THURSDAY, MARCH 8, 1990.

DEPARTMENT OF JUSTICE

ATTORNEY GENERAL

WITNESSES

DICK THORNBURGH, ATTORNEY GENERAL

HARRY H. FLICKINGER, ASSISTANT ATTORNEY GENERAL FOR ADMINISTRATION

MICHAEL J. ROPER, DEPUTY ASSISTANT ATTORNEY GENERAL, CONTROLLER

ADRIAN A. CURTIS, DIRECTOR, BUDGET STAFF

Mr. SMITH. This morning we begin the hearings on the fiscal year 1991 budget request for the Department of Justice. The request is for $8,316,132,000 which happens to be an increase of only $320,000 over the fiscal 1990 final appropriations.

We will insert the Department of Justice Budget Summary into the record at this point.

[The Justice Budget Summary follows:]

DEPARTMENT OF JUSTICE

1990 SUPPLEMENTAL LANGUAGE REQUESTS

Supplemental language is requested to make funds from the Vaccine Compensation Trust Fund available to the Department of Justice (DOJ) at the level authorized in the Budget Reconciliation Act of 1989 ($1,500,000).

The Attorney General is authorized by the Federal Debt Recovery Act of 1986 (FDRA - P.L. 99-578, 31 U.S.C. Sec. 8718(b)) to run a pilot project for 3 years to test the effectiveness of contracting with debt collection lawyers in the private sector to assist with the collection of delinquent Federal Debt. The FDRA authorizes the pilot project only through August 31, 1990, after which the program is due to terminate. This supplemental language change would extend the pilot project through September 30, 1992. The extension is necessary due to unforeseen problems which arose in the process of letting the contracts to run the pilot project, including the successful defense of a protest before the General Services Administration's Board of Contract Appeals. As a result of these delays, DOJ was unable to get the project operational in the first five pilot districts until September 1989. Extending the program until September 30, 1992, would provide the necessary time to judge the program's effectiveness.

Proposed supplemental language requests that 1989 funds transferred from the Assets Forfeiture Fund to the Building and Facilities account of the Federal Prison System may be used for the construction of detention cells operated by the Immigration and Naturalization Service and for renovations of holding cells run by the U.S. Marshals Service.

The final 1990 language change (section 605 of the General Provisions in the Commerce, Justice, State Appropriations Act, 1990) would make fees collected by the Federal Trade Commission for pre-merger reviews available until expended.

1991 APPROPRIATION LANGUAGE CHANGES

Changes proposed from 1990 to 1991 in the Department of Justice Appropriations Act, hereafter identified as the Act, do not explain the full scope of proposed language changes because the Department of Transportation and Related Agencies Appropriations Act, 1990 (P.L. 100-164) includes certain authorities in Title IV, Emergency Drug Funding, that are brought forward into the 1991 Department of Justice request either in full or in part. Although, P.L. 100-164 provided few authorities that the Department did not already have, the increased limitations on the amounts that could be spent on certain programs was significant in some cases. Where this occurs, the net changes in limitations are addressed.

General Administration. Language is added earmarking funds for the purpose of consolidating Department components in the Washington Metropolitan area and for a major renovation of the Main Justice building. The Facilities Program 2000 which will be accomplished over a 10-year period requires no-year funding.

General Legal Activities. The limitation on the amount available for the operation of the United States National Central Bureau, INTERPOL, is reduced from $5,751,000 to $5,639,000. Sequestration in 1990 will not permit the use of the full amount identified in the legislative limitation.

The 1991 request continues the limitation of $6,000,000 on the amount that shall remain available for litigation support contracts after the end of the fiscal year. The time limitation is updated to expire September 30, 1992.

The $12,160,000 limitation in the 1990 Act on the amount that shall remain available until expended for office automation systems for the legal divisions, the U.S. Attorneys, and offices supported by the General Administration appropriation is increased to $23,171,000 in 1991.

Language authorizing the United States Central Bureau, INTERPOL to establish and collect fees to process name checks and background records for non-criminal employment, licensing, and humanitarian purposes and credit fees to cover costs is deleted from the 1991 request. The insertion of a "hereafter" clause in the 1990 Act makes it unnecessary to reenact this language.

The 1990 Act contains language which authorized the Attorney General to establish and collect fees to cover the cost of identifying, copying, and distributing copies of tax decisions rendered by the Federal Judiciary. This provision was never activated because of its repeal in the Foreign Operations, Export Financing, and Related Agencies Appropriations Act, 1990, Sec. 599F (103 Stat. 1264)

Language inserted in 1990 permitting $1,000,000 to be transferred from the National Childhood Vaccine Injury Compensation Fund to the Department of Justice is increased to $1,500,000 in the 1991 request. The higher amount was authorized in the Omnibus Budget Reconciliation Act of 1989.

The General Legal Activities heading mistakenly includes language in 1990 that should have fallen under a heading titled Civil Liberties Public Education Fund. This language authorizes spending the maximum amount authorized by the Civil Liberties Act of 1988 which specified a payment of $20,000 to each person of Japanese ancestry interned in World War II who was alive on the date the Act was passed. Sec. 209 of the Act formally amended the Civil Liberties Act of 1988 (P.L. 100-383) by providing payments beginning in 1991.

It should be noted that a provision in the Emergency Drug Funding title of the Department of Transportation and Related Agencies Appropriations Act, 1990 allowing $41,476,000 to remain available until expended has no comparable carryover provision in 1991.

Antitrust Division. Section 605 of the Commerce, Justice, State Appropriations Act, 1990 established a $20,000 fee for filing pre-merger notifications required by the Hart-Scott-Rodino Antitrust Improvement Act of 1976. This section provides that fees collected in FY 1990, up to a total of $40,000,000, shall be evenly divided between the Federal Trade Commission and the Antitrust Division. The request would allow fees made available to the Antitrust Division in 1991 to remain available until expended. A similar supplemental proposal would allow fees collected in 1990 to remain available until expended.

Foreign Claims Settlement Commission. Authorities previously enumerated for the Commission in annual appropriation acts have been deleted because the insertion of a "hereafter" clause in the 1990 Act makes it unnecessary to reenact this language.

United States Attorneys. Language is proposed which sets a ceiling of $5,000,000 for selected activities related to debt collection. An earmarking of $5,000,000 for debt collection in the 1990 request was changed to a limitation in the 1990 Act.

The 1990 Act set a limit of $8,000 for official reception and representation expenses. In 1991, the U.S. Attorneys would receive a reception and representation allowance out of a $95,000 limitation requested for the Department. This proposed limitation is requested in Sec. 201 of the Department's general provisions.

United States Marshals Service. Language is added requesting authority to purchase passenger motor vehicles for police-type use without regard to the general purchase price limitation for the current fiscal year. This will permit direct purchase of vehicles instead of continuing the lease-purchase arrangement under which vehicles have been acquired previously.

Language is also added which would permit up to $12,653,000 of the 1991 appropriation to be available until expended for the renovation and construction of holding facilities. The funds would permit renovation of 115 courtroom holding cells, prisoner detention areas, and the Foley Square courtroom elevator. Marshals Service appropriations have previously been available for these purposes but this expanded program requires more than one year to fully implement a number of the proposed projects.

Beginning in 1987, the Director of the Marshals Service was permitted to collect fees and pay expenses for the service of civil process and credit not to exceed $1,000,000 to the appropriation to cover expenses incurred. The 1990 Act inserted a "hereafter" clause, which would have made it unnecessary to restate this authority on an annual basis, but it also removed the $1,000,000 limitation. The 1991 request strikes the "hereafter" clause and restores the previous dollar limitation on expenses.

The 1990 Act set a limit of $6,000 for official reception and representation expenses. In 1991, this authority is proposed for deletion in favor of a Department limitation of $95,000 which would be available for allocation among the Department's various components.

Support of United States Prisoners. Under current law this appropriation is available for the support of prisoners only in non-Federal institutions. The proposed change expands the authority of the Marshals Service to use any facility that may be obtained to house unsentenced prisoners in the custody of the Marshals Service.

In the 1990 budget, the request for the Cooperative Agreement Program was $15,000,000. The Department of Justice Appropriations Act, 1990 provided not to exceed $5,000,000, but the Department of Transportation and Related Agencies Appropriations Act, 1990, added another $10,000,000 to the limitation. The 1991 request of $15,000,000, therefore, represents no net change from the program level approved for 1990.

Fees and Expenses of Witnesses. The limitation on the funds for protected witness safesites that remain available until expended is increased from $1,690,000 to $2,000,000.

Language included in the 1990 Act allowing the Attorney General to enter into reimbursable agreements with other Federal agencies or components of the Department to pay private counsel expenses to defend Federal Government employees is stricken from the 1991 request. This provision contains a "hereafter" clause and, therefore, does not need to be repeated in 1991.

Similarly, a language provision authorizing litigating components to reimburse this account, for expert witness expenses when it appears current allocations will be exhausted for cases scheduled for trial is deleted from the 1991 request.

Community Relations Service. The limitation on the Cuban/Haitian entrant program is reduced from $21,500,000 to $20,214,000.

Asset Forfeiture Fund. The request of $100,000,000 for program expenses requested in 1991 is the same as the sums provided in the Department of Justice and Department of Transportation Appropriations Acts, 1990.

Organized Crime Drug Enforcement. The 1990 Act permitted this appropriation to reimburse participating agencies for costs incurred between October 1, 1989 and the date the Department of Justice Appropriations Act was approved (Nov. 21, 1989). This language was added because the usual terms of continuing resolutions did not assure that activities funded in previous years from one funding source could be reimbursed from a newly-established appropriation for work performed during the period in which continuing resolutions remained in force.

Also deleted is a provision relating to the Office of Justice Programs (OJP) that determined how formula grants for the Drug Control and System Improvement Grant Program shall be allocated by state. Although no language change is proposed under the OJP heading, this provision is discussed there because it is germane only to OJP.

Federal Bureau of Investigation. The number of passenger motor vehicle that can be purchased for police-type use without regard to the general purchase price limitation is increased from 2,730 to 3,136. For replacement vehicles, the number is increased from 1,850 to 2,125.

Two-year budget authority of $25,000,000 for automatic date processing and $1,000,000 for undercover operations is extended into 1991 on the same basis as in 1990.

A $15,000,000 earmarking for the construction of Pod B of the Engineering Research Facility at Quantico, Virginia contained in the 1990 Act is deleted because it is a one-time requirement.

Language is also included that would permit $10,000,000 previously appropriated for the Washington Metropolitan Field Office to be used for other activities funded by the Federal Bureau of Investigation (FBI).

Drug Enforcement Administration. The number of passenger motor vehicles that can be purchased for police-type use without regard to the purchase price limitation is increased from 703 to 1,293. For replacement vehicles, the number is increased from 489 to 775.

For research, the amount permitted to remain available until expended is increased from $1,200,000 to $1,800,000.

For purchase of evidence and payments for information, the amount permitted to remain available for two fiscal years is increased from $1,700,000 to $4,000,000.

For contracting for ADP and telecommunications equipment, the amount permitted to remain available for two fiscal years is reduced from $9,638,000 to $4,000,000.

For technical and laboratory equipment $2,000,000 is proposed to remain available for two years, the same provision that was in effect in 1990.

For the purchase of aircraft and related equipment $20,550,000 is proposed to remain available until September 30, 1992.

Language has been added for a new aviation facility. The $10,000,000 requested to remain available until expended includes funds for planning, construction, purchase of equipment and other associated costs.

The 1990 Act set a limit of $30,000 for official reception and representation expenses. In 1991, this authority is proposed for deletion in favor of a Department limitation of $95,000 which would be available for allocation among the Department's components.

Immigration and Naturalization Service. The number of replacement passenger motor vehicles that may be purchased without regard to the general purchase price limitation is reduced from 620 to 504.

The construction program increases the amount that can be made available until expended from $7,188,000 to $17,188,000. The 1991 construction program includes new border patrol stations and traffic checkpoints along the southwest border, including a major facility at San Clemente, California, and expansion of the Krome detention facility in Florida.

A provision allowing the transfer of capital assets acquired by the Immigration Legalization account for other uses by the Immigration and Naturalization Service is deleted because the insertion of a "hereafter" clause in the 1990 Act makes it unnecessary to reenact this language.

Until the Department of Justice Appropriations Act, 1990 was passed, the Immigration Examinations Fee Account was required to transfer its first $50,000,000 in receipts to the United States Treasury. The 1990 Act also amended the U.S. Code so that beginning in 1990 all adjudication and naturalization activities must be funded from fees.

The 1990 Act set a limit of $5,000 for official reception and representation expenses. In 1991, this authority is proposed for deletion in favor of a Department limitation of $95,000 which would be available for allocation among the Department's components.

Federal Prison System - Salaries and Expenses. The number of law enforcement and passenger motor vehicles that may be purchased is increased from 159 to 330. For replacement only, the number is increased from 55 to 90.

The 1990 Act set a limit of $3,000 on reception and representation expenses. In 1991, this authority is proposed for deletion in favor of a Department limitation of $95,000 which would be available for allocation among the Department's components.

Office of Justice Programs - Justice Assistance. The Anti-Drug Abuse Act of 1988 (P.L. 100-690) amended the Omnibus Crime Control and Safe Streets Act so that the number of legislative references in appropriation language could be reduced. This precluded the need to reference the Edward Byrne Memorial State and Local Law Enforcement Assistance Program, and the Missing Childrens' Assistance Act.

During debate on the 1990 Act, Congress decided that formula grants distribution authorized for the Drug Control and System Improvement Grant Program should be modified. Rather than retaining a floor of $500,000 as the minimum state allocation, the minimum was set at $500,000 or 25 percent whichever is greater. This change is reflected under the Organized Crime Drug Enforcement (OCDE) heading and permanently amends substantive law. The OCDE language supercedes Sec. 212 of the Act that was erroneously retained in the enrolled bill.

The 1991 request for $7,500,000 for the Juvenile Justice and Delinquency Prevention Act would focus resources on a newly-authorized, high-risk youth, discretionary, hard-cash-match grant program which would address special problems with gangs and drugs. The Department of Transportation Appropriations Act, 1990, provided $8,821,000 for work in this area.

For the Regional Information Sharing System (RISS), the Administration proposes appropriating $9,750,000 in 1991. With a 25-percent matching requirement from participants, the program could be financed at an operating level of $13,000,000.

GENERAL PROVISIONS

Section 201 of the Department of Justice (DOJ) Appropriations Act, 1991, requests that a total of not to exceed $95,000 from funds appropriated to the DOJ may be available for official reception and representation expenses in accordance with distributions, procedures, and regulations established by the Attorney General. This provision puts entertainment funds under one limitation where it can be better regulated and controlled.

Section 202 requests that, at the discretion of the Attorney General, no more than two percent of any DOJ appropriation may be transferred to any other appropriation. No more than two percent may be transferred into or out of any appropriation. All transfers are required to be reported to the House and Senate Appropriations Committees.

Section 202 also continues to provide that, for the FBI and Drug Enforcement Administration (DEA), amounts used for undercover operations may be used for purchasing property, buildings, other facilities, leasings of space, establishing business entities as part of undercover operations. Any such proceeds from these undercover operations may be deposited in banks or other financial institutions, without regard to Section 648 of title 18 of the United States Code (USC) and section 3302 of title 31 USC. When these sums are no longer required for undercover operations, they are to be deposited to the U.S. Treasury as miscellaneous receipts. This provision also requires FBI or DEA to conduct financial audits of each undercover operation as necessary.

Section 207 was erroneously updated in the budget request, but should have been proposed for deletion. Deletion of this section will return the matching provision for State and local drug grants to 50 percent, as provided in the Anti-Drug Abuse Act of 1988.

Section 208 would allow deposits transferred from the Assets Forfeiture Fund to the Buildings and Facilities account of the Federal Prison System (FPS) in 1989 to be used for the construction of correctional institutions, and the construction, renovation and repair of Immigration and Naturalization Service and U.S. Marshals Service detention facilities. This provides additional resources for the construction of Federal prison facilities enabling the FPS to accelerate their plans to reduce overcrowding from the current systemwide average of 65 percent to 30 percent by 1995.

Section 209 would allow fees authorized to be collected for expenses incident to civil or criminal discovery requests to be credited to the appropriate account to be used for salaries and other expenses incurred in providing these services. This will allow the provision of authorized services without impeding the substantive missions of these appropriations.

All other provisions are updated as necessary for year and section references.

1991 AUTHORIZATION BILL

The Department of Justice will submit a 1991 Authorization Bill to Congress in support of the President's Budget. The bill will provide for the necessary appropriation authorizations for the various separate appropriations within the Department of Justice. It will also continue those authorizations enacted in the 1980 Department of Justice Appropriations Authorization Act (Public Law 96-132).

In prior years, the Department's proposed authorization bills have included provisions for the permanent codification of various financial authorities that are available to the Department of Justice as well as certain additional financial authorizations that the Department has requested. This portion of the Department's legislative proposal has not been included in the 1991 Authorization Bill. The Department has submitted separate legislation to Congress seeking enactment of these permanent authorizations.

GENERAL ADMINISTRATION, SALARIES AND EXPENSES

Program Changes	Perm. Pos.	Amount
Department Leadership	...	-$208
A program decrease of $208,000 is requested in support of Administration efforts to reduce Federal spending.		
Executive Support	...	-286
A program decrease of $286,000 is requested in support of Administration efforts to reduce Federal spending.		
Intelligence Policy & Professional Responsibility	...	-80
A program decrease of $80,000 is requested in support of Administration efforts to reduce Federal spending.		
Justice Management Division	-4	-1,143
A program increase of five positions, three workyears and $580,000 is requested for the Justice Management Division. Three positions, two workyears, and $139,000 are requested to support the Office of General Counsel's Ethics and Program Fraud functions. Two positions, one workyear, and $291,000 are requested to address workload requirements associated with the review of the Department's Equal Employment Opportunity complaints. Additional funding of $150,000 is requested for contractual services to support the productivity improvement training and awareness program for Department managers.		
Offsetting decreases of nine positions and workyears and $1,723,000 are also requested. A reduction of five positions, five workyears, and $1,596,000 is requested in support of Administration efforts to reduce Federal spending. A further decrease of four positions, four workyears, and $127,000 represents savings resulting from greater use of private contractors for services.		
Facilities Program 2000	...	970
An increase of $970,000 in "no-year" funds is requested to provide resources to begin space requirements reprogramming, prospectus development, and design intent documentation for the Facilities Program 2000. Under this Program, the Department of Justice will consolidate		

GENERAL ADMINISTRATION, SALARIES AND EXPENSES

Program Changes	Perm. Pos.	Amount

Department Components located in the Washington metropolitan area over the next 10 years. The Department of Justice is currently housed in over 50 locations in the Washington area. The construction and occupancy of three new buildings provides an opportunity to dramatically reduce this fragmentation by consolidating and releasing 17 of these locations and thereby increase operational integrity for productivity. Department components from most of these locations will partially or fully consolidate in these new buildings. Savings directly accrued by the Department, though not quantified, will result from reduced lease costs due to more efficient design and improved utilization of space, improved working conditions, lower operational and administrative costs, and increased productivity due to allocation of elements. Also included in the project is critically needed renovations to the MAIN Justice and Home Owners Loan Corporation Buildings for improvement of environmental conditions, upgrading of electrical and cooling systems, and removal of asbestos hazards.

The total estimated cost (including base building construction and the MAIN and HOLC renovation construction costs) for all elements of this program is $330 million to $375 million. This is the total cost to the government. The estimate of the Department's share of these costs, over a ten year period, is $70 million. This amount is subject to negotiations with the GSA.

The funding requested for 1991 would be used to develop the Department's "Requirements Program" which identifies offices to be relocated, their personnel and equipment needs, and any special functional requirements. Additionally, the funding would provide the contract architectual and engineering support needed to begin the construction drawings. Preliminary engineering for the specialized security systems will also be accomplished. These engineering activities are crucial to the design/construction process.

The funding is requested as no-year monies because the Department is dependent upon the General Services Administration (GSA) to handle the procurement and award

GENERAL ADMINISTRATION, SALARIES AND EXPENSES

Program Changes	Perm. Pos.	Amount
of the contracts for services. While the Department is using GSA time frames for estimates on the project, the process and obligation of funds is not within the Department's control. Therefore, the funding is requested to remain available until expended to prevent it from expiring before it can be used for the designated tasks.		
Administrative Review and Appeals........................	...	-1,328
A program decrease of $1,328,000 is requested in support of Adminstration efforts to reduce Federal spending.

Program changes	Perm. Pos.	Amount
Office of Inspector General..........................	84	$6,242

This program increase is requested to meet critical investigation and audit workload requirements in 1991 and to provide resources for senior policy and administrative support activities.

Specifically, an increase of 20 positions and $1,085,000 is requested for the Audit functions. With current resources, the Office of Inspector General (OIG) has been able to perform 26 major internal audits. With the requested increase, an additional eight to ten audits can be performed annually.

The investigative functions and associated resources were transferred to OIG from only three bureaus: the Immigration and Naturalization Service, U.S. Marshals Service, and Bureau of Prisons. However, OFFICE OF INSPECTOR GENERAL, SALARIES AND EXPENSES

	Perm. Pos.	Amount
the OIG's responsibility for investigations increased to cover 28 additional components of the Department. In addition, statutory IG authorities expanded the investigative responsibilities within some of the bureaus which transferred resources. To meet these additional investigative responsibilities, an increase of 50 positions (43 investigators and 7 clerical) and $3,416,000 is requested.		
Resources for senior management and administrative support activities were not provided to OIG in the Inspector General Act of 1978, as amended. The requested increase of 14 positions and $1,741,000 for executive direction and control activities is essential if the OIG is to maintain the statutorily mandated independence from the programs and operations of the rest of the Department.

Program changes	Perm. Pos.	Amount
U.S. Parole Commission	-33	-$715

The United States Sentencing Commission was established to develop and issue comprehensive guidelines for Federal cases. The guidelines went into effect on November 1, 1987, resulting in a decrease in the Parole Commission's workload. Under current legislation, the Parole Commission is to be phased-out by November 1, 1992. To accomplish this, the 1991 request reflects a net reduction of 33 positions and $715,000, which includes a program reduction of 33 positions and $1,200,000 to continue the Parole Commission's phase-out. The request also includes $485,000 to reimburse the Bureau of Prisons for nine examiner/analyst positions and continued use of contract typists to ensure necessary staffing to meet workload demands during the phase-out period.

Program Changes	Perm. Pos.	Amount
General tax matters......................................	-4	$5,684

The Tax Division requests 1991 program increases totaling $5,706,000. Of this amount, $3,900,000 is requested to implement an automated litigation support program to index and organize the Division's larger cases. The Division also requests $1,402,000 to fund its authorized workyear level. This increase would allow the Division to fund 21 attorney and 8 clerical workyears to handle increasing civil tax workload stemming from recent legislative changes to the internal revenue code. An increase of $79,000 is requested to provide additional travel funding for attorneys participating in the Financial Institutions Fraud Task Forces; and $325,000 is requested to permit the Division to initiate a more aggressive recruitment program as well as to provide additional training and awards in an effort to reduce the Division's high attrition rate. A reduction of 4 positions, 4 workyears and $22,000 will

SALARIES AND EXPENSES, GENERAL LEGAL ACTIVITIES

Program Changes	Perm. Pos.	Amount

accrue as the Division contracts out services currently performed by Federal employees. The net change from the 1991 base level is -4 positions, -4 workyears and $5,684,000.

Criminal matters...	-1	$236

The Criminal Division is seeking program increases of 4 positions (3 attorneys), 2 workyears and $262,000. The Public Integrity Section requires these positions to fulfill its responsibilities with regard to conflict of interest issues, as expanded under the Ethics Reform Act of 1989; Independent Counsel matters; and election crimes, where the ability of staff to respond to workload demand has been diminished due to inadequate resources. Program reductions amounting to 5 positions, 5 workyears and $26,000 will accrue to the Division as contractual services are implemented to replace functions currently carried out by Federal employees. The net change from the 1991 base level for the Criminal Division is -1 position, -3 workyears and $236,000.

Claims, customs, and general civil matters......................	96	5,367

The Civil Division requests program increases amounting to 60 positions (including 36 attorneys), 29 workyears and $2,119,000 for bank and financial institution fraud cases pursuant to the requirements of the Financial Institutions Reform, Recovery and Enforcement Act of 1989. The following litigative areas are involved: Federal Appellate (7 positions including 4 attorneys, 3 workyears and $236,000), Tort Litigation (6 positions including 3 attorneys, 3 workyears and $207,000), Commercial Litigation (30 positions including 19 attorneys, 15 workyears and $1,081,000), and Federal Programs (17 positions including 10 attorneys, 8 workyears and $595,000). In addition, $1,300,000 is required for Automated Litigation Support for financial institution fraud cases. The Division also requested program increases of 11 positions (7 attorneys), 6 workyears and $924,000 for litigation involving medicare overpayments (of which $477,000 is for ALS services); 12 positions (7 attorneys), 6 workyears and $485,000 for cases associated with the Veterans' Appeals Act; and 13 positions (9 attorneys), 6 workyears and $539,000 for cases involving other highly visible policy areas such as challenges to HUD policies and housing statutes, the census, drug testing and old age care.

Land, natural resources, and Indian matters.....................	47	6,6

Program increases of 47 positions (23 attorneys), 24 workyears and $6,608,000 are requested to permit the Division to increase its environmental law enforcement activities. For the

SALARIES AND EXPENSES, GENERAL LEGAL ACTIVITIES

Program Changes	Perm. Pos.	Amount

Environmental Protection program, enhancements of 46 positions, 23 workyears and $6,568,000 are needed to address the expected increase in environmental enforcement activities such as civil litigation supporting cases involving natural resource damage and hazardous material dumping. Included in this amount is $4,300,000 for automated litigation support, of which $3,900,000 will be used specifically in the Exxon-Valdez case. Also, one position, one workyear and $40,000 is requested to allow the Division to increase administrative support for its automated litigation support applications.

Civil rights matters..	58	$4,317

The Civil Rights Division is seeking program enhancements totaling 63 positions (31 attorneys), 32 workyears and $4,344,000. Of this amount, 47 positions (26 attorneys), 24 workyears and $2,500,000 are requested for the Housing and Civil Enforcement Section to address a significant workload increase resulting from the Fair Housing Amendments Act of 1988. An additional 16 positions (5 attorneys), 8 workyears and $1,744,000 are requested to adequately handle the workload of the Voting Section that will sharply increase as the 1990 census heightens demand for Departmental review of redistricting plans. Also, $100,000 is requested for a map plotter, data files and related storage equipment to support the Voting Section's post-census responsibilities. Reductions amounting to 5 positions, 5 workyears and $27,000 will accrue as contractual services are implemented to replace functions currently carried out by Federal employees. The net change from the 1990 base level for the Civil Rights Division is 58 positions, 26 workyears and $4,317,000.

Legal activities office automation..........................	...	6,225

A program increase of $6,225,000 is needed to fund office automation enhancements in the Tax, Criminal and Justice Management Divisions and the offices of the U.S. Attorneys. These organizations are participating in a joint office automation acquisition, EAGLE (Enhanced Automation for the Government Legal Environment). Installation of EAGLE in the litigating divisions and all the U.S. Attorney offices will provide critical technology links between Washington-based Divisions and all U.S. Attorney staff in the districts. During 1991, the U.S. Attorneys will complete the installation phase for EAGLE systems in all districts. Also in 1991, the Criminal and Tax Divisions will finish the installations phase for their offices.

Proposed transfer from Interstate Commerce Commission	18	$1,394

SALARIES AND EXPENSES, ANTITRUST DIVISION

Proposed Transfer

The Administration is proposing legislation to terminate the Interstate Commerce Commission and complete deregulation of the motor carrier, freight forwarder, and water carrier industries. Remaining rail-related activities would be transferred to the Departments of Justice and Transportation. The Justice Department will assume responsibility for reviewing applications for rail-related mergers, consolidations, and acquisitions. Funds in the amount of $1,394,000, 18 workyears and 18 authorized positions are proposed for transfer to the Division in the event this legislation passes.

Pre-Merger Filing Fees

P.L. 101-162, Title VI, Section 605 reads as follows:

"Five working days after enactment of this Act and thereafter, the Federal Trade Commission shall assess and collect filing fees established at $20,000 which shall be paid by persons acquiring voting securities or assets who required to file premerger notifications by the Hart-Scott-Rodino Antitrust Improvements Act of 1976 (15 U.S.C. 18a) and the regulations promulgated thereunder. For purposes of said Act, no notification shall be considered filed until payment of the fee required by this Section. Fees collected pursuant to this Section shall be divided evenly between and credited to the appropriations, Federal Trade Commission, 'Salaries and Expenses', and Department of Justice, 'Salaries and Expenses, Antitrust Division': Provided, that fees in excess of $40,000,000 in fiscal year 1990 shall be deposited to the credit of the Treasury of the United States."

With the passage of this provision, the Division anticipates earning $19,749,000 ($20,000,000 less a sequestration of $251,000) in 1990, which will fund 236 positions and 191 workyears. In 1991, earnings of $20,000,000 are anticipated, funding 236 positions and 228 workyears. This brings total resources for the Division to 623 positions, 563 workyears and $51,566,000 in 1990, and 623 positions, 600 workyears and $53,730,000 in 1991. This is an increase of almost 20 percent over funds available in 1989.

A program decrease of $6,156,000 is required for the United States Attorneys to remain within the targeted budget levels established by the Administration. The reduction will be achieved by addressing space, furniture and equipment needs for new Violent Crime initiative employees in 1990, and concentrating 1991 resources on salaries and operating costs.

With this decrease, the U.S. Attorneys request level for 1991 is $628,095,000. This level of resources will fund 3,860 attorneys (122 for the Organized Crime Strike Forces), 725 paralegals, and 3,562 support positions. Major program resources will be devoted to organized and violent crime prosecutions, controlled substance violations, and debt collection activities.

This budget proposes that the U.S. Attorneys will begin to reimburse the Federal Bureau of Investigation (FBI) for attorney background investigations. The U.S. Attorneys currently reimburse the FBI for support personnel background investigations.

Program Changes	Perm. Pos.	Amount
Protection of the Judicial Process	99	$15,820

The requested program increase of 99 positions, 51 workyears and $15,820,000 includes 8 positions, 5 workyears and $268,000 for Witness Security; 61 positions, 31 workyears and $3,659,000 for Judicial Security; and 30 positions, 15 workyears and $11,893,000 for Prisoner Security. The increases for Witness Security will provide one Employment Specialist position, one workyear and $45,000 to assist protected witnesses in becoming self-sufficient as soon as possible; 6 positions, 3 workyears and $178,000 to provide additional administrative support in witness security regional offices and the Safesite and Orientation Center; and 1 position, 1 workyear and $45,000 to meet an increased workload associated with the construction of new identities for a growing number of protected witnesses. The increases for Judicial Security will provide 38 Deputy U.S. Marshal positions, 19 workyears and $2,425,000 to improve court security and staff a growing number of protective service details; 12 Deputy U.S. Marshal positions, 6 workyears and $766,000 to meet the increased need for out-of-district staffing at high-threat trials through the Special Assignments process; 10 positions, 5 workyears and $423,000 for additional personnel security; and 1 position, 1 workyear and $45,000 to meet an increased threat analysis workload. The increases for Prisoner Security will provide 30 Deputy U.S. Marshal positions, 15 workyears and $1,914,000 for additional prisoner security as criminal trial bench hours increase; $3,972,000 for renovation and construction of 100 courtroom holding cells; $1,007,000 for U.S. Marshals Service (USMS) cellblock security systems maintenance and procurement; and $5,000,000 for the construction of a secure prisoner elevator at the Foley Square, New York, Federal Courthouse.

SALARIES AND EXPENSES, UNITED STATES MARSHALS SERVICE

Program Changes	Perm. Pos.	Amount
Prisoner Transportation and Detention.	49	$13,264
This net increase of 49 positions, 24 workyears and $13,264,000 includes program increases of 55 positions, 30 workyears and $13,300,000 and program decreases of 6 positions, 6 workyears and $36,000 due to A-76 management and productivity improvements. The requested program increases will provide 42 Deputy U.S. Marshal positions, 24 workyears and $2,691,000 to transport a growing number of prisoners at a time when the jail space crisis requires Deputies to travel longer distances to reach available detention space; 6 positions, 3 workyears and $203,000 to support the National Prisoner Transportation System; 7 Deputy U.S. Marshal positions, 3 workyears and $447,000 to perform required inspections of State and local jails that house Federal prisoners; $6,082,000 to purchase approximately 400 replacement sedans, 3 prisoner buses, and 30 prisoner vans; and $3,877,000 to renovate and construct an additional 14 holding cells in USMS district offices, of which an estimated 20 percent are in urgent need of renovation and 80 percent fail to meet Federal standards.		
Fugitive Apprehension.	-87	-5,400
The requested program decrease of 87 Deputy U.S. Marshal positions, 92 workyears and $5,400,000 is based on an anticipated decline in the backlog of primary felony warrants from 15,946 warrants on hand at the end of 1989 to 14,576 warrants on hand at the end of 1991 and productivity gains made possible by the enhanced Warrant Information System.		
Seized Assets Management	134	6,239
The requested increase of 134 positions (45 Deputies, 43 procurement clerks, 44 business managers and 2 program analysts), 67 workyears and $6,239,000 includes 132 positions, 66 workyears and $6,192,000 to augment existing seized asset management units and establish 44 additional seized asset management units in high-seizure-activity districts, increasing the total number of units from 12 to 56. The request also includes 2 positions, 1 workyear and $47,000 to increase staffing at the National Asset Seizure and Forfeiture program offices to identify seized asset management contract requirements on a district, regional and national basis. The 134-requested positions are vital to the proper management and prompt disposition of seized assets, which are expected to increase by 92 percent from 25,363 properties seized in 1989 to 48,672 properties seized in 1991.		

SALARIES AND EXPENSES, UNITED STATES MARSHALS SERVICE

Program Changes	Perm. Pos.	Amount
D.C. Superior Court.	35	$1,540
The increase of 35 positions (12 Deputies and 23 detention officers), 17 workyears and $1,540,000 will provide additional personnel to operate the cellblock and transport prisoners within the Superior Court buildings, correcting security deficiencies that exist currently due to inadequate staffing, as well as addressing the 14 percent increase in prisoner productions anticipated in 1991. One such security deficiency is that as many as 10 prisoners are routinely moved within the courthouse by one detention officer or Deputy.		
ADP and Telecommunications	...	5,112
The requested increase of $5,112,000 includes $1,500,000 for the District Automation Project for Altos computer hardware upgrade and expansion ($850,000), dial back modems for increased computer security ($200,000), and office automation enhancements ($450,000); $700,000 for headquarters automation to replace obsolete computer hardware ($300,000), install a Local Area Network ($200,000), and provide software support for new applications ($200,000); $515,000 to rewrite the Prisoner Population Management System software to interface with USMS's Prisoner Automated Scheduling System and BOP's Sentry, and to establish a centralized database; $577,000 for enhancements to USMS's accounting system; and $1,820,000 to purchase Digital Voice Privacy (DVP) base stations and repeaters to expand the area covered by USMS's DVP radio system.		
Management and Administration.	23	1,055
The increase of 23 positions, 13 workyears and $1,055,000 includes 6 positions, 3 workyears and $286,000 for additional support to the Budget and Finance Staffs; 7 positions, 4 workyears and $284,000 to meet an increased procurement workload and reduce the backlog of seized asset management contracts that currently results in a delay of approximately six months in the award of major contracts for the maintenance of seized assets; 3 positions, 2 workyears and $142,000 to develop the Offender Based Tracking System and enhance the management information available to USMS and the Department of Justice; 1 attorney, 1 workyear and $57,000 to meet an increased workload in contract review and litigation; and 6 positions, 3 workyears and $286,000 to improve personnel and employee development services.

This requested program increase will fund an increased number of contract jail days, compensate for a higher jail day rate, and meet increased medical care and guard service costs. Approximately 3,764,696 contract jail days are projected for 1991, an increase of 20 percent over the 3,140,000 days projected for 1990. In addition, the average per diem rate is projected to rise to $42.27, a two-percent increase over the 1990 rate of $41.48.

SUPPORT OF U.S. PRISONERS

Program Changes	Perm. Pos.	Amount
Cooperative Agreement Program (CAP).	...	$15,000
The requested program increase will obtain an estimated 375 guaranteed bedspaces for Federal unsentenced prisoners in State and local jails near the Federal court cities in which the Marshals Service is experiencing the most critical bedspace shortages. The Service has tentatively targeted the following States as potential sites for 1991 CAP projects: Florida, Georgia, Indiana, Iowa, Kansas, Mississippi, Virginia, South Carolina, Tennessee and West Virginia.

TOTAL	...	56,027	...	70,628	...	14,601

Program Changes	Amount
Fees and Expenses of Witnesses	$10,891

The total requested program increase for this activity will be used to pay for increased costs associated with obtaining expert witness services. In the past several years, the Department's expert witness expenses have dramatically increased due in part to expansion of expert witness usage and significant increases in the level of compensation demanded by most witnesses, especially those with highly specialized or technical skills.

FEES AND EXPENSES OF WITNESSES

Program Changes	Perm. Pos.	Amount
Protection of Witnesses....................................		$3,310
This requested enhancement will allow the Department to maintain two new safesites and pay increased housing, relocation and medical expenses of Federally-protected witnesses and their families. The need for additional funds reflects increased participation in the witness protection program.		
Private Counsel...	...	400
This requested increase will allow the Department to hire more outside counsel to handle a projected increase in the number of *Bivens* cases, wherein the private bar attempts to couch tort claims against Government employees in terms of constitutional issues. These types of cases generally involve more defendants and, therefore, require the retention of more than one attorney per case. Finally, *Bivens* cases tend to involve complex constitutional issues and consequently result in numerous appeals, which also increase private counsel expenses.

Congress enacted a permanent indefinite appropriation to fund the expenses of Independent Counsel investigations and prosecutions in the 1988 Department of Justice Appropriations Act (P.L. 100-202). Under this appropriation, all necessary costs and expenses incurred in the pursuit of these investigations will be funded from amounts available to the Treasury. Prior to 1988, these counsel were funded through the General Legal Activities appropriation. In 1991, it is expected that the major part of the ongoing investigations will be complete; therefore, the Department projects an estimated need for $4 million.

Program Changes	Perm. Pos.	Amount
Drug Law Enforcement......................................	744	$88,306

Several Organized Crime Drug Enforcement (OCDE) component organizations have experienced an erosion of their direct funding as the need to support OCDE cases has increased. These agencies can no longer continue to divert resources to Task Force cases at the expense of other critical requirements. To correct agency "overburn" of resources for the OCDE program, the following participant agencies request the increases indicated: Federal Bureau of Investigation, 274 positions (154 agents), 224 workyears and $35,476,000; Internal Revenue Service, 190 positions (139 agents), 154 workyears and $18,729,000; Immigration and Naturalization Service, 29 positions (24 agents), 14 workyears and $2,423,000. In addition, the U.S. Customs Service requests an increase of 125 positions (92 agents), 90 workyears and $10,316,000 to enhance resources supporting the investigation of international money laundering activities. An increase of $812,000 is requested for the Bureau of Alcohol, Tobacco and Firearms to implement new electronic interception authority related to firearms investigations. Also, the Drug Enforcement Administration requires an additional 126 positions (93 agents), 50 workyears and $20,550,000 to increase its investigative support to the OCDE program; this includes a $1,800,000 enhancement for State and local overtime. Requested increases reflect new resources, not additional transfers.

ORGANIZED CRIME DRUG ENFORCEMENT

Program Changes	Perm. Pos.	Amount
Prosecutions	297	$18,866
An increase of 297 positions (151 attorneys), 148 workyears and $18,886,000 is requested to provide the level of resources needed to maintain a 1:4 ratio of prosecutors to investigators in the OCDE program. Requested increases reflect new resources, not additional transfers.		
Administrative Support	3	123
To address the added responsibility of developing and monitoring the OCDE budget and financial management functions which have resulted from the 1990 consolidation of program resources in a single appropriation, an increase of 3 positions, 2 workyears and $123,000 is requested. Requested increases reflect new resources, not additional transfers.

Organized Crime	172	4,119

An enhancement of 172 positions (including 78 agents) and $4,119,000 is requested to combat the emerging problem

FEDERAL BUREAU OF INVESTIGATION

Program Changes	Perm. Pos.	Amount
Program Increases		
of Asian organized crime in the United States. Included in this enhancement are 50 general support positions, 26 Title III monitors, 14 language specialists and 4 intelligence research personnel. The Asian organized crime threat is attributed primarily to Triad and Tong groups from Hong Kong and the Yakuza from Japan.		
Drugs.	333	$19,168
This increase provides 155 positions (including 94 agents) and $6,307,000 for field investigations in support of the FBI's National Drug Strategy. In addition, 178 special support positions are requested to assist FBI agents, allowing them to devote their time to investigative activities. These include electronic surveillance monitors (40 positions and $636,000), forfeiture analysts (50 positions and $927,000), drug intelligence analysts (38 positions and $924,000), and language specialists (50 positions and $927,000). Increased funding for undercover operations ($6,674,000) and informant payments ($2,773,000) is also requested for this program.		
White-Collar Crime	440	12,416
An additional 440 positions (including 249 agents) and $12,416,000 are requested for several priority program areas with burgeoning workload. These include: Department of Defense procurement fraud (198 positions and $5,349,000); bank fraud and embezzlement (68 positions and $1,798,000); fraud by wire (116 positions and $3,061,000); and bankruptcy fraud (28 positions and $800,000). Also, 30 accounting technicians and $605,000 are requested to provide quantitative support to investigations. Finally, funding of $803,000 is requested for increased payments to cooperating witnesses.		
Training	18	251
This increase provides 18 support positions and $251,000 for custodians, operating engineers, and security to maintain the Engineering Research Facility-Pod A.		

FEDERAL BUREAU OF INVESTIGATION

Program Changes	Perm. Pos.	Amount
Program Increases		
Forensic Services - Federal.	25	1,605
This will provide an enhancement of 25 support positions and $505,000 for the FBI Laboratory directed toward the areas of drug records, magnetic media, aerial photography, and materials analysis. It also includes additional chemists and a firearms examiner. Funding of $1,100,000 is included for the Language program for contract linguists, testers and training to address the backlog in and increasing number of tape translations required as investigations expand against Asian and other organized crime groups and against drug cartels.		
ADP and Telecommunications	5	$89
An increase of 5 support positions and $89,000 is requested to design, develop, implement, maintain, and enhance a new generation of automated systems to support FBI requirements. This request includes two positions for the Generic Case Management System which provides the architecture for an integrated system supporting all functions of any investigation conducted by the FBI. Also, three positions are included for the Scientific Management Information and Research System which supports the FBI's deoxyribonucleic acid research and analysis.		
Records Management	75	2,093
An additional 75 positions (including 19 agents) and $2,093,000 are requested to enhance the FBI's Industrial and Personnel Security Programs. These resources will be used to perform investigations of contract employees who have access to National Security Information (NSI) as well as FBI facilities, and to perform five-year reinvestigations of FBI employees with access to NSI.		
Technical Field Support and Equipment.	5	6,409
Included in this request are 2 support positions and $3,289,000 (including $3,200,000 in equipment funding)		

FEDERAL BUREAU OF INVESTIGATION

Program Changes	Perm. Pos.	Amount
Program Increases		

to enhance the FBI's physical surveillance capabilities. Special investigative equipment such as closed circuit television ($1,800,000), tracking devices ($1,000,000) and equipment to permit surreptitious entries ($400,000) are included. Two electronic technicians are required to maintain this equipment. To enhance surveillance capabilities, an additional 3 support positions and $3,120,000 in equipment funding are requested. This will provide for eight digital audio transcriber workstations ($1,200,000) to improve the transcription of intercepted audio conversations, additional dialed number recorders and supporting equipment ($720,000), and recording equipment ($1,200,000). Three electronic technicians are needed to support this additional equipment.

Executive Direction and Control.	7	$90

An enhancement of 7 positions and $90,000 is requested to conduct audits of the FBI's overall financial activity and congressionally-mandated audits of undercover operations.

SUBTOTAL, program increases.	1,285	81,752

Program Decreases

Program decreases totaling 514 positions (including 227 agents) and $27,322,000 are requested by the FBI in order to meet targeted budget deficit levels established by the Administration. These decreases are presented in the following table:

FEDERAL BUREAU OF INVESTIGATION

Program Changes	Perm. Pos.	Amount

Program Decreases

Program	Perm. Pos.	Agent Pos.	Amount

Administrative Services	-19	-2	-673
TOTAL	-514	-227	-27,322

A total reduction of $13,724,000 is requested to partially offset the $41,979,000 cost of implementing P.L. 101-173. Also, 80 positions (including 25 agents) will be shifted from direct appropriation funding to reimbursable funding. P.L. 101-173 amends 5 U.S.C. 5545(c)(2) allowing that effective October 1, 1990, administratively uncontrollable overtime (AUO) will be paid at a maximum rate of 25 percent of the rate of basic pay for a position instead of being based on the salary of a GS-10 step 1. This reduction includes the following program decreases: travel ($1,000,000); confidential case funding in Other Field Program ($1,000,000); conducting background investigations for the U.S. Attorneys on a reimbursable basic as is done with other Federal agencies (80 positions (including 25 agents) and $2,655,000); and equipment funding ($9,069,000) including $1,064,000 for replacement vehicles, $2,716,000 for ADP equipment, $3,630,000 for field investigative equipment, and $1,659,000 for field office furniture and related equipment. Reductions by program are as follows:

Program Changes	Perm. Pos.	Amount
Domestic enforcement	413	$38,690

Included in this increase are the following: 375 positions (including 300 agents), 188 workyears and $36,947,000 to enhance enforcement efforts in 15 major drug importation and distribution centers throughout the United States. Included in this increase are resources to support two new Agent groups consisting of 15 agents per group in each of the five High Intensity Drug Trafficking Areas identified in the Administration's National Drug Control Strategy and 38 positions, 19 workyears and $1,743,000 to provide additional administrative and technical support to domestic field offices.

Special Enforcement Operations/Programs.	37	13,674

This program change includes an increase of 37 positions (including 30 agents), 19 workyears and $3,674,000 to backfill resources for Operation SNOWCAP that are being diverted from domestic enforcement operations. An increase

DRUG ENFORCEMENT ADMINISTRATION

Program Changes	Perm. Pos.	Amount
of $10,000,000 is also requested to augment the efforts of the Domestic Cannabis Eradication/Suppression program. This increase will provide for total funding of $13,800,000 for this program.		
Foreign Cooperative Investigations	22	$4,877
This increase of 22 positions, 11 workyears and $4,877,000 includes 18 agents to expand 13 existing foreign offices and open one new overseas office in Salta, Argentina which is located in a remote area that is strategic to the transshipment of cocaine and chemicals.		
Diversion Control.	33	2,019
This program change includes an increase of 35 positions (including 28 diversion investigators), 17 workyears and $2,031,000 to implement the Chemical Control and Diversion Act of 1988 and provide chemical movement intelligence support at Headquarters and in select country offices with specific chemical control needs; and a decrease of 2 positions, 2 workyears, and $12,000 for management and productivity savings from pharmacist registration activities.		
State and local Task Forces.	45	8,824
This increase of 45 positions, 22 workyears and $8,824,000 includes 36 agents to fund nine provisional State and local Task Forces (for a grand total of 60 State and local Task Forces operating in 1991), thereby enhancing cooperation among Federal, State and local governments. Of this amount $4,390,000 is included to purchase cars, radios and other equipment to support participating State and local officers. DEA currently has eight provisional task forces under consideration for permanent funding. DEA is currently evaluating requests to initiate additional provisional task forces. They are located in Boston, MA; Columbus, OH; Saginaw, MI; North Lake Tahoe, CA; Westchester County, NY; San Diego, CA; Fresno, CA; and San Francisco (airport), CA.		
Intelligence	85	7,123
This increase includes 68 positions (including 54 intelligence analysts), 34 workyears and $4,367,000 to enhance financial and investigative intelligence capabilities and to correct the shortfall between the number of investigators involved in DEA cases and the number of operational intelligence analysts to support

these activities; and 17 positions (including 3 intelligence analysts), 9 workyears and $2,756,000 to complete the enhancement of the El Paso Intelligence Center as an all-source tactical intelligence center.		—
DEA Laboratory Services.	38	$3,287
This increase includes 38 positions (including 20 chemists), 19 workyears and $3,287,000 to support the Heroin Signature and Laboratory Standards programs, to provide support to the hazardous waste disposal program, and through support the additional investigative special agents for the timely analysis of drug evidence, presentation of expert testimony in court, assistance on clandestine laboratory investigations, and ballistics and signature analyses in support conspiracy cases.		
DEA Training	22	1,913
This increase includes 14 firearms instructors (agent positions), 7 workyears and $1,578,000 to provide full-time firearms instructors in each field division; and 8 support positions, 4 workyears and $335,000 to provide administrative and clerical positions for DEA's training program.		
Research and engineering and technical operations.	21	39,484
Included in this increase are 21 positions (including 10 agents), 10 workyears and $3,506,000 to enhance DEA's technical operations and research and engineering activities; $3,100,000 for domestic and foreign radio equipment; $1,000,000 for cellular telephone intercept circuitry; $12,550,000 for the replacement of seven single-engine, fixed-wing and four twin-engine turboprop aircraft; $8,000,000 for two new twin-engine turboprop aircraft for Operation SNOWCAP; $1,328,000 for additional operating and maintenance expenses for seized aircraft; and $10,000,000 for the relocation of DEA's airwing facility to support the need for adequate space, security and maintenance requirements for DEA aircraft.		
ADP Telecommunications	-13	950
This program change includes an increase of 8 positions, 4 workyears and $489,000 to support systems development and programming of modified applications; systems integration, security, and qualify assurance of existing programs; monitoring of contract support; and database administration in the ADP and Telecommunications program;		

DRUG ENFORCEMENT ADMINISTRATION

Program Changes	Perm. Pos.	Amount
$583,000 for computer support for the El Paso Intelligence Center; and a decrease of 21 positions, 21 workyears and $122,000 for management and productivity savings from field data entry and computer programming activities.		
Executive Direction and Control.	4	$930
This program change includes an increase of 18 positions (including 8 attorneys), 9 workyears and $1,011,000 to enhance DEA's legal services, and financial management and planning and inspection activities. As DEA's agent strength and overall budget has grown, increased attention must be paid to these areas. A decrease of 14 positions, 14 workyears, and $81,000 is also included for management and productivity savings from accounting and asset forfeiture fund functions.		
Administrative Services.	-2	-12
This program change reflects a decrease of 2 positions, 2 workyears and $12,000 for management and productivity savings from office services functions.

Program Changes	Perm. Pos.	Amount
Inspections.	104	$1,306

The requested increase of 104 positions and $1,306,000 will be used by the Inspections program to convert temporary inspectors to permanent positions. As a result of this conversion, these Immigration Inspectors will receive formal training, which will improve productivity and effectiveness as well as reduce the INS reliance on temporary employees at the U.S. land border inspection sites.

IMMIGRATION AND NATURALIZATION SERVICE

	Perm. Pos.	Amount
Program Changes		
Border Patrol.	200	$16,327
An increase of 200 positions (174 Border Patrol agents) and $16,327,000 is requested to increase border patrol staffing and to purchase additional intrusion and detection equipment, dogs, aircraft, and barriers. These program increases will allow INS to operate a stronger border enforcement program which is a critical element in the Office of National Drug Control Policy's Drug Strategy.		
Employer and Labor Relations	...	884
An enhancement of $884,000 for the Employer and Labor Relations program is requested for a public outreach campaign related to Section 102 of the Immigration Reform and Control Act (IRCA) of 1986, which prohibits employment discrimination on the basis of national origin and citizenship status. The additional outreach efforts address the need for increased public education about the anti-discrimination provision of IRCA, as concluded in the General Accounting Office report "Immigration Reform: Status of Implementing Employer Sanctions After the Second Year".		
Data and Communications.	...	567
The requested increase of $567,000 will be used to improve and expand existing automated data processing systems. The planned changes include: expansion of the National Crime Information Center/National Law Enforcement Telecommunications System to support additional INS field offices, implementation of the Telephone Verification project mandated by IRCA, and conversion of the INS Financial Accounting and Control System to the Financial Management Information System used by the Department, which should result in more timely, more informative reports of INS's financial status.		
Construction and Engineering	...	17,188
Increases totalling $17,188,000 are requested for the Construction and Engineering program including, $4,500,000 to expand the Krome, Florida Service Processing Center to include a 300-bed lock-down men's dormitory; $10,000,000 to begin to construct a traffic checkpoint at San Clemente, California, and $388,000 for two additional checkpoints at Marathon and Alpine, Texas; and $2,300,000 to construct two border patrol stations on the Southern border at Brownfield, California, and Ysleta, Texas.		

IMMIGRATION AND NATURALIZATION SERVICE

	Perm. Pos.	Amount
Program Changes		
Administrative Services.	...	$8,437

An additional $8,437,000 is requested for the Administrative Services program to purchase law enforcement vehicles for use by the Border Patrol and Detention and Deportation programs.

Data and Communications.	...	-13,133

A program decrease of $13,133,000 is requested in the Data and Communications program as a result of the Adjudications and Naturalization program being entirely funded from the Immigration Examinations Fee account in 1990. The Administration believes that these ADP and telecommunications expenses are directly related to adjudications activities and should be funded through the Immigration Examinations Fee account beginning in 1991.

Realignment of Positions and Resources to Meet Levels Established by the Administration.	-60	-22,127

Net program decreases of 60 positions and $22,127,000 are requested to meet budget deficit levels established by the Administration and realign positions with available funding. These reductions can be achieved through various measures. INS has shown increases in efficiency in its programs over the last several years which will further enable it to absorb these reductions.

Program Changes	Perm. Pos.	Amount
Program Decreases Related to Additional AUO Costs.	...	-$7,849

A total reduction of $7,849,000 is requested to offset partially the $11,071,000 cost of implementing P.L. 101-173. This law amends 5 U.S.C. 5545(c)(2) allowing that effective October 1, 1990, administratively uncontrollable overtime (AUO) will be paid at a maximum rate of 25 percent of the rate of basic pay for a position instead of being based on the salary of a GS-10 step 1. This program decrease will result in a reduction in discretionary travel, fewer permanent change of station moves, reductions in 31 Act overtime, and elimination of AUO payments to agents stationed at the INS central and regional offices. Reductions by program are as follows:

Decision Unit	Amount

Department of Justice Appropriations Act, 1990	...	$35,000
Adjustments to base.	...	-35,000
1991 base.	...	...
Program changes (detailed below)	...	...
1991 estimate.	...	...

The Immigration Emergency Fund, established by the Immigration Reform and Control Act of 1986 and funded by Public Law 101-162, provides funds for possible increases in border patrol and other enforcement activities, and for reimbursement to States and localities for assistance in meeting an immigration emergency.

Adjustments to base

The Department has no current plans for use of this fund; therefore, no additional appropriation is requested. Declaration of an immigration emergency is subject to Presidential determination and Congressional notification.

IMMIGRATION LEGALIZATION
(Dollars in thousands)

Permanent Indefinite Special Fund

	Perm. Pos.[1]	Amount
1989 obligations	326	$99,044
1990 budget authority.	326	54,792
1990 Sequestration	...	-767
1990 budget availability	326	54,025
Adjustments to base.	-90	-16,457
1991 base.	236	37,568

The Immigration Reform and Control Act of 1986, P.L. 99-603, provided for the establishment of a Legalization program. Under this program, aliens who entered the U.S. illegally or lapsed into illegal status prior to January 1, 1982 and who have resided in the U.S. since then and who are not excludable, could apply for temporary resident status. The law allows those granted temporary resident status to apply for permanent resident status after 18 months upon showing general admissability and citizenship skills. Consistent with the Act, this program is to be funded through application fees, which shall be available without fiscal year limitation, to cover administrative and other expenses in connection with the review of legalization applications.

Adjustments to base

The 1991 request contains the resources necessary to receive and process the 1,622,500 applications for permanent status expected to be submitted to INS. The reductions in the 1991 estimate are due to the completion of contractual services and the phasing down of operations as a result of the completion of the temporary resident phase of the Legalization program.

---

[1] The permanent positions column reflects those positions funded from program revenues. They are not included in the Department's total positions.

IMMIGRATION USER FEE
(Dollars in thousands)

Permanent Indefinite Special Fund

	Perm. Pos.[1]	Amount
1989 obligations	1,338	$110,751
1990 budget authority.	1,338	105,000
1990 Sequestration	...	-1,470
1990 budget availability	1,338	103,530
Adjustments to base.	36	6,470
1991 estimate.	1,374	110,000

The Department of Justice 1987 Appropriation Act (P.L. 99-500 and P.L. 99-591) provided for the establishment of a $5 per individual user fee for certain passengers travelling into the United States. These fees are used to fund costs associated with immigration inspection and preinspection for passengers on certain commercial aircraft and vessels; overtime immigration inspection services; administrative debt recovery, including the operation of a national collections office; expansion, operation and maintenance of information systems for non-immigrant control and debt collection; detection of fraudulent documents used by passengers travelling to the United States, and detention and deportation services for excludable aliens arriving on commercial aircraft or vessels.

Adjustments to base

In 1991, additional collections of fees resulting from increased foreign travel are anticipated. Thus, the 1991 estimate is $110,000,000.

---

[1] The permanent positions column reflects those positions funded from program revenues. They are not included in the Department's total positions.

IMMIGRATION EXAMINATIONS FEE
(Dollars in thousands)

Permanent Indefinite Special Fund

	Perm.[1] Pos.	Amount
1989 obligations	504	$69,023
1990 budget authority	1,661	104,000
1990 Sequestration	...	-756
1990 availability	1,661	103,244
Adjustments to base	...	-13,244
1991 estimate	1,661	90,000

The Immigration Examinations Fee Account was established in the Department of Justice Appropriation Act, 1989 (P.L. 100-459) which created a separate account into which the Attorney General may deposit adjudication fees collected under the regulations governing INS. The 1990 Appropriations Act (P.L. 101-162) amended 8 U.S.C. 1356(n) so that INS would no longer be required to transfer $50,000,000 in adjudications receipts to the Treasury. In conjunction with this action, Congress eliminated all appropriated resources for the Adjudications and Naturalization program. Consequently, the entire cost of operating the Adjudications and Naturalization program will be funded from the Immigration Examinations Fee Account. All deposits to the account shall remain available until expended to reimburse any appropriation the amount paid out of such appropriation for expenses in providing immigration adjudication and naturalization services. The resources to be made available will be used to adjudicate applications and petitions for benefits under the Immigration and Nationality Act and to provide necessary support to adjudications and naturalization programs.

Adjustments to base

In 1991, the collection of fees is anticipated to be $90,000,000, thereby adjusting the base to $90,000,000. These fees will be used to support the adjudications and naturalization programs.

---

[1] The permanent positions column reflects those positions funded from program revenues. They are not included in the Department's total positions.

Program Changes	Perm. Pos.	Amount
Activate New Facilities.	883	$49,578

This request provides an increase of 883 positions, 375 workyears and $49,578,000 distributed among FPS's inmate care and custody and institution maintenance and administration programs to activate facilities. This request will provide for the activation of several facilities including: 2 Federal Correctional Institutions in Minersville, PA (700 beds) and Manchester, KY (700 beds); 4 Federal Prison camps at Fairton, NJ (150 beds), Butner, NC (150 beds), Otisville, NY (150 beds), and Tallahasse, FL (150 beds); 1 camp expansion in Danbury, CT (150 beds); activation of 1 housing unit in Big Spring, TX (240 beds); one housing unit expansion in Loretto, PA (100 beds); activation of 1 housing and support facility in Tyndall, FL (225 beds); and the activation of 4 detention units located in Tallahasse, FL (150 beds), Fort Worth, TX (150 beds), Milan,, MI (150 beds), and Atlanta, GA (150 beds).

Program Changes	Perm. Pos.	Amount
Improve Staffing at Existing Institutions.	4,000	91,569

This request provides 4,000 positions, 2,000 workyears and $91,569,000 for staffing improvements at existing institutions for inmate care and custody, institution administration and maintenance, and program direction, as well as an increase to expand community programs' offices. This increase represents a conscious choice by this Administration to provide additional staffing to handle overcrowded facilities and establish a staff to inmate ratio of 1:3 by 1992.

FEDERAL PRISON SYSTEM, SALARIES AND EXPENSES

Program Changes	Perm. Pos.	Amount
Population Adjustment.	...	$25,462
This request provides an increase of $25,462,000 to finance adequate care and subsistence of a projected increase in the average daily population of 6,050. These resources will enable FPS to house an annual average daily population of 62,450 in 1991.		
Contract Confinement	...	1,000
This request provides a total increase of $1,000,000 for "electronic monitoring" (250 inmates), which enables FPS to reduce inmate base population and thus reduce overcrowding.		
Integrated Financial Management.	...	388
This request of $388,000 provides additional resources to support FPS's migration to the Department's Financial Management Information System. OMB Circular A-127 calls for each agency to consolidate and integrate their multiple accounting systems into a single Departmental system.		
Savings from Management and Productivity Improvements. . .	-85	-457
This decrease affects eight programs and represents anticipated savings from contracts with the private sector in furtherance of the Administration's A-76 initiative. Reductions are to the following programs: Inmate Care (12 positions and $64,000); Institution Security (37 positions and $199,000); Unit Management (12 positions and $64,000); Inmate programs (5 positions and $21,000); Institution Administration (9 positions and $50,000); Staff Training (2 positions and $13,000); Institution Maintenance (6 positions and $33,000); and Contract Confinement (2 positions and $13,000).

The requested program increases in this activity represent costs associated with the acquisition and construction of facilities in order to reduce

FEDERAL PRISON SYSTEM, BUILDING AND FACILITIES

Program Changes	Perm. Pos.	Amount
overcrowding and to provide a safe and humane environment for staff and inmates. This request includes increases of 25 positions, 20 workyears and $162,800,000 to provide funds for one 1,960-bed Federal prison complex located in the Northeastern region; seven detention facilities to be located in Sheridan, OR (150 beds), Leavenworth, KS (150 beds), Butner, NC (150 beds), Memphis, TN (150 beds), El Reno, TX (150 beds), Seagoville, TX (150 beds), and one detention facility in the Northeast (350 beds); the acquisition and conversion of active and closed military properties into minimum security facilities (1,700 beds); the increase in capacity at six existing institutions located in Big Springs, TX (150 beds), Raybrook, NY (150 beds), Bryan, TX (340 beds), Tyndall, FL (75 beds), El Paso, TX (150 beds) and Terre Haute, IN (100 beds); and a medical facility in Fortworth, TX (300 beds). Complete funding of the 1991 request would add 6,175 more beds including 1,250 for detention purposes. Current prison overcrowding coupled with projected increases in the Federal inmate population continues to be the major challenge facing the Federal Prison System. Today, Federal prisons are overcrowded by a system-wide average of 65 percent. It should be noted that if the FY 1995 population projection of 95,100 is accurate, and funding for the capacity expansion is limited to what has currently been appropriated, prison overcrowding would still be at a level of 45 percent in FY 1995.		
Modernization and repair	15	$40,600
The requested program increases in this activity represent costs associated with the replacement and/or rehabilitation of obsolete structures and plant facilities. This request includes increases of 15 positions, 15 workyears and $40,600,000 for renovations and improvements for seven projects and the improvement of water and sewage systems at three locations.

OFFICE OF JUSTICE PROGRAMS, JUSTICE ASSISTANCE

Program Changes	Perm. Pos.	Amount
Research, evaluation and demonstration programs.............	...	$1,758
This increase will enable the National Institute of Justice (NIJ) to continue the development of an effective less-than-lethal weapon (LLW) for use by law enforcement officers in the United States. Development of a LLW as an alternative to handguns is a project of national scope that offers the potential to save the lives of both police officers and civilians or suspects. Between 1977 and 1986, 872 law enforcement officers were killed during confrontations. In addition to the loss of life and human suffering, the direct and indirect costs to society of the police deaths alone were $500 million. Furthermore, since the United States Supreme Court ruling in Tennessee V. Garner (1985) limits the situations in which police officers may use deadly force against a fleeing suspect, development of a LLW could result in the apprehension of suspects who might otherwise escape because deadly force is not warranted, and be of immediate life-preserving assistance to law enforcement officers.		
Criminal justice statistical programs.......................	...	1,911
This increase will enable the Bureau of Justice Statistics (BJS) to (1) conduct the Quinquennial Survey of State Jail Inmates, the only national level data on State jail inmates and facilities ($1,100,000); (2) redesign the National Crime Survey to more fully measure the number of crimes of which Americans may be victims, including rapes, family violence and household crimes, with vandalism being measured for the first time ($476,000); and (3) expand the Federal integrated data base to permit the collection of more timely and comprehensive data on Federal cases, with particular emphasis on drug cases, from prosecution through adjudication, sentencing and corrections ($335,000).		
Drug Control and System Improvement Grant Program............	...	45,263
Virtually all of this funding increase will be allocated to the States under the formula grant program and will provide additional resources to enhance existing jurisdictional drug control efforts while simultaneously supporting national drug control policies and objectives. The additional funding will also enable State and local drug control agencies to consider new program initiatives for which 1990 funding was not available.		

OFFICE OF JUSTICE PROGRAMS, JUSTICE ASSISTANCE

Program Changes	Perm. Pos.	Amount
Juvenile Justice program	...	-61,905

The major thrust of this program is to attain deinstitutionalization of status offenders and the separation of juvenile and adult offenders at the State and local levels. Since 1975, over one billion dollars has been made available by the Federal Government and considerable progress has been made in achieving these objectives. Thirty-four States are in full compliance with separation requirements and another sixteen States and territories are making progress toward achieving compliance. Forty-eight of the States participating in the program have achieved full compliance with the statutory mandate to deinstitutionalize status offenders and non-offenders, and the number of violations of this statute has been reduced from 165,531 in 1979 to 9,693 in 1987 among participating States. The Administration believes that in the absence of Federal funding, States currently participating in the program will continue to commit their resources to programs that have proven successful. Accordingly, the 1991 request includes $7.5 million for a modified Juvenile Justice program that focuses on high-risk youth. The program addresses the problems of gangs and drugs and their relationship with the juvenile justice system. This program will require a 50-percent hard cash match by grant recipients.

Program Changes	Perm. Pos.	Amount
Missing Children program	...	$4,000

This increase is requested to enhance the efforts of State and local communities in responding to missing and exploited children issues. Activities that will be funded include developing and disseminating policies, procedures, and programmatic information related to search teams, investigations, crisis intervention activities, and reunification of youth with their families.

Program Changes	Perm. Pos.	Amount
Mariel Cubans	...	-4,963

In the current period of scarce Federal funds, this program is no longer of sufficient priority to command a share of the limited funds available. The Department of Justice must first use any available funds to meet its Federal justice responsibilities. A program reduction of $4,963,000 is requested for this program.

Program Changes	Perm. Pos.	Amount
Regional Information Sharing System	...	-3,652

This program is designed to aid State and local law enforcement agencies in the exchange of information. The reduction requested for 1991 will result in a Federal funding level of $9,750,000,

OFFICE OF JUSTICE PROGRAMS, JUSTICE ASSISTANCE

Program Changes	Perm. Pos.	Amount
but with a 25-percent hard cash match by participants, which the Administration is proposing, the total program level would be $13 million.		
Management and Administration................................	-7	-$398
The net reduction of 7 positions and $398,000 includes an increase of 2 positions to allow NIJ to administer the development of a less-than-lethal weapon and allow BJS to support expanded functioning of the Federal integrated data base. Also included is a decrease of nine positions and $450,000 associated with the termination of formula grant funding for the Juvenile Justice program and an increase of $52,000 for the migration to the Department's Financial Management Information System.

Collections are expected to exceed the cap of $125,000,000 in 1990 and 1991.

ATTORNEY GENERAL'S STATEMENT

Mr. **SMITH**. The Committee is pleased to welcome back the Attorney General, Dick Thornburgh.

Do you have a statement?

Attorney General **THORNBURGH**. I do, Mr. Chairman.

Mr. **SMITH**. How do you want to proceed?

Mr. **THORNBURGH**. I have a full statement, which I ask be accepted in the record and perhaps I can hit some of the high points rather quickly so we can move on to matters of concern to members of the Committee.

Mr. **SMITH**. All right, we will do that.

Mr. **THORNBURGH**. I am pleased, Mr. Chairman, to be here today to present the Department of Justice's 1991 budget request.

Before I begin, I would like to take this moment to reemphasize our gratitude for your efforts with respect to the extremely substantial boost given to the national law enforcement effort as reflected in the Department's current year budget.

We are putting to good use those additional resources. The record breaking increase in the number of prosecutors, the additional money for savings and loans investigations, greater support for our cooperative drug law enforcement effort with State and local governments, as well as other countries around the world, and the funds for prison construction to mention just a few.

We look forward to continuing to work closely with you, Mr. Chairman, and other members of the Committee in implementing this year's budget and in fashioning a budget for next year.

1991 REQUEST

Our proposal for 1991, as you might expect, is in line with the priorities I set forth last year. It is a blueprint for the new decade for effective law enforcement.

Last year, before the President submitted all of his budget amendments, I came here seeking support for a request for $7.1 billion. After the President's amendments, subsequent congressional actions, and sequestration, the total 1990 amount increased to $8.6 billion.

In 1991, the estimate approaches $9 billion. Note, however, that after subtracting separate funds for Japanese/American reparations, asset forfeiture, immigration programs, victims of crime, and the substantial cost of the independent counsels' offices, our appropriation request for operations actually totals just over $7.8 billion, still reflecting a healthy increase of $896 million or 13.7 percent when the 1990 figures are adjusted for the extraordinary $1.4 billion commitment for prison construction.

As a manager, my first priority is to keep overhead costs down so that more resources can be allocated to front line activities and this will be our rule in administering this budget.

As I noted, my full statement has been submitted for the record. It provides the nuts and bolts of the Department's budget justification and we will be pleased to respond to questions you may have about it.

This morning, however, I would try to briefly draw together the various strands of our budget items into some salient themes.

Because this Subcommittee has worked so closely with the Department over the years, you know better than most that in many ways the work of our Department is in defense of our national values, the strength of our Constitution and our legal system, as well as the sensitivity to the rapidly changing world in which we live. Amidst the despair, waste, and degradation caused by drugs and violence I do see rays of hope that our policies will ultimately prevail.

WAR ON DRUGS

I have said repeatedly that the war on drugs must ultimately be won on the battlefield of values. So I am heartened by recent surveys indicating that citizens are taking drug abuse and the violence and corruption that the drug culture engenders much more seriously.

Moreover, some surveys even indicate a decline in drug use among many segments of our population. The first national drug control strategy was released by the President last September and in the second such strategy, released in January, the President set forth goals that are, and I quote President Bush, "ambitious, but straightforward: to restore order and security to American neighborhoods, to dismantle drug trafficking organizations, to help people break the habit of drug abuse, and to prevent those who have never used drugs from starting."

In operational terms, this strategy requires a well-balanced criminal justice system, drug treatment programs, prevention activities in our schools, businesses, and communities, international efforts aimed at countries that produce and process drugs, and sound interdiction strategies, as well as strong research, intelligence, and statistical systems.

Recent international developments and domestic actions illustrate how our law enforcement strategy is taking shape. Through cooperative international law enforcement programs, the ratification by an increasing number of nations of the UN Drug Law Enforcement Convention, the valiant efforts by Colombian President Virgilio Barco against the Colombian drug barons, and the U.S. assistance program for the Andean nations, we have seen major steps forward.

The drug lords are under siege and they know it. President Bush's recent visit to the Drug Summit in Cartagena is a clear signal that the United States can actively assist other nations involved in the war on drugs.

MONEY LAUNDERING CRACKDOWN

A related initiative is a continuing crackdown on money laundering. The Department of Justice has frozen and seized hundreds of millions of dollars of drug related profits and we have not hesitated to prosecute foreign banks for their alleged involvement in international money laundering schemes.

Recent significant prosecutions include BCCI in the Operation C-Chase case and Banco de Occidente of Panama in Operation Polar Cap.

It is imperative that we choke off improper access by drug lords to the legitimate banking systems both domestically and abroad. I have personally engaged in discussions with governmental and banking leaders in Switzerland, Luxembourg, and most recently last week in Uruguay, all potential centers for money laundering operations.

DOMESTIC INTERDICTION

Domestic interdiction efforts also have had some spectacular successes. Twenty-one metric tons of cocaine seized in a Los Angeles warehouse, five metric tons of cocaine found hidden in shipping containers in New York, and nine tons seized in Texas, all of this the product of efforts in one 6 week period last fall. We must, however, continue our vigilance to halt the volume of drugs that keeps flowing in undetected.

FUNDING FOR THE DRUG WAR

The portion of the Department's resources devoted to the war on drugs is steadily increasing. For 1991, it accounts for approximately 45 percent of our requested budget. On the enforcement side, this includes not only the Drug Enforcement Administration, the Organized Crime Drug Enforcement Task Force activities, and the Asset Forfeiture program, all clearly identified with the war on drugs, but significant portions of the resources of numerous other components of the Department working together; the FBI, the Criminal and Tax Divisions of the Department of Justice, our United States Attorneys, the U.S. Marshals, the Immigration and Naturalization Service, and the Bureau of Prisons, among others. These components have specific interrelated tasks and their efforts are closely interwoven in international narcotics control, drug interdiction, and the gathering and dissemination of intelligence.

With respect to aiding State and local governments, we are seeking $490 million in State and local Narcotics Control and Justice Assistance Improvement Grants under the Anti-Drug Abuse Act of 1988. This amount is 6 times the entire budget request for the Office Justice Programs when President Bush took office.

As important as the Department's efforts are against drugs, they cannot overshadow the importance of law enforcement responsibilities in a variety of other areas.

VIOLENT CRIME

In this Administration, the Department has vigorously focused on reducing violent crime. The first civil right of every American is after all the right to be free from fear in our homes, on our streets, and in our communities.

Last May, the President submitted a violent crime initiative which sets forth his enforcement strategy. The Organized Crime Strike Forces have expanded their focus to include the interstate activities of street gangs and other non-traditional forms of organized crime and have been reinvigorated by consolidating their efforts with the United States Attorneys' offices in their areas.

We are also continuing our aggressive efforts to counter terrorist activities and vigorously pursue extradition of terrorists apprehended abroad.

We had to make some tough choices this year for the FBI's budget to accommodate the budget impact of the overtime legislation passed last fall without sacrificing the agent positions and workyears that we initially feared we would have to reduce to pay for these increased overtime costs. After a great deal of work, I think we have found a reasonable solution for the FBI and the two other major law enforcement components involved in absorbing the increased overtime expenses.

WHITE-COLLAR CRIME

In addition to combating crime in the streets, we must be as effective in combating white-collar crime, what I call "crime in the suites". Here it is essential to alter some of the values present in corporate boardrooms and the offices of Federal, State, and local government officials.

Last December, I announced a comprehensive attack on savings and loan fraud utilizing the $50 million in new appropriations provided by the Congress at the President's request. This effort will deploy more than 400 additional prosecutors, FBI agents, and accounting personnel to 27 cities across this Nation. In 1991, we are seeking additional substantial resources for the FBI in this area. The work of the Tax Division will be expanded and the Civil Division will be involved more heavily in bank fraud cases, and our Securities and Commodities Task Forces are now pursuing illegal activities in markets in 8 major cities.

The Department also is aggressively pursuing fraud and corruption by persons doing business with or employed by the Department of Housing and Urban Development. We are working to ferret out these cases, to prosecute criminal activities, and, where possible, to bring civil actions for restitution and damages. We cannot and will not allow programs intended to assist low and moderate income Americans to be exploited for illicit personal gain.

We are also devoting substantial additional resources to other white-collar crime areas, including public integrity investigations and defense contractor fraud. The FBI's budget calls for a total of 440 new positions to focus on all aspects of white-collar crime, particularly defense procurement fraud, bank fraud and embezzlement, fraud by wire, and abuse of the bankruptcy statutes.

Unfortunately, the crimes already committed in these areas will remain a substantial burden to the American taxpayer for years to come. The additional resources we are seeking will offer much needed reinforcements to our ability to deter and to punish those who would seek to defraud the American people. We must convey a clear message that enforcement will be swift and punishment will be sure for those businesses and public officials who abuse the trust placed in them. These cases are often extremely complex and require detailed investigation and coordination by many different law enforcement efforts.

The President and this Department have also made major strides in our enforcement efforts to protect the environment. Cases like the Exxon Valdez appropriately garner considerable public attention, but the challenges facing the Land and Natural Resource Division's environmental enforcement efforts, both criminal and civil, are never ending. We are redoubling our efforts to bring to justice the environmental profiteers who break our laws and foul our air, water, wetlands, and land for private gain. With the addition of 47 positions, this budget request represents a 65-percent increase over fiscal year 1989 budget authority and underscores our continuing commitment to protecting the environment.

The work of the Civil Rights Division is also expanding. Criminal civil rights enforcement actions against "skinheads" and other hate groups are yielding successes. In 1989, the Division prosecuted more than twice the number of racial violence cases than in any prior year. Last Thursday, 5 white supremacist "skinheads" were convicted in Dallas, Texas, of conspiring to violate the civil rights of Jewish, African American, and Hispanic citizens in Dallas, Texas. Similarly, since the Fair Housing Amendments Act of 1988 took effect last March, the Civil Rights Division has filed 21 cases in fiscal year 1989, another 21 lawsuits thus far in fiscal year 1990, for a total of 42 cases in less than a year. This total is more than twice the number of housing lawsuits brought during any previous fiscal year. Moreover, we are laying plans for vigorous enforcement of the Voting Rights Act in anticipation of the redistricting process in the aftermath of the 1990 census.

The Antitrust Division now benefits from a major funding change achieved during the 1990 budget cycle and I have approved the hiring of additional personnel in that Division. Pre-merger notification filings under the Hart-Scott-Rodino Antitrust Improvement Act now require a fee of $20,000, which is collected by the Federal Trade Commission and divided equally between the Commission and the Antitrust Division. One note of caution, however. Indications are that receipts may well fall short of the $20 million estimate and we are carefully monitoring what might be the effect of any such budget shortfall.

DEFENSE OF THE TREASURY

One of the frequently overlooked, but extremely important aspects of the Department of Justice's work is its role as defender of the Treasury, protecting the American taxpayers from a run on their tax dollars. For example, our Civil Division defended against over $21 billion in claims against the Treasury. Judgments totaled only $125 million, less than 1 percent of the amount demanded. The Tax Division's success in defeating deductions for trading in commodities futures straddles alone may have saved some $8 billion for the taxpayer. Conversely, the Civil Division won judgments on behalf of the Government which totaled in excess of one-half billion dollars.

Similarly, the Assets Forfeiture Fund uses the proceeds of illegal drug transactions, and recycles them to combat drug trafficking. In 1991, we estimate receipts of some $500 million. An estimated $128 million will be deposited to the Special Forfeiture Fund for use by the Director of the Office National Drug Control Policy, while many other millions of dollars will be equitably shared with State and local law enforcement agencies. We have also urged Congressional enactment of a debt collection act which would enable us to expand our efforts to track down those who owe money to the United States and, if necessary, to seize their assets. Protection of the taxpayers' funds, in short, is an important element of our aggressive litigation strategy.

We are also seeking additional funding to meld the disparate parts of the newly created office of Inspector General into an effective management tool to combat fraud, waste, and abuse which may exist within our own Department. This reflects a clear commitment to ensuring the highest ethical standards within our own operations.

PRISON NEEDS

With respect to all of the Department's criminal law enforcement efforts, a final key ingredient is the Federal Prison System. Last year when I appeared before this Subcommittee, there were approximately 46,800 prisoners in Federal institutions. Today, one year later, this number has grown to approximately 55,000 and the projection for 1991 is for 62,450 prisoners in 66 institutions. The Bureau of Prison's inmate population has increased by about 30,000 inmates or roughly 125 percent since 1981, an unprecedented rate of growth reflecting in part aggressive law enforcement efforts and expanded resources, thanks to the support of the Congress. It is interesting to note that 49 percent of current Federal inmates are drug offenders compared to 25 percent in 1981. Despite the infusion of the $1.4 billion in construction funds in 1990, we still expect to exceed our long range target of 30 percent overcrowding in 1995. New construction is essential if we are to handle this increasing prison population, but in 1991, we must rely on the increased utilization of already authorized facilities and we are at the same time evaluating alternatives for monitoring lower risk inmates.

CONCLUSION

This brief summary of the Department's work emphasizes our commitment to firm and aggressive enforcement of the law in all areas of our responsibilities, as well as our commitment to the fair and equitable administration of justice. These twin goals are essential to redeeming the promise of Government to provide equal treatment to its citizens and to protect their rights.

I am proud of the achievements of the Department of Justice in the last year and with the additional resources we seek today, I believe the Department will be able to expand upon these achievements. I look forward to working cooperatively with you, Mr. Chairman, and the members of this Committee and this Subcommittee in the coming budget negotiations and I will be happy to try to respond to your questions and concerns.

Thank you very much.

[The prepared statement of Attorney General Thornburgh follows:]

DEPARTMENT OF JUSTICE
STATEMENT OF THE ATTORNEY GENERAL
DICK THORNBURGH
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the Committee:

Thank you for giving me this opportunity to present the Department's 1991 request and to express my sincere appreciation for your own tenacious efforts in support of objectives that closely coincided with the President's 1990 request.

Today, in addressing the Department's budget issues, let me try to draw together the various strands of the budget into salient themes. Because this Subcommittee has worked so closely with the Department over the years, you know, that in many ways the work of the Department is related to the defense of our national values, the strength of our Constitution and legal system, and to staying abreast of developments in the rapidly changing world in which we live.

I have said repeatedly that the war on drugs must ultimately be won on the battlefield of values. While we may not be able to change the values of most drug traffickers, we are beginning to make some progress in the schools and in the neighborhoods. Our communities are organizing to work together, and high school drug use is at its lowest level in years.

However, the battlefield of values is not limited to drugs. The ethical values and morality expressed in some of the nation's corporate board-rooms and the offices of Federal, State, and local government officials also require attention. Greed, corruption and abuse of the public trust threaten the vitality of whole cities and industries. Law enforcement is essential to combatting white collar crime, but it is only a part of the solution.

White collar crime takes many forms -- insider trading, fraud, public corruption, environmental offenses. Currently we are deeply involved in addressing financial institution and defense contractor fraud, HUD-related cases, public integrity matters, security and commodity trading practices, and environmental crime. Unfortunately, despite our best efforts the crimes already committed in these areas will be a substantial burden to the American taxpayer and the nation's economic well-being for years to come. The Department's budget request includes additional resources to address these problems, as well as the other areas discussed below.

DRUG ABUSE TRENDS

Drug abuse is the most serious problem facing the nation. In a Washington Post - ABC News poll last August, 44 percent ranked drugs as the country's most serious problem. Among the nation's blacks, almost 70 percent gave this answer. This attitude was shared by teenagers where 60 percent agreed. This may help explain why the national survey of drug abuse among high school seniors conducted by the Alcohol, Drug Abuse, and Mental Health Administration shows drug use at its lowest level since the survey began in 1975. There has been a steady downward trend in the experimentation and use of marijuana. The sharp rise in the perceived harmfulness of cocaine and crack, its highly addictive smokeable form, has also caused its use to decline. In fact, almost all measures of drug use in the high school survey have been downward. Similar trends are shown in college surveys. These results are encouraging because those who graduate from high school and college are the ones who become our leaders and establish patterns of acceptable behavior.

Although the trends for high school and college students are moving in the right direction, those who regularly use drugs remain a danger. Of continuing concern is the intensive drug use among those who drop out of school and the high proportion of those who are arrested that test positive for the use of one or more drugs. Here we face a more intractable problem that involves the use of law enforcement resources which I will discuss shortly in more detail.

The melding of diverse trends in the drug area may help explain the rather static situation in the overall criminal statistics area. If the data from the National Crime Survey of the victims of crime provides a good measure, there has been no significant change in the overall crime rate in the last three years. However, since 1980, the number of victims of violent crime, personal theft, and household crime have all fallen by more than 10 percent. Still, one fourth of all households reported violence or theft in 1988.

DEPARTMENT OF JUSTICE AUTHORIZATION ACT AND BUDGET REQUEST

This year the Department has again submitted a legislative proposal to Congress seeking the authorization of its various appropriations. As you know, the last authorization bill to be enacted for the Department of Justice was for the 1980 fiscal year. The authorities contained in that Act, however, have been continued by the Appropriations Committees in annual appropriations acts. The Appropriations Committees have also updated certain of these authorities, including the undercover authorities for the Federal Bureau of Investigation and the Drug Enforcement Administration. This year the President's budget specifically requests that these important undercover authorities be continued in the Department's appropriations act.

The Department's proposed authorization bills have, in the past, served two purposes. The first has been to assure the necessary authorization, as required by Section 204 of the Crime Control Act of 1976, for each of the Department's appropriations. The second has been to provide the financial management authority, such as undercover authority, that are needed for the day to day operation of the Department. This year, the Department will submit two separate bills to Congress to achieve these two purposes.

The Department's proposed appropriations authorization bill was submitted in late February. It requests the authorization of 19 Department appropriations in accordance with the funding levels requested in the President's budget. The second bill, which we intend to submit later this month, will request permanent codification of the various financial management authorities that the Department has been seeking for several years.

We believe that by separating our requests, we will facilitate the Congress' consideration of the important issues raised by each of these legislative initiatives.

The Department's budget request for 1991 continues the blueprint for federal law enforcement that was proposed in 1990. Last year, before the President submitted his last two budget amendments, I was here supporting a request for $7.1 billion. Following the transmittal of all of the President's amendments, Congressional action, and sequestration, the 1990 amount increased to $8.6 billion. In 1991, the estimate approaches $9 billion. All of these amounts, I might note, are far above the $6.7 billion in budget authority we had in 1989.

Fortunately, the Committees on Appropriations are not required to address the full $9 billion estimate. The Civil Liberties Public Education Fund, which was addressed last year in the 1990 appropriations, will pay out $500 million to persons of Japanese ancestry who were relocated in World War II. Another $272 million in permanent indefinite budget authority for the Asset Forfeiture Fund represents primarily the distribution of asset equity to innocent owners and equitable sharing with state and local law enforcement agencies. Three self-financing funds of the Immigration and Naturalization Service total another $238 million. In addition, the $125 million Crime Victims Fund is self-financed. After subtracting these items and the Independent Counsel estimate, requests requiring positive action by the Committees on Appropriations total $7.812 billion. This is $127 million less than the $7.939 billion provided in 1990.

Before any conclusions are reached about this being a no growth budget, I must emphasize that one simple adjustment converts a declining budget to one showing substantial growth. In 1990, the "Buildings and Facilities" account of the Federal Prison System received $1.397 billion in budget authority. In 1991, the request for this account is $374 million. By subtracting these amounts from the appropriation totals, the remaining appropriations grow from $6.542 billion to $7.438 billion, a healthy increase of $896 million or 13.7 percent.

NATIONAL DRUG CONTROL STRATEGY

On September 5, 1989 the President released the Administration's first National Drug Control Strategy as required by the Anti-Drug Abuse Act of 1988. In his transmittal letter, he said that "America's fight against epidemic illegal drug use cannot be won on any single front alone; it must be waged *everywhere* -- at every level of Federal, State, and local government and by every citizen in every community across the country." In January 1990, the second National Drug Control Strategy report was released. This report noted that the goals of the strategy are "ambitious but straight-forward: to restore order and security to American neighborhoods, to dismantle drug trafficking organizations, to help people break the habit of drug use, and to prevent those who have never used drugs from starting." The despair, waste and degradation seen on many fronts were balanced in part by what Bill Bennett has described as, " -- sometimes astonishing signs, often heartening signs -- of hope."

It is difficult to quantify why we have reason for hope. Efforts to publicize the drug problem have had a positive effect. Settling on a strategy that attacks both the demand for and supply of drugs is clearly a necessity. In operational terms this requires a well-balanced criminal justice system; drug treatment programs; prevention activities in our schools, businesses, and communities; international efforts aimed at countries that produce and process drugs; and sound interdiction strategies as well as strong research, intelligence and statistical systems.

Recent international developments and domestic enforcement actions illustrate how our strategy is taking shape. Cooperation between nations reached a summit in December 1988 when I went to Vienna to sign, on behalf of the United States, a United Nations Convention Against Illicit Narcotic Drugs and Psychotropic Substances -- a convention signed by more than 80 countries that has some real law enforcement teeth. The Senate ratified this Convention last November.

While the general level of cooperation among nations was improving, the grim battle between the Colombian government and the Medellin and Cali drug cartels reached a crisis. Between 1981 and the summer of 1989, almost 200 judges and seven members of the Colombian Supreme Court had been killed. Then, on August 18, Luis Carlos Galan, a leading presidential candidate, was assassinated. This event led President Virgilio Barco to announce open war on Colombian drug barons and to reach agreement with the United States on a list of Colombians who, if captured, would be extradited to the United States. In September, President Bush felt the drug issue was so critical that he made a prime time appeal to the American people. This address, linked with the first National Drug Control Strategy, announced a massive assistance program for the three Andean nations most deeply involved in the production and processing of cocaine -- Colombia, Bolivia and Peru. A major purge of Colombia's police was followed by the arrest of Jose Raphael Abello, the fourth ranking member of the Medellin cartel. The more violent demise of another Medellin kingpin, Jose Rodriguez Gacha, and the surrender of Panama's Manuel Noreiga require no explanation. The recent visit of President Bush to the Drug Summit in Cartegena, Colombia is America's clear signal that it will actively assist other nations involved in the war on drugs.

The drama of the Panama action and the Colombian drug war is unmatched anywhere in the world. Bolivia, a major cocaine producer, has used its troops to carry out crop and laboratory eradication programs. In mid-December, Bolivia deported a former

Interior Minister, Luis Arce Gomez, to Miami to face cocaine trafficking charges. In Mexico, a number of persons were sentenced for the murder of DEA agent Enrique Camarena. Peru, the major exporter of raw cocaine, struggles with the help of the United States merely to retain some Governmental presence in its vast Huallaga Valley. Meanwhile, there are large areas in Asia where opium is grown with impunity and readily converted into heroin for worldwide distribution. Finally, we in America find it hard to defend our failure to control domestic marijuana production, particularly when it is cultivated on public lands.

Money laundering, a business necessity for any major illegal drug operation, has suffered severe setbacks with the collapse of the Noreiga regime and a dramatic change in the banking practices of several European nations.

Despite the substantial tribulations of the cocaine cartels, the drugs keep flowing. Interdiction efforts force the traffickers into innovative and expensive cat and mouse games, but it must be devastating for at least some traffickers to lose 21 metric tons of cocaine in an unguarded Los Angeles warehouse. Later, firefighters in New York found another five metric tons hidden in shipping containers beneath a layer of highly toxic lye. Then in Texas, there was the seizure of another nine tons. This was all accomplished during a six week period in October and November 1989.

Although crack cocaine is the most serious drug abuse problem now facing us, we must be aware of other problems. Heroin, marijuana, methamphetamine and its smokeable derivative "ice" cause many serious health and crime problems. Ice, like cocaine, can often stimulate violent, psychotic behavior. At present, this product is largely confined to Hawaii, but the situation could change rapidly because ice is produced easily from domestic methamphetamine.

ROLE OF DEPARTMENT OF JUSTICE IN DRUG WAR

The portion of the Department's resources devoted to the war on drugs is steadily increasing. Out of our total appropriations request of $7.8 billion for 1991, on which the Subcommittee will act, approximately $3.5 billion, or about 45 percent is attributable to anti-drug abuse activities. This includes the full $700 million request for the Drug Enforcement Administration, the entire $330 million request for the recently consolidated Organized Crime Drug Enforcement activities, and all amounts associated with the Asset Forfeiture Fund. The Federal Prison System has the largest absolute portion for any component of the Department, an amount that exceeds $1 billion. The increased Anti-Drug Abuse grant programs account for almost all of the $526 million requested for the Office of Justice Programs. Substantial contributions are also being made by the Federal

Bureau of Investigation, the Immigration and Naturalization Service, the U.S. Attorneys, the Marshals Service, and by several components within the General Legal Activities appropriation.

Most components involved with the drug war have specific, interrelated tasks. Investigators from the Drug Enforcement Administration, the Federal Bureau of Investigation and other investigative agencies bring their cases to the U.S. Attorneys for prosecution. When an arrest is made, the person charged may be placed under the custody of the Marshals Service who must secure space in a local jail or some other detention facility. If a guilty plea is entered or a trial is conducted, a sentence is decided upon and confinement in Federal Prison System is likely. The elements of the Federal justice system described above are strongly interwoven with our efforts at international narcotics control, drug interdiction, and the gathering and dissemination of intelligence. The Department also participates in a variety of demand reduction activities. The drug related research, development, evaluation and assistance efforts of the Office of Justice Programs differ somewhat from other Federal law enforcement programs, but are carefully coordinated to address the needs of the criminal justice system. The Anti-Drug Abuse grant program assists law enforcement operational efforts by promoting street level techniques that have proven effective.

I will summarize some of the Department's 1991 initiatives related to drug control by component.

DRUG ENFORCEMENT ADMINISTRATION

For 1991, the Drug Enforcement Administration is requesting an appropriation of $700 million, an increase of $151.3 million over the amount made available in 1990. This will provide more agents and support personnel to support both domestic and foreign operations.

The largest portion of the increase, 413 positions and $38.7 million will be directed at enhancing domestic enforcement and efforts in 15 major drug importation and distribution centers. Fully funding the Special Enforcement Operations Program established in 1990 to target and immobilize major trafficking organizations will require an additional 37 positions and $3.7 million. An additional 22 positions and $4.9 million will be provided to the Foreign Cooperative Investigations Program to expand 13 existing oversees offices and open a new office in Argentina. Another $10 million will go to assist State and local governments in marijuana eradication activities. Also, 45 positions and $8.8 million will be provided for nine State and Local Task Forces.

As these front-line activities expand, there is a critical need to provide adequate support for them. Clearly, training, intelligence specialists, and laboratory services are needed to support the increased number of agents. Those who have visited the El Paso Intelligence Center have been impressed with its efficiency, but this effort must be complemented by more direct operational support from intelligence specialists operating out of DEA's many field offices. Increased funding for radios, research, aircraft purchase and maintenance, and the relocation of DEA's airwing facility are important if we are to adequately support an ever more sophisticated war on drugs. Finally, resources to implement the Chemical Diversion and Trafficking Act of 1988 are essential if we are to keep drugs of therapeutic value in legitimate channels.

The budget justifications address these requests in more detail but the efficiency of the Drug Enforcement Administration is as much dictated by the balance between programs as by absolute funding levels.

ORGANIZED CRIME DRUG ENFORCEMENT

One of the most successful efforts of the Government in fighting the war on drugs is found in the work of the Organized Crime Drug Enforcement Task Forces. Although Title I of the Anti-Drug Abuse Act of 1988 dictated that the Task Forces should be funded from a single appropriation, the Task Forces themselves date back to October 14, 1982, when President Reagan came to the Great Hall of the Department of Justice to announce his initiative to draw on the diverse skills of many agencies that dealt with the growing involvement of organized crime in illegal drug activities. The proposal received a hearty endorsement from the Senate and the Congress provided a single appropriation to support the Task Forces in both 1983 and 1984. Beginning in 1985, the Task Forces were funded by direct agency appropriations.

Each of the current 13 Task Force regions is headed by a U.S. Attorney who may draw on the skills of the Drug Enforcement Administration, the Federal Bureau of Investigation, the Immigration and Naturalization Service, the Marshals Service, the Internal Revenue Service, the Customs Service, the Bureau of Alcohol, Tobacco, and Firearms, the Coast Guard, and the Criminal and Tax Divisions of the Department of Justice.

With the additional $115 million requested in 1991, the Task Forces will undertake additional undercover operations, apply more agents to track aliens involved in drug trafficking, provide additional personnel to work on money laundering and financial crimes linked to drug trafficking, expand firearms investigations, provide more officers to capture narcotic fugitives, and bolster the number of attorneys prosecuting cases.

I would like to emphasize that cases must pass detailed scrutiny by all of the participating agencies before they are designated as Task Force cases. By their nature, the activities being investigated are long-term, high-level, complex, and require multiple investigative skills. The increase requested is linked with the designation of more and more cases.

ASSET FORFEITURE FUND

A key account linked to the national drug control effort is the Asset Forfeiture Fund. The idea of using the proceeds of illegal drug transactions to combat drug trafficking goes back a number of years, but implementation of a system to effectively accomplish this goal has been difficult. Our established program is popular and increasingly effective, as we continue to improve its management and operations.

In 1991, we estimate receipts of $500 million. Payments from the Fund are estimated at $372 million, of which $100 million would involve program-related expenses under the control of the Committees on Appropriations. At the present time we estimate that $128 million will be deposited to the Special Forfeiture Fund for use by the Director of the Office of National Drug Control Policy.

FEDERAL BUREAU OF INVESTIGATION

The budget request for the Federal Bureau of Investigation totals $1.64 billion in 1991, an increase of $141 million over the amount available in 1990.

Before proceeding to discuss the major items in the budget request, I must take a moment to discuss a problem that held up the delivery of our budget documentation. As you know, both houses of Congress passed a bill on November 13, 1989 changing the basis for paying administratively uncontrollable overtime. The President signed this bill, which became Public Law 101-173, on November 27, 1989. This cost, of course, had not figured in our original budget request for 1991, but since it became law we had to make the necessary adjustments. In all our law enforcement components, there are substantial increases in overtime costs, but the largest cost occurs in the FBI because it has the most agents and a larger proportion of its employees in the higher grades where the cost increases were greater. Without an increase in our total allowance, the cost had to be absorbed somewhere. After the President released his budget, we concluded that 559 FBI agent positions and workyears simply could not be sacrificed to pay for these increased overtime costs. Some other solution had to be found. It took a while to work this out, but I think we have found a reasonable solution for the FBI and the two other major law enforcement components involved.

The budget justifications you have received avoid the sharp agent reductions announced in our January 29, 1990 Press Release.

The modified budget request focuses new resources for the same initiatives previously addressed. Instead of filling new positions midway through the fiscal year they would tend to be filled only in the last quarter. In the war against drugs, an additional 333 positions and $19 million will be used to enhance field investigations and provide the associated investigative support, undercover operations and make informant payments. For ferreting out the growing threat of Asian organized crime an additional 172 positions and $4 million is needed. Other high priority field investigative activities would receive 205 additional positions and equipment for an additional $35.5 million. The largest single increase focuses on white-collar crime where 440 positions and $12.4 million will be used to augment the current program. The additional resources will be applied against defense procurement fraud, bank fraud and embezzlement, fraud by wire, and abuse of the bankruptcy statutes. Smaller, but still significant increases are proposed for training, forensic services, computer support, technical field support and equipment, and records management. Many of the new initiatives will be funded by offsetting reductions in a variety of other functions and by resources freed-up from non-recurring, one-time expenses.

IMMIGRATION AND NATURALIZATION SERVICE

For the Immigration and Naturalization Service, the 1991 "Salaries and expenses" budget of $884 million is $42 million higher than the $842 million provided in 1990.

Enhancements for the Border Patrol total 200 positions and $16.3 million. Conversion of temporary immigration inspector positions to permanent positions increases the number of permanent positions by 104 at a cost of $1.3 million.

Construction proposals totalling $17.2 million will permit the expansion and security upgrading of the Krome, Florida Processing Center, allow construction to begin on a large border checkpoint at San Clemente, California, fully fund two new border patrol stations on the Southern border and add two additional checkpoints at Marathon and Alpine, Texas.

An increase of $8.4 million is needed to purchase additional vehicles.

These increases are largely offset by decreases in personnel and the transfer of $13.1 million in data processing and communication costs from appropriated funds to the Immigration Examinations Fee account where they more properly belong.

LEGAL ACTIVITIES

The litigation and other legal work in the Department is conducted by the staff supported from three salaries and expenses appropriations -- U.S. Attorneys, General Legal Activities and the Antitrust Division. The Fees and Expenses of Witnesses appropriation provides the resources necessary to pay expenses for witnesses who appear on behalf of the Government.

U.S. ATTORNEYS

The U.S. Attorneys are the front line of our legal arsenal. In each of the 94 judicial districts they prosecute criminal offenses, represent the Government in civil actions, and initiate proceedings to collect fines, penalties, and forfeitures. Combatting financial institution fraud became a prime issue in 1990, but, in terms of overall impact, it was the President's June 27, 1989 amendments to combat violent crime that really lifted the horizons for the U.S. Attorneys. These amendments included a request for 1,600 positions and 800 workyears. In 1991, the budget request focuses on funding most of the newly authorized positions for the full year. The 1991 request of $628 million includes $72 million for this purpose. In addition, the budget request includes the transfer of 186 positions and $13.6 million from the Criminal Division to the U.S. Attorneys, a change associated with the Organized Crime Strike Forces. The remainder of the net increase of $109 million requested for the U.S. Attorneys is accounted for by mandatory increases and other cost adjustments.

GENERAL LEGAL ACTIVITIES

The various legal divisions and other components funded from the General Legal Activities appropriation were provided 3,570 positions and $295 million in 1990. After the transfer out of 186 positions and $13.6 million from the Criminal Division and other base change adjustments, the continuation of the 1990 program into 1991 would require 3,342 positions and $310.1 million. The request for 1991, however, includes a number of new initiatives that bring our requirements up to 3,538 positions and $338.5 million.

Last year, you may remember, the Department undertook a major initiative to uncover financial institutions fraud. Fifty additional positions were requested for the Criminal and Tax Divisions to initiate financial institution fraud cases. Including the work of the United States Attorneys and the Federal Bureau of Investigation, we applied almost $50 million to this program. In 1991, the work of the Tax Division will be expanded and the Civil Division will be involved more heavily in financial institution fraud cases. The Civil Division pursues cases to uphold the new regulatory structure for financial institutions and secure the Government's assets in bank failures, requiring the infusion of 60 positions and $1.3 million for automated litigation support.

The demand for a better environment and the mandate to enforce new statutes results for in a request of $9 million more for the Land and Natural Resources Division. This includes 47 positions and $2.3 million to address the increasingly complex nature of environmental litigation as well as an increase of $4.3 million for the Division's automated litigation support activities.

The work of the Civil Rights Division is also expanding. Last year we wrestled with establishing an Office of Redress Administration so that the Department could make payments to 60,000 or more persons of Japanese ancestry interned during World War II. In the 1991 budget, the focus of the Division shifts more toward the enforcement of voting laws and the implementation of the Fair Housing Act Amendments of 1988.

We also believe that the chronically overworked Civil Division needs more resources to handle appeals from the newly established Court of Veterans' Appeals, recover Medicare overpayments, and litigate cases of national importance in such areas as entitlements, the population census, and drug testing.

Additional funds are included in the budget for office automation and automated litigation support. These continuing initiatives will enable the Department to more effectively compete with law firms hired to challenge Government interests.

ANTITRUST DIVISION

During the 1990 budget cycle, a major change was made in the way the Antitrust Division is financed. Instead of relying on appropriated funds, the Division will receive up to $20 million in receipts generated by a new provision in the 1990 appropriations act that sets a fee of $20,000 to accompany each premerger notification filing required by the Hart-Scott-Rodino Antitrust Improvement Act of 1976. Fees are now being collected by the Federal Trade Commission and divided equally between the Commission and the Antitrust Division. Current trends in the collection of the fee suggest that filing are falling below anticipated levels. We are monitoring this situation closely to address any possible shortfall. If the increase of $1.9 million in appropriated funding is approved and receipts do not fall short of the estimate, we believe the total resources for the Division in 1991 would exceed $53.7 million.

The 1991 request also includes proposed legislation that would have the Antitrust Division assume certain responsibilities now entrusted to the Interstate Commerce Commission relating to rail mergers. The cost of this function is almost $1.4 million.

FEES AND EXPENSES OF WITNESSES

Fees and expenses are paid to witnesses who appear on behalf of the Government in cases in which the United States is a party. The costs incurred by this appropriation are driven principally by the cost of paying expert and fact witnesses and the number of witnesses admitted to the Government's witness protection program. This appropriation also pays for mental competency examinations, private counsel to represent Government employees sued for actions taken while performing their official duties, and the compensation of victims for crimes committed by protected witnesses.

In 1991, the request for this appropriation is $70.6 million, an increase of $14.6 million over the 1990 adjusted appropriation. The bulk of the increase, $10.9 million, is to allow the Department's growing litigation staff to compete with well-funded opposing counsel for expert witness services. The increased cost of providing subsistence, housing, and medical services to protected witnesses is estimated at $3.3 million. The remainder of the increase is for private counsel.

U.S. TRUSTEES SYSTEM FUND

The Bankruptcy Judges, U.S. Trustees, and Family Farmer Bankruptcy Act of 1986 provided for the nationwide expansion of a pilot program to administer bankruptcy cases that first became operational in 1980. Beginning in 1988, the program became totally self-financing, but under the enabling legislation all expenses of the Fund are charged to the allocation of the Committees on Appropriations.

The 1991 request of $65.7 million provides for 929 positions. The requested increase of $5.6 million over 1990 includes a program increase of $1 million which will provide more vigorous audit coverage of private trustees by contractors. The remainder of the increase is for mandatory adjustments.

UNITED STATES MARSHALS SERVICE

Like many other components of the Department, the increases requested for the Marshals Service in 1991 are heavily driven by the war on drugs. The entire Assets Forfeiture Fund and the cost of managing forfeited assets is linked with the drug problem. For the Salaries and Expenses and the Support of U.S. Prisoners appropriations it can be argued that no increases would be necessary if we felt that drug offenders were not dangerous and could be relied on to return for trial if released on bail. The wisdom of the Administration, the Judiciary, and the Congress tells us that drug traffickers and many drug users flaunt not only our general system of values but the legal system as well.

As a result, the $288.5 million requested for the Salaries and Expenses appropriation is 21.3 percent higher in 1991 than in 1990. Potential violence requires the Administration to request an additional 99 positions and $15.8 million to protect the courts, provide the staff necessary to manage an increase in the number of protected witnesses, and guarantee prisoner security in courthouses. An additional 55 positions and $13.3 million is needed to transport more prisoners to progressively remote detention facilities. Managing the growing stock of seized assets requires another 134 positions and $6.2 million. The other big expense is linking the whole system together with the necessary automatic data processing and communications, an expense that will increase by 23 positions and $6.2 million. There are other changes but these are the main thrust of the 1991 request.

SUPPORT OF UNITED STATES PRISONERS

One of the Department's most rapidly growing accounts is Support of United States Prisoners. For 1991, the request is $193 million, $34.6 million, or 21.8 percent over the 1990 funding level and a 75 percent increase over the 1989 level. The request includes $178 million for the Marshals Service to contract with State and local jails to detain Federal prisoners before and during their trials. The remaining $15 million will be used to expand or renovate detention facilities in exchange for guaranteed jail space for Federal prisoners at jails located near Federal courthouses. There appears to be no end in sight to the competing need for jail space by Federal, State, and local jurisdictions.

FEDERAL PRISON SYSTEM

The size of the Federal Prison System is dictated mainly by the number of prisoners. Last year, when I was before this Subcommittee there were about 46,800 prisoners in Federal institutions. Today, there are over 55,000. The projection for 1991 is 62,450 prisoners in 66 institutions. In addition, approximately 7,100 sentenced prisoners will be housed in contract facilities, principally Community Treatment Centers. Despite the infusion of about $1.5 billion in construction funds in 1990, we will still need substantial resources over the next several years to bring overcrowding to manageable levels.

Not too many years ago, I understand that it would have been fairly easy to enumerate new prison projects, report on the status of previously approved projects, and briefly describe when new facilities would be opened. Today, I must settle for telling you that we are requesting approximately $374 million to construct and modernize prison facilities. The plan includes one major, new 1,960 bed prison complex that incorporates a maximum security prison, a minimum security prison, and a prison camp in the Northeast Region. Another 1,700 beds would be obtained by the acquisition and conversion of surplus military facilities. Construction of seven detention facilities and the expansion of six existing facilities, together with the other projects described above, would provide an additional 6,175 beds. Within the Buildings and Facilities request, major renovations and repairs would be made to existing institutions.

New construction is essential to handle the increasing prison population, but in 1991 we must rely on the increased utilization of already authorized facilities. For immediate needs we must look to what we can do with our Salaries and Expenses appropriation. Here we seek 22,269 positions and $1.372 billion, an increase of 4,798 positions and $233 million. A large portion of the dollar increase is associated with mandatory cost adjustments, but significant new resources are planned in other areas. To expand staffing at existing, overcrowded institutions, an additional $91.6 million is needed to fill 4,000 new positions. The next major increase relates to activating new facilities. With $49.6 million and 883 positions, we plan to provide 3,315 additional beds at a large number of institutions. Providing food, medical supplies, clothing and other prisoner care services to an average daily population projected to increase from 56,400 inmates to 62,450 inmates in 1991 will cost another $25.5 million. Other changes relate to initiating electronic monitoring for low-risk inmates, financial management, and management productivity improvements.

OFFICE OF JUSTICE PROGRAMS

Today, as many State and local governments are overwhelmed with drug activity, the National Drug Control Strategy has responded by proposing the infusion of Federal funding. When President Bush took office, the 1990 budget request for the Office of Justice Programs stood at $96.3 million. During the 1990 budget cycle, both the Administration and the Congress pushed for significantly higher funding levels. The budget request you have before you for 1991 stands at $613.6 million, more than six times the initial 1990 request. Nearly 80 percent of this, or $490 million, is for the State and Local Narcotics

Control and Justice Assistance Improvement grants authorized by the Anti-Drug Abuse Act of 1988.

Although the Anti-Drug Abuse program dominates the requested funding, the Administration continues to provide steadfast support for law enforcement research and statistical programs. In 1991, the National Institute of Justice is requesting $24.5 million including a program increase of $1.8 million to develop an effective less than lethal weapon. The Bureau of Justice Statistics request is for $23 million including program increases totalling over $1.9 million, the latter amount including the census of jail inmates.

The $8 million request for the Missing Children program doubles the amount provided in 1990. This increase is designed to allow State and local governments to enhance their response capability.

One segment of the Juvenile Justice program merits special support. Formula grants would be eliminated but $7.5 million would be designated to support the High Risk Youth program that addresses problems of gangs and drugs as they interact with the nation's juvenile justice system. Grantees would have to provide a 50 percent hard cash match.

The request also includes $9,750,000 in Federal funds to support the Regional Information Sharing System. The intent of the request is to maintain the program at the $13 million level on the condition that the Federal share in these projects not exceed 75 percent. Although the seven involved projects provide for the useful exchange of information, the beneficiaries are primarily State and local law enforcement agencies.

The Public Safety Officers' Benefits program achieved the status of independent appropriation funding in 1990. The $26.1 million request is slightly higher than the amount available in 1990 because benefits are linked to the Consumer Price Index.

GENERAL ADMINISTRATION

The $101 million request for the General Administration appropriation is only slightly above the $96.5 million provided in 1990. Mandatory increases of $7.3 million exceed the net increase of $4.6 million because of rather large savings in several areas.

As I announced last year, I intend to keep overhead costs down so that more resources can be allocated to front line activities. Bureaucratic layering has been reduced and I intend to continue to look for savings in the same way I did when I was Governor of Pennsylvania.

A few program increases, however, are necessary. Five positions and $580,000 in new resources are needed primarily to strengthen our ethics and equal employment opportunity efforts.

Finally, resources are required to consolidate the Department's major Washington area offices and to produce architectural and engineering plans to renovate the Main Justice and the Home Owners Loan Buildings. The consolidation program, which is designated as Facilities Program 2000, will be accomplished over a 10-year period. Planning for the renovation work is at an advanced stage. The 1991 funding request is for $970,000.

Before closing the discussion on General Administration, I would like to remind you of a supplemental request to extend until the end of 1992 our program to use private contractors to collect debts owed the Government.

INSPECTOR GENERAL

Last year we asked for our first appropriation for the Office of Inspector General, which was established by the Inspector General Act Amendments of 1988. In October 1989, the Office transmitted its first Semiannual Report to the Congress.

During the time following its establishment on April 14, 1989, until the end of 1989, the Office relied on funds transferred from other appropriations. In 1990, it will have available $20.5 million in funds from its own appropriation and almost $2.4 million in reimbursements.

Bringing together some rather diverse functions from the Department's central Audit Staff, the Immigration and Naturalization Service, the Marshals Service, the Drug Enforcement Administration, and the Federal Prison System was not easy because the missions of the various components were very different and therefore difficult to integrate into a single organization working in 14 metropolitan areas. Inadequate funding to maintain existing functions required us to approach the Congress for the transfer of additional resources just to survive 1990.

As the first Inspector General assumes his duties, he will find a viable organization with four functional elements -- audit, investigations, inspections, and management and planning. He should be able to function well with a requested budget for 1991 of $28.4 million, an increase of 84 positions and $7.8 million over the resources provided in 1990.

Although the new Inspector General must determine his own priorities, the budget includes 50 positions for investigations, 20 positions for audit, and 14 positions for management and administration.

CONCLUSION

Except for the Community Relations Service and the National Institute of Corrections, both of which have small decreases proposed for 1991, I believe I have covered all the Department's activities that require the attention of the Committees on the Judiciary and Appropriations. Again, I would like to thank everyone who helped to deliver the Administration's 1990 appropriation request and I look forward to 1991 as a year in which the administration of justice will continue to rank as a high priority for the 101st Congress.

COMMUNICATION INDUSTRY'S ANTI-DRUG EFFORT

Mr. **Smith**. Well, thank you, Mr. Attorney General. We are glad to have you back and to have your views of the Department's activities and your anticipations for the coming year.

We have a number of questions, but before we start, Mr. Regula wanted to introduce somebody.

Mr. **Regula**. Thank you, Mr. Chairman.

Mr. Attorney General, you just met earlier two members of the audience that are part of the Ohio Broadcasters Group that are in town and I wanted to tell you what that association has done.

Last night, in the State of Ohio, the television and radio industry gave 2 hours or more of prime time to the whole drug issue as part of an education program so that the State in effect was blanketed with programs on the importance of drug education, the problems that it creates for families, and so on, and the industry produced these for television and radio broadcast in the State.

I think it was a tremendous program effort. They showed our Ohio delegation some of the work they had done at the dinner last night and it was quite impressive.

So I wanted to pass that on since you mentioned here the efforts that were being made in terms of education and I hope that other States will pick up on what has happened in Ohio.

Thank you, Mr. Chairman.

MISCONCEPTIONS IN THE DRUG WAR

Mr. **Smith**. Well, that fits in well with something that I wanted to say at the beginning. There are two unfortunate misconceptions with regard to the war on drugs. One is that people have established a goal of winning the war on drugs. We do not win wars, no war, what you do is reduce the losses that you would have had had you not fought the war. Their goal is to win the war in 5 years or 10 years. It is not going to be completely won, but the important thing is would it have been worse not to have fought the war.

The other misconception is, and it fits right in with what Mr. Regula just brought up, there is a tendency to want to measure what we are doing in the different fields, education, rehabilitation, law enforcement, and so forth, by the number of dollars being spent in that particular segment. I am convinced that the principal source of education in this war on drugs is going to have to be through communications and we cannot reach a broad segment of our population any other way. The cost is relatively cheap, but for every one that does not become a casual user, or perhaps an addict later. For everyone of them that does not have to be prosecuted we might save a half a million dollars in the enforcement area. It is terribly important, but we cannot measure the relative importance of prosecutions and incarceration and the rehabilitation after they are in prison, the parole system and so forth by the numbers that are spent. It just costs a lot more money.

NEW PROGRAMS VS. ANNUALIZATION IN BUDGET

That gets us down to your budget. It does seem like a lot of money. It is a lot of money that we are spending, but everything is relative. It costs a lot of money to prosecute someone and handle them after they have been convicted.

The budget that you have presented to us is big compared to 2 years ago. It is up over what it was last year, but the increase is necessary to annualize the program that was begun last year and that is very considerable. Some of these people that we put on last year in DEA, FBI, and other agencies will only have worked in fiscal year 1990 maybe a month, 2 months, 3 months. Next year they have to have the full year. You have to annualize it.

What I am really getting at is how much of your increase was for annualization of that budget to maintain the same program level? And then, how much are you requesting in program growth?

As I have analyzed it, most of the increase you have asked for, that was approved by OMB, was really for annualization of the program that we are putting into effect in 1990.

Mr. THORNBURGH. I think there are several distorting factors in any budget presentation and I might mention a couple of those prior to specifically dealing with your question, Mr. Chairman.

One of those, of course, is the fact that in the Federal budget there is no separate capital account. Therefore, the $1.4 billion contained in last year's budget for new prison construction is treated precisely the same for accounting purposes as the dollars paid in salaries and benefits to agents and prosecutors. So that is the first corrective factor in looking at the differential between the current year's budget and the budget that is proposed for next year.

Second, as you point out, there is an increment always of dealing with the baseline budget needs that were brought on stream last year, in many cases, as you have also pointed out, for substantially less than the full year. And obviously having an agent or a prosecutor on board for 1 month is going to cost substantially less than for the total year, the 12-month period.

The third factor is in the reference I made to the administratively uncontrollable overtime amendments that were passed last year, which have to be absorbed within this year's budget in the FBI, DEA, and INS. That amounts, in the aggregate, to a fairly substantial figure.

And the fourth, of course, is the need to absorb the sequester that occurred last year to make up for that and to take into the account the pay increases.

But with all that said and done, I think it is important to note that in the areas about which we have major concern there have been actual increases—in the number of agents in the FBI, agents in the Drug Enforcement Administration, the Border Patrol, in the Bureau of Prisons, and perhaps of singular importance, in the number of prosecutors that our United States Attorneys will have available to handle not only an increased flow of cases, but a greater sophistication in the cases involved.

I came here in, as you will recall, August of 1988, to assume the Office of Attorney General. From that time until today, we have had an increase of 50 percent in the number of Federal prosecutors available to handle cases in the high priority areas which the President has identified. That has been supplemented by proportionate increases in slightly varying proportions in our investigative talent and, of course, with the vast increase authorized in this year's budget for the prison construction.

Mr. SMITH. Well, there has been in the request an increase in the number of FBI agents and DEA agents, for example, dedicated to drugs, but my analysis of the budget is that while you have asked for 95 additional agents for drugs, it took 70 away from your other FBI activities.

Mr. THORNBURGH. That is right.

Mr. SMITH. So we are talking more about drugs, but you cannot take those 70 away. They have important responsibilities in this whole crime situation.

REQUEST TO OMB

So my next question is, what did you ask of OMB? Where were these cuts made?

Mr. THORNBURGH. Well, the cuts really resulted from the AUO requirements and the sequester requirements that the Office of Management and Budget did not single out the Department of Justice for in treatment, but which had to be absorbed.

Mr. SMITH. But what was your total dollar request to OMB?

Mr. THORNBURGH. The reason I cannot give you a quick answer is that is history.

Mr. SMITH. Somebody there can help you.

Mr. THORNBURGH. The Department request to OMB totaled $9,022,168,000.

Let me put it this way, Mr. Chairman, when we first tried to fit the OMB figures into our needs, one of the scenarios we looked at would have called for some fairly substantial reductions in priority areas, in the FBI in particular because they bore the brunt of the AUO costs.

I found that unacceptable and directed the people working on our budget to cooperate with the FBI to come up with alternatives as a management initiative, with the stricture that we had to operate to ensure that the President's priorities were honored by the maximum amount of increases in the area of drugs, white collar crime, and organized crime.

Mr. SMITH. I understand that.

Mr THORNBURGH. And that is what is presented to you today. There had been some options talked about that would call for a decrease in those agents and I simply would not countenance that.

Mr. SMITH. Well, I understand. I mean the Department makes their request to OMB and OMB considers that and the requests of all the departments, and they tell you that you have got to get along with less money. When the Committee makes our 302(b) budget allocation we need to know what things were cut out because we might do some shifting between departments and agencies.

Mr. THORNBURGH. I think we have helped you out by shifting out own resources into the areas that we have, I think, mutually identified as our priorities.

[The following information was submitted for the record:]

DEPARTMENT REQUEST TO OMB

The 1991 **General Administration** (GA) Congressional submission reflects reductions of 17 positions and $9,516,000 from the level requested of the Office of Management and Budget (OMB). These reductions include $2.4 million associated with adjustments to base such as the 50-percent absorption of the 1991 pay increase ($882,000); the effect of cuts in the final 1990 appropriation (8 positions and $1.9 million); the effect of the 1990 sequester ($1.3 million); the Administration's efforts to reduce Federal spending (5 positions and $3.5 million); decreases of 4 positions and $127,000 associated with A-76 savings; and the anticipated FTS 2000 savings ($259,000).

The 1991 **Office of Inspector General** (OIG) Congressional submission includes reductions of $1,094,000. The reductions are as follows: 50-percent absorption of the 1991 pay increase ($333,000); absorption of administratively uncontrollable overtime (AUO) increases ($546,000); and other adjustments to base totalling $215,000.

The 1991 request for the **U.S. Parole Commission** includes a net reduction of 12 positions and $1,527,000. However, the President's budget also includes cuts of 5 positions and $165,000 taken during the 1990 budget process for a total reduction of 17 positions and $1,692,000. This reduction was for adjustments to base of $446,000 including the 50-percent absorption of the 1991 pay raise ($54,000), FTS 2000 ($85,000) and space rental cuts ($131,000); additional phase-down costs (12 positions and $1,064,000); and elimination of program increases for the Intensive Supervision Program (3 positions and $100,000) and the Monitoring Program (2 positions and $82,000).

The Department's 1991 OMB request for the **General Legal Activities** (GLA) appropriation totaled $381,850,000, while the request to Congress totaled $338,546,000 for a reduction of $43,304,000. The adjustments are described below.

- The Congress reduced the 1990 request for GLA by $5,491,000 in the enacted 1990 appropriation and a 1990 program supplemental for $6,350,000 was denied. The 1991 base request in the OMB submission included funding for these requests.
- Mandatory increases experienced a net reduction of $11,258,000. This included denial of requested increases for executive pay, within grade increases, GSA rent increases, building maintenance, general pricing levels, security investigations and annualization of program supplementals. Also included are reductions in funding for FTS 2000 savings and increases in mandatory funding for the 1991 pay raise and for SES pay.
- The transfer of the Organized Crime and Racketeering Strike Force field units from the Criminal Division to the U.S. Attorneys offices accounts for a decrease of

$13,600,000. The permanent sequester of funding imposed through the 1990 reconciliation process reduces the 1991 request by $3,587,000.

- An program reduction for A-76 productivity savings amounts to a reduction of $75,000.

- Adjustments in requested program enhancements comprise the remaining $2,943,000 difference between the OMB and Congressional requests. These include an increase of $539,000 in the Civil Division request, a reduction of $1,657,000 in the Lands Division enhancement, an increase of $1,299,000 for the Civil Rights Division, a decrease of $16,000 for INTERPOL, and a decrease of $3,108,000 for Legal Activities Office Automation.

The Department requested 564 positions and $51,372,000 for the **Antitrust Division.** The Congressional budget shows 387 positions and $33,730,000, a reduction of 177 positions and $17,642,000. OMB denied the requested program increase of 20 positions and $633,000. Half of these positions were for the Division's Cartel program; the other 10 positions were for the Division's Structure program. In addition, 157 positions and $15,000,000 in associated funding is non-appropriated because the Division was given authority to collect Hart-Scott-Rodino premerger filing fees. The remaining difference of $2,009,000 is for denied adjustments-to-base, including a permanent sequester of $405,000.

The Department requested $641,113,000 from OMB for the **U.S. Attorneys** appropriation for 1991. Of this request, $628,095,000 was approved for the President's Budget to the Congress. The following breakout displays the $13,018,000 difference between requests.

- A decrease of $4,807,000 for half of the 3.5 percent pay raise proposed by the Administration for 1991.

- An increase of $3,053,000 for 1991 costs for the 1990 pay raise for senior executive service employees.

- An increase of $1,982,000 for GSA space and related services requirements.

- Decreases totalling $20,690,000 for other mandatory requirements. This includes amounts for administrative salaries, general pricing levels, security reinvestigations, within-grades, and building maintenance ($12,152,000) as well as a reduction to adjust for the permanent sequester ($6,697,000). Also reduced was funding for the FTS 2000 ($1,841,000).

- An increase of $13,600,000 for the transfer of the Organized Crime Strike Forces from the Criminal Division.

- A program decrease request of $6,156,000 to meet the budget levels established by the Administration.

The **U.S. Marshals Service** (USMS) 1991 resource request to Congress reflects a reduction of 211 positions and $22,049,000 from USMS's request to OMB. Of this amount, $9,752,000 is associated with unfunded adjustments to base, including 50 percent of the 1991 pay increase ($1,852,000). In addition to these absorptions, the following program increases were denied:

- Seized Asset Management - 44 positions and $2,144,000 for additional staff for seized asset management units in the districts and at National Asset Seizure and Forfeiture program offices.
- Prisoner Transportation and Detention - 13 positions and $2,414,000 for additional support to the National Prisoner Transportation System, additional Deputy U.S. Marshals to perform required jail inspections and in-district transportation of prisoners, and funds for the purchase of vehicles.
- Protection of the Judicial Process - 18 positions and $769,000 to enhance witness and judicial security.
- D.C. Superior Court - 21 positions and $483,000 for additional staff at the D.C. Superior Court.
- Management and Administration - 22 positions and $1,051,000 for additional staff in the areas of personnel, budget, finance and resource analysis.

OMB decreased 87 positions and $5,400,000 to the Fugitive Apprehension program. OMB also decreased 6 positions and $36,000 for A-76 management and productivity improvements.

The 1991 **Support of U.S. Prisoners** request to Congress reflects a reduction of $10,826,000 from the OMB request. Of this amount, $5,826,000 is associated with a rising jail day rate and $5,000,000 is associated with the Cooperative Agreement Program.

The Department's 1991 OMB request to for the **Fees and Expenses of Witnesses** (FEW) appropriation was $76,629,000. The request to Congress is $70,628,000, a reduction of $6,001,000.

- The total mandatory increase of $1,783,000, which included an increase of $1,500,000 for expert witnesses for the Exxon-Valdez case, was denied. Also, a permanent sequestration of $757,000 was taken.
- OMB reduced funding of the requested program increases as follows: Expert Witnesses - $3,459,000 and Private Counsel - $2,000.

The Department requested 120 positions and $31,121,000 for the **Community Relations Service**. The Congressional budget shows 118 positions and $28,172,000, a reduction of 2 positions and $2,949,000. OMB denied a program increase of 2 positions and $63,000 for the Prevention and Conciliation of Community Disputes program to provide 2 additional conciliators to its Seattle/Northwest region, Region X. The remaining $2,886,000 difference is for denied adjustments-to-base, including a permanent sequester of $404,000.

The budget request for **Organized Crime Drug Enforcement** increased by a total of $46,836,000 including a net $539,000 increase in mandatory expenses, a $36,837,000 increase in funding for drug law enforcement activities and a $9,460,000 increase for drug prosecutions.

For 1991, the final request to Congress for the **Federal Bureau of Investigation** (FBI) reflects a total reduction of 2,886 positions and $332,138,000 from the OMB request and includes a reduction of 856 positions (336 agents) and $173,875,000 to requested program enhancements.

The FBI's base level was reduced by $116,348,000 including the following: $15,000,000 for construction of the Engineering Research Facility (ERF) - Pod B; $10,000,000 for the relocation of the Washington Metropolitan Field Office; $14,160,000 for half of the 1991 pay raise; $20,941,000 for the 1990 sequester; 38 positions and $1,844,000 to meet the Administration's targeted budget deficit levels; and $321,000 in savings associated with the replacement of 23 agents in administrative positions at headquarters with non-agents. The FBI also did not receive funding for various mandatory increases, including GSA recurring services, building maintenance, and general pricing level adjustments.

Program Increases Denied: In order to fund a portion of the increased costs of AUO, all positions requested in 1991, except those for the Drugs program, are lapsed at 75 percent, rather than the typical 50 percent. New positions requested for the Drugs program are lapsed at 65 percent. OMB has agreed to provide full annualization of these positions in 1992. Due to the new lapse, personnel funding for program enhancements reflected in the request to Congress is less than that requested to OMB. This increased lapse rate is reflected in the program reductions identified below:

- Other Field Programs - Total increases of 244 positions (114 agents) and $32,890,000 were denied, including additional resources for the Bureau Applicant program and for establishing a legal attache in Madrid, Spain.

- Organized Crime program - Increases totaling 188 positions (89 agents) and $18,768,000 were denied, including the following: 100 positions to conduct additional Civil RICO investigations; 86 positions requested to support intensified efforts against Asian Organized Crime; $2,532,000 for confidential case expenditures; 2 positions to establish a legal attache in Bangkok, Thailand; $849,000 for aircraft operations; $696,000 for public source information subscription costs; and $1,600,000 to increase the number of offices supported by Special Operation Groups/Off-premise sites.

- Drugs program - Increases of $3,348,000 were denied. OMB supported the FBI's full request for this program. The difference between the FBI's request to OMB and the current request results from lapsing positions at 65 percent instead of 50 percent in order to absorb the increased costs of AUO.

- White-Collar Crime program - Increases denied total 165 positions (95 agents) and $20,536,000, including 102 positions for the investigation of environmental crimes, 55 positions for bankruptcy fraud, 8 accounting technician positions, and $214,000 for payments to cooperating witnesses.

- Training program - 2 positions and $3,916,000 were denied, including $1,307,000 to provide for 10mm pistol ammunition for increased firearms training and $450,000 for field firing-range construction.

- Forensic Services - Federal program - Enhancements of $4,507,000 were denied, in part, for the architectural design of a new FBI laboratory facility ($3,750,000) and to obtain explosives examination equipment ($254,000).

- Automated Data Processing and Telecommunications program - A total of 37 positions and $27,589,000 were denied. Requests not supported include: $14,000,000 for the procurement of intelligent workstations; $10,700,000 to replace headquarters equipment which has surpassed its life-cycle; and $1,600,000 for increased supply and maintenance requirements.

- Records Management program - Resources totaling 162 positions (38 agents) and $11,009,000 were denied, including the following: 30 document examiner positions for the Freedom of Information Privacy Act Section; 128 positions to conduct background investigations of contractors and 5-year reinvestigations of FBI employees with access to National Security Information; 4 document classification assistant positions; and $1,500,000 for optical disk storage hardware for automation.

- Technical Field Support and Equipment program - This program was denied 41 positions and $30,101,000. Included in this reduction were the following: $17,012,000 to construct ERF - Pod B; 32 field electronics technician positions; 9 support positions; and $11,208,000 for the replacement/expansion of the technical equipment inventory.

- Fingerprint Identification program - The FBI's request of $3,346,000 was denied. This funding was requested to purchase additional Automated Fingerprint readers and cameras for the Automated Identification System.

- Criminal Justice Data and statistical Services program Funding of $17,000,000 for the first-year costs of the National Crime Information Center 2000 project was cut.

- Executive Direction and Control program - All position increases were supported, but lapsing positions at 75 percent resulted in a reduction of $92,000.

- Administrative Services program - The request for 17 positions and $473,000 was denied. These resources were requested for contract, procurement, property management, and accounting areas to support increasing FBI field activities.

Program Decreases: In addition to the program enhancements denied, the FBI's 1991 budget includes decreases totaling 740 positions (including 252 agents) and $41,915,000. Program decreases are detailed below:

- Program decreases totaling 514 positions (including 227 agents) and $27,322,000 have been proposed in order to meet targeted budget deficit levels established by the Administration. These decreases are presented in the following table:

	(Dollars in Thousands)	
Program	Pos.	Amount
Other Field Programs	-235	-$12,528
Organized Crime	-47	-2,232
White-Collar Crime	-65	-3,255
Training	-11	-529
Forensic Services-Federal	-10	-489
ADP and Telecommunications	-26	-2,888
Records Management	-24	-796
Tech. Field Support and Equip.	-4	-1,295
General Law Enforcement Training	-8	-397
Forensic Services-Non-Federal	-4	-193
Fingerprint Identification	-43	-1,277
Criminal Justice Data and Statistics Services	-6	-195
Executive Direction and Control	-12	-575
Administrative Services	-19	-673
TOTAL	-514	-27,322

- A program decrease of 80 positions (including 25 agents) and $13,724,000 is also included to partially offset the $41,979,000 costs of increased AUO payments. This includes the following program reductions: travel ($1,000,000); confidential case funding in Other Field Programs ($1,000,000); conducting background investigations for the U.S. Attorneys as a reimbursable program as is the practice with other Federal agencies (80 positions (including 25 agents) and $2,655,000); and equipment funding ($9,069,000) including $1,064,000 for replacement vehicles,

$2,716,000 for ADP equipment, $3,630,000 for field investigative equipment, and $1,659,000 for field office furniture and related equipment. Reductions by program are as follows:

Program	Pos.	Amount
	(Dollars in Thousands)	
Other Field Programs	-80	-$6,521
ADP and Telecommunications	...	-2,716
Tech. Field Support and Equip.	...	-4,487
TOTAL	-80	-13,724

- The final program reduction is a decrease of 146 positions and $869,000 for A-76 management and productivity initiatives. The decrease is reflected in the Records Management (73 positions and $438,000) and the Fingerprint Identification (73 positions and $431,000) programs.

The **Drug Enforcement Administration's** (DEA) 1991 resource request to Congress reflects a reduction of 73 positions and $36,734,000 from DEA's request to OMB. Of this amount, 2 positions and $20 million for base level absorptions including 50 percent of the 1991 pay increase ($5,350,000) and the 1990 sequester ($7,772,000). The absorption of AUO costs ($13,826,000) was handled by reducing program increases associated with new positions. A portion of the modular costs associated with these positions for expenses such as rent, utilities, and purchase of evidence and payments for information, were lapsed by 50 percent. OMB has agreed to annualize these costs in 1992. In addition unfunded adjustments to base included mandatory costs for within-grades, executive salary increases, and foreign administrative support costs charged by the Department of State. Furthermore, OMB denied the following program increases:

- Domestic Enforcement - 19 positions and $958,000 for field administrative support for domestic field offices.

- DEA Laboratory Services - $8,000,000 to relocate the Special Testing and Research and Mid-Atlantic Laboratories into a common facility in the metropolitan Washington, D.C. area.

- DEA Training - $1,000,000 for an architectural and engineering study for the construction of a drug law enforcement training facility at the FBI Academy in Quantico, VA. In addition, OMB denied $300,000 to purchase 500 submachine guns.

- ADP and Telecommunications - $2,551,000 for ADP contractor support for maintenance operations and systems integration and $480,000 for 400 facsimile machines.

- Records Management - 2 positions and $98,000 to enhance DEA's Investigative Records activities.
- Executive Direction and Control - 11 positions and $586,000 for a staffing shortfall in legal activities.
- Administrative Services - 15 positions and $1,557,000 for general administrative support and resources for medical exams, the fitness program and employee assistance programs.

However, the Administration added program increases of 15 positions and $11 million.

In addition, OMB cut 39 positions and $227,000 for expected savings from A-76 productivity initiatives.

The **Immigration and Naturalization Services's** (INS) 1991 resource request to Congress reflects a reduction of 1,623 positions and $149,495,000 from the request to OMB. Of these reductions, 1,157 positions and $60,569,000 occurred when Congress funded the Adjudications and Naturalization program entirely through the Examinations Fee account. An additional 485 positions were cut because they could not be funded.

Of the remaining reduction of $88,926,000, $21,492,000 are related to base-level adjustments including $7,849,000 associated with absorption of the AUO increase and $9,929,000 with the 50-percent absorption of the 1991 pay increase.

The absorption of $7,849,000 in AUO costs was handled by reducing discretionary travel and the number of regional conferences held by INS, reducing permanent change-of-station moves by 25 percent, continuing implementation of the INS policy that agents stationed at headquarters and regional offices will not be eligible to receive AUO, and continuing implementation of the INS policy that reduces overtime (other than AUO) by 10 percent. Additional funding for AUO came from a $3,222,000 reduction in a program increase for the purchase of replacement vehicles.

Unfunded adjustments to base included mandatory costs for within-grades, executive salary increases, and foreign administrative support costs charged by the Department of State. In addition to these absorptions, the following program increases were denied:

- Border Patrol - OMB cut $10,846,000 to fund positions authorized by the Morehead Amendment to the Immigration Reform and Control Act of 1986. Offsetting this cut, INS received an additional 200 positions and $13,222,000 as part of the National Drug Control Policy Board's strategy.

  In addition, OMB reduced requests for low-light TV cameras by $3,260,000, for infrared night scopes by

$3,289,000, and mobile sensors by $1,358,000. These 1991 equipment reductions can be offset by $4,300,000 in supplemental funding received in 1989.

- Anti-Smuggling Program - 11 positions and $499,000 for additional special agents to be placed along traditional alien smuggling routes (e.g., New York City, Miami and Los Angles).
- Employer and Labor Relations - OMB reduced by $100,000 the program increase for enhancement of the INS public awareness program relating to the Anti-Discrimination provisions of the Immigration Reform and Control Act (Section 102).
- Training - $3,500,000 to fund 100 additional journeyman level training courses at the Federal Law Enforcement Training Center at Artesia, New Mexico.
- Data and Communications - $1,100,000 for nationwide expansion of the Automated Information System Criminal Alien Program.
- Construction and Engineering - OMB reduced the program increases for construction of a new Brownfield, CA border patrol station by $740,000 and of a new Ysleta, TX border patrol station by $700,000. OMB also denied $3,155,000 which would have allowed INS to buy out the leases of 5 existing Border Patrol stations.
- Administrative Services - OMB reduced the program increase for replacement vehicles by $8,319,000. Of this reduction, $3,222,000 was used to offset partially the increased cost of AUO.

OMB also required the following program decreases to meet budget targets established by the Administration and to align positions with the available funding:

	(Dollars in Thousands)	
	Positions	Dollars
Inspections	0	-$3,281
Investigations	23	-3,891
Anti-Smuggling	-14	-761
Detention & Deportation	0	-5,953
Employer & Labor Relations	0	-170
Refugees & Overseas	0	-916
Training	6	-97
Data & Communications	-40	-2,359
Information & Records Mgmt.	55	-1,316
Intelligence	-3	-110
Research & Development	0	-10
Construction & Engineering	-3	-197
Field Management	-13	-1,120
Legal Proceedings	-21	-1,200
Executive Direction & Control	-7	-283
Administrative Services	-43	-1,360
TOTAL	-60	-23,024

OMB required A-76 reductions of 110 positions and $643,000. This reduction was taken entirely from the Information and Records Management program.

OMB reduced the base for the Data and Communications program by $13,133,000 as a result of the Adjudications and Naturalization Program being entirely funded from the Immigration Examinations Fee Account in 1990.

OMB nonrecurred the $7,000,000 in resources provided by Congress in 1990 for the Machine Readable Visa Program and the Automated Fingerprint Identification Program.

The **Federal Prison System's** (FPS) 1991 request for their **Salaries and Expenses** (S&E) appropriation, reflects an increase of 1,915 positions and a reduction of $30,307,000. Of this amount, $13,849,000 is associated with the 1990 sequester and $9,408,000 is associated with the 50-percent absorption of the 1991 pay increase. The FPS S&E account also took base reductions of $21,443,000 for nondiscretionary increases including payroll items, GSA rent, GSA recurring reimbursable services, building maintenance, security reinvestigation, and general pricing level adjustment costs. However, these base reductions were offset by an increase of 2,000 positions and $20,000,000 for additional positions to address overcrowding. In addition to these absorptions, the following program changes were made:

- Population Increase - $2,360,000 of FPS resources associated with the population increase.

- Contract Confinement - $2,790,000 for the enhancement of community treatment centers.

- A-76 - A reduction of 85 positions and $457,000 for A-76 management and productivity savings was taken.

FPS's 1991 request for **Building and Facilities** (B&F) includes base reductions of $4,379,000 associated with the 1990 sequester and $602,000 with 50-percent of the 1991 pay increase. However, offsetting program increases cut the net reduction to 1 position and $859,000. The final request of 378 positions and $374,358,000 represents nearly the total B&F request.

FPS's 1991 request for the **National Institute of Corrections** (NIC) appropriation reflects a reduction of $773,000. Of this amount, $534,000 is associated with base level adjustments including $139,000 for the 1990 sequester and $33,000 for the 50-percent absorption of the 1991 pay increase. In addition to these absorptions, NIC will take a program decrease of $239,000 to meet targeted deficit levels that will affect the technical assistance, clearinghouse, research and training functions that NIC provides.

FPS's 1991 request for **Federal Prison Industries** (FPI) reflects a $20,000,000 denial in borrowing authority for FPI.

The **Office of Justice Programs** request to OMB included 315 positions and $276,023,000. The final allowance provided 345 positions and $613,590,000. The request and allowance for the mandatory Public Safety Officer's Benefits program is identical. The difference of 30 positions and $337,567,000 is reflected as follows:

- For the Drug Control and System Improvement Grant program, an additional $342 million was provided for State and local Anti-Drug Abuse grants.
- The allowance was reduced by $2,973,000 for requested mandatory increases including $425,000 for the absorption of the January 1991 pay raise.
- The allowance for requested program increases was reduced by only $63,000. However, this net reduction included an increase of $4 million for the Missing Children program and a decrease of $3,750,000 for the Regional Information Sharing System.
- Congressional action on the 1990 request resulted in a net reduction of $870,000 and an increase of 30 positions.
- The 1990 sequester reduced the request by $527,000.

PRISON FUNDING

Mr. **Smith**. Now it appears that one of the areas that you figured was a lower priority was prisons, although you have already told us that we are going to need 30 percent more space than we will have by 1995. It is apparent that additional prison space will be needed unless there is some new approach to this prison problem.

Is there some new approach to it, or are we just not starting as many prisons as we started last year?

Mr. **Thornburgh**. Well, the question in the prison area, of course, is always how much is enough.

Mr. **Smith**. Right.

Mr. **Thornburgh**. And clearly the $1.4 billion contained in this year's budget will be not spent all in this year. It will be stretched out over a 5 year period.

Mr. **Smith**. But if we do not have budget authority each year to start——

Mr. **Thornburgh**. I think the request this year is in the range of $370 million.

Mr. **Smith**. That is over $1 billion less than it was last year.

Mr. **Thornburgh**. Yes.

Mr. **Smith**. Well, are we to just have that big start last year and then temper way off, or are we going to continue——

Mr. **Thornburgh**. Well, the thinking there is that this year's figure be considered in view of this unprecedented commitment made during the current year. We will continue to monitor what the effect of that is in terms of reaching the goals——

Mr. **Smith**. But we already know that we are going to be short of our goal by 1995.

Mr. **Thornburgh**. I think that is probably true based on current estimates, but those are only estimates and I do not know that we could absorb in any useful way in this current budget year more appropriations than were made.

Mr. **Smith**. Of course, what we are talking about is largely budget authority and in the first year the outlays are very small. It does cut down on budget authority, but you have to get it started.

ALTERNATIVES TO INCARCERATION

Are there any alternatives in mind like monitoring prisons that will make some relief in this area?

Mr. **Thornburgh**. We have looked particularly at alternatives in areas that relate to prisoners that pose a lesser threat to the community. Frankly, those kinds of alternatives, boot camps and monitoring and what have you, do not apply to the 49 percent of the major drug offenders that we have in jail, nor do they apply to violent criminals.

The long and short of it is that we are going to need to continue to monitor our needs for new construction. It takes 3 years to build a prison. So we have this sizeable capacity that will be coming on stream and I can pledge to you that we will look for a careful assessment of our needs and this is not unique to the Federal Government. It is the same at the State and local level as well.

Mr. **Smith**. And you are pointing out that we are going to be far short of prison space in 1995 and what is already going on is that

1/ The final Department request to OMB amended the submission for the 1991 pay increase, administratively uncontrollable overtime, annualization of the 1990 Drug Strategy Supplemental, and costs for Employee Data Services, resulting in a total request of $9,022,168,000 they do not have enough prison space. Therefore, they have to let people out before they ought to be let out.

Mr. THORNBURGH. No.

Mr. SMITH. You do not think so?

Mr. THORNBURGH. That is something I do not think——

Mr. SMITH. Well, the judges tell us that they are. They have to take that into consideration. How crowded are the jails——

Mr. THORNBURGH. Well, I do not know how they are going to let them out since we have no parole procedures and——

Mr. SMITH. Well, that is the other problem. We are getting into sentencing guidelines. There are more and more minimum sentences. The two things are in conflict really.

Mr. THORNBURGH. I suppose if you look at the problem strictly on a snapshot of what today's situation is, you could theoretically authorize an infinite amount for new prison construction. But my hope is that we are going to see a turnaround in the drug situation over the next 5 or 10 years, that the trends that are just beginning to develop will in fact reduce the number of drug offenders that we will ultimately have to deal with, and that through careful monitoring we can be realistic in presenting to the Congress what the needs are on a year-by-year basis.

The assessment made jointly by the Administration and the Congress last year that produced this extraordinary authorization for the next 3 to 5 years is not necessarily the be all and end all, but I think it represents a fair assessment of what the needs may be.

Now, as I pointed out and you reminded me, the projections currently are that that will fall short of the goal of 30 percent overcrowding. And if that projection continues to hold true, then we are going to be faced with seeking additional authorizations.

Mr. SMITH. Well, as you know, it is popular here to suggest or pass laws that increase minimum sentences. Every time we increase the minimum sentence for somebody, it means somebody else will be let out of prison that should be during that extra period of time because there is not going to be the space.

Mr. THORNBURGH. I am not sure we have seen any evidence of that. We are concerned about the overcrowding problem, but the fact that people are being——

Mr. SMITH. The two things are in conflict. We have a shortage in prison space, and then we increase minimum sentences.

Mr. THORNBURGH. Well, part of that is, of course, reflected in the increased prison population we have now because those minimum mandatory sentences are now beginning to fall in in many of the cases, and I support them. I think they are good. I think that is the only deterrent capability you have if somebody knows they are going to commit a crime that they are going to jail for sure and that was the major thrust as you recall behind——

Mr. SMITH. Going to jail for sure for a limited number of years is more important than the possibility you will not even have to go to jail for a longer number of years. Do you agree?

Mr. THORNBURGH. Well, I think the whole thrust of the President's request for the additional funding last year was to provide a more certain environment with regard to those who commit crime.

If people can commit crime, and this happens in some of our major metropolitan areas at the State and local level, that there are two phenomena at work, excessive plea bargaining that leaves people off when they should be facing jail time, and early release.

Now neither of those phenomena presently affect the Federal system in my judgment, but they do create enormous pressures on that system with regard to the overcrowding that is being addressed by the additional prison construction.

PRISON CONSTRUCTION REQUEST TO OMB

Mr. SMITH. I have taken too much time before I yield to other members, but one last question on this.

In the area of prison construction, what did you ask of OMB? You got $375 million for budget authority. What did you ask of OMB?

Mr. THORNBURGH. The Bureau of Prisons requested $637,305,000 to the Department. The Department request to OMB was $375,217,000.

Mr. SMITH. So your judgment then was that $637 million was required?

Mr. THORNBURGH. I hasten to add that in each of these cases we have to conform to the overall budget priorities that OMB and you address.

Mr. SMITH. I understand.

Mr. Rogers.

PRISON CAPACITY

Mr. ROGERS. Mr. Attorney General, good to see you here again. We think you are doing a wonderful job as the Attorney General of our Nation, our chief law enforcement officer, and we wish you the very best.

Mr. THORNBURGH. Thank you.

Mr. ROGERS. On the Bureau of Prisons request, let me quickly deal with that with you as well. My understanding is the fiscal year 1990 funding that you now have for BOP will continue the capacity expansion program, increasing beds by an estimated 24 and a half thousand, which would be a 77 percent increase, if I am not mistaken; is that correct?

Mr. THORNBURGH. That is right.

Mr. ROGERS. The current rated capacity is 32,500 beds, rated capacity meaning what the facilities are designed to currently accommodate, and in addition, there are 8,500 more beds currently under construction. Your fiscal year 1991 proposal, correct me on this, will add 6,175 beds to the 24 and a half thousand increase received in 1990; is that correct?

Mr. THORNBURGH. Yes.

Mr. ROGERS. And that will contribute to a reduced overcrowding rate of 27 percent by 1995. During 1991, I understand your proposal is that 3,315 beds will come on line from current year activation resources and 900 beds will come on line from prior year expansions and construction for a total of 4,215 new beds on line in 1991. Does that agree with your statistics?

Mr. THORNBURGH. That is my understanding.

EFFECT OF ADDITIONAL FUNDING ON JUSTICE SYSTEM

Mr. ROGERS. Well, let me ask you on a broader plane, with the drug war increases that have been given to the various law enforcement agencies over the last 2, 3, 4 years, we have seen huge increases in the numbers of U.S. Attorneys, of law enforcement personnel in the DEA and the FBI, as well as of local resources, and we have seen some prison increases, and yet I have the feeling that all of this by nature is sort of herky jerky, what with this tremendous caseload increase over the last several years.

I am told that criminal case filings increased during the 1980's by 56 percent and drug case filings rose 229 percent during that same period, swamping the courts, swamping the normal machinery we have for dealing with criminal violations. As the Congress and as the administrations have attempted to cope with that sheer volume, perhaps we have appropriated funds not fully knowing which components within the administration of justice would bear the greatest future cost burdens.

I am wondering if you think that the system is in gridlock now in any of its portions and, if so, what can we do about it?

Mr. THORNBURGH. I think one of the problems that you have correctly identified is that there is a certain episodic nature to keeping the system in phase, but that is unfortunately the nature of the process.

We are anxious to press particular priorities when the moment is right. We did so last year and with your support made up for one of those out of balance areas in the prison area.

In the last 2 years, the imbalance with regard to the number of prosecutors has been addressed by a 50-percent increase in the prosecution area.

The President has indicated his support for additional 75 new Federal judges to bring that portion of the criminal justice system up to a level that it can carry its share of the load.

In our budget this year, you will notice, for example, a Drug Enforcement Administration request for additional support personnel, not for new agents, although agent requests are in there, but this is a component that is designed to enable those agents to perform. They need support in carrying out their activities.

And I think, if I can suggest, that the resolution of this dilemma is to see that the policymakers, those of us within the Department and in the Administration and those of you within the Congress, keep reminding ourselves that we are dealing with a continuum here, that we are dealing with a criminal justice process each portion of which requires attention in its season and there is no way, obviously, that full funding for every portion is going to be available in any one given year. But to ignore any one given portion for any protracted period of time would have a very harmful effect on the smooth operation of the system.

So we are gratified when we are able to agree upon a major infusion of funds into the prison system, a major infusion of funds into prosecution, and to propose a major addition to the judicial man and woman power that will deal with that component.

But our quest for a final and perpetual balance, I think, is always going to be frustrated by the kinds of socioeconomic phenomenon that underlay our crime problem in the first place.

As I indicated to the Chairman, let us hope, I think unrealistically, but let us hope that the drug problem all but disappears or is in your terms, contained, by 1995

That means that part of the 45 percent of the Department of Justice's budget that is devoted to anti-drug activities could be reallocated and in some cases reduced, but we do not know that and our job, working with you, is to constantly monitor where the needs are the most important and to work with you to see that those needs for the time being are addressed in a reasonable and rational way.

PRISON CONSTRUCTION FUNDING

Let me correct one thing, Mr. Chairman. My staff reminds me that the figure I gave you with regard to our budget request and how it ended up after OMB, failed to take into account the Assets Forfeiture Fund.

The OMB anticipated, and I think properly, that we would be putting as much as $280 million from the Assets Forfeiture Fund realization, which is speculative at year beginning, into prison construction as well. So that we get pretty close to the figure that we requested in the aggregate from the two sources, one contained in our budget request, and the other in the Assets Forfeiture Fund dollars that would be diverted into more prison construction.

Mr. SMITH. But we did have Assets Forfeiture Funds going into prisons last year. You know, the Drug Czar needed a kitty. So what is left over at the end of the year now goes to the Czar for his kitty.

Mr. THORNBURGH. A good case can be made to the Czar to use that kitty that he has available to him for prison construction. However, authority to transfer Assets Forfeiture Fund surpluses directly to the Federal Prison System's "Buildings and Facilities" appropriation ended with fiscal year 1989. Beginning in fiscal year 1990, surpluses up to $150 million are transferred to Bill Bennett's Special Forfeiture Fund. For fiscal year 1990, up to $115 million of such surpluses can be applied to prison construction by the Special Forfeiture Fund.

Mr. SMITH. Well, that is possible. He has a great deal of discretion there.

Mr. THORNBURGH. Yes.

Mr. SMITH. But the amount for prisons coming out of that source has been reduced.

Mr. THORNBURGH. Out of the budget?

Mr. SMITH. Assets forfeiture.

Mr. THORNBURGH. Well, it is hard to say. We do not know what is going to be there. We do not know what his priorities are going to be, but I think we can make a good case to him to put something approaching what the OMB scored on that amount into prison construction.

EFFECT OF DRUG CASES ON JUSTICE SYSTEM

Mr. ROGERS. Well, between the requirements of the Speedy Trial Act, the judicial sentencing guidelines that are new to the system, the complexity of many of these drug cases, and the asset seizure cases, the system is more difficult to operate these days and it is putting more people—a larger percentage of the defendants in prison than it did before, thanks to very efficient investigation, prosecution, sentencing, and the like.

It has reached the point that even though we are building a lot of prison beds now, historic increases, we are still overcrowded around 60 percent, I am told, and the 24,000 beds funded this year will take a long time to activate, making a dent in the overcrowding problem a more distant reality.

At the same time, many of the regular civil cases are being squeezed by the heavy influx of criminal drug cases into the courts and are tending to squeeze other civil cases back into the shadows.

Is that a trend that bothers you any?

Mr. THORNBURGH. Well, I think to the extent that these are cases that command a lesser priority, that is inevitable given the finite amount of resources that are available.

The important thing I would direct your attention to in this budget request is a willingness to tackle the cases that, if the Federal Government did not investigate and prosecute, would in all probability not be brought before our courts. These are cases where the additional investigators and prosecutors are not necessarily going to show up statistically in the number of cases, but will show up qualitatively in the deterrent capability that is built into increasingly sophisticated criminal enterprises.

When you are working on an international money laundering case, or a case involving savings and loan fraud, or housing and urban development fraud, or defense procurement fraud, or public corruption, there are very seldom cases where you break down the door, seize the evidence, put the cuffs on the defendant and bring him to court for a 1 or 2 day trial. They inevitably involve painstaking, laborious and lengthy investigations that follow a complicated paper trail that was designed to frustrate detection. And to the extent that we do not concentrate on those cases, then our financial, business and governmental institutions are going to see their credibility erode, I think, to the great loss of the Nation.

So that our emphasis on those Federal type responsibilities is probably going to crowd out from time to time the more run-of-the-mill criminal case, but that is a longstanding development.

I remember when I was head of the Criminal Division in the Department of Justice in the 1970's, then-FBI Director, Clarence Kelly, identified the need to concentrate on quality rather than quantity in dealing with cases that theretofore had been the statistical life blood of the investigative agencies, automobile theft, bank robbery cases, and the like. That is a trend that has been reinforced over the years as our investigative agencies have directed their expertise, and it is truly remarkable in some of these areas, to the big cases.

That does not mean that the other cases are going to go untended because over the same period of time there has been an enormous increase in the capability of State and local prosecutors and investigators to take up some of the slack.

But inevitably, in any criminal justice system that is constrained by finite resources, some crooks are not going to be prosecuted.

That is just going to be true in any system and the question—the management challenge for those of us who have the responsibility is to ensure that we are putting our resources in the areas that ought to command a priority in the interest of the Nation as a whole.

IMPORTANCE OF LAW ENFORCEMENT IN DRUG WAR

Mr. ROGERS. Let me ask you about the drug war. I know how strongly you feel about the importance of good law enforcement, drug seizures, interdiction and putting the crooks in prison, but how important are non-law enforcement efforts in the overall elimination of the problem?

I would like, if you would, to give us your views on the importance of factors other than law enforcement, the other solutions to the drug problem, particularly the environment of the user.

Mr. THORNBURGH. I could probably best respond to that by repeating what I told a somewhat surprised audience I was speaking to on the West Coast not long ago. I told them, if you want to lose the war on drugs, just leave it to law enforcement. They gasped for a moment, but then realized precisely what I was saying and that is, we have to realize that law enforcement alone is never going to be able to address the drug problem in the United States or anywhere else.

We cannot win this battle in the courtroom alone. We have to win it in the classroom, in the work place, in the community, and we have to win it on the battlefield of values. We are beginning to see that in this country. The inadmissability of a drug dependent lifestyle has got to be reinforced and has to be accelerated by the type of comprehensive approach that the President has suggested. That means concentration to be sure on law enforcement, which has a very important role to play, but also, by attention to better education, better rehabilitation and treatment, beginning with finding out what kinds of rehabilitation and treatment hold some promise for success rather than, as the Chairman suggested, the folly of just pouring more money into these programs.

Mr. ROGERS. Let me ask you, how important is peer pressure, and by that I mean in a much larger sense? How important are movies and television programs and video tapes that kids rent? How important is that peer pressure on the problem?

Mr. THORNBURGH. Well, you could probably get a better witness than the Attorney General on that, Congressman Rogers, but what for it is worth, as a parent and as one who has been involved in our educational process as well as law enforcement, I think it is very important.

And I think one of the difficulties for which we now pay an enormous price is that we went through a period in this country during the 1960's and 1970's where drug use was in fashion, in vogue, among many role models—entertainers, athletes, even political figures, those to whom attention is paid by young people because they necessarily are going to emulate those role models in their own conduct.

And from my point of view, those are the most grievous offenders of all. When you hear and read and learn of prominent figures in sports who make light of drug use, of entertainers who glorify drug use through lyrics and songs and portrayals, of political figures who should be engaged in the war on drugs succumbing to that war, it cannot help but have a debilitating effect upon the efforts of those of us attempting to create a set of values that rules out drug use throughout the country.

But again, I think the more kinds of things that Congressman Regula mentioned had been done by the media in his district the better—the kinds of things that the President has worked with people like James Burke, the former chief executive officer of Johnson & Johnson, and the advertising group that has been assembled there. When was the last time that we saw drug use glorified on television or in the movies? It has been a while, thank heavens. There is clearly a sanction against drug use by professional athletes, even though not as much as some of us would like to see imposed. There is a greater realization that drug testing in the work place is an important way, not only to detect the drug user, but to force that drug user to confront his or her problem and make available employee assistance programs.

I realize once you begin to talk about the drug problem you expand your horizons to cover, as we should, the whole of our society and the contributions that can be made by leaders in every part of that society.

So beginning with your question about how important is law enforcement, it is very important and I am proud of the job that our men and women have done on the front lines literally of this effort. But their efforts will go for naught if the rest of our American society does not enlist with the same zeal and vigor and display the same commitment to changing the basic values that gave rise to the notion that somehow using drugs was an admissible lifestyle, that the high from drugs, as a substitute for and an addition to the natural highs of enjoying what we have as a quality of life in this country, was an admissible lifestyle.

Mr. Rogers. Well, to the contrary, I do not think we could have found a better witness to illuminate on that very subject than you. I think you have done—as you say you could not—superbly in that area.

I have other questions and I will await another turn to ask them.

ADEQUACY OF BUDGET REQUEST

Mr. Smith. Mr. Early.

Mr. Early. General, what is interesting to me is that we talk about a $9 billion budget, and we talk about too much Government sometimes. In your statement you talked about coming down on all of that S&L fraud. From the numbers we hear in Congress, the S&L fraud is going to cost 300 to 500 billion dollars.

Again, with hindsight, General, wouldn't we have been better off if we had had enough FBI agents to stay on top of the banking fraud before it occurred—detected it earlier. I think that if you had detected it earlier, you would have prevented a lot of it and you would have really saved an awful lot of money.

I am really troubled that your budget is so little.

Mr. THORNBURGH. Well, I hate to say it, Congressman, but I have got to, that the FBI and the Department of Justice have been seeking those resources to concentrate in the bank fraud and embezzlement area for years and they have not been forthcoming.

Mr. EARLY. There is no question about that.

Mr. THORNBURGH. And now, of course, with the crescendo of attention that is focused by the collapse of many portions of the savings and loan industry, we are getting those assets.

But consistent with what I said before, we will take our opportunities and our resources as we can get them. There is still a great deal of effective work to be done in prosecuting the persons who were responsible for the wrongdoing in this area and we are extremely grateful for the $50 million addition to our resources, which you and your colleagues have provided. I guarantee you, we will make good use of it.

Mr. EARLY. I am sure you will and I hope you set up some type of system where you can see how much we recover with that $50 million.

Mr. THORNBURGH. I would not want to make an rash promises on that though.

Mr. EARLY. No, I do not want any promises or anything—

Mr. THORNBURGH. I think we talked about that last year.

Mr. EARLY. I think you recoup as much as you can.

Mr. THORNBURGH. We will. We will. Our Dallas Bank Fraud Task Force, I think, by now has recouped on the order of $14 million in the cases, but in most of these cases the assets have been dissipated or they are in vastly overvalued real estate.

But you are quite right and we will fulfill that by giving you a report on what we have recovered.

[The information follows:]

RECOVERING COSTS IN FINANCIAL INSTITUTION FRAUD CASES

Federal prosecutors have successfully obtained judgments ordering restitution amounting to over $160 million in financial institution fraud cases closed since the beginning of 1988. Actual recoveries of assets have not kept pace with judgments, however, amounting to only a fraction of the total restitution ordered. Although recoveries are likely to grow as more judgments are obtained and as we are able to devote additional resources to collection under existing judgments, many of those persons convicted of fraud will lack sufficient assets to satisfy the court imposed penalties.

RECOVERING COSTS IN DRUG WAR

Mr. EARLY. General, again, the $9 billion, I am not looking to point a finger at Republicans or Democrats, Conservatives or Liberals, but there should be more government in the area of law enforcement. We should learn from the S&L experience in this member's opinion.

I am interested in your response to Mr. Rogers with regard to the "drug war". The public pictures a guy breaking down the door, and a 6 foot 6 agent putting the handcuffs on and taking him out.

We got at organized crime and we are going to get at drugs with accountants, through the paper scenario—the paper trails. We should give you more new people for the tax aspect.

I read a series in a Miami paper on laundering and all the money that's involved. You would recapture 10 times what a thousand tax accountants would cost. Would you agree with that? Do you have an opinion on it?

Mr. THORNBURGH. Well, I am always struck by the fact that when I visit around the country—I always make it a point to visit with local law enforcement officials and they always want to make a very strong plea for additional aid and funding. In my some 20 years of experience, since I first got into law enforcement, I have never found a law enforcement officer who said they had enough, and I am no exception.

But we also have to be cognizant of the fact that we operate within the fiscal constraints that are imposed on the Government and what we try to do——

Mr. EARLY. We do not look too good, General, given what you would have saved in the S&L situation, which will never be fully appreciated by the public because when you save something they do not see it. And in the drug war, with the tax types of people I think you need, you would recoup from that.

Mr. THORNBURGH. I think you could make a case that as operated now the Department of Justice, if it were a business operation, would have a triple A rating in terms of our credit standing because of what we recover over what we cost.

Mr. EARLY. You would be in the top 500 because your $9 billion cost would generate hundreds of billions of dollars.

Mr. THORNBURGH. Let me say in fairness that we have made extraordinary use of the criminal investigative talent of the Internal Revenue Service in a lot of these complicated cases and that we have a number of accounting-trained agents in the Federal Bureau of Investigation. We have some very skilled prosecutors experienced in these cases. We have gotten enormous help, for example, in the Dallas Bank Fraud Task Force, where our efforts have been focused up to now, from the Internal Revenue Service and their criminal investigative agents. They are invaluable and I know from my own experience as a prosecutor how they can be helpful in making these kinds of paper cases.

EFFECT OF SENTENCING COMMISSION

Mr. EARLY. General, I want to get little more specific on cases. You know in Government we can be as fraudulent as anybody else. When we get a problem, we say we are going to have a study, a blue ribbon committee, and then we get the study and do not do anything.

Now in this morning's paper, there is a report of a study on the Sentencing Commission, which disturbs me. It is a GAO study. It is our study. It was taxpayers' money.

It says that the GAO study found that the Commission, created in 1984 to overhaul the Federal sentencing system, lacks a long range plan. It says we do not fill vacancies. It points out how the staff director of 4 years has been without a research director for more than a year and a half.

I think our job is to implement based on those things. I have heard testimony, and I am no expert in law enforcement, but with the Sentencing Commission, we are going to supervised release, the same as parole, but we are going to call it supervised release.

They say that the procedures are going to be changed, General, so that all of the prisoners are going to now come under the jurisdiction of the judges. That means none of them are going to have hearings in the prisons.

Now how many more marshals—what a drain on marshals it is going to be. You are going to be moving them from the prison. Why not correct that now and say that these matters will be heard in the prisons?

Mr. THORNBURGH. You mean on criminal charges?

Mr. EARLY. Under the current system, what happens now is these prisoners are tried at the institutions that they are in. Under this new revised system, you are now going to have to take them to the courthouse.

Your marshals are already overextended.

Mr. THORNBURGH. Build courthouses at the prisons?

Mr. EARLY. No. They are now tried at the prisons when they have a revocation of——

Mr. THORNBURGH. Oh, I see what you mean.

Mr. EARLY. Why not leave it like it is. I cannot understand why we do not correct that type of thing.

Mr. THORNBURGH. I think that is a question you really have to address to the judicial branch because they are the ones that make this determination.

Mr. EARLY. General, you sound like one of us.

[Laughter.]

Mr. EARLY. Now let's not pass this around. Let us just correct it, somehow.

Mr. THORNBURGH. I will make a deal with you, Congressman, I have to speak to the Judicial Conference in a couple of weeks and I will be sure to indicate some concern over that. I frankly have not addressed that problem, but I appreciate your raising it and we will take a look at it.

PRISONER ESTIMATES RESULTING FROM SENTENCING GUIDELINES

Mr. EARLY. General, in your statement on the subject of prisons, your numbers are conservative, I think. you say there are 57,000 prisoners, and the number will go to 62,000.

Earlier in the week, Judge Wilkins of the Sentencing Commission said that—I think he said they are getting 1,200 cases sent to them for examination, people that have been sentenced; I think it was per week. That is going to go up and I think we have to have alternatives to the prisons, as the Chairman said.

Mr. THORNBURGH. Let me just say one thing, if I might, Congressman Early, about the Sentencing Commission. It has been less than a year since the constitutionality of the Commission and the guidelines were approved by the Supreme Court and there was a certain delay and uncertainty about the Commission and its activities. I think a lots of these issues have been resolved and there are a lot of issues relating to sentencing guidelines, which in my view, personally, provide a much preferable format in terms of certainty and uniformity of sentences.

But I am sure that they would be the first to acknowledge that there are a lot of these things that have to be worked out now that their status has been reaffirmed.

Mr. EARLY. And I think they are trying. But according to the GAO study, General, they have three vacancies on the Commission. They have a 6 member Commission where you need a majority vote, and they have only 3 members on the Commission. Those vacancies have been there for a long time. The research director position vacant a year and a half, that is about all they have been in existence.

I wish we would implement from the study so that we will not have to do another study when this study is outdated.

[Laughter.]

Mr. THORNBURGH. Well, you give me marching orders. We will review the GAO study to see what contributions we can make.

PHASE-OUT OF THE PAROLE COMMISSION

Mr. EARLY. The Parole Commission is scheduled to be phased out in 1992. Last year you indicated the Department was reviewing options for handling the parole hearings of prisoners still incarcerated after the elimination of the Commission.

Has there been any determination?

Mr. THORNBURGH. We have not reached a final position on that, no.

USE OF TECHNOLOGY IN WAR ON DRUGS

Mr. EARLY. Okay. I think the FBI is the finest investigatory agency in police work there is, and I think it is because Hoover put them on the road to high technology and computerization. They are the most sophisticated technologically.

Now with drugs, which is going to be even more cumbersome because it is going to be more international, we should do the same thing. And I just hope Mr. Bennett is doing that and I hope you are doing that. I just do not think we can make progress if we are not up to date technologically.

Mr. THORNBURGH. Well, I quite agree with you and, as you may know, part of the President's drug strategy is to create a national drug intelligence center, which will ensure that we avail ourselves of intelligence gathered on drug trafficking and money laundering from whatever source it comes, and to use every bit of sophisticated computer capability and to draw upon what the Treasury Department is designing to deal with the material that they generate through their monitoring of cash transactions and the like.

This kind of coordinated effort, which draws on military intelligence and the intelligence community, as well as the law enforcement community, will be no doubt costly and troublesome, but it is an investment that I quite agree with you that we simply have to make to keep abreast of times.

We find more and more that law breakers are using this advanced technology. There is no excuse for us not matching them effort for effort.

USE OF ASSETS FORFEITURE FUND FOR PRISON CONSTRUCTION

Mr. EARLY. I have more questions that I am going to submit for the record, Mr. Chairman.

Just one thing, wouldn't we be better off using the entire asset forfeiture fund, which everyone wants a piece of, for prisons?

Mr. THORNBURGH. Well, we find it to be a very useful incentive for inducing cooperation with State and local officials, Congressman.

It is pretty hard, and in some cases unjust, to carry out a cooperative investigation involving the FBI, DEA, local sheriff, local police department, and when $20 million in assets is seized to take it all into Federal Treasury. In adoptive cases, up to 90 percent of the proceeds can be shared with the State and local law enforcement agencies. In joint investigative cases, a share equal to the effort contributed to the case is given to each contributing law enforcement agency. You have no idea the return that we get on that in terms of their desire to more closely integrate their activities with ours. I think that using at least a portion of that fund in the Equitable Sharing program, which was about $158 million last year and it may be $190 million this year, is a good investment.

There is a portion that goes into prisons to be sure, but those we will have to mutually assess on a year-by-year basis.

Mr. EARLY. Thank you, Mr. Chairman.

RETIREMENT OF LAW ENFORCEMENT AGENTS

Mr. SMITH. Mr. Regula.

Mr. REGULA. Thank you, Mr. Chairman.

Just a housekeeping item, Mr. Attorney General. Regarding FBI retirements Mr. Early mentioned the quality, has there been some change that would allow agents to stay on longer if they chose to do so in terms of early retirements?

Mr. THORNBURGH. The Law Enforcement Commission, which has been established to review the entire pay and benefit structures within the Federal law enforcement community, is something to which I attach enormous importance. When that Commission renders its final report I hope it will receive very careful attention by you and your colleagues, Congressman.

Mr. REGULA. So you are looking at the whole structure of law enforcement?

Mr. THORNBURGH. Yes. In that there is a recommendation that would advance by 2 years to age 57 the retirement age, but there are a great many other matters, including entry level pay, locality pay, moving expenses, that are simply going to have to be addressed if the FBI and our other agencies are to retain their preeminent role.

It is becoming a desperate situation and I think when that report comes before the Congress, you will be as amazed as I am to learn of some of the stories about individuals who have a strong dedication to law enforcement who simply by dint of the financial inequities that exist in our current system are crowded out of the Federal system and sometimes crowded out of law enforcement altogether.

I am making an early unabashed commercial for the work product of that Commission, but it does tie into the question that you asked.

Mr. REGULA. Well, thank you and I think that is great that you are looking into that because the success of all of your programs depends on quality people.

Mr. THORNBURGH. Absolutely.

INTERNATIONAL ANTI-DRUG COOPERATION

Mr. REGULA. Are you getting better international cooperation in the drug issue?

Mr. THORNBURGH. I do not think there is any question that the last year has seen an explosion in international cooperation for two reasons I would suggest: One is an unfortunate one that more and more countries are having to face up to their domestic drug abuse and drug trafficking problems. The second is that the President has taken a lead role in involving himself personally with foreign leaders in making clear the expectations we have of them in securing cooperative efforts. That makes it a lot easier for those of us who are on the front lines to deal with our counterparts in other countries.

In the European community, for example, I meet regularly with my counterparts in working out cooperative measures to deal with drug trafficking and money laundering.

Last year, I was in Colombia, Bolivia, and Peru to meet with the presidents and law enforcement and military heads of those countries. And the degree of cooperation that has been forthcoming from that area, the Andean region, culminating with the Cartagena meeting has been truly extraordinary. A very courageous human being, the President of Colombia, Virgilio Barco, has already returned to us 14 major Colombian drug traffickers who were facing criminal charges in the United States and the rest of them are on the run because they know he means business.

I mentioned earlier our conversations with present or potential money laundering centers around the world—in Switzerland and Luxembourg and Uruguay. When our discussions occur in an environment where we go into those meetings armed with a commitment from the President of the United States and the Congress of the United States to be effective in securing their cooperation, we have a major, major advantage.

Finally, there is the United Nations Drug Convention. Oftentimes I think we tend to look at actions taken in the United Nations as being more words than action. This drug enforcement convention is tough. It is oriented towards law enforcement. It obligates each of the signatory nations that ratify the Convention to specific actions in improving their capability to deal with cooperation in furnishing evidence, in removing the veil of bank secrecy, in making money laundering an offense, in asset forfeiture, in asset sharing, in dealing with precursor chemicals, in providing for boarding of vessels. It is a tough and effective law enforcement mechanism. Our Senate ratified it in near record time. There are now 5 or 6 countries that have gone through the ratification process and the President has indicated his determination to see other countries follow suit.

So that establishes a framework and a network out there within which the over 100 countries that participated in framing that Convention can establish specific ways to cooperate.

~~So~~ I am much encouraged on the law enforcement side with the degree of cooperation that we have received. I might mention, just for the sake of the record, our relationships with Mexico, which have been troublesome from time to time in the past. We have established a personal relationship with the Attorney General and his Chief Deputy for drug law enforcement in Mexico.

We will be meeting with the Organization of American States later in the spring and the Western Hemisphere efforts have been enhanced as well by the removal of one of the weak links, General Noriega, in Panama, who now awaits trial in a jail in Miami.

So I think I can say that this has been a high spot on the enforcement side of the effort against drugs.

Mr. REGULA. Well, that is great. I would follow up on the OAS. You mentioned them briefly. Has the Organization of American States been effective in providing assistance in the drug issue?

Mr. THORNBURGH. You could probably get a better assessment of their role from the State Department, Congressman, as we have dealt mostly on a bilateral basis with the countries that are in OAS, but I mentioned that as a further determination on the part of these constituent countries to act in a cooperative way.

Mr. REGULA. I am pleased to hear this because I think international cooperation has to be a real key to any successes that we have.

Mr. THORNBURGH. There is no way that any one country can deal with the problem alone or within its own borders. That is just as basic as can be. We have the biggest appetite and the biggest responsibility, I suggest, in this country to take a lead role, but we cannot do it by ourselves.

DEMAND REDUCTION EFFORTS

Mr. REGULA. You mention appetite. What, if anything, can your Department do in interfacing with the education system in the United States? Because it seems to me that the key element here, and you mention it in your statement, is to dry up demand.

Mr. THORNBURGH. We have in each of our agencies a portion of our resources devoted to demand reduction. The FBI supplies speakers for communities and schools. The Drug Enforcement Administration does the same, as do other agencies.

I will tell you an interesting example of how strong that commitment is. Our United States Attorneys, 93 strong, meet once a year to discuss issues of the day and to exchange views candidly with the management of the Department of Justice. This last fall's meeting was in San Antonio. It was preceded by a 2-day meeting of the United States Attorneys devoted exclusively to demand reduction. It has nothing to do with their law enforcement responsibilities. It was these folks getting together in a workshop to exchange ideas on how they as prosecutors could make a contribution to their respective communities by helping out in the education and prevention area.

I was greatly impressed by that because in all honesty that is not part of their narrow job description, but they are leaders in their communities, they are good citizens and they tackled that as a priority and I was very proud of it.

Mr. REGULA. Thank you.

Thank you, Mr. Chairman.

ASSETS FORFEITURE FUND

Mr. SMITH. Mr. Kolbe.

Mr. KOLBE. Thank you, Mr. Chairman.

General Thornburgh, welcome.

Mr. THORNBURGH. Good morning.

Mr. KOLBE. Good morning.

Mr. Chairman, let me begin by following up something I asked about last year regarding the asset forfeiture fund.

Last year, I am quoting responses to some questions I asked, Mr. Roper stated that $470 million was the estimated fiscal year 1990 level of receipts.

Can you tell me is that indeed turning out to be true? Is that estimate valid? What is the estimate for 1991? It looks to me like it is $372 million.

Mr. THORNBURGH. Mr. Roper, my coach, will give you a response, Congressman Kolbe.

Mr. KOLBE. All right.

Mr. THORNBURGH. The estimate, I am advised, is still $470 million for 1990 and $500 million for 1991. We will take whatever we can get though, I assure you.

Mr. KOLBE. Five hundred is—then I still have trouble understanding how this works, but maybe I need to ask some questions of staff.

The 1991 estimate here is $372 million, it says. Is the rest retained, or what happens to that? Maybe Mr. Roper could directly respond.

Mr. THORNBURGH. I am advised those are the obligations that we expect to obligate in 1990.

Mr. KOLBE. Okay.

Mr. THORNBURGH. But I will be glad to clear up any questions. We will make appropriate staff available to you or your staff to lay it out. It does get confusing, I have to admit myself, because there is a lot of in and out of that fund. There is a lot of that fund that is being currently managed and in the process of being converted into distributable or usable funds, I think there is over a billion dollars in assets that the marshals currently are managing, holding in some cases pending judicial proceedings in order to carry forward the forfeiture on real estate and things like that.

Mr. KOLBE. I think the rest goes to Mr. Bennett, the Drug Czar. Is that right?

Mr. THORNBURGH. Right.

DRUG ENFORCEMENT AGENTS

Mr. KOLBE. I too join in with my colleagues in saying that I commend you and the Justice Department for the emphasis you are putting in fighting the war on drugs and the understanding that we are going to have to do it, as you say, with changing values. I guess we are all coming to the conclusion, I think rightly so, that we are not going to win this war by getting at the supply side. We are going to have to win it on the demand side and that means changing people's attitudes about the use of drugs, changing people's attitudes about tolerance of others using drugs, and that is really what this battle is all about.

Nonetheless, of course, the enforcement aspect of our triad, if you will, on attacking the drug problem remains a very important part of it.

The 1991 request for DEA is $150 million over what we appropriated last year. You have got 413 new positions there. Can you or somebody tell me of that number, 413 new positions, how many would be DEA agents as opposed to support staff and others?

Mr. THORNBURGH. Three hundred out of the 413 new Domestic Enforcement positions will be agents.

Mr. KOLBE. Would actually be designated law enforcement agents?

Mr. THORNBURGH. Yes.

Mr. KOLBE. DEA agents.

Do you have any idea where you see the need for——

Mr. THORNBURGH. I am sorry, in addition, there are 30 agents in the Special Enforcement Operations program. So that would be 330. Also, there are 78 agents in various other programs, for a total of 408 agents, out of 705 net new positions.

Mr. KOLBE. Thirty in the special enforcement?

Mr. THORNBURGH. Yes, special operations.

HIGH INTENSITY DRUG TRAFFICKING AREAS

Mr. KOLBE. Special operations. Thank you.

Do you have any idea how you see allocating these new resources of agents, where you are going to place them?

Mr. THORNBURGH. Well, generically I think you have identified it, where the major problems exist and I would have to seek the advice and input of the Director on that score.

Again, it sometimes becomes a patch and fill operation because of a change in the patterns of trafficking or a bad guess as to where we might have allocated resources in a particular time interval, but that is the management challenge that DEA faces.

They report to me some shift in cocaine trafficking patterns away from Southern Florida, for example, to Southern California, the Southwest border area, and that would occasion, for example, a shift in resources.

The drug strategy identified five high intensity drug trafficking areas.

Mr. KOLBE. One of which was the Southwest border and I am wondering whether the increases are going to be targeted in those areas?

Mr. THORNBURGH. A portion of those will be because of the high intensity drug trafficking area designation, but some of—again, it is a mix and match proposition because some of those have already de facto been the subject of high intensity efforts.

So those, again, will be the kind of management decisions that are based on a careful review of the entire situation. I would not want to prejudge or anticipate what the recommendations of the DEA people will be if they receive this kind of influx.

I can only assure you that the placement of those agents will be done on the basis of a careful assessment of what the priority areas ought to be and obviously will fulfill the President's direction with regard to high intensity drug trafficking areas that were identified in his strategy.

Mr. KOLBE. Thank you, General Thornburgh. I have some other specific questions in the area of staffing, but I will either submit those for the record or wait for the individual parts of your Department to appear to ask those questions.

USE OF MILITARY FACILITIES FOR PRISON SPACE

On the subject of Federal prison space, in your testimony you say that you are asking for 1,700 new prison beds and you are going to do that through acquisition and conversion of surplus military facilities.

Have you had liaison at this point with the Defense Department to identify those facilities? Where do we stand on that?

Mr. THORNBURGH. I think it is important for me to state for the record, we have had an extraordinarily good relationship with the Department of Defense in this and other areas during Secretary Cheney's tenure and obviously have two kinds of military facilities that we are looking at. One involves presently constructed facilities that can be used largely for minimum security use and the other is land that can be used for the new types of complexes that we are talking about.

Specifically, we have established 5 Federal prison camps on active bases and 2 more are scheduled to open this year. They were established with funds from previous years, but we have also asked in this year's budget for 6 positions and $22 million to acquire and convert additional active and closed military facilities for minimum security use.

We have not specifically designated those locations as yet, but I emphasize the close relationship we have had with the Department of Defense and anticipate that these and other opportunities to make use of the facilities made available by the Base Closing Act will be availed of to the maximum extent that we can.

FUNDING FOR NEW PRISON CONSTRUCTION

Mr. KOLBE. The additional money that you are asking is not for new construction; is that right?

Mr. THORNBURGH. In this year?

Mr. KOLBE. Yes, sir.

Mr. THORNBURGH. I do not believe so.

Mr. KOLBE. I am sorry, $374 million to construct and modernize prisons. Well, that is what I am not clear of. Does that——

Mr. THORNBURGH. I get confused because, as I referred to earlier on, we do not have any separate capital budgeting. Internally we do, but monies appropriated and authorized in one year are obviously not going to be spent in that year.

We have a sizeable prison construction program underway this year that is not necessarily reflected in our budget request for this year, if I make myself clear.

What we do have in this year's budget request is $50 million and 883 positions for the activation of new facilities and these are facilities that will be brought on line during fiscal year 1991.

But again, I am not sure that that gives you in any way a sense of what the picture is with regard to the entire prison expansion program where we have this $1.4 billion appropriated last year for use in providing a total of 20,080 new beds.

So I am not sure that I have helped you much on that.

Mr. **Kolbe**. It is helpful. I gather you do not see prison population increases slackening off any time in the near future.

Mr. **Thornburgh**. I would not, although hope springs eternal, and our monitoring of the problem will be constant. We will seek to address those within the fiscal constraints that are imposed in the maximum way possible.

I made it clear last year, shortly after I came on the job, that we had to simply address this problem, that the success of our law enforcement efforts had produced a dividend of a shortfall in our prison facilities and the $1.4 billion that was included in last year's budget, I think, was a tremendous turnaround in the establishment of the proper priorities to deal with the entire criminal justice process.

DEPORTABLE ALIENS IN FEDERAL PRISIONS

Mr. **Kolbe**. General Thornburgh, I heard an extraordinary figure yesterday and since I cannot exactly remember the precise amount, I will not quote it. But maybe you know, or you could get for the record, the percent of prisoners in the Federal prison system that are deportable foreign nationals. Does anybody roughly know?

Mr. **Thornburgh**. I think it is 17 or 18 percent.

Mr. **Kolbe**. Oh, I heard something much higher than that.

Mr. **Thornburgh**. Maybe it is 17 or 18 thousand. Let me get you that figure.

Mr. **Kolbe**. That would be closer to it.

Mr. **Thornburgh**. I have inquired about that figure as well.

Mr. **Kolbe**. If it is 17 or 18 thousand, I think it is, then you are talking somewhere in the neighborhood of more like 35 percent, which is what I had heard.

Mr. **Thornburgh**. Our best guess collectively among our staff is 17.4 percent of the sentenced prisoners, but we will get you those figures.

[The information follows:]

Non-U.S. Citizens in BOP Custody

[As of February 1990]

Total inmate population	55,874
Non-U.S. citizens (total) (21.8 percent)	12,175
Sentenced inmate population	45,833
Non-U.S. citizens (sentenced) (17.4 percent)	7,989

Non-U.S. Citizens in BOP Custody—Continued

By Security Level:

	Total			Sentenced		
	Population	Non-United States	Percent	Population	Non-United States	Percent
Level 1	12,901	761	5.9	12,866	751	5.8
Level 2	5,923	2,397	40.5	5,696	2,247	39.5
Level 3	8,248	2,319	28.1	7,488	1,785	23.8
Level 4	9,228	2,052	22.2	8,569	1,514	17.7
Level 5	4,313	801	18.6	3,748	254	6.8
Level 6	392	48	12.2	392	48	12.2
Administrative [1]	10,341	2,970	28.7	7,058	1,390	19.7
Holdovers	4,528	827	18.3	16	0	0
Totals	55,874	12,175	21.8	45,833	7,989	17.4

[1] Administrative facilities include detention, medical and correctional centers.

AGREEMENTS ON DEPORTATION OF CRIMINAL ALIENS

Mr. Kolbe. I would appreciate that. And it raises this question, as soon as their prison terms are up, they are going to be turned over to INS and deported. Have you had any discussions with the governments of the nations from which these people come, and I am thinking most obviously of Mexico where you would have probably the largest single number of them, about deporting them at the time of sentencing and perhaps providing assistance to the Mexican government to support them. The cost savings would be enormous. They have a different view of penology in Mexico and we could save a lot of money. We have authority to do that now. We do prison exchanges on occasion.

Mr. Thornburgh. Our most recent discussions were with nations in the European community where a treaty exists between the United States and European countries.

One of the difficulties—again, I will give you a fuller response, but one of the difficulties is that it is sometimes uncertain to what extent the full prison term will be served in the country from which these people come. That is, getting them out of our prisons is one thing, making sure that they serve an equivalent or appropriate time in prison in another country is quite another.

Of course, once they are out of our prisons, we have lost control over what the other country's criminal justice system will do with a particular defendant. And I think that is probably the major hurdle to a general emptying out of that population.

Mr. Kolbe. Well, I concur with that and there is certainly a number that I would not recommend that you deport, but there is an awful lot of others that are pretty low level drug peons and dealers that this might be something worth considering.

Mr. Thornburgh. I would be afraid that the net effect might well be that we not only let them out of our prisons, but we let them out of any prison if they are low level people and I think we would want to be very careful with that.

Mr. Kolbe. I think you will find that we have a program that does that and that has been used and I think that has been fairly successful and they have probably been kept in prison down in

Mexico and being in prison in Mexico is not a particularly nice thought.

Mr. THORNBURGH. No, I do not think I would want to volunteer for it.

Mr. KOLBE. I am just wondering whether or not this is something that might not be more commercially pursued.

Mr. THORNBURGH. I will ask Mr. Quinlan, who I am sure does not want to be landlord to any more people, alien or otherwise, than he must, and make sure we get you a response on that.

Mr. KOLBE. Thank you.

[The information follows:]

DEPARTMENT POLICY FOR DEPORTABLE SENTENCED NON-U.S. CITIZENS IN BUREAU OF PRISONS CUSTODY

Despite the fact that the Bureau of Prisons continues to actively participate in the international prisoner exchange treaty, that process has not had a significant impact on the number of aliens returned. The primary reason is that before an inmate can be deported to serve a sentence in his native country, not only must the country agree to accept him, but the inmate must agree to go. This issue has been discussed with Director Quinlan. While it is being further explored, several significant reservations exist to change the policy of deporting non-U.S. citizens to prisons in their country of origin. These include the violation of an inmate's constitutional right to be protected from cruel and unusual punishment, as well as the potential liability to the Department and the Attorney General were an inmate transferred without his consent.

RICO REFORM PROPOSALS

Mr. Chairman, finally just in a general way would you give us your thoughts about the various reform proposals of the RICO statute?

Mr. THORNBURGH. Well, the Department of Justice has expressed some concern for some time about the unrestricted use of the civil RICO provisions by private litigants. We have very tight controls and guidelines on the use of the criminal and civil RICO statutes by our prosecutors and our lawyers to develop uniform policies and to make sure that this very powerful and, we believe, positive weapon against sophisticated crime is used in a way that represents the national interest.

On the other hand, we have no guidelines, no control, no say so in how private litigants can use the civil RICO statutes. We have been consistent supporters of reform proposals in that regard that would provide for adequate safeguards to insure that the statute is not being used in inappropriate cases.

We continue to take that view, but we are equally committed to retaining the provisions of the RICO statute to deal with, as its name indicates, Racketeer Influenced and Corrupt Organizations. It has proved to be a very effective tool in dealing with major organized and white collar crime and, at the same time that we are supportive of reforms on the use by private litigants, we want to make sure that we do not lose the ability to use it in appropriate cases in the Federal effort.

Mr. KOLBE. I concur with both statements. It has been a valuable tool and I think there have been abuses.

Have you endorsed any specific legislation? There have been various proposals that have been floated, and I know that have been introduced as pieces of legislation.

Has the Department endorsed a specific proposal?

Mr. THORNBURGH. We have viewed favorably bills such as S. 438 and H.R. 1046, which embody the concepts that I discussed and have, over a period of time, in fact before I became Attorney General, supported the principle that the ability of private litigants to secure treble damages, for example, be restricted.

But again, I think that we want to always be sure that we are in there raising our own flag with regard to retaining our ability to use civil RICO in labor racketeering and procurement fraud cases. For example, the Teamsters case and the current proceedings brought against the International Longshoreman's Association on the New York waterfront are examples of cases which simply could not have been dealt with appropriately without the tool of the civil RICO statutes because of the fact that they address an enterprise that is racketeer influenced or corrupt in a way that individual serial prosecutions of individuals cannot effectively do.

So we want to be sure that there is no doubt about the differentiation between our support of change for private litigants and the retention in the Government of the ability to continue to use civil and criminal RICO.

Mr. KOLBE. Thank you, General Thornburgh.

Thank you, Mr. Chairman.

DISTRIBUTION OF GRANT FUNDS

Mr. SMITH. Mr. Attorney General, you know the League of Municipalities was in town last week. There has been a huge increase percentagewise, in the amount of Federal drug grants available to State and local governments in the last 2 years, especially in the last year. Some of the cities want the money to go directly to them instead of to State organizations for redistribution. Apparently some of them think that they ought to be under a formula in which they get funds directly without competing with other jurisdictions. We are going to be besieged with these ideas and possible amendments that would try to make grants available directly to the cities in some flat, rigid percentage basis. What is your opinion on that?

Mr. THORNBURGH. Well, the general theory of these kinds of programs, as I understand it, has been to require each of the States to submit a comprehensive plan, which takes into account the needs of all of their communities and channels the funding that is forthcoming from the Federal Government into priority areas that are established on a State-wide basis.

The concern of the cities is not a new one, nor has it been confined historically, as you know, Mr. Chairman, simply to law enforcement funds.

When I was Governor of Pennsylvania, we had to deal with the same kind of bypassing mechanisms for a great many of the Federal programs that came into our State, but I felt then as I feel now that the State is a more appropriate planning agency when it comes to addressing the needs of all of the communities.

I was visited by a delegation from the Conference of Mayors, two Republicans, two Democrats, from cities that broadly represented the make-up of that organization. I told them that I could see very little prospect that the Administration's views would change on the appropriateness of using the States as a planning and dispensing mechanism.

But they said that they had had some discussions with the governors about breaking out a portion of these funds for direct grants to the cities. I said, if you are able to reach a consensus with my former colleagues about how the cities might have a little larger role, I doubt very much that the Administration would object to that.

But the notion that there should be a wholesale fragmentation of the process by direct grants to municipalities, cities, or whatever, I think continues to lack appeal.

As you know, as you and I discussed, that was a format utilized in the Law Enforcement Assistance Administration in its early days and I do not think that the assessment of that mechanism was as positive as it has been in the later years of using the States as the appropriate vehicle.

It does become a matter of resource allocation, but my sense is that the States can make that decision better than those of us here in Washington because of their intimate knowledge of the entire panoply of needs that local municipalities have to deal with.

ROLE OF LOCAL GOVERNMENTS IN DRUG TREATMENT

Mr. SMITH. Well, I also asked several of these municipalities how they would use it if they got more money directly and I was struck by the small amount of attention directed toward doing more with drug users. They seem to want it all for more enforcement.

Mr. THORNBURGH. That is what I was going to say.

Mr. SMITH. And it seems to me that if there is a real big void out there in this whole drug war, it is we are not doing much to get users in the circumstances where they will involuntarily take some alternative treatment. They do not necessarily have to be in jail, but make them go to a few classes and maybe watch some video, or maybe be humiliated just a little bit, but there does not seem to be those kinds of programs.

Now I would say this, I have talked to some sheriffs that did want to try this. They would not get any money if grants went directly to municipalities. They would have to go to a different level like the county government. Is there not a void in this area?

Mr. THORNBURGH. Well, I think you have clearly identified a need that can be best addressed at the local level because conditions are going to vary from community to community that give rise to a particular drug problem or a particular kind of drug problem.

That is not a kind of thing that, I think, we can direct out of Washington through the Justice Department or the Department of Health and Human Services, or the Department of Education.

And as compared with the law enforcement situation, which is interstate and, as we have reminded ourselves this morning, international in nature, and I must say that the degree of cooperation that I outlined as being hopeful in the international field is far exceeded by the degree of cooperation that is carried out between law enforcement authorities at the State and local level with their Federal counterparts. The Organized Crime Drug Enforcement Task Forces, the State and local task forces, have been enormously successful, as I learned during my trip to Iowa last month, in binding together all of the law enforcement agencies to deal with the problem of drugs which transcends county lines and State boundaries and international boundaries.

When you come to dealing with the characteristics of a community that creates and sustains the demand in the first place, while you can learn from what other communities may have done that has been successful in education, treatment, and user sanctions, that is going to be something that depends by and large on the profile of the drug user and the profile of drug use in the communities.

So I think you are absolutely right. That is an area where there is a peculiar capability on the part of those local areas to act.

Nonetheless, I think that the type of fund distribution that is envisioned by using the States as the coordinating agency ensures that the proper balance is going to be built into those programs from all of the different municipalities and organizations that are going to be dealing with it.

So it really, I think, is a fruitful area for the States to look at in terms of helping these local communities identify and attack the particular characteristics of the drug problem on the user side that they have in their communities.

USE OF MILITARY BASES AS BOOT CAMPS

Mr. **Smith**. Well, there are all kinds of ideas about what we ought to do about the drug war. There is a consensus building in the Congress toward doing something with the boot camp idea combined with Job Corps. To do that would cost a lot of money unless we use all of the efficient resources available. One possibility, of course, is to utilize surplus military bases. The same base can have a prison, a boot camp and maybe a Job Corps camp on it. That is going to take some coordination.

Mr. Early, as early as 6 or 8 years ago, started talking about using military bases. As you know, the prison administration did not want to use them at first, but we forced them to use one down in Florida and they liked the idea after they tried it. So the use of military bases is pretty well accepted now.

You mentioned that there is a lot of intelligence coordination going on between the various agencies. This is going to take a little coordination between agencies too, to get a coordinated proposal for the use of a base for various kinds of purposes.

Have you any comment on that?

Mr. **Thornburgh**. Well, I think the problem that we have to face up to is the degree to which these base sites are going to be made available, if at all, to State and local governments because the boot camp concept really does not have much of a role in the Federal system, as you know.

I think there are a lot of States that are experimenting with them. The results have been mixed, as I understand it. But if individuals are to be drawn away from their drug dependent lifestyle, a boot camp has to be accompanied with some literacy enhancements, job training enhancements, job placement opportunities.

I agree with you, I think everybody would agree that that reintegration process has to be made out of the whole cloth. But the degree to which we as the Department of Justice or indeed the United States Government can make an effective contribution in that respect, I am somewhat uncertain about. I am not really sure what we can do because those, as I indicate in my view any way, are largely going to be the responsibilities of the State and local government.

Mr. SMITH. Well, of course, coming up with plans like that, we should be asking the Czar. You and Czar Bennett get along pretty well, do you not?

Mr. THORNBURGH. Yes, we do.

Mr. SMITH. We should be asking him, I guess, because he is supposed to be putting his overall plans together.

Mr. THORNBURGH. Well, you will find us most of the time speaking with one voice.

[Laughter.]

DRUG TESTING

Mr. SMITH. I see.

But, of course, as he has said so many times, somehow we have to reduce the number of casual users. Apparently there is some encouragement in that respect. According to surveys that have been made recently there is a 30 percent reduction in drug use. There was one report a few days ago that was really interesting to me. It was a survey that showed that 80 percent of the people working in certain kinds of factories wanted drug testing. My conclusion would be that that means 80 percent were not casual users. I do not believe somebody that is a casual user would want a test.

Mr. THORNBURGH. No, and I think it also tells you that that 80 percent does not look very kindly on the remaining 20 percent who do use drugs.

Mr. SMITH. No, but it is a substantially higher figure of noncasual users than we have been hearing about. I mean to hear a lot of people tell it, you would think the majority out there were using drugs.

Mr. THORNBURGH. Well, I think that breakdown is consistent with the kinds of figures that we see beginning to develop and I am cautious about assessing those, but that is an encouraging figure. I think it also tells you, if I can just make a pitch for something that I think is not in the law enforcement area but can be enormously helpful, is increased drug testing.

You look at the military experience. I have a son who is in the United States Navy and I know what that record has been since 1981, when they first did their random drug testing and found 27 percent of the enlisted men were using drugs. They instituted random drug testing in the Navy and that figure last year was 4.8 percent. And they did not have to do a lot of separations. It just became clear that the values system within the United States Navy enlisted service was one that did not condone a drug dependent lifestyle.

I asked him, "Bill, tell me," I said, "is there any way you can kind of fiddle with those tests and maybe beat the system?" "No way", he said, "they say random drug tests, they are random drug tests." That kind of thing is being done, as you know, in certain portions of Government where there is a sensitivity to safety or national security or the integrity of our law enforcement agents. More and more employers are beginning to utilize it, again, not as a sanction to identify someone, but to give people help because self-denial is so often the biggest hurdle to getting through to drug users.

Mr. SMITH. Well, clearly, safety is in the mind of a lot of factory workers.

Mr. THORNBURGH. I should think so.

Mr. SMITH. That is clearly behind that.

REQUEST TO OMB

We requested earlier some figures about your request to OMB on specific items. At that point, I wish you would have them put in the record what you have requested, not overall, but also, identify the parts that were eliminated by OMB, and what they would be used for.

ADDITIONAL JUSTICE DEPARTMENT RESPONSIBILITIES

In addition there has never in history been such an increase in the Justice Department in resources over such a short period of time, and never such an increase in the amount of responsibility and the need for the money. We know you have a big job to do and I think that you are doing a good job but we have a lot to do yet.

Mr. THORNBURGH. Yes, we do.

Mr. SMITH. This Subcommittee certainly wants to cooperate with you in any way we can to try to overcome the main problem of drugs, but you still have to still continue on all of the other problems.

Mr. THORNBURGH. I just want to say, Mr. Chairman, that we take that responsibility very seriously. I have shared with the management team at the Department of Justice my own assessment that it is often more challenging to deal with the management of the generous allocation of resources that the President and you have provided to us than to manage in tougher times because the temptation to not be as attentive to the nickels and dimes sometimes ensues when you have been provided with the ample funding that you given to us.

But I can assure you that our management team at the Department of Justice is determined to wring every last bit of performance for the taxpayers out of the appropriations that you have provided to us and we are greatly appreciative of the confidence that you have in us.

Mr. SMITH. Good.

Mr. Rogers, do you have any more questions?

WHITE-COLLAR CRIME INITIATIVES

Mr. ROGERS. Yes, Mr. Chairman.

General, we have overlooked a little bit this morning, although you mention it in your opening statement, the white-collar crime initiatives that you are leading.

You have got some substantial increases in here for white-collar crime enforcement. I wonder if you would care to tell us what that money will be used for?

Mr. THORNBURGH. The white-collar crime program has obviously a number of components. The principle additional funding this year will go into the savings and loan enforcement effort.

The $50 million provided to be sustained in our budget request for this year is to establish task forces in 27 cities around the country that have been identified as the locale of the major fraud that has been visited upon these institutions.

That will mean that we can draw on the model established in the Dallas Bank Fraud Task Force, which has secured the conviction of nearly 50 top executives of savings and loan institutions that were victimized during the 1980's. The replication of that model is being geared up across the country in these 27 cities.

In addition, we have sustained efforts in securities and commodity frauds in 8 areas throughout the country where techniques have been used to defraud customers, including a major push in the penny stock fraud area. The defense procurement fraud area, largely centered in Operation Illwind, here in the Eastern District of Virginia, has investigated and successfully prosecuted a number of major corporations, their executives and some Defense Department personnel.

We have some 800 open investigations in the HUD fraud area that are devoted to focusing attention not only on those contractors and consultants who may have defrauded the Government, but on individuals within the Government who may have been involved in illegal activity. We have a continued effort by our Public Integrity Section working with the United States Attorneys to deal with political corruption at the Federal, State and local level. Plus, as provided for specifically in this request, we have additional personnel in the environmental and antitrust areas: in the environmental area with particular attention to toxic waste and oil spills and ocean pollution, and the antitrust area, sustained effort toward those acts that impact directly on the consumer, such as bid rigging or price fixing.

These are all criminal prosecutions and they have their counterparts, of course, throughout the Department of Justice in accompanying civil efforts to recover as much as we can of monies out of which the Government may have been defrauded.

Mr. ROGERS. Well, I thank you for that testimony and, as the Chairman has stated, this Subcommittee wants to work and is working with you and will continue to work with you. We wish you well in your job.

Mr. Thornburgh. Thank you.

Mr. ROGERS. Thank you, Mr. Chairman.

Mr. SMITH. Mr. Early?

NEED FOR ADDITIONAL FINANCIAL ACCOUNTANTS

Mr. **Early**. General, would you provide for the record how many more accountants and tax type of people you could use—who would generate more money than they would cost, strictly for drug wars.

I will include the rest of my questions for the record.

[The information follows:]

Need for Additional Financial Accountants

Although the FBI uses agents with accounting backgrounds and Bureau-employed accounting technicians on some drug investigation cases, the Department depends upon the Internal Revenue Service for financial expertise related to drug cases. This is especially true with regard to the highly sophisticated and complex narcotic trafficking and money laundering cases handled by the Organized Crime Drug Enforcement (OCDE) Task Forces.

The IRS has the capability to identify the individuals who profit from their involvement in drug trafficking. This includes the lawyers who finance and advise the traffickers and help launder illicit narcotics money; the accountants who keep the books and disguise the source of narcotics proceeds; and the wealthy doctors, stockbrokers, and businessmen who serve as silent partners in the enterprise. These criminals have rarely been identified and prosecuted in the past. They are not routinely the target of drug enforcement agencies since there is seldom a connection between these individuals and the hard narcotics. The only way to identify and attack these criminals is through the use of financial investigations to link them with the money earned from narcotics sales. The agents assigned to the IRS's Criminal Investigations Division are the recognized experts in this aspect of narcotics cases.

For 1991, the Department of Justice is requesting an increase for the Internal Revenue Service's participation in the OCDE Task Force program amounting to $18,729,000 and 190 positions, of which 139 are special agents. These resources are requested specifically for the purpose of investigating money laundering and financial crimes associated with the massive drug smuggling operations across the Southwest Border.

The FBI attempts to recruit and hire financial accountants for its white-collar crime investigative activities; however, it is not a primary mechanism in drug investigations. The Department relies on IRS to work hand in hand with FBI and DEA agents on drug investigations.

Questions regarding the need for additional financial accountants should be directed to the IRS.

QUESTIONS FOR THE RECORD

Mr. **Smith**. Okay. We will have a few more questions to be answered for the record.

Mr. **Thornburgh**. Fine. We will be delighted to work with you and your staff in providing you as full a picture as we can of what we are doing and we thank you again for the support that has been given to us.

Mr. **Smith**. Thank you.

[The following questions were submitted to be answered for the record:]

QUESTIONS SUBMITTED BY CONGRESSMAN SMITH

Attorney General

Non-programmatic Reductions

QUESTION: The Committee is concerned about some of the Federal Bureau of Investigation (FBI) 1991 funding actions taken by the Office of Management and Budget which the Department was unable to reverse and which could seriously impact the ability of a number of your bureaus from performing their drug and crime related duties. I am referring to "program decreases" made against the FBI, the Immigration and Naturalization Service (INS) and the United States Attorneys for two reasons: first, in order to "offset costs associated with increased administratively uncontrollable overtime (AUO)", and second, in order to "meet targeted budget deficit levels". At a time when we are trying to enhance law enforcement efforts, how can the Administration possibly justify the following reductions:

> FBI: -$13.7 million to offset AUO costs. Cuts to come in travel, confidential case funding, background investigations, and equipment vital to drug and crime investigations.
>
> -$27.3 million/-514 positions (including 227 FBI agents) to meet budget deficit levels.
>
> United States Attorneys: -$6.2 million to meet budget deficit levels. The United States Attorneys will be unable to fill an estimated 225 positions authorized for 1990.
>
> INS: -$22.1 million/-60 positions to meet budget deficit levels. Cuts to be made across the board, with majority from the Detention and Deportation, Inspections, and Investigations programs.
>
> -$7.8 million to offset AUO costs. Cuts to come in travel, permanent change-of-station moves, and reduced overtime payments.

ANSWER: FBI: The $13,724,000 reduction for the FBI is part of the overall cost of $41,979,000 associated with the enactment of P.L. 101-173. The methods of funding this additional cost were chosen because they will have the least disruptive impact on the operations of the FBI. Agent positions, workyears and end-of-year agents on-board will all increase in 1991 over 1990 with this budget request. This funding has been accomplished by the following methods:

Included in this $13,724,000 is $9,069,000 that will be met through an equipment reduction in 1991. To accomplish this, the FBI will reduce purchase of replacement automobiles ($1,064,000), ADP equipment ($2,716,000), field investigative equipment ($3,630,000) and field office furniture ($1,659,000). Generally, the FBI will extend the life of a number of automobiles and the current inventory of equipment to handle this reduction.

A second component of this reduction will be achieved by the proposal allowing the FBI to conduct background investigations beginning in 1991 for the United States Attorneys on a reimbursable basis, as is done with other Federal agencies, including other agencies within the Department such as the Drug Enforcement Administration (DEA). This results in savings of $2,655,000 for the FBI to apply toward increased AUO costs. The United States Attorneys will absorb this funding from within the Executive Office for United States Attorneys; this funding absorption will not impact field operations.

The third component of this reduction will be realized through savings of $1,000,000 in travel and $1,000,000 in confidential case funding in the FBI's Violent Crimes and Major Offenders program. Anticipated workload in this program should allow the FBI to take these reductions without affecting ongoing investigations.

In addition to these reductions of $13,724,000, the lapse of 952 non-drug positions reflected as enhancements in the 1991 request was changed from the traditional 50 percent to 75 percent. Further, new positions in the Drugs program are lapsed at 65 percent. This results in savings of $26,655,000. The effect on the FBI is that these new positions will be brought on later in the fiscal year, i.e., three-quarters instead of half way. New agents often perform duties such as background investigations and other applicant matters early in their career. This change in lapse (an agent entering on duty in June instead of April) should have little impact on FBI investigative matters.

Finally, a 1991 enhancement of $1,600,000 originally intended for capital improvement projects at the FBI Academy will be used instead to fund AUO costs. The FBI plans to proceed with these electrical project this year with available 1990 funding.

In total, the FBI's 1991 budget also requests a reduction of 514 positions (including 227 agents) and $27,322,000 to meet targeted budget deficit reductions established by the Administration. The FBI elected to take this reduction proportionately across all programs. This does not include any reductions to the FBI's Drugs program which are reflected as adjustment to base (38 positions (including 22 agents) and $1,844,000). Other Field Programs would be reduced by 235 positions (including 133 agents). The Organized Crime program would be reduced by 47 positions (including 27 agents) providing sufficient resources remain to avert a resurgence of the threat of organized crime. In the FBI's White-Collar Crime program, a reduction of 65 positions (including 44 agents) would preclude the expansion of programs that are least disruptive to FBI priorities and operations in general.

United States Attorneys. In support of the Administration's efforts to reduce the Federal budget deficit, a reduction of $6.2 million was applied to the United States Attorneys 1991 request. In addition to this reduction, 225 positions that were not filled in 1990 to meet the 1990 sequester and some pay absorptions will remain unfunded in 1991.

As a result, 80 fewer attorneys will be employed for narcotics and dangerous drugs prosecutions than authorized by the President's Violent Crime initiative. Furthermore, 80 fewer attorneys will be employed for prosecution of white-collar crime and other priority litigation programs. In addition, 65 support positions will remain unfilled.

Immigration and Naturalization Service. For INS, a program reduction of 60 positions and $22,127,000 is requested to meet targeted budget deficit reduction levels established by the Administration. With the exception of the Border Patrol, INS will reduce its programs across-the-board to absorb this reduction. To accomplish this, INS will maintain a hiring freeze in 1990 and reach this reduced position and funding level in 1991 through attrition.

To fund the increased AUO costs of $11,071,000, INS has reduced a 1991 enhancement for replacement automobiles by $3,222,000. The remaining base absorption of $7,849,000 is planned to be taken in such areas as permanent change-of-station moves ($2,800,000), overtime other than AUO ($2,781,000), and discretionary travel/regional conferences ($1,268,000). An INS policy that agents at headquarters and regional offices can not receiving AUO will save $1,000,000. This general "belt-tightening" by INS should not impact on its operations during 1991.

QUESTION: Would you agree that these reductions are non-programmatic in nature, and in fact, that these bureaus can effectively utilize these funds?

ANSWER: Any reduction to an agency's budget can be considered programmatic. However, the methods of funding the increased AUO costs as well as absorbing the reductions to meet targeted budget deficit levels were carefully selected to minimize the programmatic effect on the involved agencies.

State and Local Drug Grants

QUESTION: The Department is requesting $492 million in 1991 for grants to State and local law enforcement agencies, an increase of $45 million over 1990 appropriations. Is the Administration now committed to the concept that the Federal Government must provide funding to enhance State and local law enforcement if we are to win the war on drugs?

ANSWER: The Administration is committed to the Anti-Drug Abuse State and Local Grant Program in the 1991 budget proposal. The request for $490 million in 1991, an increase of more than $45 million over 1990, represents a continuing commitment. This Administration recognizes that a comprehensive, coordinated approach is needed to combat the nation's drug problems. To be successful in the war on drugs, we must all work together to combine efforts at all levels of government and within all elements of society. The Administration's recognition of this concept is addressed at length in the 1990 National Drug Control Strategy that was issued in January.

QUESTION: In 1990, $50 million was appropriated for discretionary grants for State and local agencies. Considering the needs of these agencies in their drug efforts, why has the Department not yet issued its program plan for distribution of these grants? I understand that last year this plan was issued in January.

ANSWER: The 1990 Anti-Drug Abuse Discretionary Program Plan was published in the *Federal Register* on March 19. Last year, because the appropriation bill was signed on October 1, the Program Plan was published in January, the earliest publication date since the program's inception. For 1990, the appropriation was enacted on November 21, budget authority was subsequently reduced for sequestration, and final sequester amounts were not available until after enactment of the Omnibus Budget Reconciliation Act of 1989, on December 19. Additional factors existed that influenced timing of the Plan's publication. The available funding increased from $30 to $50 million. Since many projects had already been funded for a three-year period, a more detailed analysis of the programs under consideration was required. Careful review and consideration was required to ensure consistency with the President's 1990 National Drug Control Strategy, issued in January. It was important to ensure appropriate coordination with other Federal drug control agencies. In addition, compatibility with projects earmarked for funding in the Conference Committee report had to be considered. In 1987 and 1988, the Program Plan was published in March. Thus, the Program Plan was quite timely.

QUESTION: How can the Department say on one hand that it is supportive of these grants and then on the other delay the awarding of grants for which funds have been appropriated?

ANSWER: The 1990 formula grants were awarded to all 56 States and Territories by mid-March, a full month earlier than last year. As indicated previously, the 1990 Discretionary Program Plan was published in March, the same month it was published in preceding years, with the sole exception of 1989.

QUESTION: $50 million was appropriated for discretionary grants for 1990. In the report accompanying the Act, less

than 25 percent of this amount was identified for national programs and demonstration projects with high Congressional interest. What is the status of these projects?

ANSWER: The Program Plan contains national programs and demonstration projects consistent with those identified in the Conference Committee Report.

S&I Study

QUESTION: Last fall, the Committee directed our Surveys and Investigations (S&I) staff to perform a review of the State and local drug grant program. The review determined that the formula grant portion of the program was being well run; however, the S&I staff was prevented from performing its standard review of the discretionary program. Why was the Department unwilling to allow the Committee's S&I staff unrestricted access to the personnel and information associated with this program?

ANSWER: The longstanding policy of the Executive Branch is to comply with Congressional requests for information to the fullest extent consistent with the constitutional and statutory obligations of the Executive Branch. In implementing this policy, the goal of this Department in all cases is to satisfy legislative interests while protecting Executive Branch confidentiality interests. We also seek to ensure that the information provided is complete, accurate and transmitted in a timely fashion. Accordingly, we made available all of the employees the S&I staff desired to interview, but requested that a Department representative be present at the interviews. We also made available all requested documents and provided the S&I staff with office space to facilitate their efforts in reviewing the documents in which they expressed an interest.

QUESTION: By not allowing the S&I staff unrestricted access to the program, it gives the impression that information critical of the management of the program will be uncovered. Are you satisfied that this program is being run properly?

ANSWER: We regret that the S&I staff drew the erroneous conclusion that the Department's request to have Departmental representatives sit in on the interviews was an attempt to suppress derogatory information on the management of the programs. The Department fully supports the Committee's oversight activities, as was evidenced in this matter by our willingness to make available all requested employees and documents. The internal control mechanisms of the Department are designed to ensure that programs are efficiently and effectively managed and are in compliance with the applicable Federal laws. This review process naturally results in changes in program management. Based on these internal control mechanisms, we are satisfied that the discretionary grant programs are being properly managed. However, this is not a static situation but is a continuing process that results in program changes as difficulties are identified and addressed.

QUESTION: The Committee would find it very difficult to fund a program in which it is unsure whether it is being properly managed. Can you assure the Committee that the S&I staff will be provided the access it needs to determine that the program is being run properly?

ANSWER: We can assure the Committee that the S&I staff will be provided the access it needs to determine whether our programs, including the discretionary drug grant program, are being run properly. We have examined the Surveys and Investigations staff's request to interview Bureau of Justice Assistance personnel without a Department management representative or attorney present at the interview. It is our understanding that the Bureau of Justice Assistance employees that the Investigations staff wishes to interview without Departmental representatives present are only engaged in grant administration activities; they are not policymakers and are not involved in the law enforcement or litigative functions of the Department. In these circumstances, while we must specifically consider each interview request, we do not anticipate the need to insist on either denying access or having a Departmental representative present in the interviews. Our agreement to provide access for this investigation does not constitute agreement with respect to any future investigation because in order to discharge faithfully our constitutional and statutory responsibilities to protect confidential information we must review on its own merits each Congressional request for access to documents and individuals.

To facilitate this process, we request that S&I staff inform the Office of Legislative Affairs in the Office of Justice Programs of the identities of the individuals whom they wish to interview. The Legislative Affairs Office will then make the necessary arrangements for the interviews to take place. We also believe that the S&I staff also avail themselves of the opportunity to interview policy level personnel within the Bureau of Justice Assistance and the Office of Justice Programs on the administration of the Anti-Drug Grant programs and not restrict their inquiry to staff.

Congressional Earmarks

QUESTION: What is the Department's policy concerning compliance with Congressional guidance in reports accompanying your Appropriations Act?

ANSWER: The Administration recognizes that earmarking in Congressional reports does not have the force of law; however, in the interest of comity, the Administration acknowledges the guidance provided in the reports.

QUESTION: If the Department decides not to comply with a Congressional earmark, do you then plan to comply with section 606 of your 1990 Appropriations Act, which requires that you submit a reprogramming if you reduce any program approved by Congress by 10 percent or more?

ANSWER: The Department has no plans not to comply with any Congressional earmarks and will continue to submit reprogramming notifications when any program approved by Congress is reduced or increased by $500,000 or 10 percent, whichever is less.

Facilities Program 2000

QUESTION: You request about $1 million to initiate a requirements study for the possible consolidation of Justice Department components in the Washington, DC area. Please describe your plans for this "Facilities Program 2000"?

ANSWER: For many years the Department of Justice has been working with the General Services Administration (GSA) to consolidate a large number of DOJ components in the Washington metropolitan area. In March 1988, the Attorney General and the Administrator of GSA signed a Memorandum of Understanding regarding the allocation to DOJ of approximately 1.2 million square feet of space in the planned International Cultural and Trade Center/Federal Office Building (ICTC/FOB), which will be within two blocks of the Main Justice Building (MAIN). However, objections were raised to DOJ's tenancy in this "international" facility, and the United States Information Agency emerged as an alternate agency for predominant occupancy of ICTC/FOB.

In response to this development, last July, the Attorney General and Acting Administrator of GSA agreed upon the allocation to DOJ of 350,000 square feet of space in ICTC/FOB, 280,000 square feet of space in the Ariel Rios Federal Building (ARB) (which is across the street from MAIN), and approximately 400,000 square feet of space in a new facility to be leased within a six-block radius of MAIN. In addition, GSA plans to renovate MAIN and the Government-owned Homeowners Loan Corporation Building (HOLC) to improve environmental conditions, upgrade electrical and cooling systems, and remove asbestos hazards.

Facilities Program 2000 is DOJ's strategy to consolidate a portion of its headquarters personnel, currently housed in 20 leased buildings in the Washington metropolitan area, into these 5 facilities. This initiative will require approximately 10 years to implement fully. Accomplishing this initiative would result in substantial savings to the Government from reduced long-term lease costs and dramatically reduce the Department's physical fragmentation, thereby improving working conditions, lowering operational and administrative costs, and increasing productivity due to the physical proximity of staffs.

The $970,000 requested for 1991 would be used to develop the Department's "requirements program" that identifies offices to be relocated, their personnel and equipment needs, and any special functional requirements. Additionally, the funding would provide the contract architectural and engineering support needed to begin the process of preparing construction drawings. Preliminary engineering for the specialized security systems will also be accomplished. These engineering activities are crucial to the design/construction process.

QUESTION: Are you limiting consideration of sites for this consolidation to the downtown area of Washington, D.C., or are you considering the whole metropolitan area?

ANSWER: To minimize the impact of rising lease costs in downtown Washington, D.C., while consolidating the offices, boards and divisions (OBDs), the Department has expressed its desire to be housed in Government-owned buildings to the maximum extent. Of the buildings comprising Facilities Program 2000, five are Government-owned and the 400,000 square foot new facility has been proposed for the "least cost" financing program developed by GSA, which eventually would result in Government ownership. Moreover, three of the five buildings (MAIN, HOLC, and ARB) contained in the agreement with GSA are already in existence, and two of those (MAIN and HOLC) are currently occupied by DOJ. Also, construction of ICTC/FOB along 14th Street, between Pennsylvania and Constitution Avenues, N.W., was authorized by statute.

QUESTION: Is it really necessary for all Justice Department components to be located downtown?

ANSWER: Facilities Program 2000 focuses on housing the headquarters elements of Department components, particularly the OBDs, which require proximity to MAIN, the United States Courts, and other legal institutions in the downtown area. Moreover, the litigating missions of the OBDs inherently requires a collegial association between the Assistant Attorneys General (AAGs), the Solicitor General, and the Attorney General, and their staffs. Therefore, the AAGs have maintained a presence in MAIN, while many of their Branch Directors and Section Chiefs have been housed proximate in other buildings nearby. Further, the Department's litigating divisions provide services to other Government agencies (e.g., the Tax Division's principal client is the Internal Revenue Service) which are located in downtown Washington, D.C. Moreover, the individual OBDs combine to essentially represent a bureau in terms of programmatic requirements, and they support the mission of one another, e.g. attorneys from several divisions often work on the same cases. Thus, the OBDs, if combined, are not unlike a departmental bureau in terms of programmatic requirements, with the Justice Management Division providing administrative and support services to all OBDs.

The integrity of the Department's litigation of cases would be severely compromised if the OBDs were housed outside of Washington, D.C. In addition to the issue of physical distance from MAIN, client agencies and individuals, legal institutions, and the United States Courts, the issues of security and attorney-client privilege must be considered. The Department's attorneys can not simply telefax or send by messenger classified, Grand Jury, and other privileged documents that they deal with on a daily basis. Consultations with other Government and Department officials, and opposing counsel to review documents and exchange privileged information must be conducted in person. The financial and litigative costs to the Government in terms of lost attorney productivity due to traveling to meetings, interviews, and Court proceedings can not be overestimated. Therefore, there appears to be no positive gain from fragmenting the Department's components throughout the Washington metropolitan area.

The Department's bureaus, however, have a greater degree of individual programmatic autonomy, including providing their own administrative and support services, in comparison with the OBDs. Therefore, a bureau could be located some distance from MAIN, as in the case of the DEA and the United States Marshals Service (USMS), which are housed at Lincoln Place in Pentagon City. Of the Department's other bureaus, the INS is scheduled to be relocated from leased space to ICTC/FOB because of its international orientation, the Bureau of Prisons will remain housed in Government-owned HOLC, and the FBI is housed in the Government-owned J. Edgar Hoover Building.

QUESTION: Have there been any problems associated with having DEA and USMS located in Pentagon City?

ANSWER: Given the level of programmatic autonomy of the Department's individual bureaus, DEA and USMS have not experienced significant problems due to their relocation to Lincoln Place in Pentagon City.

El Paso Intelligence Center

QUESTION: In the conference report accompanying their 1990 appropriation DEA was provided $1 million to upgrade the computer system at the El Paso Intelligence Center (EPIC). This upgrade is critical to the processing of intelligence data because existing systems at EPIC are inadequate.

We understand that the Department of Justice has made a determination that EPIC's automation requirements can best be handled through the sharing of computer resources at the Department's Dallas Regional Data Center and not through DEA's purchase of a computer. We further understand that the Department made this determination based primarily on cost criteria.

Concerns have been raised that there are operational and security considerations which override cost considerations. For example, the unique requirements for processing intelligence data seven days a week/24 hours a day at EPIC necessitates their having a dedicated system. In addition, EPIC is processing classified and sensitive information that requires special handling and security and there are serious concerns about the security associaed with the transfer of data between EPIC and the Dallas Data Center.

Is it true that the National Security Agency found that DEA's security posture is compromised through the sharing of computer resources with the Data Center?

ANSWER: The National Security Agency (NSA), in its latest report prepared in February 1990 on the security at the Rockville Data Center (attached), did not find that DEA's security was compromised. DEA does not share computer resources with any other Department component at the new Data Center. Instead the DEA computing complex at Rockville, Maryland is dedicated solely to DEA requirements, including backup. The Data Center in Dallas will support EPIC in the same secure manner as DEA applications are supported in Rockville.

QUESTION: Did NSA recommend that DEA remove all its processing from the Data Center?

ANSWER: In its latest report, NSA did not recommend that DEA remove all its processing from the Rockville Data Center. It did point to the need for some corrective actions on the part of DEA, which the Department is taking. These actions dealt primarily with DEA procedures and responsibilities for user access to DEA's dedicated computing complex.

QUESTION: Did the Department thoroughly review all aspects of this project, including security and operational requirements at EPIC, before reaching its decision to utilize the Dallas Data Center?

ANSWER: The Department considered EPIC operational and security requirements before reaching the decision to use the Dallas Data Center to support EPIC data processing. Security and operational considerations played a major part in the early analysis of ways to provide the much-needed enhancement of computer support for EPIC. It was not until those considerations were addressed that the Department decided to use the Dallas Data Center to support EPIC's data processing requirements rather than DEA purchasing a separate computer. The result is that the Dallas Data Center, which is operational seven days a week/24 hours a day, currently has a powerful computer in place that is dedicated solely to meeting EPIC requirements. The Data Center resources that will be shared are limited to operator and other support mechanisms. Thus, we are achieving economies of scale without jeopardizing

EPIC's operational or security requirements. Overall, the Department continues to believe that the decision is consonant with the National Drug Control Strategy and represents the best solution from the perspectives of both cost and effectiveness.

QUESTION: Were NSA or the Intelligence Community consulted before this decision was made?

ANSWER: The Intelligence Community was not specifically consulted before the decision was made to provide data processing support for EPIC from the Dallas Data Center. Nonetheless, the Department is aware of NSA and other Intelligence Community concerns and interests on processing data with EPIC's level of sensitivity and these concerns have been represented in the decision. If any additional concerns or interests surface, the Department is prepared to address them in an objective manner. One of the advantages of the Department's decision about EPIC computer support is the flexibility it provides to meet additional requirements, including increasing security levels, as they might arise.

QUESTION: Can the Department find other uses for the resources at the Dallas Data Center?

ANSWER: The Department will support any use of the Dallas Data Center when it represents the most cost conscious and effective means to support mission needs of Department components in particular and the law enforcement community in general. The Department is becoming more effective in addressing the issue of information management and seeing the logical interfaces among the various law enforcement information systems and databases. We believe that the Dallas Data Center is in a position to assume major data center responsibilities and functions in the Southwest border area, especially as it relates to sensitive drug enforcement data and would be responsive to such requirements.

EXECUTIVE SUMMARY

1 This report replaces the Information Security Assessment of the Drug Enforcement Administration, Automated Data Processing Systems, published in June 1989. Following publication of the original report, it was determined that many of the findings and recommendations concerning the Department of Justice, which supports the Drug Enforcement Administration (DEA), were outdated and no longer applicable

2 Most of the DEA's computer support is handled by the Justice Data Center-Washington (JDC-W) facility. The majority of this report is based on a recently concluded review of those portions of the newly activated JDC-W facility, located in Rockville, MD, that support the DEA. The team was not able to give specific attention to those systems that are operated by the DEA outside of the JDC-W This assessment was undertaken at the request of the JDC-W personnel.

3 The assessment team found the new facility to be state of the art and believes that it provides DEA users with a reliable, protected processing capability which can meet user requirements for automated information systems support. Once available security procedures and automated features are fully implemented, certification and recertification becomes a routine task, allowing new and future security requirements to fit into the system with little effort. A complete listing of the findings and associated recommendations compiled by the assessment team are found in this report. The assessment team commends the JDC personnel for an excellent job in designing and setting up this new facility.

EXECUTIVE SUMMARY (U) ii

SECTION I - INTRODUCTION (U) 1

SECTION II - THREAT (U) 3

SECTION III - FINDINGS AND RECOMMENDATIONS (U) 5

SECTION IV - CONCLUSIONS (U) 9

SECTION I - INTRODUCTION

PART I - DEPARTMENT OF JUSTICE

1. In September 1989, the Justice Data Center--Washington (JDC-W) began operations at their new computer facility in Rockville, MD. This facility now houses four mainframe computer systems owned by the Department of Justice (DoJ), one of which is operated solely in support of the Drug Enforcement Administration's (DEA) automated information systems. On 19-22 December 1989, representatives from the Information Systems Security Organization (ISSO) at the National Security Agency (NSA) performed a computer security assessment of portions of the DoJ/DEA computer system.

2. The computer security assessment was not an inspection, accreditation, certification, or risk analysis but a technical analysis of the computer security posture of the DoJ/DEA system at JDC-W. The information analyzed was derived from discussions with the automated data processing (ADP) Facility Security Officer, operations personnel, user help desk personnel, systems programmers, and other ADP facility security staff. During this assessment, there were no hands-on testing of the system or discussions with DEA ADP users of the system.

3. The assessment examines various areas of computer security. These areas are designed to determine whether the goals of computer security are being met. It is recognized that the goals of computer security include:

a. Protection from compromise of information;

b. Protection from accidental or malicious modification, insertion, or destruction of information;

c. Protection from denial of service threats to information and computing resources; and,

d. Accountability of users on computer systems.

4. The assessment also recognized the similar goals or fundamental characteristics of the DoJ/DEA system as defined in the U.S. DoJ Order 2640.2B, dated November 16, 1988, Subject: Automated Information Systems Security.

5. The computer security goals and the DoJ fundamental characteristics are achievable by implementation of the DoJ 2640.2B requirements. These requirements specify the protection mechanisms necessary to ensure the effectiveness of the DoJ/DEA system in a secure operating environment and, more importantly, define who in the organization is responsible for implementating this policy. The responsibilities are a joint effort of the ADP Facility Security Officer and the DoJ user organizations.

PART II - DRUG ENFORCEMENT ADMINISTRATION

1. The DEA has one of the most straightforward missions within the Federal Government and includes:

   a. The enforcement of controlled substance laws;

   b. The investigation and prosecution of persons involved in the illicit production and trafficking of controlled substances; and

   c. The promulgation of programs to reduce availability of illicit controlled substances.

2. The DEA's primary responsibilities include:

   a. Coordination and cooperation with other Federal Government law enforcement agencies and state and local law enforcement officials on mutual drug enforcement efforts;

   b. Investigation and prosecution of major violators of controlled substance laws operating at all levels;

   c. Regulation and enforcement of/with compliance with the laws governing the legal manufacture and distribution of controlled substances;

   d. Management of a national narcotics intelligence system in cooperation with federal, state, local, and foreign officials to collect, analyze, and disseminate data as appropriate;

   e. Operation of all DEA programs associated with drug law enforcement officials of foreign countries;

   f. Provide scientific and technical training and research and other support services that enhance the DEA's overall mission;

   g. Liaison with the United Nations, Interpol, and other organizations on matters relating to international narcotic control programs; and

   h. Coordination and cooperation with other federal, state, and local agencies, as well as foreign governments, in programs designed to reduce the illicit availability of abused drugs on the U.S. market through noninterdiction methods, such as crop eradication, crop substitution, and training of foreign officials against drug abuse.

SECTION II - THREAT

1. The spectrum of threat to the DEA's ADP environment is as diverse as the threat to the DEA's other operations. The criminal element (including drug traffickers and those involved in criminal activities peripheral to drug-related matters) has a deep and abiding interest in both obtaining the DEA's sensitive information and denying the DEA access to that information. Casual hackers and others with questionable intentions may also attempt to enter ADP systems, electronically, out of curiosity or malice. Such entries often result in the alteration, destruction, or compromise of data resident in these systems and the possible denial of the use of the systems to legitimate users.

2. There have been cases of disgruntled federal employees, with legitimate access to computer files, who have caused serious harm before the damage is noticed. Also, cleaning crews in many commercial buildings routinely have access to office spaces during and after duty hours. In this case, when computer terminals are left activated or unattended and when sensitive hard copy material is not properly destroyed, an opportunity exists for an unauthorized person to access the system.

3. Moreover, phone tapping and/or bugging of offices and homes of persons involved in law enforcement activities have been reported. In many commercial buildings, the telephone closet and conduit systems are accessible to unauthorized persons because of their central location in maintenance corridors or basements. As most ADP communications use the commercial telephone system, this vulnerability may allow the adversary considerable insight into the activities, involvements, and concerns of DEA personnel.

4. The telephone threat becomes all-pervasive in the DEA's overseas operations, where the host nation's government controls all telephone service into and within the country. In many countries where drug kingpins wield a great deal of power and influence, there are officials at all levels who are influenced directly or indirectly by the politics of contraband.

5. Additional modes of communication may also be compromised in overseas facilities because of the presence of local nationals in many U.S. buildings, including embassies and consulates. In drug-exporting countries, many local national employees may have family or other ties with narcotics traffickers that would give them the incentive to use their positions to acquire information that could be used to damage operations and persons involved in interdiction and eradication.

6. Additionally, all computer systems that are connected in any way to the outside world are susceptible to malicious codes (e.g., computer viruses). Any system with a dial-in/dial-out capability is vulnerable, especially those computers that are linked to commercial networks and electronic mail systems or that communicate with on-line bulletin boards. Other vulnerable systems include those which use software that is loaned, borrowed, or acquired outside of the normal government procurement channels (including public domain software, freeware, and software downloaded from bulletin boards). Disks brought in from outside official channels can convey all sorts of malicious code embedded into the software. Past instances of malicious codes have ranged from the benign (sending a Christmas greeting) to the malevolent (destroying data) and can be unwittingly transmitted by users from one system or stand-alone unit to another via ordinary but "infected" software.

Personal computers (PCs) with internal hard disk units are particularly vulnerable to this transmission of code. While it is recognized that even officially procured software can be "infected," it has the least probability of being so.

7. Although all of the threat listed in this section does not apply to the DEA's ADP support systems, the operational environment in which DEA agents perform investigations and undercover operations requires an awareness of all threat. With agents working out of their homes, cars, and other diverse locations, the possibility of compromise of sensitive information proportionately increases with the element of risk.

SECTION III - FINDINGS AND RECOMMENDATIONS

PART I - DEPARTMENT OF JUSTICE

1. INTEGRITY AND ISOLATION

a. Finding:

Most users of the JDC-W, including the DEA, access the systems by remote means. Access to the DoJ/DEA mainframe is through a dedicated Comten 3690 front-end processor on dedicated lines. There is dial-in capability to the JDC-W, but no dial-in user is permitted access to the DEA mainframe. The software that resides in these Comten systems has no audit capability other than controlling a remote user's access to a particular mainframe. No individual user identification or authentication takes place in the Comten. If a user has access to a remote terminal, he or she can access the system on a dedicated line, be acknowledged as a legitimate user, and be passed on to the mainframe system for additional processing. On the dial-in Comten, the user must know the phone number and can then dial in and be presented with a "Ready For Logon" prompt. The user must identify the system and application to which he wishes to connect. The Comten then ports the user to the proper system. Users with terminals and modems can use this method of access from anywhere, including their homes. A request for the DEA/DoJ mainframe and application would not be recognized.

Recommendation:

The DEA system should remain inaccessible to the Comten dial-in processor. As future upgrades are contemplated, some form of call-back modem capability should be implemented on the dial-in system. Although not a cure-all for dial-in security, it does provide a measure of protection and identification not now available. As software upgrades are made to the Comten operating system, some form of Personnel Identification Number (PIN) and auditing capability could be implemented on the system. There are also other programs, such as the Low Cost Authentication and Encryption Device (LEAD), which may also fit nicely into the DoJ's future plans.

b. Finding:

The JDC-W stores, maintains, and processes all DEA information on a dedicated IBM 3090-400E mainframe computer. This system also possesses its own dedicated peripheral devices for the DEA mission. The current operating system is the IBM MVS/XA, Release 2.2. The system employs the "Top Secret" security subsystem software, Release 4.2. The DEA users perform most of their system functions with the Model 204 (M204) database management system and the Guardian security subsystem. There is also system interaction and batch processing capability through the use of the Time Share Option (TSO) and Customer Information Control System (CICS). All system hard-copy output is remotely printed at DEA facilities or printed and packaged at JDC-W and couriered to a DEA focal point for distribution unless a specific authorized user calls ahead and makes arrangements for pickup. This process allows the DEA to control the destruction of system output when it is no longer required. The backup to this system is a dedicated AMDAHL 5870 mainframe processor which had served as the primary mainframe processor before the JDC-W moved to the new facility in Rockville, MD. The complex is equipped with a backup battery power supply which is good for approximately one-half hour. This allows sufficient time for an orderly shutdown to avoid loss of data and equipment damage.

Recommendation:

The JDC-W should continue operating under the same configuration. The DEA's information is sensitive enough for their isolation on this system to be necessary. The contingency plan, as required by DoJ 2640.2B, should be completed and tested periodically to ensure it works.

2. CONTROLLED ACCESS AND IDENTIFICATION

a. Finding:

When discussing controlled access in relation to automated information systems security, the discussion is confined to automated computer features and procedures which restrict a user's logical access to the system. Physical security to the facility and personnel security in the form of background checks, etc., are not included as part of the assessment. Although these types of security disciplines are important, they should not be part of an information systems security assessment process but should be policy concerns of the DoJ. The automated access control to the DEA system is currently being handled in two fashions. "Top Secret," Release 4.2, subsystem software controls access to all DEA system functions with the exception of the M204 and CICS. Currently, the DEA users employ the Guardian security subsystem for additional access control to CICS functions. DEA systems programmers install and maintain the Guardian software and also determine the capabilities and rules they wish implemented on this subsystem. This is possible because Guardian does not execute as a privileged program on the system; therefore, the DEA does not need system manager privileges to maintain this system. "Top Secret," Release 3.0, was evaluated as a C2 level of trust subsystem by the National Computer Security Center (NCSC). Release 4.2 is believed to contain at least the same features and probably a few enhancements which would permit it to maintain its C2 rating although it has not been officially evaluated. If implemented properly on the DoJ/DEA system, this software security subsystem can more than adequately protect all DEA information resources.. At present, however, "Top Secret" is not fully implemented on this system. The M204 still operates outside the "Top Secret" purview and Guardian is being implemented for access protection to M204 resources. The Guardian subsystem was not looked at during this assessment because it is under the control of DEA users and only the JDC-W complex was assessed

Recommendation:

According to DoJ 2640.2B, the ADP Facility Security Officer is responsible for implementing the automated security features and procedures of the system. The users are responsible for adhering to those rules to protect their information. In short, the JDC-W provides the capability and the rules for protecting access to the information. "Top Secret" will provide the necessary security mechanisms to protect DEA's information even to a classified level. The JDC-W needs to place "Top Secret" at the top of the system root directory and only permit access to system applications through "Top Secret," including M204 access. Since the M204 is a database management system which interfaces with MVS operating systems, "Top Secret" can control access to the M204. The current version of the M204 has an interface which permits the M204 to run under the "Top Secret" subsystem. M204 access controls and privileges remain enforceable by the M204, under control of the DEA, once "Top Secret" access is satisfied.

b. **Finding:**

The JDC-W does not require individual accounts, even within the rules currently specified by "Top Secret." However, the JDC-W permits group accounts to exist on the system when requested by the user organization. The DEA ADP managers do not allow group accounts because this would negate the effectiveness of auditing.

Recommendation:

Internal policy guidelines should be established to ensure adherence to password management guidelines required by DoJ 2640.2B (National Bureau of Standards (NBS) Federal Information Processing System (FIPS) Publication 112, "Password Usage," dated May 30, 1985). A process to delete unauthorized accounts in a timely manner when employees are transferred or leave the organization needs to be implemented. The JDC-W should also remove group accounts and only allow individual accounts and passwords.

c. **Finding:**

In reviewing the "Top Secret" rules specified for users at the JDC-W, it was clear that no time-out feature is implemented on user accounts, except for the DEA PROFILE Management System which provides a 10-minute time-out feature on the M204 and CICS. However, the time-out feature has not been implemented by the JDC-W and the DEA to its full capabilities. Since many reports of malicious attacks on computer systems indicate they are perpetrated by insiders, usually in the form of a disgruntled employee, not implementing this feature in "Top Secret" leaves the JDC-W complex of systems vulnerable. The reason this feature is present in security subsystems is because it offers adequate protection. If a user has not actively communicated with the system within a certain period of time (usually set at 10 minutes), the system automatically logs the user off. This prevents users from logging on and leaving their terminals unattended for long periods of time.

Recommendation:

The time-out feature should be implemented by the DEA and the JDC-W to reduce the vulnerability of unauthorized access.

PART II - DRUG ENFORCEMENT ADMINISTRATION

1. OVERALL

Finding:

The DEA's current ADP security policy is based on Chapter 82, Subchapter 825, in the DEA Internal Security Manual (effective 1 January 1988). This policy, as written, appears to cover most of the very critical areas of ADP operations.

Recommendation:

This policy should be adhered to and enforced by all persons dealing with DEA ADP operations.

2. AUDIT TRAIL

Finding:

The Guardian application system audit trail is reviewed by DEA personnel and formal guidance containing how it is to be reviewed, when it needs to be reviewed, or what the procedures are for reporting and follow-up of found discrepancies have been promulgated through the Office of Security Programs.

Recommendation:

Audit trail records should be reviewed regularly (at least on a weekly basis, if not daily) with discrepancies documented, researched, and followed up immediately. Discrepancies should also cover attempts to access closed files. As an additional suggestion, the initial audit trail should not include successful logons--this would make a daily evaluation very easy to examine for attempts, etc.

3. USER SECURITY AWARENESS

Finding:

The technology explosion has resulted in many users not being aware of the vulnerabilities of the system (especially user-related vulnerabilities).

Recommendation:

The DEA has done well with its information and communications security (COMSEC) awareness program for all incoming personnel. Incorporating this into the DEA's Quantico, VA, Training Academy curriculum would train new DEA agent personnel in good computer and INFOSEC habits. Equivalent training should be incorporated into onboard employee training sessions, and updated and repeated as necessary to ensure that the DEA work force is knowledgeable about INFOSEC.

SECTION IV - CONCLUSIONS

1. A secure system starts with a sound security policy. The DoJ has such a policy in DoJ 2640.2B. The policy implements the national requirements and clearly delineates who is responsible for implementing this policy at the JDC-W complex. The JDC-W complex is new and considered state of the art in computing processing capabilities. The systems at JDC-W have the hardware configurations and software systems to provide DoJ users and the DEA with reliable, secure processing capability.

2. As the JDC-W and the users of the JDC-W, including the DEA, implement and follow the security procedures and automated features that are available at the complex, the process of certification and recertification becomes a routine task allowing new and future security requirements to fit into the system with little effort.

QUESTIONS SUBMITTED BY CONGRESSMAN EARLY

Attorney General

War on Drugs

QUESTION: Your statement mentions that the United Nations Convention Against Illicit Narcotics signed by more than 80 countries has some real law enforcement teeth. What law enforcement teeth does it provide?

ANSWER: The United Nations Convention established the norms for criminalizing the production, cultivation, and trafficking of illicit drugs. In addition, it contains a number of provisions designed to curtail the diversion of 12 precursor and essential chemicals. The Convention obligates all participating nations to criminalize each link in the drug trafficking chain -- from the production of illicit drugs to the laundering of drug profits. It mandates unprecedented cooperation in the investigation and prosecution of drug-trafficking offenses and facilitates the extradition of traffickers.

QUESTION: What agreements reached at the drug summit in Cartegena will have a positive impact on the Department's efforts in the "War on Drugs"?

ANSWER: The Cartegena summit reaffirmed the willingness of our government and the governments of Peru, Bolivia and Colombia, to fight a comprehensive battle against drug trafficking, attaching all facets of the drug trade.

The agreement we reached reaffirmed interdiction as an essential element of the "War on Drugs" and pledged increased interdiction efforts on the part of all governments involved. In addition, the agreements call on each government to devote more resources to combatting drug trafficking, including the active participation of each nation's military. The United States offered to provide equipment and training to its Andean partners. All four countries agreed to increase information sharing and enhance cooperation in intelligence operations.

QUESTION: It has been a little more than a year since the enactment of the Anti-Drug Abuse Act of 1988. What impact has this legislation had on the problem of drug enforcement?

ANSWER: By incorporating many key legislative initiatives into one law, the Anti-Drug Abuse Act of 1988 has directly benefited Federal drug law enforcement agencies and indirectly enhanced drug law enforcement operations by eliminating or modifying obstacles that would prevent or hinder such operations. Examples of these key initiatives include the following:

Chemical diversion and trafficking -- This portion of the bill has enabled the regulation of the distribution of selected precursor and essential chemicals used to clandestinely manufacture amphetamine, methamphetamine, LSD, heroin, and cocaine.

Overseas benefits -- DEA personnel serving overseas have been authorized the same benefits available to Department of State personnel, thus enhancing their overall effectiveness.

Foreign language bonus -- Employees who make substantial use of a foreign language in the performance of their official duties are eligible for bonuses of up to 25 percent of their base pay.

Transfer of financial records -- Financial records may be transferred to the Attorney General when they are needed to pursue investigations of criminal law violations.

Marijuana plant counts -- Mandatory minimum penalties can now be applied to specified marijuana plant counts as well as specified weights.

FAA regulations -- The Federal Aviation Administration (FAA) has provided assistance to law enforcement agencies in the enforcement of controlled substances (e.g., by substantially modifying regulations concerning the recordation and registration of aircraft.)

Pakistan -- Foreign assistance available to Pakistan has been conditioned on their destruction of illicit laboratories and their prosecution of laboratory owners and operators.

Coca herbicide -- The Department of State is funding the testing and use of herbicides for aerial eradication of coca. (Testing is underway in Peru.)

Foreign forfeitures -- Transfer of forfeited property or proceeds has been made possible for foreign countries that participate in the seizure of drug-related assets.

Crack penalties -- Mandatory minimum penalties have been created for crack possession.

Civil Air Patrol -- The United States Air Force may now issue regulations ensuring that the Civil Air Patrol has an integral role in drug interdiction and eradication activities.

Increase in public safety officer benefit -- The death benefit payable to beneficiaries of officers killed in the line of duty has been increased from $50,000 to $100,000.

Military assistance -- This portion of the bill has enabled drug producing and transiting countries to use Foreign Assistance Act funds to procure weapons and ammunition for use in narcotics control, eradication, and interdiction.

Organized Crime Drug Enforcement Task Forces -- The Act centralized resources to coordinate the investigation and prosecution of OCDE cases. These cases are often the most highly sophisticated and diversified criminal drug-related and money-laundering cases.

Anti-Drug Abuse State and Local Grants -- The grant program has provided an impetus for State and local drug control officials to work closely together to identify drug control problems and devise strategies to target available resources to ensure the maximum impact on drug trafficking and abuse. The Anti-Drug Abuse Act of 1988 permitted significant expansion of drug control activities. The formula grants are being used for a variety of programs, including demand reduction, crime prevention, organized and white collar crime, street sales programs and many others. However, the largest percentage of funding (nearly 38 percent) is being used for the implementation of multijurisdictional task forces, which are critical to effective drug control efforts. The 1990 discretionary program will focus on areas such as drug testing, street level enforcement, drug user accountability, alternative sentencing, demand reduction, and information systems. Significant efforts are being undertaken to ensure that the programs funded with these resources are carefully evaluated.

Additionally, in creating the Office of National Drug Control Policy (ONDCP), the Act envisioned a central entity to coördinate the Government's drug supply and demand reduction activities. Furthermore, the National Drug Control Strategy has been prepared as a document that contains a comprehensive strategy of the current thinking regarding the manner in which our nation should attack the drug problem. This "truly national plan" has thus served to crystallize the thinking of a broad array of Federal, State and local officials, experts in the field of drug prevention, treatment, and enforcement, as well as hundreds of concerned and public-spirited citizens.

QUESTION: What impact has it had on the Department's resources?

ANSWER: With respect to the investigative agencies of the Department, Title X -- Supplemental Appropriations -- of the Anti-Drug Abuse Act of 1988 provided additional 1989 funding for limited growth of the FBI and the DEA into highly select locations where it was determined that the resources would have the greatest effect on major drug trafficking organizations.

The FBI was provided $15 million that supported an additional 279 positions (including 120 agents). These resources continued to implement the FBI's Drug Program which focuses on destroying a greater portion of the 450 major drug trafficking organizations identified by the intelligence community.

Similarly, $26.2 million was appropriated for the INS to continue to provide an important contribution in the coordinated strategy to suppress the supply of illegal drugs entering this country by increasing its personnel commitment to the Inspections program as well as its Border Patrol Staff.

The $30 million enhancement for DEA provided resources for 221 positions (including 70 agents) and aircraft, pilots and airwing support for its supply reduction operations in South America to reduce the flow of drugs to our country. The funds provided also allowed DEA to staff the El Paso Intelligence Center adequately and enabled it to focus on the international aspects of drug trafficking by serving as the all source tactical drug interdiction intelligence center.

The funds provided also enabled the Department to increase its asset seizure and forfeiture activities. DEA increased the number of Asset Removal Teams which have proven successful in conducting thorough financial investigations.

Additional funds for the United States Attorneys were used to increase the number of attorneys dedicated to forfeiture cases thereby resulting in increased processing of judicial forfeitures.

Funds received in the new law also provided for important post-arrest programs such as prosecuting attorneys, the courts, and the prison system, by directing new resources to ensure that those arrested for drug crimes would be prosecuted and if convicted, would serve stiff sentences. With the $69 million enhancement for the United States Attorneys, new assistant United States Attorneys are narrowing the existing gap between arrests and prosecutions by prosecuting an unprecedented number of significant drug traffickers.

The $16.4 million for the United States Marshals Service provided increases in the areas of Judicial Security and custody of prisoners. The $95.6 million for the Bureau of Prisons (BOP) allowed for the construction of an additional Federal Correctional Institution, expansion of four existing facilities, the acquisition of surplus facilities, as well as a Northeast detention facility. The $16.4 million for the Support of United States Prisoners (SUSP) provided increases for the care and housing of United States prisoners in non-Federal institutions.

Finally, with the additional funding made available to the Office of Justice Programs for the Drug Control and System Improvement Grant Program, State and local law enforcement efforts are also being enhanced. Through this grant program, the criminal justice system will be vastly improved by developing programs to assist multijurisdictional and multi-State organizations in support of National drug control priorities, thereby providing an assault on all fronts in the "War on Drugs."

Drug-Related Homicides

QUESTION: The number of drug-related homicides continues to escalate. How is the Department responding to this crisis, and what initiatives does the Department plan to take to address this problem?

ANSWER: On May 15, 1989, President Bush announced a proposal to amend the 1990 budget by providing an additional $1.189 billion to further address violent crimes.

Two new violations, police killings and drug-related homicides expanded the Violent Crimes subprogram in 1989. A new penalty provision in Title 21 now makes it possible to impose the death penalty for drug-related killings of Federal officers, State or local law enforcement personnel or for local homicides which meet the drug distribution threshold.

In the area of drug-related homicides, it is not the intention of the Federal law enforcement agencies to interject themselves into matters which can be or should be investigated, prosecuted, or otherwise resolved by State and local law enforcement entities. It is our intention to use this new jurisdiction to assist local law enforcement in a united front against drug-related subjects who kill as part of their activities and to seek significant penalties whenever possible.

A number of FBI and DEA field offices are currently conducting investigations in cities where drug-related homicides are a major crime problem. These long-term cases are being worked jointly with State and local law enforcement agencies.

The Federal law enforcement agencies are involved in the task force concept to investigate violent crimes in large cities throughout the United States including Boston, New York, Washington, D.C., Richmond, Miami, Pittsburgh, Chicago, Los Angeles, and San Francisco. The task force approach to violent crimes has significantly improved the intelligence base for law enforcement agencies to address youth gang violence. The joint effort by Federal, State and local law enforcement agencies enables law enforcement to coordinate efforts to address crime problems of mutual interest.

Youth Gangs

QUESTION: Youth gang involvement in drug-related violence has also increased substantially. What action is the Department taking to address this problem?

ANSWER: Youth street gangs are major traffickers in crack cocaine and heroin at the street level. Their role, combined with the high propensity for violence exhibited by the gangs, were the chief reasons that DEA established three centrally-managed Special Enforcement Operations targeting gangs. In addition, DEA's Los Angeles Division heads the multi-agency task force focusing on gangs in the Los Angeles area -- one of the areas where the presence of gangs is strongest. In addition, youth gang involvement in drug-related violence is being investigated by Federal law enforcement task forces where appropriate and any violation of Federal law is specifically being addressed by the FBI.

High Intensity Drug Trafficking Areas

QUESTION: The National Drug Strategy calls for the designation of "High Intensity Drug Trafficking Areas." How many areas have been designated thus far. And what results have we seen from this initiative?

ANSWER: Currently, the Office of National Drug Control Policy has designated five areas as High Intensity Drug Trafficking Areas. These are: New York, Miami, Los Angeles, Houston, and the Southwest Border.

The initiative is still relatively new and its results relating to the impact on drug trafficking have not yet been fully realized. The Anti-Drug Abuse Act of 1988 requires that the Director of the ONDCP report to Congress by March 1, 1991, on the effectiveness of this initiative. We have seen a substantial resource enhancement and this will further coordination and cooperation between Federal, State and local law enforcement agencies in targeting drug trafficking networks in these areas.

Precursor Chemicals

QUESTION: It appears that there is increasing concern regarding the availability of precursor chemicals and the implications for the production of illicit drugs. Does the Department view this as a serious problem?

ANSWER: The producers of cocaine rely heavily on the precursor and essential chemicals imported from other countries in processing coca leaves into refined cocaine. The diversion of these essential and precursor chemicals is viewed by the Department as a serious problem.

The Chemical Diversion and Trafficking Act was enacted as part of the Anti-Drug Abuse Act of 1988. The intent of this legislation is to control the sale and distribution of precursor and essential chemicals to prevent their availability to clandestine laboratory operations worldwide. The DEA has responsibility for chemical control through its Diversion Control program. The 1991 budget request for DEA includes an additional 33 positions (28 diversion investigators) and $2 million to enhance the Diversion Control program. These positions will support the implementation of the Chemical Diversion and Trafficking Act.

QUESTION: Has the Department taken a position on the call for more restrictions and/or controls on the shipment of precursor chemicals?

ANSWER: The Chemical Diversion and Trafficking Act provides an effective tool against the diversion of essential and precursor chemicals by making the diversion of chemicals from the United States more difficult; however, as exports from the United States decrease, the exports of targeted chemicals from Europe increase dramatically.

To counter, the U.N. International Narcotics Control Board and DEA will be hosting a conference for European and Latin American countries which will sensitize chemical source and destination countries to the problems of chemical diversion and trafficking.

In addition, the Department and the International Narcotics Control Board are encouraging countries participating in the International Chemical Conference to ratify the new U.N. Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances which contains a number of pro- visions designed to curtail the diversion of 12 precursor and essential chemicals. Only ten countries have ratified the U.N. Convention to date: the United States, the Bahamas, China, Nigeria, Senegal, India, East Germany, Chile, Ecuador and Bahrain.

The Department is also assisting the Organization of American States in drafting chemical control legislation to be used as a model in developing regulations in member countries.

Jail Space

QUESTION: Your statement indicates that there appears to be no end in sight to competing need for jail space by Federal, State, and local governments? To what extent has the severity of this problem increased and are we making any headway at all?

ANSWER: In just four years, the USMS has seen its average daily prisoner population soar 80 percent from 7,216 as of January, 1986 to 12,953 as of January 1990. As the USMS's daily population has grown, so has the average stay and the total number of contract jail days. The pressure continues to build to find adequate bedspace for Federal prisoners in Federal court cities.

BOP has steadily increased its assistance to the USMS in housing these prisoners. There are approximately 6,000 unsentenced detainees in Federal prison facilities with a rated capacity of approximately 3,300. The USMS has requested that BOP expand its assistance in housing Federal detainees by constructing additional Federal Detention Centers and establishing or expanding jail units at existing Federal prisons. BOP's 1991 budget includes $96.6 million to assist the USMS by expanding Federal detainee bedspace by 1,250. The attached table provides the BOP current and planned detention assistance. (Attachment A)

Progress has also been made in the area of increasing cooperation between the BOP, INS, and the USMS. This past fall, a top level Detention Group was established to idetify mutual detention issues and problems and to work together to develop solutions. BOP, INS, and USMS are also working together to develop a Five Year Detention Plan that will call for the funding to support the construction of new Federal facilities from 1992 to 1996. In addition, the USMS is working with the Administrative Office of the United States Courts and the General Services Administration to develop a Federal Law Enforcement Center prototype which would follow local government centers and provide space for detention, courts, and United States Attorneys.

As a shorter-term response to the detention space crisis, the USMS is currently operating a Northeast Detention Initiative that involves the daily assessment and allocation of available bedspace in BOP facilities in the Northeast.

QUESTION: The budget request indicates that BOP plans to acquire surplus military facilities for use as minimum security facilities. Would you summarize the Department's plans in this area. What arrangements or procedures have been established with the Department of Defense to facilitate this initiative?

ANSWER: Historically, BOP has worked closely with the Department of Defense to identify suitable locations for correctional facilities on military bases. These efforts have resulted in establishment of three minimum security Federal Prison Camps on deactivated bases, and 12 on active bases. An additional ten correctional facilities, ranging from minimum to high security, have been constructed on former military property. (See Attachment B.)

Recently, BOP was included as a member of the Commission on Alternative Utilization of Military Facilities established by the President. The Commission was established to review unused or underutilized Department of Defense facilities that could be used or renovated to serve as a minimum security prisons and for other purposes.

The Department of Defense has recently provided the Commission with over 5,000 documents identifying buildings and land holdings throughout the country. The Bureau is evaluating the documents to determine if sites located in areas targeted for expansion meet the Bureau's habitability and life safety requirements.

Once the evaluation is complete, the Bureau plans to work with the individual military services to determine if selected property is available and suitable for use as a correctional facility.

On those bases selected for conversion, the Bureau will closely coordinate with local elected officials and base personnel to develop appropriate environmental studies before making final decision to proceed.

In addition to the ongoing relationship that has been established over the years, the BOP plans to utilize its membership on the Commission as a vehicle to further identify and establish additional minimum security Federal Prison Camps on military bases.

Requested Increases

QUESTION: The budget request includes almost $92 million to improve staffing at existing Federal correctional facilities. What problem areas will be addressed with this increase?

ANSWER: Operating BOP at a level approaching 70 percent over its design capacity without commensurate staffing increases has placed severe demands on staff. To address this situation, a plan as been set in motion to increase staffing levels at existing institutions with a goal of achieving a staff to inmate ratio of 1:3 by 1991. The 1991 budget includes 4,000 positions for this purpose. Within this increase, special emphasis will be given to:

- Health Services. Current staffing levels are not sufficient to meet the increased demand for medical services brought about by the rapid inmate population growth. With projected continued growth in the population, medical services staffing will be increased system-wide to provide adequate levels of medical care. In addition, resources are requested to construct a long-term nursing facility to address specific care requirements of an aging population.

- Drug Treatment. Currently, approximately 50 percent of the inmate population is incarcerated for drug offenses and the number of offenders with serious drug abuse histories is even greater. The recent anti-drug abuse statutes assure that these numbers will continue to grow and that offenders will be incarcerated for significantly longer periods of time. To enhance program capabilities for successful intervention, the Bureau will add specialized staff to implement a three-part treatment system consisting of eight to ten "intensive" treatment programs for approximately 1,000 beds; a larger "low-intensity" educational program for approximately 2,000 inmates; and a network of pre-release aftercare treatment contracts.

- Inmate Literacy. Approximately 15,000 inmates in BOP do not have a graduate equivalency degree (GED), which is essentially the standard for literacy in the workplace. Most of these inmates are not enrolled in a GED program. Of 7,300 offenders withdrawing from the Adult Basic Education Program is 1988, most will probably be released without basic literacy skills. With the additional staff and resources requested to increase the mandatory literacy period from 90 to 120 days, we estimate an additional 5,000 literacy completions will be generated annually. If an ex-offender cannot compete effectively in the job market, he/she more than likely will return to life of crime.

- Human Resources. With the Federal inmate population and the number of prison facilities projected to nearly double by the end of 1995, the recruiting, staffing, staff training and development requirements for the Bureau are truly staggering. The Bureau must begin now to acquire the staff resources to plan and implement the recruiting, training and staff development systems that will insure the existence of an ample pool of experienced and competent personnel to meet the substantial managerial and staffing demands resulting from this rapid growth.

QUESTION: The budget request again includes a substantial number of new positions for the Department's law enforcement agencies (DEA, FBI). What impact is this having on the Department's training program, particularly with regards to capacity and quality?

ANSWER: DEA anticipates training 651 students in its basic agent training course in 1991. This includes the new special agents requested in the 1991 budget and replacements for agents lost to attrition. Approximately 15 basic agent classes are planned to train this number of new agents.

The training requirement will have a decided impact on the DEA staff and on the shared facilities at the FBI Academy at Quantico; however, the resources are available to provide the necessary training. FBI Academy facilities will be at 100 percent of capacity and basic agent training will continue to be the training priority. As a result, in-service and State and local training courses may suffer. Although the facilities at Quantico will be used for these programs as available, classes will most likely be taught off-site or in the field. DEA is investigating the possibility of converting Camp Upshur at Quantico for use in State and local in-service training.

An analysis of FBI general law enforcement training responsibilities through 1995 reflects that on an average, a minimum of 98 percent of FBI Academy facilities will be required, on an annual basis, to meet FBI training obligations. Available demographic data indicates that by 1995, 75 percent of the FBI's special agent complement will have 11 years or less of experience. During the period from 1991 to 1995, 37 percent of the FBI agent complement will average five years or less of experience. Consequently, if the FBI is to replace its special agent workforce during a period of heavy attrition (1991 - 1995), a substantial commitment of FBI training resources are necessary. In fact, it is estimated that by 1992, 94 percent of classroom space must be dedicated to FBI training programs. Efforts have been initiated to examine alternatives to meet the projected training requirements.

Adjustments to Base Funding

QUESTION: What is the Department's cost of the January 1990 regular Government and Senior Executive Service (SES) pay raises?

ANSWER: The Department has estimated the 1990 cost of the 3.6-percent civilian pay raise to be $99,453,000. This total pay increase amount is absorbed in 1990. In the 1991 request, the Department is requesting a total increase of $131,964,000, which is the amount required for full-year funding.

Further, the Department has costed the 1990 SES pay raise at $979,638. Increases of $1,220,154 for the 1990 Executive Level salary increases are estimated. In 1990, the Department is required to absorb both these amounts.

QUESTION: What is the amount of sequestration for the Department?

ANSWER: The sequestration as applied to our 1990 available funding level is $82,628,000. Of this amount, a total of $8,406,000 reflects a limitation on program levels and/or obligations.

QUESTION: How is the Department absorbing these costs? What impact is this having on your agencies and their programs?

ANSWER: Generally, all organizations took cuts in discretionary areas such as travel, training and equipment, and planned to delay hiring of some personnel. However, both the United States Attorneys and the FBI have taken substantial cuts in staff. The United States Attorneys will be unable to fund 225 of the planned 800 new workyears that were to be devoted to violent crime work. Also, the FBI will cut back 109 positions from the 454 originally planned to work financial institution fraud cases. Both the United States Attorneys and the FBI believe that it is better to sustain these reductions to new initiatives rather than erode base operations even further. Even with these cuts, more reductions in other FBI programs, including staff, equipment and ADP items are required. Department organizations plan to reduce costs by:

- Deferring or eliminating equipment and systems purchases;
- Tightening up prompt payment procedures to minimize payment penalties;
- Deferring non-critical renovations and repairs;
- Limiting administrative and other travel to essential travel only;
- Tightening controls in expendable supplies and use of copying machines;
- Curtailing administrative conferences and using teleconferences instead, where feasible;
- Delaying hiring; and,
- Reducing overtime costs where feasible.

QUESTION: Did the Department recoup all or any part of the sequester in its 1991 base?

ANSWER: The 1990 full-year sequester is not restored in 1991 except for the following organizations: Office of the Inspector General, USMS, SUSP, DEA, and Border Patrol (INS).

1991 Vacancies

QUESTION: The budget request proposes an increase of 6,615 positions, for a total of 80,621 positions Department-wide. How many of the 80,621 positions will be vacant in 1991? How many will be unfunded with the budget request before us?

ANSWER: Based on the historical, normal turnover rate of four to six percent for the Department, it is anticipated that of the 80,621 positions, 4,837 will be vacant at the end of 1991. There is an approximate 50-percent lapse rate in bringing new employees on-board once the budget is enacted and security clearance of new employees are approved; however, all new positions are currently planned to be filled at the end of 1991.

It is possible that circumstances beyond the Department's control may result in a higher vacancy rate. For example, if pay recommendations from the National Advisory Commission on Law Enforcement are enacted or a sequester is required in 1991, it is likely that the Department will be required to absorb these costs. In that event, additional vacancies would be expected.

QUESTIONS SUBMITTED BY CONGRESSMAN CARR

Attorney General

Telemarketing Fraud

QUESTION: In the 1990 Appropriations bill this Committee directed the Justice Department to prepare a report on telemarketing fraud. This report was to have been submitted to the Committee within six months of enactment of the bill. The bill was signed into law on November 21, 1989.

How are you progressing on the report? What are your initial findings? Even though you technically have until May to provide us with the report, will this Committee be able to receive your findings before that date?

Please comment on what the Department is doing in the area of telemarketing fraud.

ANSWER: As of April 17, 1990, all United States Attorneys' offices had been surveyed and provided responses. Of the 93 districts responding, 58 offices indicate they have handled cases or matters dealing with telemarketing fraud. The Department will share the results of its inquiries as soon as the data are analyzed. We will attempt to forward a completed report in advance of the May 21 deadline.

QUESTIONS SUBMITTED BY CONGRESSMAN KOLBE

Attorney General

QUESTION: You've requested increases for the Drug Enforcement Administration (DEA) and Immigration and Naturalization Service (INS) for new positions. Can you provide a breakdown on how many of these positions will be agents and how many will be support? Also, could you provide the total number of authorized positions and breakdown of agents to support positions for the INS, Federal Bureau of Investigation (FBI), Border Patrol and DEA? How many of these authorized positions are currently filled? Please provide a summary of where current vacancies are. If you received your full request for this year for these agencies how many positions would then be filled?

ANSWER: For 1991, the Department is requesting program increases of 304 positions for INS. Of these, 104 are for the Immigration Inspections program and 200 are for the Border Patrol program. The 104 immigration inspector positions are to provide for the replacement of temporary inspectors with permanent staff. The Border Patrol positions, 176 of which are Border Patrol agents and 24 of which are support positions, are requested to enhance the Patrol's drug interdiction efforts. In total, INS is requesting an increase of 280 agents and 24 support positions in 1991.

In 1990, INS's authorized force is 12,388 positions. Of these, 6,648 are agent positions (that is, Border Patrol agents, immigration inspectors and criminal investigators) and 5,740 are support positions. The Border Patrol program has an authorized force of 4,852 positions, of which 4,089 are agents and 763 are support.

INS currently has on board 6,492 agent and 4,931 support positions.

During 1990, the Border Patrol plans to hire 192 new agents. At the end of the year, we anticipate that 4,496 employees will be on board in that program, of which 3,865 will be agents and 631 support. Because of general absorptions required in 1990, the Border Patrol will be unable to fund 356 of its authorized positions. The majority of the 104 immigration inspector positions will be filled from the ranks of temporary inspectors currently on board.

In 1990, the FBI is authorized 9,542 agent and 11,594 support positions (including 557 fingerprint clerks, 7,740 general administrative, clerical and office services support, and 3,297 professional/technical support). The total ratio of 1.22 support for each agent reflects personnel at FBI Headquarters along with support assistance provided for State and local assistance, which are not directly field investigative related. Therefore, the ratio of agent to general support included is not indicative of field investigative operations. The FBI uses a general field agent to field general support ratio of .65 support to each agent which is more reflective of field requirements. Direct funding has been provided for 9,210 agent and 11,227 support workyears for 1990.

The 1991 request to Congress includes a net increase of 172 agent and 335 support positions. Direct funding has been requested for 9,108 agent and 11,106 support workyears in 1991.

The FBI's 1990 hiring plan is projecting 9,187 agent and 11,477 support workyears to be utilized in directly-funded functions. This 1990 projection is 23 agent workyears less than and 250 support workyears more than the appropriated workyear levels. The 1991 hiring plan is projecting that 9,119 agent and 11,085 support workyears will be utilized in directly-funded functions. This 1991 projection is 11 agent workyears more than and 21 support workyears less than the requested direct workyears to Congress.

The following chart shows the requested positions and vacancies for DEA.

Drug Enforcement Administration
Positions Levels 1989-1991

	Special Agents			Support			Total

QUESTIONS SUBMITTED BY CONGRESSMAN CONTE

Attorney General

Bankruptcy Investigation

QUESTION: I want to address a problem in my district. In 1985, a company in my district, the X-Tyal International Corporation, filed for bankruptcy. There was evidence of fraud and double billing on defense contracts, and the FBI investigated the case.

Last fall, the defense procurement fraud unit closed that case with no criminal prosecution, even though their investigators said the circumstances surrounding the X-Tyal bankruptcy were suspicious. They said the evidence was not sufficient to proceed.

The closing of that plant was highly damaging to the local community. Two hundred and thirty people lost their jobs. Some of those people have pursued the case and have released evidence obtained by the FBI.

That evidence raises real questions as to why the FBI dropped the case, and I wrote to the Assistant United States Attorney in January to request that the case be reopened and that additional resources be devoted to the investigation.

I don't expect you to be personally aware of this history, but I want you to be aware of the case. Frankly, the public image of your Department suffers in the eyes of

local citizens when credible evidence appears to have been brushed aside. That evidence has been published throughout my district.

I would like you to look into this case with a view toward reopening it. Would you get back to me as soon as possible?

ANSWER: In September 1985, the FBI and the United States Army's Criminal Investigation Command (CID) initiated a joint investigation of X-Tyal. The investigation focused on allegations of fraud relating to five defense contracts awarded to X-Tyal between 1982 and 1985 and X-Tyal's bankruptcy in June 1985. After reviewing the results of the investigation and considering the recommendations of the FBI and CID that prosecution was not warranted, the Department's Defense Procurement Fraud Unit declined prosecution of X-Tyal or any individuals.

The investigation identified potential criminal activity in the five areas described below. In each instance, for the reasons noted, insufficient evidence existed to initiate a criminal prosecution of X-Tyal.

1. X-Tyal submitted false progress payment claims by "double-billing" the same invoice to support multiple progress payment claims.

The investigation found only one instance of a double-billed progress payment. An X-Tyal bookkeeper attributed the double-billing to error. Upon discovery of the double-billing, the contract administrator suspected no fraud and elected to administratively offset the overpayment against future progress payments due. An audit of X-Tyal progress payments by the Defense Contract Audit Agency (DCAA), dated March 29, 1985, revealed no instances of fraud or suspected fraud.

2. X-Tyal misrepresented its financial condition to a Defense Contract Administration Services Management Area (DCASMA) office during the pre-award survey conducted in March 1985.

The pre-award survey was largely based upon a balance sheet and income statement provided to the DCASMA office by X-Tyal. Each had been prepared by an independent certified public accountant who stated that he believed each to be accurate. The investigation uncovered no additional evidence that demonstrated that the balance sheet and income statement ware false and that any X-Tyal officers or employees knew that they were false.

3. X-Tyal fraudulently transferred assets to Toloco Industries, a company controlled by the wife of X-Tyal's president, one month prior to X-Tyal's filing for bankruptcy.

The investigation determined that in May 1985, X-Tyal transferred $106,438 to Toloco Industries in payment for materials related to the manufacture of inflatable shelters. Two X-Tyal employees stated that they recall the shipment and that the material was legitimately required for the manufacture of the inflatable shelters. X-Tyal's bankruptcy trustee withdrew a claim that the $106,438 was a preferential transfer based upon a lack of evidence to substantiate that claim.

4. X-Tyal converted textiles valued at $800,000 that the United States had provided to X-Tyal for contract performance.

The investigation revealed that although a DCASMA industrial specialist had estimated a loss of textiles valued at $800,000, the actual extent of any loss could not be substantiated due to inadequate records. The investigation uncovered no evidence showing that X-Tyal or any of its officers or employees had removed any textiles from the X-Tyal premises or that they had improperly sold or otherwise disposed of any textiles.

5. X-Tyal paid inflated rates to Toloco Industries for the lease of a plant in North Adams, Massachusetts.

An initial suspicion that X-Tyal paid unreasonably high rental charges to Toloco Industries for its North Adams facility was not further substantiated by the investigation. A DCAA audit of rental costs claimed in connection with progress payments revealed no fraudulent activity.

THURSDAY, MARCH 8, 1990.

GENERAL LEGAL ACTIVITIES AND THE CIVIL LIBERTIES PUBLIC EDUCATION FUND

WITNESSES

DONALD B. AYER, DEPUTY ATTORNEY GENERAL

HARRY H. FLICKINGER, ASSISTANT ATTORNEY GENERAL FOR ADMINISTRATION

MICHAEL J. ROPER, DEPUTY ASSISTANT ATTORNEY GENERAL, CONTROLLER

ADRIAN A. CURTIS, DIRECTOR, BUDGET STAFF

BUDGET REQUEST

Mr. SMITH. Continuing with our review of the Department of Justice, we will now hear testimony concerning the General Legal Activities appropriation and the Civil Liberties Public Education Fund. General Legal Activities requests $338,546,000 in fiscal year 1991, an increase of $43,657,000 over FY 1990 enacted amounts. $500,000,000 was appropriated in last year's appropriations bill for Japanese-American reparations for FY 1991. We will insert in the record at this point the fiscal year 1991 budget justifications for these accounts.

[The justifications follow:]

Legal Activities

Salaries and expenses, General Legal Activities

Summary Statement

Fiscal Year 1991

The 1991 request for the General Legal Activities (GLA) appropriation totals $338,546,000; an increase of $28,437,000 over the 1991 base level. The enhancements reflect the Administration's continuing concern with increasing its prosecutive success in the fight against crime, protecting the public's interests in litigation involving the Federal Government, responding to the workload demands of recent legislation, and achieving improved management of Departmental resources.

Summary of General Legal Activities by Major Initiative

Civil Litigation - The Civil Division requests enhancements totaling 96 positions and $5,367,000 in 1991. This includes $3,590,000 for personnel costs associated with increased workload in the appellate, Federal programs, torts and commercial litigation areas. An additional $1,777,000 is requested for automated litigation support that is crucial to the Government's success in its largest and most complex civil litigation cases. About $3,419,000 or 64 percent of this request, supports litigation to combat financial institution fraud.

The Land and Natural Resources Division seeks an additional $5,926,000 and 34 positions for the enforcement of environmental laws and for protection of the Government's interest in the management of its natural resources. A significant increase in the number of cases -- particularly those involving environmental enforcement statutes -- is projected in 1991. The request includes $4,300,000 for automated litigation support required to successfully conclude the Division's most complex cases.

The Tax Division requests enhancements totaling $5,102,000. This includes $1,402,000 to provide sufficient resources to fund the Division's authorized workyear level. It also includes $3,700,000 for automated litigation support to permit the Division to more effectively organize and prepare document-intensive cases resulting from the IRS's large-case initiative.

The Civil Rights Division requests 16 positions and $1,744,000 to address Voting Section workload increases caused by an influx of Section 5 redistricting cases. In addition, $100,000 is requested for the purchase of a map plotter for analysis of voting redistricting decisions. An increase of $2,500,000 and 47 positions is also requested to address a significant workload increase resulting from the Fair Housing Amendments Act of 1988.

Criminal Prosecution - The Criminal Division seeks enhancements of 4 positions and $262,000 for workload associated with the conflict of interest and election fraud cases, and the independent counsel determinations conducted by the Public Integrity Section. The Tax Division requests an increase of $279,000 for prosecution of criminal tax cases. This includes $200,000 for automated litigation support and $79,000 for travel costs associated with financial institution fraud cases. For the Land and Natural Resources Division, the Department requests 12 positions and $642,000 to prosecute alleged criminal violations of environmental statutes.

Management Improvements - The Department is requesting an additional $6,225,000 for Legal Activities Office Automation to continue its program of automation improvements in the legal divisions and the U.S. Attorneys' offices. This funding will enable the litigating components to increase efficiency, strengthen management and improve the productivity of their litigating efforts. With this enhancement, the participating components will replace outdated equipment and provide access to such information system applications as legal research, attorney timekeeping and administrative management systems.

The Tax Division requests an enhancement of $325,000 to address its problem in the recruitment and retention of qualified personnel -- particularly attorneys. Included in this request is $75,000 to establish a professional development program for the Division's attorneys. The remaining $250,000 will be used to initiate a more aggressive attorney recruitment program to fill open slots, and to provide additional awards to outstanding experienced professionals.

The Land and Natural Resources Division requests an increase of $40,000 and 1 position to provide the administrative support needed to implement the automated litigation support initiatives requested in the 1991 budget.

Program reductions totalling 14 positions and $75,000 will be realised from A-76 management savings as three legal divisions (Tax Division - 4 positions, $22,000; Criminal Division - 5 positions, $26,000; and the Civil Rights Division - 5 positions and $27,000) contract out services currently performed by Federal employees.

Legal Activities

Salaries and expenses, General Legal Activities

Justification of Proposed Changes in Appropriation Language

The 1991 budget estimates include proposed changes in appropriation language listed and explained below; new language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses, General Legal Activities

For expenses necessary for the legal activities of the Department of Justice, not
otherwise provided for, including not to exceed $20,000 for expenses of collecting
evidence, to be expended under the direction of the Attorney General and accounted for
solely on his certificate; and rent of private or Government-owned space in the
District of Columbia; [$257,000,000], , of which not to exceed [$5,751,000] shall be available $5,639,000
for the operation of the United States National Central Bureau, INTERPOL; and of which $338,546,000
not to exceed $6,000,000 for litigation support contracts shall remain available until
September 30, [1991]; Provided, That of the funds available in this appropriation, not 1992
to exceed [$12,160,000] shall remain available until expended for office automation systems $23,171,000
for the legal divisions covered by this appropriation, and for the United States Attorneys,
the Antitrust Division, and offices funded through Salaries and expenses, General Administration:
[Provided further, That for fiscal year 1990 and hereafter the Chief, United States National
Central Bureau, INTERPOL, may establish and collect fees to process name checks and background
records for non-criminal employment, licensing, and humanitarian purposes and, notwithstanding
the provisions of 31 U.S.C. 3302, credit such fees to this appropriation to be used
for salaries and other expenses incurred in providing these services. Provided further, That
for fiscal year 1990 and hereafter the Attorney General may establish and collect fees to cover
the identifying, copying and distributing copies of tax decisions rendered by the Federal
Judiciary and that any such fees shall be credited to this appropriation notwithstanding the
provisions of 31 U.S.C. 3302:] Provided further, That, notwithstanding any other provision of
law, not to exceed [$1,000,000] for expenses of the Department of Justice associated with $1,500,000
processing cases under the National Childhood Vaccine Injury Act of 1986 shall be reimbursed
from the special fund established to pay judgments awarded under the Act.

[Subject to the provisions of section 104(e) of the Civil Liberties Act of 1988 (Public Law 100-383; 50 U.S.C. App. 1989 (b-3(e)), the maximum amount authorized under such section for any fiscal year is appropriated, from money in the Treasury not otherwise appropriated, for each fiscal year beginning on or after October 1, 1990, to the Civil Liberties Public Education Fund established by section 104(a) of the Civil Liberties Act of 1988, for payments to eligible individuals under section 105 of that Act.]

19 U.S.C. 1619; 21 U.S.C. 886; 28 U.S.C. 501, 505-506, 510-520, 524-526, 48 U.S.C. 1424, 1617, 1694; 50 U.S.C. App. 6; Department of Justice Appropriations Act, 1990; additional authorizing legislation to be proposed.)

[For carrying out efforts at National Drug Control and the President's initiative to combat violent crime, $41,476,000, to remain available until expended, to improve the effectiveness of the Department's legal activities, to improve coordination between law enforcement programs in this country and other countries, to improve efforts in extradition of drug cartel kingpins and to improve Criminal Division efforts in Federal/State task forces.]

(Department of Transportation and Related Agencies Appropriations Act, 1990.)

Explanation of changes:

1. The first four changes update the 1990 language to coincide with the 1991 request.

2. The fifth change deletes two provisos that are no longer necessary. The first proviso is no longer required because the 1990 language constitutes a permanent statutory adjustment. The second proviso contains language which was repealed in the Foreign Operations, Export Financing, and Related Appropriations Act, 1990 (Sec. 599F, 103 Stat. 1264).

3. The sixth change increases the amount that can be transferred from the National Childhood Vaccine Injury Compensation Fund from $1,000,000 to $1,500,000 pursuant to P.L. 101-239.

4. The seventh change deletes language no longer required because the 1990 language constitutes a permanent statutory adjustment.

5. The eighth change deletes language no longer required because the 1990 language constituted a one-time requirement.

Congressional Appropriation Actions: Funding provided in the appropriations acts totaled $298,476,000, a reduction of $5,491,000 from the President's Budget, as amended. Of the $298,476,000, some $295,776,000 was provided by Congress to fund requests made in the amended Bush Budget and for other specific purposes. This left a total of $3,700,000 in undistributed program increase funding which was allocated among the General Legal Activities accounts at the discretion of the Department. The result of these combined actions is represented in the columns, above.

1990 Sequestration: These columns reflect the sequestration required by P.L. 99-177, as amended by the Omnibus Budget Reconciliation Act of 1989.

---

[1] The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.

General L[illegible] Activities

Salaries and expenses

Justification of Adjustments to Base

(Dollars in thousands)

Mandatory Increases	Perm. Pos.	Work-years	Amount
1. Annualization of 1990 positions	0	186	$12,213

This provides for the annualization of 191 positions approved in the original 1990 President's Budget request to Congress, plus 168 positions requested in the President's 1990 Violent Crime budget amendment.

	Approved 1990 Increases	Annualization Required
Annual salary rate of 359 approved positions	$12,764	
Less lapse (50 percent)	-6,861	$5,862
Net compensation	5,903	5,862
Associated employee benefits	1,444	1,433
Other object classes	24,351	4,918
Total costs subject to annualization	31,698	12,213

Mandatory Increases	Perm. Pos.	Work-years	Amount
2. Additional compensable day	0	0	697

The annual salary rate for Federal employees is based on 260 paid days. During 1991 there is one more compensable day (261) than 1990 (260). Appropriate personnel benefits are included in this figure.

Mandatory Increases	Perm. Pos.	Work-years	Amount
3. 1990 Full-year pay increase impact on 1991	0	0	6,429

This request provides for the full-year pay increase of 3.6 percent as contained in the general provisions of the U.S. Treasury, Postal Services and General Government Appropriations Bill, 1990, for civilian and miliary personnel to be effective in January of 1990. The Department will be required to absorb the total pay raise in 1990. The requested increase of $6,429,000 is the amount required for full year funding in 1991. NOTE: The 1991 budget requests an increase to fund the reductions made in 1990 to cover the pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.

	Perm. Pos.	Work-years	Amount
4. 1991 pay increase For the first time, the Administration is proposing to include the costs of the pay increase effective in the budget year with the initial budget request. This request provides for 50 percent of the proposed 3.5 percent pay increase effective in January of 1991. The Department will be required to absorb half of the costs of this pay raise. The amount requested, $2,305,000, is the cost of the pay increase for approximately three-quarters of the year assuming a 50-percent absorption.	0	0	2,305
5. Senior Executive Service pay increase This request represents the 1991 costs of the pay increase for senior executive service employees. This pay raise is to be effective in January of 1990, but will be absorbed completely for the first year. In 1991, an increase of $1,100,000 is necessary for this requirement. Funding for the executive level employees pay raise is completely absorbed in both years.	0	0	$1,100
6. Special Salary Rates This request provides increases as authorized by law in 5 U.S.C. 5303. The Office of Personnel Management has approved these rates for positions where retention and recruitment of qualified applicants is a problem. The Department's request represents coverage of 33 authorized special rates.	0	0	80
7. Health Benefits The Federal Employees Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1990, the actual contribution to health insurance increased. The requested increase of $814,000 provides funds for actual increased costs from pay period 1 to pay period 2, projected for a full year.	0	0	814
8. GSA Rent GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. An uncontrollable increase of $605,000 or a five-percent increase over the base, is required to meet our commitment to GSA.	0	0	605
9. GPO printing costs The Government Printing Office (GPO) is currently projecting a seven-percent increase over the 1990 printing costs. An additional $71,000 will be required in 1991.	0	0	71

	Perm. Pos.	Work-years	Amount
10. Employee data and payroll services Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems, maintenance and payroll accounting, are based on the number of employee records maintained. The rate of $188.23 per record in 1990 will be raised to $199.52 per record for 1991. The change is based on anticipated uncontrollable cost increases of 6 percent for the operation of the Justice Employee Data Service. An increase of $31,000 will be required in 1991.	0	0	31
11. Foreign Allowance Allowances for Government employees in foreign areas are determined by the Department of State (DOS). The State Department anticipates a 10-percent increase in 1991. The requested increase of $12,000 provides 10 percent more than is budgeted for 1990.	0	0	12
12. Distributed Administrative Support Under the Foreign Affairs Administrative Support agreement an annual charge is made by the DOS for administrative support items. The amount of this charge is determined by the DOS. The DOS advises that a 10-percent increase in foreign operations costs is anticipated. The increase of $1,000 is based on the 1990 base availability.	0	0	$1
13. INTERPOL dues Adjustments in the annual dues payable to the International Criminal Police Organization.	0	0	43
14. Correction of base funding for Office of Special Counsel Funding and workyears necessary to reflect appropriate base level resources given the staffing level of the Office of Special Counsel.	0	4	90
15. Project EAGLZ Maintenance As part of Project EAGLE, the Tax and Criminal Divisions and the U.S. Attorneys will be required to provide maintenance costs from their operating budgets after the government assumes ownership of the workstations and other equipment associated with this initiative. Based on the 1989 procurement of this equipment, $835,000 will be needed to cover these maintenance requirements in 1991.	0	0	835
16. Annualization of 1990 leases The amount provided in this increase will allow full year funding of leases for office automation systems for Department management offices and litigating components.	0	0	4,932
Total, mandatory increases	0	190	30,258

	Perm. Pos.	Work-years	Amount
Decreases:			
1. Nonrecurring costs associated with 1990 program increases	0	0	($671)
2. Staffing of Office of Redress Administration Staffing of the Office of Redress Administration has been accomplished through reassigning existing personnel , by hiring personnel on temporary appointments and by utilizing contract personnel. To accurately reflect the projected utilization of resources, it is necessary to reduce ORA resources 42 positions and 41 workyears in 1991. This reduction does not imply any need for less funding for this effort; funds originally allocated for salaries and benefits will be used for contractor support.	(42)	(41)	0
3. Federal Telecommunications Systems (FTS) In 1991, the General Services Administration (GSA) is to have the FTS 2000 system fully implemented. At present GSA projections indicate costs for current FTS minute usage charges will decrease from 34 cents per minute to 18 cents per minute. The requested reduction of $767,000 from the 1990 base reflects this decrease.	0	0	(767)
Total, adjustments to base	(42)	149	28,820

Activity Resource Summary

(Dollars in thousands)

Activity: Conduct of Supreme Court proceedings and review of appellate matters

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Federal appellate activity	49	54	$4,650	49	54	$4,889	49	54	$4,889	...	...	...

Long-Range Goal: To be as effective as possible in the conduct of all aspects of government litigation in the appellate courts and the U.S. Supreme Court.

Major Objectives:

To adequately represent the interests of the U.S. Government in cases before the Supreme Court.

To review appellate cases to determine their suitability for appeal to the U.S. Supreme Court or to a lower Federal Appellate Court.

To meet all filing dates of cases before the U.S. Supreme Court.

Base Program Description: The major function of the Solicitor General's Office is to supervise the handling of government litigation in the Supreme Court of the United States.

The Office of the Solicitor General is the Government's foremost legal office. The original Statutory Authorization Act of June 22, 1870, states: "There shall be in the Department of Justice an officer learned in the law, to assist the Attorney General in the performance of his duties to be called the Solicitor General." As stated in 28 C.F.R. 0.20, the general functions of the Office are as follows: (1) conducting, or assigning and supervising all Supreme Court cases, including appeals, petitions for and in opposition to certiorari, briefs and arguments; (2) determining whether, and to what extent, appeals will be taken by the Government to all appellate courts (including petitions for rehearing en banc and petitions to such courts for the issuance of extraordinary writs); (3) determining whether a brief amicus curiae will be filed by the Government, or whether the Government will intervene, in any appellate court; (4) assisting the Attorney General and the Deputy Attorney General in the development of broad Department program policy.

Accomplishments and Workload: Recent accomplishments and workload of the Office of the Solicitor General are presented as follows:

Supreme Court Matters: Item	1988	1989	Estimates 1990	Estimates 1991
Pending, beginning of term	416	425	438	451
Received	2,136	2,142	2,182	2,198
Terminated	2,127	2,129	2,169	2,187
Pending, end of term	425	438	451	462

Supreme Court Matters:	Item	1988	1989	Estimates 1990	Estimates 1991
Other Activities:					
Appellate determinations		1,533	1,537	1,540	1,544
Certiorari determinations1/		736	740	749	754
Miscellaneous recommendations2/		378	379	377	381
Oral Arguments		74	83	74	76

Explanation: Cases decided during the 1988 Term of the Supreme Court in which the Solicitor General has filed a brief include those in which the Court held that: (1) the sentencing guidelines promulgated by the United States Sentencing Commission pursuant to the Sentencing Reform Act of 1984 are consistent with the separation of powers under the Constitution and are not the product of an improper delegation by Congress of its legislative power (United States v. Mistretta); (2) the Fourth Amendment does not bar the Customs Service from requiring employees who apply for a transfer to a position involving the interdiction of drugs or the handling of firearms to undergo a urinalysis drug test (National Treasury Employees Union v. von Raab); (3) application of the forfeiture provisions of the federal drug laws to assets that the defendant wishes to use to pay his attorney is consistent with the relevant statutory provisions and the Sixth Amendment of the Constitution (Caplin & Drysdale v. United States); United States v. Monsanto); (4) the Federal Advisory Committee Act does not apply to meetings of the Standing Committee on the Federal Judiciary of the American Bar Association, especially in light of the potential for the Act to interfere with the President's constitutional power to nominate officers of the United States (Public Citizen v. U.S. Department of Justice); and (5) the Constitution does not require a state to permit the use of public facilities or employees to perform abortions or prohibit a state from requiring a physician to perform medically reasonable tests to determine the viability of a fetus that has a gestational age of 20 or more weeks (Webster v. Reproductive Health Services).

Cases decided during the 1989 Term of the Supreme Court in which the Solicitor General filed a brief include those in which the Court held that: (1) neither the First Amendment nor a common-law evidentiary privilege bars the enforcement of a subpoena issued to a university by the Equal Employment Opportunity Commission in an investigation of alleged employment discrimination (University of Pennsylvania v. EEOC); (2) a federal district court abused its discretion in imposing contempt fines on individual members of the Yonkers City Council for refusing to vote for a remedial measure contemplated by a consent decree without first imposing fines on the City alone (Spallone v. United States); and (3) the statute assessing a percentage fee from the Iran - United States Claims Tribunal does not violate the Just Compensation Clause of Due Process Clause of the Fifth Amendment (United States v. Sperry Corp.).

Cases to be decided during the 1989 Term of the Supreme Court include those in which the Solicitor General has filed a brief arguing that: (1) whether the law directing federal district courts to impose monetary assessments against convicted defendants was passed in violation of the Origination Clause of the Constitution presents a nonjusticiable political question, and that law does not in any event violate the Origination Clause (United States v. Munoz-Flores); (2) the Equal Access Act prohibits content-based discrimination against student speech in a high school's student club program, and that Act is consistent with the Establishment Clause of the First Amendment (Board of Education of Westside Community Schools v. Mergens); (3) a State may, consistently with the Due Process Clause of the Fourteenth Amendment, require clear and convincing evidence that an incompetent person would want life-sustaining procedures withdrawn before it approves the termination of such procedures (Cruzan v. Director of Missouri Department of Health); (4) a state statute requiring notification of the parents of a minor who seeks an abortion does not violate the Due Process Clause of the Fourteenth Amendment (Hodgson v. Minnesota); and (5) the Office of Personnel Management may not be equitably estopped from terminating a civil service disability retirement annuity as required by law (OPM v. Richmond).

1/ Includes certiorari authorizations, no certiorari decisions, direct appeal authorizations and no direct appeal decisions.

2/ Miscellaneous decisions include the following: amicus participation, mandamus, rehearing, settlement, bails, stays, etc. This figure does not include oral arguments in the Supreme Court, conferences, correspondence, etc.

This budget activity includes personnel and funding resources necessary to maintain an effective and viable Tax Division. The tax enforcement litigation conducted by Division attorneys ensures that the nation's internal revenue system will remain healthy and that general public compliance with the country's tax laws is maintained. In conducting its primary mission of tax law enforcement, the Tax Division serves as a revenue generating agency for the Federal Government, thereby contributing significantly to the Administration's and Congress' efforts to reduce the Federal budget deficit.

Long-Range Goal: To ensure uniform enforcement and equitable policy positions on all tax related matters filed with Federal and State Appellate Courts.

Major Objectives:

To maintain the quality of the Government's written and oral advocacy in tax cases on appeal and to prepare briefs, petitions, and other legal documents required by the Solicitor General for submission to the Supreme Court.

To recommend appeal of adverse Tax Court, Claims Court, and District Court decisions to ensure protection of the Government's and the public's interests.

To make fair and consistent interpretations of complex new tax statutes in all cases litigated in the Appellate Courts.

To formulate and successfully to advocate fair and consistent interpretations of the new tax provisions of the Tax Reform Act of 1986 which are now being considered by the appellate Courts.

To handle successfully the new source of appellate workload emerging from the enactment of the Taxpayer Bill of Rights in November, 1988.

Base Program Description: Federal Appellate attorneys litigate all civil tax cases on appeal to the United States Court of Appeals and to State Appellate Courts. Tax Division appellate attorneys also prepare drafts of all pleadings and briefs filed by the Solicitor General in the Supreme Court for cases pending in that Court and make recommendations to the Solicitor General regarding: (1) filing petitions for certiorari in tax cases lost by the Government; (2) appeal of tax cases lost by the Government in the District Court, the Claims Court, and State trial courts; and (3) prosecuting appeals in cases lost by the I.R.S. in the United States Tax Court where appeal is authorized. In addition, the Division's Federal Appellate attorneys handle the appeal of Freedom of Information and Privacy Acts cases and civil torts suits which involve I.R.S. officials.

Accomplishments and Workload: Accomplishments of the Federal Appellate Activity program are presented in the following table:

	1988	1989	Estimates 1990	Estimates 1991
Appellate Caseload:				
Pending, Start of Year	1,024	963	924	889
Received	730	701	754	792
Closed	791	740	789	832
Percent Government Wins	92%	90%	90%	90%
Work Products:				
Main Briefs	575	595	620	635
Reply Briefs	100	115	130	140
Briefs in Opposition	25	15	10	10
Oral Arguments	275	320	345	395
Memoranda	495	540	580	600
Dispositive/Motions	140	150	160	165

These workload data are derived from the Tax Division's automated monthly report of actual caseloads for each of the Division's litigating components. 1988 and 1989 statistics reflect actual end of year caseload. 1990 caseload estimates are projected based upon two months of actual data on case receipts and closings. 1991 projections are based upon anticipated workload increases stemming from recent changes in the nation's tax laws and the Internal Revenue Code. In addition, 1991 estimates are derived, in part, from a model that predicts the number of Tax Court decisions appealed to the Courts of Appeals by using the relationship between the number of taxpayer returns administratively appealed to the I.R.S., and those unagreed appeals that eventually become petitions filed with the Tax Court. The model then tracks the method of disposition of all petitions filed and correlates the number of cases ending in decisions by the Tax Court and cases appealed to the Circuit Court to project appellate case receipts. We add to this figure the estimated number of District Court decisions that will be appealed, determined by using trend data and applying an historical factor to the Tax Division's projected civil case receipts.

While workload statistics are valuable in assessing the productivity of our Federal Appellate attorneys, and Tax Division attorneys in general, case examples provide a clearer understanding of the nature of the litigation Tax Division attorneys are required to handle. Some relevant case examples clearly demonstrate the critical role played by Tax Division Federal Appellate attorneys in generating revenues for the Federal Treasury.

The revenue generating ability of Tax Division Federal Appellate attorneys is perhaps best evidenced by their continuing success in litigating the commodity futures straddle cases which, in the aggregate, involve tax revenues estimated by the I.R.S. at more than $8 billion. In one recent case, Landreth v. Commissioner, Federal Appellate attorneys convinced the Ninth Circuit to follow the Tenth Circuit's decision in Miller v. Commissioner and to disallow deductions of straddle losses unless they resulted from a transaction entered into with the primary purpose of generating economic profit, notwithstanding the Ninth Circuit's earlier precedent to the effect that merely a "possibility" of profit was sufficient to claim the deductions. In addition, the Federal Appellate Section has prevailed in each of ten Appellate Circuits which have reached decisions on appeals from the Tax Court's decision in Glass v. Commissioner. This matter involved several hundred cases involving straddles on the London Metals Exchange. We believe that these precedents will ultimately govern several hundred similar cases now pending in the Tax Court or in audit. The monies involved are substantial.

In yet other matters, Federal Appellate attorneys are engaged in high-stakes litigation involving the complex foreign tax provisions of the Internal Revenue Code. In United States v. Goodyear Tire and Rubber Co., the Supreme Court granted certiorari to review a decision in favor of the taxpayer, and, in an unanimous opinion, ruled in favor of the government. The Court held that the term "accumulated profits," as used in the Code's definition of the foreign tax credit, should be defined by reference to the tax laws of the United States rather than by reference to the tax laws of a foreign country, as the lower court had held. The Internal Revenue Service has indicated that our victory over Goodyear will save the Treasury approximately $1 billion.

The Division's appellate lawyers are also handling some significant cases involving financial institutions. For example, five cases are currently pending in the courts of appeals involving the issue whether a financial institution realizes a tax loss when it exchanges a pool of residential mortgages for a pool of substantially identical residential mortgages held by another financial institution. In Centennial Savings FSB v. United States, First Federal S & L of Temple v. United States, and San Antonio Savings Ass'n v. Commissioner, the Fifth Circuit held that such losses were deductible. Appellate Section attorneys, however, convinced the Sixth Circuit, in Cottage Savings Ass'n v. Commissioner, to hold that such losses were not deductible. With this issue also pending in the District of Columbia Circuit, the deductibility of "mortgage-swap" losses will likely be taken up by the Supreme Court. The I.R.S. estimates that, on an industry-wide basis, this issue involves over $1.5 billion in tax revenues.

With regard to the banking industry, Federal Appellate attorneys are currently litigating a case in the Eleventh Circuit, Citizens and Southern Corporation v. Commissioner, which is the first in an anticipated series of cases involving the issue whether a bank may amortize a portion of the premium it paid to acquire another bank. The banks have argued that amounts paid for customer's checking and savings accounts are amortizable "core-deposits." In these cases, the banks are essentially attempting to depreciate goodwill - a concept that could result in staggering revenue losses if extended to other industries. As it stands, the "core deposit" issue appears in conjunction with many bank acquisitions. The I.R.S. has estimated that on an industry-wide basis, that issue involves upwards of $3.5 billion with respect to bank acquisitions alone.

Two final examples of the work done by the Division's appellate lawyers may be cited. In the first of these cases, United States v. Ron Pair, the Supreme Court held that the Internal Revenue Service was entitled to post-petition interest on its "over-secured" claims in bankruptcy. Under the Internal Revenue Code, the lien that secures the Internal Revenue Service's claim attaches to all property or rights to property of the taxpayer. Accordingly, the Internal Revenue Service often has liens on property, the value of which exceeds the value of the Service's claim for unpaid taxes. In this case, the Supreme Court, rejecting the reasoning of the Court of Appeals, held that when the Service was thus "over-secured", the Service was entitled to interest on its claim during the pendency of the bankruptcy. Since many bankruptcies remain under court control for extended periods, the decision here will provide for substantial additional recoveries by the Internal Revenue Service. Similarly, the Appellate Section recently prevailed in the Seventh Circuit case of Levit v. Ingersoll-Rand Financial Corporation, where the Court held that the trustee in bankruptcy could not recover from the Treasury the amounts paid by the bankrupt for trust fund taxes during the year prior to the filing of the bankruptcy petition. The Supreme Court will consider a similar issue involving employee withholding taxes in Bieger v. United States. Collecting overdue taxes in corporate bankruptcies is a mounting problem. A victory in Bieger will prevent bankrupts from using the many millions of dollars of employment taxes collected from their employees in the months preceding bankruptcy as a general pool of funds from which to pay their creditors.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Criminal tax prosecution............	120	117	$7,792	120	117	$8,143	120	117	$8,422	...	...	$279

Long-Range Goal: To investigate and prosecute individuals and/or corporations involved in criminal tax violations, including those arising from the Savings and Loan crisis, gasoline and diesel fuel excise tax evasion, illicit tax shelters, and money laundering schemes.

Major Objectives:

To investigate and prosecute cases arising from the Savings and Loan crisis and to support U.S. Attorneys and Criminal Division attorneys in joint efforts to prosecute such cases.

To investigate and prosecute aggressively criminal violators of the tax laws in cases referred by the I.R.S. and the U.S. Attorneys' Offices and to handle the appeals resulting from these cases.

To supervise and, as appropriate, prosecute criminal tax cases involving tax protesters schemes involving money laundering, off-shore banking operations, and other criminal tax evasion activities.

To monitor and occasionally participate in criminal Grand Jury Investigations conducted by the U.S. Attorneys' Offices and to review Grand Jury evidence to determine whether prosecution for tax crimes should be authorized.

To serve as the liaison with U.S. Attorneys' Offices throughout the nation and with the Criminal Investigation Division of the I.R.S.

To protect the revenue interests of the Federal Treasury by ensuring that illicit tax shelter and tax evasion schemes are discovered, thoroughly investigated, and successfully prosecuted.

Base Program Description: The Tax Division's Criminal Tax Prosecution program is crucial to the overall effort to enforce the nation's tax laws. In particular, the Criminal Enforcement Sections' aggressive investigation of off-shore banking and money laundering activities involving significant amounts of illegally withheld taxes has contributed greatly to minimizing the potential revenue loss for the Federal Treasury. Criminal Tax attorney involvement is initiated when a criminal tax matter is referred to the Division by the Internal Revenue Service. Upon referral of such matters, a program attorney reviews the case to determine the level of complexity and importance. Routine cases are quickly transmitted to the appropriate U.S. Attorney's Office for investigation and prosecution. Complex criminal tax cases, on the other hand, are more thoroughly reviewed by our attorneys to determine the most appropriate means with which to investigate and/or prosecute the matter in question. Prosecutions of criminal tax cases are generally conducted by the U.S. Attorneys' Offices but Tax Division involvement is sustained throughout the case. Specifically, our Criminal Tax attorneys provide advice on evidentiary problems, trial tactics, and plea bargaining; prepare indictments, legal memoranda, and trial briefs as required; and monitor the status of criminal tax cases pending in the U.S. Attorneys' Offices. Our attorneys handle Grand Jury Investigations, trials, and appeals when requested by the U.S. Attorneys, for example, when particular tax expertise is required or the U.S. Attorney's Office declines the case but the Division feels that it warrants further investigation. In addition, Tax Division Criminal Tax attorneys are heavily involved in prosecutions associated with tax protesters and tax shelters.

Accomplishments and Workload: Workload accomplishments of the Criminal Tax Prosecution program are presented in the following table:

	1988		1989		Estimates 1990		Estimates 1991	
	# Cases	# Subj.	# Cases	# Subj.	# Cases	# Subj.	# Cases	# Subj.

The Division's Criminal Section attorneys frequently become involved in highly publicized cases with widespread ramifications. For example, Criminal Section attorneys have been heavily involved in litigation arising from "Operation Illwind", the Pentagon's investigation into alleged bribery of Defense Department officials by private consultants to gain inside information on Government contracts.

In United States v. Charles F. Gardner, Criminal Section attorneys were successful in obtaining a guilty plea from the defendant, a former vice-president and general manager of Unisys Corporation. Gardner pled guilty to three charges including: willfully aiding and assisting in the preparation of a false corporate tax return; conspiracy to commit bribery of an official of the United States Navy; and conspiracy to file false statements with the United States Government. Gardner entered a guilty plea to having bribed Melvyn R. Paisley, the then Assistant Secretary of the Navy for Research, Engineering, and Systems, to influence Paisley in his official duties, including decisions and actions pertaining to two specific defense contracts. Gardner, at the request of defense consultant James G. Neal, a co-conspirator, arranged for the purchase of a condominium [illegible] Valley, Idaho, which was owned by Paisley. Gardner instructed James G. Neal, the owner of Deltech, Inc., that the condominium was to be purchased for $149,000 and that no negotiations or attempts to lower that price were to be undertaken even though the condominium was overpriced. Significantly, the condominium was subsequently sold for $100,000. Gardner is only one of many individuals implicated in the "Operation Illwind" scandals.

Neal, owner of Deltech, Inc. and a private consultant for the Unisys Corporation, pled guilty to three separate felony counts. The first count charged that Neal engaged in a multiple conspiracy to impede, impair, and obstruct the Internal Revenue Service and to commit bribery of a Federal official. The second count charged that Neal filed a false claim against the United States Government, and the third count charged that Neal willfully attempted to evade and defeat the income tax liability of Deltech, Inc. for the fiscal year ending September 30, 1986.

The Gardner and Neal tax pleas related to a scheme whereby Neal's company, Deltech, claimed $292,000 in false income tax deductions for the fiscal year in question. The additional taxes due and owing were approximately $114,073. The scheme was engineered to conceal money siphoned from the Unisys Corporation to be used to make illegal bribes to Department of Defense employees and consultants in order to influence the award of Government defense contracts. The money was also used to make illegal campaign contributions to U.S. Congressmen. Significantly, both Gardner and Neal are now cooperating with the on-going "Operation Illwind" investigation. Additional tax indictments and guilty pleas are anticipated.

In yet another highly publicized criminal tax investigation, United States v. Lyndon LaRouche, a Tax Division attorney played a critical role in obtaining the conviction of Lyndon LaRouche on December 16, 1988. LaRouche, a former Presidential candidate, was convicted of conspiracy to commit income tax evasion and mail fraud and was sentenced to fifteen years in prison. A Criminal Tax attorney assisted the U.S. Attorney's Office in the Eastern District of Virginia in the investigation and actual prosecution of the case.

LaRouche was convicted of conspiracy to evade his personal income taxes during the period 1980-1987; 1979 was the last year he filed an income tax return. LaRouche claimed that he was not required to file income tax returns because he had earned no income for the period in question. In reality, the LaRouche organization, the National Caucus of Labor Committees, paid for all of LaRouche's personal expenses.

The mail fraud convictions stemmed from the LaRouche organization's solicitation of loans from prospective investors. Part of the borrowed money was used to finance LaRouche's 1984 Presidential campaign. The Government proved that LaRouche defrauded lenders with false assurances of the financial stability of the LaRouche organization and that neither he nor his organization ever intended to repay the loans when they became due. Morever, LaRouche's organization diverted funds and spent $4.2 million on real estate in Virginia and thousands more on improvements for LaRouche's 200 acre Leesburg estate. Of the $4 million collected for LaRouche's unsuccessful Presidential campaign, only half was repaid and only $5 million of the $30 million collected for non-campaign purposes was ever repaid.

Another case exemplifying the importance of the criminal tax litigation conducted by Tax Division attorneys is the criminal tax shelter appeal United States v. Robert G. Wilson and Melvin Bogus. Following a jury trial in the Southern District of Florida, Robert G. Wilson and Melvin Bogus were convicted of conspiracy to defraud the United States Government, mail and wire fraud, tax evasion, and aiding and assisting in the filing of false and fraudulent tax returns. The charges stemmed from their promotion and sale of a tax shelter scheme in which taxpayers claimed losses for non-existent trades in Treasury Bills and Government National Mortgage Association mortgage certificates ("Ginnie Maes"). The program was actively promoted for three years, 1978, 1979, and 1980. For the years 1978 through 1980, the number of investors in the tax shelter approached 2,500. Of significance, the fraudulent losses generated by the tax shelter scheme amounted to more than $140 million. Wilson was sentenced to imprisonment for a total of 18 years and Bogus was sentenced to imprisonment for a total of 13 years.

Finally, in United States v. David A. Taggart and James L. Taggart, Tax Division attorneys obtained the convictions of David A. Taggart and James L. Taggart on all eleven felony counts with which they had been charged. The prosecution arose out of the Praise The Lord (PTL) television ministry of James O. Bakker and Tammy Faye Bakker. David Taggart served as the executive vice-president of PTL and as a personal assistant to James O. Bakker. James Taggart was a co-owner, with his brother, of an interior decorating firm whose primary client was PTL. The Taggarts failed to report $1.2 million of income.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Criminal tax prosecution............	120	117	$8,143	120	117	$8,422	...	...	$279

An additional $279,000 is requested for the Criminal Tax Prosecution program. Of this amount, $200,000 is required for automated litigation support, which will be particularly useful in the Section's efforts to address effectively litigation arising from the country's financial institutions crisis. The remaining $79,000 is being requested to fund additional travel costs which will be incurred as a result of the Criminal Sections' involvement in the Bank (savings and loan) Task Forces being established throughout the country.

Additional funds for automated litigation support are required to address the rapidly growing financial institutions litigation now emerging. The application of automated litigation support to complex and document-intensive cases is critical to the criminal tax enforcement efforts of our attorneys. Currently, Tax Division attorneys are extremely disadvantaged in litigating against opposing counsel in the private sector because automated litigation support is not available to Tax Division attorneys. This disadvantage will be intensified as the Division attempts to assist the U.S. Attorneys and the I.R.S. in savings and loan tax-related litigation. Automated litigation support is not available from the U.S. Attorneys' Offices because our cases are generally tax-specific and thus separate from any matter being handled by the U.S. Attorneys' Offices.

The critical need for this litigation tool cannot be overstated in this era of increasingly sophisticated automation technology. Criminal Section attorneys have indicated that automated litigation support capabilities would have been invaluable in three recent cases with over 40,000 documents and 500 exhibits. The records in the savings and loan cases will undoubtedly dwarf those in these earlier cases. The request for additional funds for this important automated litigation support is clearly warranted by the critical nature of the undertaking. The President and the Attorney General have pledged that those guilty of crimes that, in the end, will cost the taxpayers billions of dollars will be brought to justice. Particularly in light of the highly sophisticated means employed by many of those who bilked the savings and loan associations, automated litigation support will be required if the Tax Division is to do its part in keeping the pledge made by the Administration.

The emergence of litigation arising from the financial institutions crisis will have a direct impact on the travel requirements of the Division's Criminal Sections. The Chief of the Internal Revenue Criminal Investigation Division in Dallas has advised us that he anticipates an additional 50 to 60 tax investigations will arise in 1990 and 1991. Division attorneys working on savings and loan matters will be traveling not only to Dallas, but to all regions in the country where the investigation of failed savings institutions reveals tax crimes. If our Criminal Tax attorneys are to provide legal support to U.S. Attorney and I.R.S. officials participating in the Bank Task Forces, additional funds for Tax Division travel requirements must be provided. The Division's request to cover these additional travel costs is extremely conservative, but the additional funds will permit the Tax Division to assist in ensuring the vital success of the President's Savings and Loan initiative.

It should likewise be noted that the Division has initiated efforts to provide greater assistance to the U.S. Attorneys's Offices in their general criminal tax investigation efforts by increasing its own criminal prosecution load. As a result, average travel time per attorney increased from 60 to 70 days per year in 1989. In fact, Criminal Sections' travel expenditures have risen $227,000 or 54 percent from 1987 to 1989. Even with this additional assistance, however, the U.S. Attorneys' Offices reportedly still have a substantial backlog of criminal tax cases. Even greater Tax Division assistance is thus required and, indeed, warranted. The Criminal Sections must have additional funding for travel if this greatly needed additional support is to be provided.

In summary, additional funding resources for the Division's criminal tax prosecution program will enable our Criminal Sections attorneys to provide all necessary support and assistance to the U.S. Attorneys and the I.R.S. in their joint efforts to enforce the nation's tax system and, in particular, to address aggressively the nation's savings and loan crisis. Every effort must be made to ensure that the Government's and general public's interests are adequately protected. With sufficient funding, the Tax Division will be able to provide the legal tax expertise required by the joint Bank Task Force efforts, and the opportunities for successful resolution of this emerging litigation will be greatly enhanced.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Civil Tax Litigation..............	339	317	$22,733	339	330	$24,198	339	330	$29,300	...	...	$5,102

Long-Range Goal: To litigate effectively all civil tax matters under dispute in an effort to maximize the tax revenues collected for the Federal Treasury and further enhance public compliance with the nation's internal revenue system.

Major Objectives:

To defend, and resolve fairly, all suits against the Government seeking a refund of taxes paid.

To represent the Federal Government in all injunctive, declaratory judgment, suppression, mandamus, jeopardy assessment, and other civil tax suits.

To provide all necessary legal advice and other support to the I.R.S. and the U.S. Attorneys' Offices in their efforts to enforce the nation's internal revenue system.

To maintain effective civil tax litigation operations by relying increasingly upon automation capabilities, including automated litigation support and automated legal research, in order to remain competitive with opposing counsel in the private sector.

To defend all civil tort actions brought against revenue officials, to discourage "nuisance" suits and to prevent harassment of I.R.S. officials and other Federal personnel.

To maximize the collection of unpaid taxes through successful litigation of all civil tax recovery suits and through prompt collection of all tax judgments issued in the Government's favor.

To participate in bankruptcy proceedings where tax claims are at issue in order to establish the Government's priority in relation to other creditors and to collect all non-dischargeable debts.

To seek Court orders enforcing administrative summonses issued by the I.R.S. in order to ensure that on-going tax investigations are not impeded.

To ensure adequate representation of the Government in the complex legal cases involving Federal immunity from State and local taxation, and in cases under Code Section 7428 governing the criteria for tax exempt status.

To maintain equitable Freedom of Information Act and Privacy Act programs so that a taxpayer's right to information concerning the policies and practices of the I.R.S. in enforcing the nation's tax laws is balanced with the I.R.S.'s ability to conduct effective tax investigations, to limit Government disclosure of tax return information, and to maintain third-party confidentiality.

To ensure that the financial interests of the Federal Government are adequately protected in a new and increasingly complex tax law enforcement environment.

Base Program Description: The Division's civil tax litigation efforts ensure that taxes legally owed to the Federal Government are in fact collected and that non-meritorius refund claims are denied. Civil Tax Litigation attorneys litigate suits filed by or against taxpayers in the U.S. District Courts and the U.S. Claims Court. That litigation includes: tax refund suits brought by taxpayers in the U.S. District Courts and the Claims Court which challenge I.R.S. determinations regarding individual and corporate Federal tax liabilities; recovery of monetary judgments for taxes owed; bankruptcy litigation; defense of suits brought against I.R.S. and other Government officials for torts violations allegedly committed in tax collection activities; and suits filed against the United States Government pursuant to certain provisions of 28 U.S.C. Section 2410. Other civil tax litigation includes: summons enforcement cases; declaratory judgments to determine qualifications for tax exempt status; injunctive relief and penalty cases against tax shelter promoters; and State and local tax immunity suits. In addition, our attorneys are now responsible for handling new sources of civil tax litigation arising from the enactment of the Taxpayer Bill of Rights and the Tax Reform Act of 1986.

In summary, the civil tax litigation efforts of Tax Division attorneys have resulted in the equitable and effective administration of the nation's internal revenue laws. More significantly, the successful efforts of our Civil Tax Litigation attorneys in enforcing those laws have generated substantial revenue for the Federal Treasury and have established favorable judicial precedents.

Accomplishments and Workload: Accomplishments of the Civil Tax Litigation program are presented in the following table:

			Estimates	
	1988	1989	1990	1991
1. Defense Monetary Claims				
a. Tax Refund Cases

Workload data are obtained from the Tax Division's automated case management system data base. The 1988 and 1989 workload data reflect actual end of year caseload. The 1990 and 1991 workload projections are based on past historical trends and on information received from the I.R.S. regarding their anticipated workload stemming from a reprioritization of their tax enforcement efforts.

The Division's civil tax litigation program represents the most comprehensive of its litigating activities. The civil tax litigation conducted by our attorneys includes: (1) litigation in defense of monetary claims; (2) litigation for the recovery of money; (3) litigation to enforce Federal civil programs; (4) litigation under the provisions of the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA); (5) litigation stemming from the Tax Reform Act of 1986; and (6) litigation arising from the Taxpayer Bill of Rights enacted on November 10, 1988.

While many of the cases handled by the Division's Civil Trial attorneys are highly important, the following examples demonstrate the critical role that the Division's Civil Trial attorneys play in enforcing the nation's tax laws and in protecting the fiduciary interests of the Federal Government.

In three related cases, the tax issues in question stem from revisions to the Internal Revenue Code enacted in 1986. These cases are: N.D Horton, Sr., et al. v. United States; Horton Homes, Inc. v. United States; and N.D. Horton, Jr., et al. v. United States. At issue in these cases are questions of first impression involving the new interest abatement provision of the Internal Revenue Code, Section 6404(e). Under this provision, the Secretary of the Treasury is now authorized to abate interest attributable in whole or in part to any error or delay by an I.R.S. officer or employee in performing a ministerial act. In the Horton cases, the taxpayer alleged that the Secretary erroneously failed to abate interest of $702,824. We have questioned the court's jurisdiction to determine whether the terms of the interest abatement statute are permissive rather than mandatory, and have raised such basic issues as the plaintiffs' entitlement to a jury trial and the standard to be employed in reviewing the Secretary's determinations under the statute. These cases involve investigations of seven related entities and 21 taxable periods. In addition, two widely-marketed tax shelters are implicated. While we recently prevailed in the trial court in Horton Homes, Chief Counsel, I.R.S., has indicated that these cases are merely the first of an expected flood of cases involving Section 6404(e).

Frequently, Civil Trial attorneys are required to take dramatic action to protect Federal revenues. For example, Civil Trial attorneys successfully represented the Government's interests in the recent bankruptcies of William Herbert Hunt and Nelson Bunker Hunt, the largest individual bankruptcies in history. Civil Trial attorneys were instrumental in drafting and obtaining Bankruptcy Court confirmation of plans of reorganization under which the Government will immediately receive $170 million from the Hunt brothers. These plans also provide for the Government to receive an additional $165 million out of the Hunt's future income. Another case in which Civil Trial attorneys obtained a substantial recovery is Roberto Duran v. United States, a case arising in the United States District Court for the Southern District of Florida. In this instance, Civil Trial attorneys filed suit to recover approximately $1.8 million in taxes erroneously refunded to Mr. Duran, a world-class boxer. In addition, the attorneys took steps to prevent Mr. Duran from leaving the country until he had repaid the amounts owing to the Treasury. The Civil Trial attorneys eventually obtained Mr. Duran's agreement to surrender his passport, to pay over certain assets to a trust account on behalf of the United States, and to an order prohibiting him from transferring any assets without the prior written approval of the United States. As a result of the efforts of our Civil Trial attorneys, we have collected and deposited a total of $1.8 million in refunds erroneously paid to Mr. Duran out of the proceeds of a prize fight.

Other significant trial level cases involve litigation conducted by the Tax Division's Claims Court attorneys. Tax refund suits in the Claims Court are very frequently the litigation vehicle of choice for large corporations and for tax counsel desirous of obtaining a nation-wide precedent by obtaining a decision in the one circuit with national jurisdiction, the Federal Circuit, which hears appeals from the Claims Court. As a result, the dollars at issue in the more than 650 tax cases pending in Claims Court are substantial--the average case involves $1.9 million.

Examples of cases being handled by the Tax Division in the Claims Court illustrate the importance of this litigation. For example, Claims Court suits in Shimota v. United States and George v. United States seek recovery of $87,000 in taxes for 1987 and challenge the treatment of the lump sum payments received by Federal retirees under a new statutory election. The Washington Post has reported that over $700 million in taxes hinges on the outcome of this suit. Furthermore, the potential taxes involved in this will increase each year as more retirees opt for the new election opportunity.

In yet another highly important case, Favell et al. v. United States, the Claims Court granted the Government's cross-motion for a partial summary judgment. The plaintiffs, professional hockey players who have non-resident status, argued that a portion of their income was excludable from U.S. taxable income because it represented compensation for activities performed outside of the United States during the off-season to fulfill their contractual obligation to report to training camp in good physical condition. Adopting the Government's argument, the Claims Court held that the off-season fitness programs were not required by the contracts at issue, that the off-season was not a contractually compensated period, and that therefore no portion of the compensation was excludable from U.S. taxable income. The fate of 193 similar cases hangs on the ultimate decision in this test case.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Civil Tax Litigation..............	339	330	$24,198	339	330	$29,300	...	...	$5,102

The Administration requests an additional $5,102,000 for the Tax Division's Civil Tax Litigation program. The additional funds requested provide $3,700,000 to implement an urgently needed automated litigation support program. The remainder, $1,402,000, will allow the Division to fund, for the first time in several years, the workyear level authorized for the Tax Division. These additional funds are essential to enable the Tax Division to fulfill its litigating mission in the face of increasing caseloads and anticipated new sources of tax litigation stemming from recent legislative changes to the nation's internal revenue code.

1. Automated Litigation Support

The Tax Division has long recognized the value of applying automated litigation support to certain complex and document-intensive cases. Past requests for funding to implement an automated litigation support program have been supported by both Department officials and the Office of Management and Budget. However, Congressional action requiring each component to absorb across-the-board reductions has made implementation of an automated litigation support program impossible. As a result, Tax Division attorneys have been hindered in their efforts to oppose private counsel who, in most instances, have unlimited access to this legal research technology.

An additional $3.7 million is required for the civil tax litigation activity in order to implement an automated litigation support program. The Tax Division intends to implement this program to address the 25 to 35 large, document and dollar intensive cases our Civil Trial attorneys litigate each year.

For example, the Division was heavily involved in pretrial proceedings in *In re ContiCommodities Services, Inc. Litgation* (N.D. Ill.). In this multi-district litigation, four tax refund suits are joined with litigation brought by investors in a Government security trading program operated by ContiCommodities Houston Arbitrage, a subsidiary of Continental Grain, Inc. In these tax refund suits, the investors are claiming more than $500,000 in tax refunds due to losses allegedly incurred by them in the program, with an additional $400,000 in interest at stake. (There is related Tax Court litigation in which these investors and others have claimed an estimated $25 million in losses.) Over 140 depositions have been taken on the tax-related portion of this case, involving more than 250 days of work. Nine thousand multi-page exhibits, totaling over four million pages have been produced by the various parties to this litigation. Two depositories, one in Houston and one in Chicago, have been established to house the primary source documents, such as internal memoranda and commodity futures tickets. Although the Tax Division has attempted to use personal computers to store the deposition testimony, the only feasible manner in which to control this massive documentation and search the millions of pages of deposition transcripts and exhibits is through automated litigation support.

In a second case, the *Barrister* tax shelter case, the Government is trying to collect $25 million in tax penalties from the three principals involved in the scheme. The transactions involve 95 partnerships with 30 to 40 investors each for two tax periods. Tax Division attorneys have been called upon to review 2 five-drawer file cabinets of background documents from informal sources, 100,000 documents provided by the plaintiffs, valuation appraisals of 300 books by 4 separate appraisers and the testimony of 35 individuals deposed by our attorney and 50 deponents in related matters. Tax Division attorneys and paralegals have recorded 2,800 hours of time on this case during pretrial preparation and now must organize this mass of complex financial information into a case with no automated litigation support system and only limited personal computer storage.

A third example of a case warranting automated litigation support is the bankruptcy proceeding in *In re Stephen J. Klemen*. In this case, the Government filed a $12 million proof of claim with the trustee, who is holding $5.6 million in assets. Over 250 boxes of evidentiary documents filled with partnership information and commodity transactions data were obtained by the Tax Division attorney handling the case. In addition, 15 depositions have been taken during the discovery phase of the case. While the document count is smaller than in some of our cases with high automated litigation support potential, the real dollar value ($5.6 million) of this case and the abbreviated time frame typical in bankruptcy litigation increase the need for automated litigation support substantially.

Finally, in the *Noske* tax shelter case, discovery has recently been completed, resulting in the production of evidentiary material from 65 deponents and exhibits related to 186 different trusts. There are potentially one hundred witnesses who could be called upon to testify during the trial. The total number of documents received is estimated at 500,000 pages. The attorney assigned to this case is, with the help of our paralegal staff, loading the material into a wordprocessing system with limited cross-referencing and indexing capabilities. Clearly, the system is inadequate to handle the volume of documents and the method is extremely costly due to the labor intensive nature of inputting documents.

The ability to provide automated litigation support to specific categories of civil tax cases would accomplish several important objectives. Automated litigation support would provide our attorneys with the ability to index documents, cross reference evidence collected, and rapidly retrieve all information relevant to the tax law issues at suit. Additionally, it would provide a brief bank indexed by issue for our attorneys to utilize in order to expedite their litigation efforts. Automated litigation support would also enable Tax Division attorneys to analyze *all* case-related documents more thoroughly; create detailed chronologies of evidence; and most importantly, prepare the most comprehensive and effective legal arguments possible against opposing private sector counsel.

Comprehensive indexing and cross-referencing of documents in these large, voluminous cases would enable our attorneys to abstract readily all information pertinent to the tax issues in litigation. As a result, more comprehensive and timely legal arguments could be developed. This is critical to the litigating efforts of Tax Division attorneys who must argue against opposing counsel who are increasingly relying upon sophisticated office automation and legal research technologies in their efforts to defend their clients. Clearly, the lack of automated litigation support places Tax Division attorneys at an extreme disadvantage in the courts. This constantly growing gap can only be filled if automated litigation support and other technologically sophisticated legal research tools are made available to our attorney personnel.

The Division's need for automated litigation support has intensified significantly over the past several years. This has resulted, in part, from the I.R.S.' emphasis on multi-issue and large dollar and document intensive cases. This new enforcement strategy is not in lieu of addressing more traditional tax enforcement matters. Hence, Tax Division attorneys are now required to litigate both the more traditional enforcement workload, as well as the large, document and dollar intensive cases now being referred by the I.R.S. These new matters involve reams of documents, extensive discovery, and numerous depositions, and thus clearly lend themselves to the application of automated litigation support. Further, these cases are not only document-intensive, but also revenue-intensive, thereby clearly warranting the expenditure of funds for automated litigation support. The most effective way to ensure that our attorneys are able to review and analyze the hundreds of thousands of case-related documents involved in these cases, and to ensure that the most effective legal arguments are developed, is to rely upon automated litigation support for assistance.

2. Restoration of Workyears

The additional funding requested to restore the Tax Division to its authorized workyear level provides funding associated with 21 unfunded attorney workyears and 8 unfunded clerical support workyears. Congressional reduction to the Division's appropriated funding needs has required us to absorb these reductions through personnel cost savings. Since personnel costs comprise approximately 75 percent of the Tax Division's budget, this is the only area in which the required level of reductions could realistically be achieved. As a result, staffing levels, and our attorney staffing levels in particular, have declined seriously, to the detriment of the Division's ability to meet its goals.

a. Return on the Dollar

The importance of providing funding to restore the Tax Division to its authorized personnel strength is clear when one considers the crucial role played by the Division in protecting the financial interests of the Federal Treasury. The revenues involved in the litigation conducted by Tax Division attorneys are frequently extraordinary. Of equal importance, the favorable judicial precedents obtained by the Division protect against future raids on the Treasury. Hence, it is essential that the actual staffing requirements of the Tax Division be fully satisfied so that the Division can continue the impressive level of performance it has traditionally maintained. A sufficiently staffed and funded Tax Division is particularly important when one considers the massive revisions to the nation's internal revenue system enacted under the Tax Reform Act of 1986. Subsequent changes to the nation's tax laws and the Internal Revenue Code likewise mandate that the Tax Division be sufficiently staffed in order to address unprecedented challenges to the country's revenue generating system.

Demonstrating the Tax Division's important role in protecting the public fisc is a simple matter. The Tax Division annually defends cases representing many billions of dollars of potential lost revenue. For example, in the case of United States v. Ptasynski, 462 U.S. 74 (1983), the Division was successful in obtaining a Supreme Court decision upholding the constitutionality of the Windfall Profit Tax Act of 1980. A number of oil companies attacked the tax on the ground that an exemption provided therein for certain Alaskan oil companies violated the Uniformity Clause of the Constitution. The Supreme Court, however, upheld the tax thereby preventing the loss of as much as $76 billion of tax revenue. This case is of particular significance because it reflects the relatively short span required for new tax legislation to be contested in the courts, where Tax Division attorneys must then conduct the litigation. Likewise, recently enacted legislation, such as the Taxpayer Bill of Rights and specific changes to the Internal Revenue Code, is likely to stimulate additional litigation in 1991. The Tax Division must have its full complement of attorney and support personnel if this new source of workload is to be addressed effectively.

Another case, AmSouth Bank Corporation v. United States, illustrates that for every dollar invested in the Tax Division, literally tens of thousands of dollars of potential losses to the Federal Treasury are avoided. This case involves the issue whether a bank may amortize that portion of the price it paid to acquire another bank. The purchaser/banks have claimed that amounts paid for checking and savings accounts constitute depreciable "core deposits" which may be written off against income. Although this case directly involved $1.6 million, the issue presented appears in conjunction with many bank acquisitions and has been estimated by the I.R.S. to involve upwards of $3.5 billion on an industry-wide basis.

Our Civil Trial attorneys are also litigating several cases involving the foreign tax credit provisions of the Internal Revenue Code. One such case, Continental Illinois Co. v. United States, involves the issue whether a bank can take a foreign tax credit for fees imposed by Brazil and Argentina on loans. The I.R.S. has estimated that, on an industry-wide basis, this issue involves several hundred million dollars.

In sum, if the Tax Division is to maintain its level of exceptional litigation, the requested funds to restore the Division to authorized workyear strength is absolutely essential. For every Tax Division position left unfunded, the Federal Treasury stands to lose far more than it gains. If, by virtue of inadequate staffing, the Tax Division loses one case it might otherwise have won, the loss to the Federal Treasury could easily exceed the entire budget of the Tax Division.

b. New Sources of Litigation

i. Taxpayer Bill of Rights

The Tax Division's role as protector of the fisc has assumed even greater importance as a result of recently enacted changes to the nation's tax laws. Specifically, the Taxpayer Bill of Rights enacted on November 10, 1988 and changes made to the Internal Revenue Code under the interest abatement provisions of the Tax Reform Act of 1986, will increase the workload of the Division substantially. To address these new sources of civil tax litigation, the Division must be restored to authorized, but currently unfunded, staffing levels.

The Taxpayer Bill of Rights was enacted as Sections 6226-6247 of the Technical and Miscellaneous Revenue Act of 1988. Several key provisions in the new legislation have a direct bearing on the future workload of the Division's Civil Trial attorneys. One provision amended Internal Revenue Code Section 7430 pertaining to the award of attorney fees to successful litigants in tax cases. Typically, attorney fees are potentially recoverable by a taxpayer whenever the Division loses all or a significant portion of a case. Likewise, attorney fees can be awarded to the taxpayer in instances where the Government concedes the case. In the past, the administrative actions of the I.R.S. generally could not be the basis for a recovery. The Taxpayer Bill of Rights, however, expands Section 7430 to provide for the award of attorney fees based on I.R.S. administrative actions. The revision means that even if the Government's litigating position in a case is reasonable, a taxpayer can nonetheless continue with the suit, seeking an award for attorney fees under Section 7430. At this point, Tax Division attorneys would be required to litigate the issues of whether the I.R.S. was substantially justified and whether the amount claimed by the taxpayer was reasonable. The actual workload impact of this revision alone can only be estimated until experience demonstrates actual litigation trends. However, both I.R.S. and Tax Division officials firmly believe that taxpayers will press fee claims allowable under this new provision aggressively in order to recover the often substantial legal fees incurred at the administrative level.

A civil damage action provision of the new statute will likewise generate a new source of civil tax litigation for the Division's Civil Trial attorneys. Previously, taxpayers did not have a specific right to bring an action against the Government for damages sustained due to unlawful actions taken by an I.R.S. official or employee. The new statute now grants taxpayers the right to sue the Federal Government in Federal District Court for damages if in connection with the collection of any Federal tax, an officer or employee of the I.R.S. recklessly or intentionally disregards the Internal Revenue Code. It is expected that this provision will be utilized extensively by taxpayers because not only can the taxpayer recover the costs of the actions, but he or she can recover all economic damages sustained as a proximate result of the unlawful actions or inaction of the I.R.S. employee. To add further burden to the litigation responsibilities of Tax Division attorneys, this concept of civil damage actions is new so that careful and time-consuming preparation of these cases is essential in order to establish favorable judicial precedents.

Finally, the new statute grants taxpayers a right to bring an action for damages resulting from the wrongful failure to remove a lien on a taxpayer's property. Under the new legislation, taxpayers can sue the Federal Government in Federal District Court if any I.R.S. employee knowingly or negligently fails to release a lien on the taxpayer's property as required under the Code. Moreover, the legislation permits taxpayers to recover the costs of the action and damages equal to the actual direct economic damages resulting from the actions of the I.R.S.

The 1988 Taxpayer Bill of Rights provides taxpayers with unprecedented avenues to recover monetary claims against the Federal Government. Undoubtedly, many taxpayers will seek to take advantage of these provisions. And as public knowledge of the provisions in the Taxpayer Bill of Rights becomes more widespread, caseload increases are a virtual certainty. Tax Division Civil Trial attorneys can only manage these new sources of litigation if funding is made available to restore the Tax Division to its authorized level of personnel strength.

ii. Interest Abatement Litigation

Changes to the nation's Internal Revenue Code enacted under Tax Reform Act of 1986 have also generated a new source of workload for our Civil Trial attorneys. Under the revised Code, the Secretary of the Treasury, for the first time, is authorized to abate interest attributable in whole or in part to any error or delay by an I.R.S. officer or employee in performing a ministerial act. Under the revised Code, a taxpayer can now process a claim for abatement of interest which, if denied, can be appealed administratively within the I.R.S. Once administrative avenues for the claim are exhausted, and the taxpayer pays the interest in full, he or she can file a claim for a refund in Federal District Court.

Currently, there are more than 5,000 applications pending for abatement of interest in the I.R.S.'s Examinations and Appeals Unit. Approximately the same number of claims were decided in the past year--with a denial rate of over 88 percent. Although it is too early to predict the number of denied claims that will result in a refund suit being filed, the potential universe of claims is large enough to make the requested workyear restoration absolutely essential.

The Division's Civil Trial attorneys currently litigating the interest abatement cases for the Tax Division estimate that it will take over 300 attorney hours to prepare and try one particular case alone. Assuming that each case requires only 300 hours, receipt of six such cases in a year will consume an entire attorney workyear. The fact that there were over 5,000 claims processed last year with 5,300 more claims pending, and knowing that over 8,750 of these claims will be denied, makes it certain that the Tax Division will receive a substantial number of abatement cases in 1991. The amounts are not always large in interest abatement claims, but it is likely that any significant denied claim will be appealed and will result in litigation. Unless the requested funds to restore the Tax Division to staffing strength are forthcoming, this new source of tax litigation will burden severely an already burdened staff.

iii. Debt Collection/Bankruptcy Matters

Restoration to authorized staffing levels will also enable the Division to intensify its efforts in more traditional areas of civil tax litigation, such as debt collection and bankruptcy matters. Finally, restoration of authorized staffing levels will permit the Division to deal with workload resulting from heightened I.R.S. activity in tax collection, enforcement litigation, and international tax programs. In addition, a fully staffed Tax Division will ensure that large cases involving more than 1,000 hours of attorney time, including a substantial and increasing number of cases involving specialized industries such as financial institutions, are litigated effectively.

With regard to the Division's debt collection program, the Division has long recognized some deficiencies in its debt collection efforts due to staffing shortages and other budgetary constraints. Existing staffing levels are insufficient to permit our attorneys to handle all of the activities associated with debt collection matters. The critical importance of collecting debts owed to the Federal Government is obvious. However, the primary mission of the Tax Division is tax enforcement litigation. Insufficient staffing levels, burdensome caseload dockets, and mandatory requirements to meet court imposed deadlines, often preclude our attorney personnel from actively following up on debt collection matters. As a result, the full revenue-generating potential of the Tax Division goes unrealized.

As of the end of 1989, a total of only $25.3 million had been collected by the Tax Division and deposited in the Federal Treasury. For the same time period in fiscal year 1988, a total amount of $32.8 million had been collected. Moreover, as of the end of 1989, 659 debt collection cases were outstanding with a total balance involving slightly more than $152 million. The Division has taken steps to intensify its efforts in the area of debt collection, but continues to suffer from a lack of resources to maximize its debt collection potential, while still meeting other pressing litigating priorities. Maintaining an effective debt collection program, in which debts owed to the Federal Government are pursued actively and in a timely manner, can only be accomplished if additional funding is provided to restore the Tax Division to its authorized workyear level.

In a related vein, the Division has seen a significant increase in the number of bankruptcy cases it is required to litigate. Since the amount owed to the Government is the primary issue in bankruptcy proceedings, the successful determination of the Government's claim affects the potential amount of money eventually collected by the U.S. Treasury more directly than in any other type of case the Division litigates. Bankruptcy caseload increased by 37 percent from 1987 to 1988, from 6,054 cases to 8,284 cases. And it rose by 48 percent over 1988 in 1989 when the Division received 12,286 new cases. At the same time, with bankruptcy caseload reaching unprecedented levels, authorized staffing levels have remained static, and in actual fact have declined due to a rising attrition rate. While our attorneys are attempting to manage this ever growing caseload, the situation has forced a concurrent decrease in the average number of attorney hours spent on each bankruptcy case. The logical outcome of this shift in our ability to spend adequate time on bankruptcy matters is a decline in the amounts of money determined to be owing and payable to the Government. The Division must be fully staffed both to litigate effectively the increasing number of bankruptcy cases we are receiving and to make some in-roads to reduce the number of actual cases which remain pending.

iv. General Workload Increases

The 1990 President's request for the Internal-Revenue Service asked for a 10 percent increase in personnel for enforcement litigation and international tax programs, and a 2.5 percent increase in collection personnel. The recent 1990 budget agreement reached by the Administration and the Congress calls for an additional $500 million for tax law enforcement. The increases represent the continuation of a trend under which the I.R.S. has, over the past four years, received nearly a 20 percent increase in funding for its collection and enforcement activities. During the same time, the Tax Division has received only a 2 percent increase in funding. The additional I.R.S. activity funded by this budget growth, is and will continue to be, reflected in the number and complexity of civil litigation cases in the Tax Division. As a result, the staff funded currently is becoming increasingly overburdened. Staff level restoration would go a long way toward alleviating some of this workload burden. In sum, it is the responsibility of the Tax Division to put teeth into these new enforcement efforts. This can only be accomplished if full funding is provided to restore the Division to authorized workyear strength.

With part of the funding increases it has received, the I.R.S. has targeted cases involving either substantial dollar amounts or issues having industry-wide importance. Reflecting this new emphasis, the number of cases on which Tax Division trial attorneys spent over 1,000 hours rose from 29 in 1988 to 36 in 1989. It is important to put this figure in perspective: over 18 of the Civil Trial attorneys, or approximately 13 percent of the total number of Civil Trial attorneys, thus spent all their time working on cases that represented approximately 0.3 percent of the total number of cases pending in the Civil Trial sections. Since the Division is only now beginning to deal with the first of the number of cases to be produced by the I.R.S.' large-case initiative, the Civil Trial sections must be sufficiently staffed or face the prospect of increasing the already crowded dockets of their attorneys, each of whom, on average, is already responsible for over 80 cases.

Among the large cases being received by the Tax Division are those involving specialized industries, including in particular, financial institutions. Some of these cases involve so-called "mortgage swaps", presenting the issue whether a savings and loan realizes a tax loss when it exchanges a pool of residential mortgages for a pool of substantially identical residential mortgages held by another financial institution. The variations on the "mortgage swap" technique appear endless: the seller can alter the appearance of the transaction by entering into servicing agreements or by marketing the swapped mortgages to private investors through selling participation interests in trusts.

Other banking cases received by the Division involve the issue whether a bank may amortize that portion of a deposit base obtained in the purchase of another bank that includes checking and savings accounts--assets the banks have described as "core deposits". The "core deposit" cases represent an attempt by the banks to depreciate their customer bases. If the banks are successful in this regard, it can be expected that other industries will follow suit and attempt to depreciate their customer bases. The impact on the Treasury of such cases would be staggering. Indeed, on an industry-wide basis, the "mortgage swap" and "core deposit" cases already represent upwards of $4.5 billion in potential lost revenue. The number of cases received by the Division involving these two issues has increased from 4 in 1988, to 10 in 1989, with an expectation that the Division may receive as many as 16 such cases in 1990.

It is also anticipated that the Division will be receiving a substantial number of cases as the result of enhanced I.R.S. efforts in the area of international tax enforcement. In particular, the Division likely will receive substantial litigation involving Section 482 of the Code, under which section the I.R.S. may allocate income, deductions, and other tax items among related corporations to prevent the evasion of taxes or to reflect the corporations' incomes clearly. A recent "White Paper" issued by the Department of the Treasury suggests that I.R.S. enforcement efforts involving Section 482 will not only result in the Division receiving substantive tax cases involving millions of dollars of revenue and perhaps roomfuls of documents, but also a number of cases involving I.R.S. attempts to obtain documents from foreign corporations. In order to handle these cases properly, particularly in light of the foreign policy ramifications that they present, the Civil Trial sections must be adequately staffed and funded.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Management and Administration.....	99	103	$5,526	99	107	$5,940	95	103	$6,221	-4	-4	$303

Long-Range Goal: To provide Division-wide management and policy direction including: maintaining effective programs in response to Administration, Congressional, and Departmental priorities; ensuring timely review and analysis on proposed legislation affecting the nation's internal revenue system; fulfilling the Division's administrative responsibilities under the Freedom of Information and Privacy Acts, and Section 6103 of the Internal Revenue Code; maintaining effective liaison with the Internal Revenue Service, U.S. Attorneys' Offices, and other client agencies; and providing essential administrative, financial, information systems, and other administrative support services required by Tax Division employees.

Major Objectives:

To provide policy guidance and direction to all litigating components of the Tax Division.

To represent the Tax Division effectively in its dealings with the I.R.S., the U.S. Attorneys' Offices, and other Department components.

To argue successfully on behalf of the Division to obtain necessary funding and programmatic resources in order to sustain effective litigating operations.

To provide all required financial, technical, personnel, and other support services to components throughout the Division.

To ensure the fiscal solvency of the Tax Division under a continuing series of budgetary constraints.

To supervise the implementation of Project EAGLE office automation so that the information systems technology needs of the Tax Division are comprehensively met.

Base Program Description: The Executive Direction, Legislative Affairs, and Administrative Services components of the Tax Division provide the necessary leadership, policy guidance and direction, and administrative support to maintain a viable Tax Division effectively serving the litigative needs of the I.R.S., the U.S. Attorneys' Offices, other components of the Department of Justice, and other client agencies. The Division's executive leadership ensures that appropriate and uniform policies involving civil and criminal tax law enforcement are established. Likewise, the Division's management and policy officials promote and maintain cooperative communications and liaison with the I.R.S., U.S. Attorneys' Offices, other Department of Justice components, and other external client agencies. The legislative affairs program serves to review and analyze legislative proposals which directly affect the litigating mission of the Division. In addition, the legislative affairs program ensures that all legislative reports required by the Congress, the Office of Management and Budget, and the Department of Justice are professionally prepared and provided on a timely basis. Appropriate and timely responses are also required in handling matters under the Freedom of Information and Privacy Acts.

The Administrative Section provides Division-wide administrative, fiscal/budgetary, information systems technology, personnel, and other administrative support services. The Administrative Section is divided into five essential components including: (1) the Executive Office which provides overall control and guidance; (2) the Comptroller's Staff which is responsible for all financial, budgetary, program evaluation, and travel processing activities of the Division; (3) the Information Resources Staff which is responsible for the implementation and maintenance of the new Project EAGLE office automation system, and for providing all other information systems support required by Division personnel; (4) the Personnel Staff which monitors recruitment, hiring, and training of Division personnel, as well as providing all other necessary personnel services; and (5) the Services Staff which manages resource services, security, case and file control, procurement, facilities management, and all other service support functions required throughout the Division.

Accomplishments and Workload

The Division's senior executive management remains committed to maintaining and, indeed, improving the standards of quality that have been the hallmark of the Tax Division for over fifty years. This commitment is reflected both in demonstrated improvements in cooperative relations with other Governmental organizations and in management innovations implemented internally within the Tax Division.

Recognizing that uniform and equitable enforcement of the nation's tax laws requires a team effort, the Division has fostered heightened cooperation with the Internal Revenue Service, the U.S. Attorneys' Offices, other Department components, and other client agencies responsible for enforcing public compliance with the nation's internal revenue system. Tax Division participation in the Organized Crime Drug Enforcement (OCDE) Task Forces, and the Bank Task Forces established to address the country's savings and loan crisis, clearly demonstrates a commitment to playing a critical role in enforcing the nation's tax system. Similarly, the Division has played a role in the negotiation of bilateral treaties, such as the Mutual Legal Assistance Treaties (MLAT), which gives the United States Government access to individual and corporate financial information in both civil and criminal tax cases. These treaties are critical to the Government's efforts to enforce the nation's tax laws, to interdict international money-laundering and tax shelter schemes, and to ensure public compliance with the internal revenue system.

Internal management improvements have been made to ensure responsible fiscal management within the Division. Currently, each Office/Section Chief is directly responsible for monitoring expenditures within his/her section and is required to limit expenditures to remain within existing office/section budget allocations. This management policy represents Executive leadership's concern with involving Division-wide managers in assuming more responsibility for the fiscal solvency of the organization. At a time of increasingly limited resources, management's involvement in monitoring expenditures is critical.

In addition, the Division's Criminal Section has been reorganized into regional jurisdictons in order to provide more effective leadership in the area of criminal tax law enforcement. As a result, line attorneys are now assigned to help U.S. Attorneys' Offices try criminal tax cases in a particular region on a regular basis in the hope that tax cases will get processed faster, that individual attorneys will acquire more litigation experience, and that a closer relationship in general can be fostered between the Division and the field. In addition, our Criminal Tax attorneys are now actively involved in litigation stemming from the OCDE Task Forces and the Bank Task Forces.

Of most significance, the Division's leadership has participated closely with the Executive Office for U.S. Attorneys and the Criminal Division to develop and implement a uniform office automation system, known as Project EAGLE. Contract award has now been made and implementation is scheduled to begin in February, 1990. With the sophisticated office automation environment provided under the Project EAGLE system, the Tax Division, for the first time, will be at a competitive advantage with opposing private sector counsel.

The Division has also established an internal training office to meet the tax-specific training needs of all Tax Division employees, particularly new line attorneys. The Training Office addresses the training requirements of attorney, paralegal, clerical, and administrative personnel at minimal cost, as many of the sessions are conducted internally. More-importantly, the Division's Training Office will be actively involved in both coordinating and providing necessary training associated with the new Project EAGLE office automation system.

Tax Division executives have intensified scrutiny of the fiscal policies, information systems, personnel performance, employee training, and other administrative support functions required by the Division. Significant improvements have been made in all of these areas.

Expenditures are carefully monitored, payments are promptly posted, and financial reports are routinely reviewed for accuracy and any necessary reconciliation. These activities have enabled staff to make recommendations to the Division's executives as to how best to allocate limited funds. As a result, the Division has continued to remain fiscally solvent despite a continued series of Congressional across-the-board reductions to the Department's appropriations as a whole.

The Division's new information technology systems, Project EAGLE, will now bring the Tax Division into the sophisticated office automation environment of the 1990's. As currently scheduled, in February, 1990, the new highly sophisticated Project EAGLE office automation system will begin to be implemented. An aggressive implementation schedule has been developed, looking to Division-wide implementation by the end of 1991. The new system will provide calendaring, electronic mail, word processing, and other data base capabilities. More significantly, the Division's current case management system is being redesigned so that Division-wide managers will be able to have specific and more detailed information which cannot now be retrieved from the case management system. In sum, with the successful implementation of Project EAGLE office automation, the Tax Division will, for the first time, be brought into the highly sophisticated technological environment of the 1990's.

The Personnel Staff in the Administrative Section effectively processes the necessary paperwork for all Division-wide personnel and payroll actions. It also enters relevant personnel data into the Division's automated personnel system and coordinates the Division's electronic time and attendance project. Other services provided by the Personnel Staff include: advising Section managers on hiring, promotion, and separation procedures; scheduling and accounting for training; coordinating the uniform application of workplans and performance appraisals; and tracking employee time and attendance, including daily reports on leave usage and travel. The Division's new automated personnel system also provides employee security clearance and emergency locator information and enables the automated tracking and scheduling of attorney applicant interviews. In addition, the Personnel Staff coordinates the Division's participation in the Department's Honor Law Graduate Program.

The Services Staff of the Administrative Section coordinates and manages Division-wide procurement; controls and distributes all office supplies, equipment, and attendant maintenance service; maintains Division-wide mail, messenger, filing, and records management services; and arranges for office renovations and furnishings. An automated inventory system has been established and is relied upon to monitor and administer these functions. In addition, the Services Staff is responsible for facilities management including office moves, designing new office space, and general building maintenance. Building security requirements and coordinating the Division's security program are also the responsibility of the Services Staff.

In summary, financial, technical, personnel, and other support services provided throughout the Tax Division have resulted in productivity improvements in terms of improved fiscal management, in greater automated communications capabilities, and in the implementation of the sophisticated Project EAGLE office automation technology. As a result, the Tax Division continues to function efficiently and effectively despite declining staffing levels and increasing demands for more administrative support services from all Tax Division components.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Management and Administration.....	99	107	$5,940	95	103	$6,221	-4	-4	$303

The Administration is requesting an additional $303,000 to implement critically needed recruitment and retention initiatives and to further develop an attorney professional career development program. In addition, the program requests a management savings reduction of four positions, four workyears, and $22,000.

Over the last year and a half, the Tax Division has reduced administrative overhead through efficiencies and automation. The Division plans to continue its efforts to work more efficiently through management initiatives designed to better develop employee staff. The funds requested will enable the Division to renew its emphasis on the recruitment and retention of personnel and further develop and expand our attorney professional career development program.

Recruitment and Retention

The Tax Division requires an additional $250,000 to implement an aggressive recruitment and retention program. The Tax Division is encountering the same difficulties in recruiting and retaining qualified individuals to perform its mission as other Federal agencies, problems described by the Office of Personnel Management in its study, "Civil Service 2000" as a "quiet crisis." The Tax Division's recruitment and retention problems are exacerbated by factors unique to the Division, principally the general shortage of attorneys and law graduates willing and able to litigate tax cases, the subject matter of which is increasingly complex and constantly changing. Another factor uniquely affecting the Tax Division's ability to recruit and retain attorneys is the increasing competition for qualified candidates from the Office of Chief Counsel for the Internal Revenue Service. This is to say nothing of the competition posed by private law firms who can offer new attorneys substantially greater financial benefits than those available in the public sector. Similar factors are impairing the Division's ability to hire and retain capable paralegals and secretaries. Personnel recruitment and retention are clearly the most critical management issues facing the Tax Division's current leadership.

We must maintain a stable core of able, conscientious litigators and support staff if we are to attain our goal of providing fair and consistent interpretations of complex tax statutes. Overall, Division records show that between FY 1982 and FY 1987, the average years of attorney service dropped from 8.4 to 7.3, which is below the Departmental average of eight years. Even more significantly, for FY 1987, the Division's attorney turnover rate was 16 percent, as compared to the Departmental average of 10 percent. Perhaps more telling, however, is the fact that between FY 1982 and FY 1987, the percentage of attorneys on-board with less than four years experience rose from 42 to 57 percent. Indeed, in some sections, the percentage of attorneys on-board with less than four years experience is approaching 75 percent.

Many of the factors hindering the Tax Division's recruitment and retention of attorneys also affect its ability to develop and maintain a staff of quality paralegal and secretarial personnel. Again, low salaries pose the greatest obstacles to our efforts to recruit and retain qualified personnel. By the time legal secretaries reach the GS-7 salary level, which is generally the highest grade offered by the Division, they are receiving approximately 30 percent less than their counterparts in the private sector. In light of these figures, it is not surprising that the annual turnover rate of secretaries in the Tax Division is exceedingly high. In fiscal year 1988, for example, the turnover rate was 37 percent, or approximately double that experienced by the Division in any one fiscal year between 1978 and 1984. Indeed, since fiscal year 1985 the turnover rate has never gone below 33 percent. This increased turnover rate is particularly troublesome because it comes after a period in which the Tax Division responded to budgetary constraints by reducing the size of its support staff through increased usage of computer wordprocessing. Heightened turnover is thus being experienced at a time when each of our secretaries takes longer to train and has greater responsibilities.

The Tax Division's recruitment and retention of paralegals is complicated by an additional factor—exceptionally high demand. Citing Labor Department statistics, an article in the New York Times ("Making a Living is Now a Family Enterprise", Oct. 11, 1987), stated that paralegals constitute the fastest growing employment field in the United States today. A 1987 survey in the National Law Journal (Rosen, "The Large-Firm Continues: A 10 Year Look", Sept. 28, 1987) indicates that in response to this increasing demand, starting salaries for paralegals at large private firms now average approximately $20,000. By comparison, the Tax Division hires paralegals at the GS-5 level, or $16,305. The result is a shortage of qualified candidates. Because of low salaries, the Tax Division is also hard-pressed to retain qualified paralegals, particularly in light of the possibilities for upward mobility offered by corporate legal organizations. The latter phenomenon was highlighted in an article in Focus magazine ("Flight of Paralegals", Aug. 17, 1988), which indicated that even large law firms are having some difficulty in maintaining their paralegal staffs.

While recognizing that the chief cause of the recruitment and retention problem is the growing disparity between pay and benefits offered by the Tax Division and those offered by private employers, the Division understands that it cannot resolve the pay gap issue under the existing Federal personnel system. However, with additional funds we can double the amount of awards and special recognition bonuses paid to employees performing outstanding and exemplary service. This initiative, dubbed "compensation for excellence", requires an additional $200,000. Our hope is that by rewarding excellent performance we can retain some of the upper echelon of our work force.

Compensation for excellence specifically addresses the retention problems the Division has experienced in recent years. In an attempt to deal with the Division's increasing recruitment problems, we require an additional $50,000 for recruitment trips to law schools, improving the Tax Division's summer legal intern program, and heightened recruitment efforts to attract experienced attorneys.

Although the Tax Division participates in the Summer Honors Intern Program and the Honors Law Graduate Program run under the auspices of the Justice Department's Office of Attorney Personnel Management, and continues to hire highly qualified candidates, we need to concentrate on recruitment. The Division has devoted more resources to informing law students and judicial clerks of the employment opportunities available in the Tax Division. Clearly, however, more effort in this regard is warranted. To that end, the Division needs to expand its program whereby attorneys on official travel visit law school tax and litigation classes in order to provide students with information about employment opportunities with the Tax Division.

In summary, the 1991 requested increases for the Division's recruitment and retention initiative are critical to Executive leadership's efforts to maintain a highly qualified and professional staff. Only by attracting such a staff can the Division hope to litigate effectively on behalf of the United States Government and thus to protect the nation's financial interests.

Attorney Professional Career Development Program

The Tax Division is requesting an additional $75,000 to expand an attorney professional career development program. The Division's Executive leadership has embarked on an aggressive training program begun in 1989 which provides separate in-house, tax specific training for attorneys, paralegals, and clerical staff. Initial funding of training equipment was absorbed within available resources. However, in order to provide the type of tax-specific training program necessary to prepare new Government attorneys properly to deal with the complex changes in the nation's tax laws, and with the reality that they will be in court representing the Government's interests within six to twelve months of their employment, additional funding to intensify our training efforts is absolutely critical. Specifically, as part of the Tax Division's attorney professional career development program, we intend to do three things. First, $42,000 would be devoted to paying for courses offered by outside training concerns that cannot be duplicated in-house or with experienced guest speakers. Second, $8,000 would be used to purchase legal tapes, training videos, and other greatly needed training tools in order to provide as much in-house training as possible on current tax issues to our attorneys. The final component of our attorney professional career development program includes sending new attorneys, of which there were 59 in 1988, on travel to second chair at trials with a more experienced litigator. The additional $25,000 requested for this purpose will enable the Division to send each new attorney on at least one such learning experience before they have to litigate alone in court. With these funds, the Division will be able to cultivate a highly qualified staff which will ensure that the Government's fiduciary interests are effectively protected.

Management Savings Reductions of 4 positions, 4 workyears, and $22,000 are taken in support of the Administration's efforts to increase efficiency in Government operations in the files and systems support operations.

This budget activity includes resources for the primary mission of the Criminal Division. Funds requested for this activity support personnel involved both at Headquarters and in the field in the prosecution of over 900 Criminal statutes.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Federal appellate activity............	29	27	$2,152	29	27	$2,307	29	27	$2,307	...	...	...

Long-Range Goal: To secure appellate judicial decisions in criminal cases favorable to the United States in accordance with the fair administration of criminal justice.

Major Objectives:

In Supreme Court cases, the Section prepares draft briefs (briefs in opposition and merit briefs) and petitions for certiorari; and screens defendants' certiorari petitions.

In courts of appeals cases referred to the section by the United States Attorneys and other components of the Division, the Section writes briefs, rehearing petitions, and mandamus petitions. It also presents oral arguments.

In judicial decisions adverse to the government, the Section prepares memoranda on behalf of the Criminal Division to the Solicitor General recommending whether further review should be sought.

The Section furnishes solutions to legal problems arising in the prosecution of criminal cases to other components of the Division and to the United States Attorneys.

Base Program Description: The Appellate Section consists of a group of attorneys who are experts in federal criminal law. (1) The Section, in conjunction with the Office of the Solicitor General, reviews certiorari petitions in federal criminal cases filed in the Supreme Court to determine whether to respond by filing a brief in opposition or to waive a response because the petition does not merit any answer. If the case merits a response, a draft brief in opposition is prepared by a Section attorney opposing Supreme Court review. The Section also prepares draft certiorari petitions and merits brief for the Solicitor General. (2) In cases before the courts of appeals, at the request of United States Attorneys, Section attorneys write briefs and participate in oral argument. The Section also provides advice to Assistant U.S. Attorneys who seek assistance in the preparation of their appellate briefs. (3) The Section examines reviewable decisions of district courts and courts of appeals adverse to the United States Department of Justice to determine whether review or further review is justified. In this process, the Section Attorneys in their memoranda present the strongest possible arguments in favor of the government's position, and, where possible, attempt to develop arguments that will result in decisions favorable to the United States.

Accomplishments and Workload: The quantitative experience and expectations of the Appellate Section are presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Supreme Court:				
Briefs in opposition	350	308	350	350
Waiver of responses	200	230	200	200
Merit (including amicus) briefs	16	11	11	11
Government petitions for certiorari	6	5	5	5
Court of Appeals:				
Main and reply briefs, oral arguments and Rehearing and mandamus petitions	200	255	255	255
Adverse Decision Memoranda	800	844	844	844

The Appellate Section plays a major role in obtaining favorable appellate decisions in federal criminal cases. For example, the Sentencing Reform Act of 1984 requires that criminal sentences be imposed under guidelines promulgated by the Sentencing Commission. The interpretation of the guidelines is now a common issue in appellate litigation, and the Section is involved in ensuring that the guidelines are properly construed. The Section provides relevant arguments to United States Attorneys pertaining to favorable judicial interpretations. The Section handles appeals for United States Attorneys and other Sections of the Division, including the appeals in complex cases. The Section has continued to shepherd successfully the Speedy Trial Act, providing advice to the United States Attorneys on issues arising under the Act.

It is anticipated that the addition of new positions to the U.S. Attorneys' Offices will result in an increase in adverse decisions, resulting in an increase in adverse decision memoranda. Other workload factors will also be affected. The new workload demands will be met by the addition of one attorney position to the staff in 1990.

Cases of importance recently handled successfully by the Section, in some instances in conjunction with the Solicitor General, include Caplin & Drysdale v. United States, 109 S. Ct. 2646 (1989) and United States v. Monsanto, 109 S. Ct. 2657 (1989) in which the Supreme Court upheld the forfeitability of drug proceeds to be used to pay attorneys fees; Schmuck v. United States, 109 S. Ct. 1443 (1989) in which the Supreme Court resolved a complex double jeopardy issue in the government's favor; United States v. Sokolow, 109 S. Ct. 1581 in which the Supreme Court held that DEA agents had reasonable suspicion to make an investigative stop of a traveler at an airport; United States v. Wallington, No. 88-6033 (5th Cir. Nov. 21, 1989) in which the Fifth Circuit upheld the government's right to prosecute individuals for theft of confidential government information; United States v. Gonzalez, 875 F.2d 875 (D.C. Cir. 1989) and United States v. Cariballo-Tamayo, 865 F.2d 1179 (11th Cir. 1989), the courts of appeals ruled that Customs officers have the statutory authority to board vessels on the high seas; and United States v. Lopez-Pena, No. 87-2003 (1st Cir. Nov. 22, 1989) in which the Section was able to limit the Supreme Court's recent decision that magistrates cannot conduct voir dire in jury trials to cases where the defendant objected in the trial court. In addition, the Section contributed to the government's brief in Mistretta v. United States, 109 S. Ct. 647 (1989), which upheld the constitutionality of the Sentencing Guidelines.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Organized crime prosecution...........	282	238	$19,099	96	83	$7,850	96	83	$7,850	...	...	...

Long-Range Goal: To nullify the influence of major organized criminal activities on the economic, political, and social institutions of the United States.

Major Objectives:

To ensure the investigation and prosecution of all major organized groups and activities.

To use innovative investigative and litigative approaches utilizing all appropriate criminal and civil remedies against organized crime.

To set and maintain national goals, priorities and standards in joint program planning and execution by Federal, State and local agencies active in organized crime law enforcement.

Base Program Description: Program resources are directed at those organized crime groups, whether La Cosa Nostra (LCN), Sicilian Mafia, Asian Organized Crime or other emerging groups, which pose the greatest threat to the economic and social well-being of the nation. With the transfer of Strike Force Offices to the United States Attorneys, which was implemented by Attorney General Order No. 1386-89, dated December 26, 1989, the Organized Crime and Racketeering Section will act as a strategic reserve of experienced prosecutors to try labor racketeering, RICO and other organized crime cases wherever needed. These lawyers will serve to complement the Strike Force Units established in the United States Attorneys' Offices and provide expertise to those units and other United States Attorneys' Offices that are prosecuting organized crime cases. In addition, these lawyers will be available to identify and to target emerging criminal organizations, and to investigate new methods of prosecution.

The Section will also provide staff, as necessary, to the Organized Crime Council, which will be established to oversee the national effort against organized crime. That Council will be chaired by the Attorney General's designee, and will consist of the Assistant Attorney General, Criminal Division, a designee of the AGAC and the head of each concerned federal investigative agency. The Council will review policies, promote interagency coordination and will review priorities and evaluate the threat presented by emerging organized crime elements to establish national priorities.

The remaining members of the Section will provide Washington based management and support to the Strike Force Units across the country. Because the existing organized crime case management system will remain intact, the Strike Force Unit in each United States Attorney's Office will report case initiations and prosecution decisions to the Organized Crime and Racketeering Section for approval.

Through the Case Initiation Report approval mechanism, management regulates the application of national priorities. The chief priority is LCN activity and affiliated labor racketeering, followed by emerging organized crime groups. Quality control and compliance with Department prosecutorial policies and procedures are guaranteed by the Prosecution Memorandum approval process and continuous supervisory contacts. Program priorities are set through the National Organized Crime Planning Council (NOCPC), chaired by the Chief of the Organized Crime and Racketeering Section, which complements the extensive interagency communication in the field on case-related matters with regular assessments of local program effectiveness in each Strike Force city and in Washington.

Accomplishments and Workload: The recent experience and future projections of the organized crime and racketeering program are summarized quantitatively in the following table:

Item	1988	1989	Estimates 1990*	 1991*
Matters:				
Pending, beginning of year	513	604	660	668

Other dispositions (transfers to U.S. Attorneys, deaths)	4	6	10	10

*Workload figures for 1990 and 1991 include investigative matters and cases handled by Strike Force Units.

The challenge facing law enforcement today is to sustain our pressure on the LCN and, at the same time, prevent emerging organized criminal groups from acquiring a power base. The President's Commission on Organized Crime noted three major characteristics of organized crime in the United States today. In the first place, there has been a rapid growth in recent years of newly organized crime groups. Most are ethnic-based, although some originated in U.S. prisons or as motorcycle gangs. They share with traditional organized crime, i.e., La Cosa Nostra, a drive to establish a criminal territory, a disrespect for law and a willingness to rely on violence, criminality and corruption to achieve their ends. Organized crime in the United States today is a complex tapestry of multiple groups supported, wittingly or unwittingly, by numerous protectors, specialists and associates. In the second place, the Commission found that the forces of law enforcement indeed have "the mob on the run." Recent successes by law enforcement against the leadership, membership, and associates of La Cosa Nostra have seriously threatened its operations. The emerging groups cited in the report, however, are attempting to fill the vacuum, and the report recommends that law enforcement must broaden its perspective to address the full panoply of organized criminal groups and their methods of operation. The final finding of the Commission has been widely reported previously and has been the subject of an Administration program for several years; namely, the increased concentration of Organized Crime on drug trafficking. This problem has been the focus of the Organized Crime Drug Enforcement Task Forces. In offenses where traditional Organized Crime families are involved and in cases where emerging groups participate in multiple crimes besides narcotics, the Criminal Division's Organized Crime and Racketeering Section will provide guidance, support and a strategic reserve of experienced prosecutors to complement the United States Attorneys and the Strike Force Units in those offices. Demonstration projects regarding Asian organized crime, for example, will continue.

Since the President's Commission on Organized Crime issued its report on labor-management racketeering in March 1986 and recommended greater use of civil RICO, seven such lawsuits brought by the Department of Justice have resulted in the removal of LCN-corrupted parties to labor-management relations. Two other civil RICO actions seeking to enjoin LCN involvement in labor-management matters are pending. In five of those lawsuits, trustees or monitors have been installed to supervise elections of new labor union officers and to oversee the affairs of labor organizations, including the International Brotherhood of Teamsters, the largest labor union in North America. Demonstrating the Department's implementation of the Presidential Commission's recommendation that initiatives be undertaken with respect to LCN infiltration of business and distortion of the market place, a court-appointed administrator was appointed in one case to oversee the activities of the Fulton Fish Market in New York City. As part of efforts to police industries impacted by organized crime, a nationwide investigation by the FBI and the Department of Labor led to the criminal prosecution in 1988 of individuals and businesses in the health care industry. The Section has recommended that the Administration submit to Congress legislation which would implement seven of the Presidential Commission's legislative recommendations and three new statutory initiatives with respect to labor-management racketeering.

The Organized Crime Strike Forces' regular criminal prosecution efforts in 1989 resulted in some dramatic successes. For example: (1) In November 1989, the Cleveland Strike Force obtained jury convictions of Reuben Sturman, one of the largest distributors of pornography in the United States and two other individuals. All three were convicted of conspiracy to prevent collection of income taxes totaling more that $1.4 million on $2.7 million skimmed from Sturman's pornography businesses in the United States and Great Britain. Sturman was also convicted of 15 other substantive charges. (2) In another Cleveland Strike Force case, a jury in January 1989 convicted two union officials, including a Teamsters International vice-president, of RICO in connection with their embezzling over $700,000 from two local unions through payments to "ghost" employees. The men were indicted with Teamsters International President Jackie Presser, who died prior to trial. (3) In June 1989, the Newark Strike Force, in conjunction with the United States Attorney's Office, obtained jury verdicts of guilty against Genovese Family consigliere Louis A. Manna and five LCN associates on multiple counts of RICO and related charges involving murder, gambling, labor racketeering, and extortion. The conduct in the RICO charges included conspiracy to murder John Gotti, the reported boss of the Gambino Family, and other individuals. (4) In November 1988, following a seven-week trial, LCN boss Nicodemo "Nicky" Scarfo and 16 LCN co-defendants were convicted on all counts in a RICO prosecution brought by the Philadelphia Strike Force. The conduct charged in the two RICO counts included nine murders and four attempted murders, as well as multiple acts involving distribution of drugs, gambling, and extortion. Scarfo was sentenced to 55 years in prison; other defendants, including several mob bosses or underbosses and numerous "soldiers", received prison sentences ranging from 30 to 45 years.

New resources anticipated from the President's 1990 budget initiative on violent crime are expected to result in a 5 percent increase in investigative and case matters opened and closed. The increased activity will be directed to expansion of efforts directed at Asian and Sicilian Organized Crime groups in Los Angeles, San Francisco, Houston, Boston, Chicago, and elsewhere. These resources will be directed from Headquarters. Resources will also focus on other emerging groups, e.g., street gangs.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Public integrity......................	34	32	$2,611	34	32	$2,738	38	34	$3,000	4	2	$262

Long-Range Goal: To enhance the public's confidence in elected and appointed officials at all levels of government by deterring dishonesty and corruption in the discharge of the public's business and by protecting the integrity of the franchise.

Major Objectives:

To supervise the investigation and conduct the prosecution of selected corruption cases at the Federal, State and local government levels.

To supervise the investigation and conduct the prosecution of all matters involving alleged criminal misconduct by Federal judges.

To ensure an effective Federal law enforcement effort against election fraud and criminal conflicts of interest among Federal employees.

To assist U.S. Attorney personnel in developing their own capabilities to recognize, investigate and prosecute public corruption and election fraud offenses.

To respond, within the statutory time limits, to complaints subject to the Independent Counsel provisions of the Ethics in Government Act (28 U.S.C. 591, *et seq.*) and, after investigation, to make timely recommendations to the Attorney General concerning the need for the appointment of independent counsel in such matters.

To establish and maintain liaison with the Inspectors General and others responsible for the investigation and administrative discipline of public employees and to ensure the flow of intelligence concerning employee crimes to Federal prosecutors.

Base Program Description: The Public Integrity Section prosecutes selected cases against Federal, State and local officials, and its staff is available as a source of advice and expertise to law enforcement officials and prosecutors at all levels of government. In addition, the program serves as a center for planning, coordinating and implementing nationwide programs focused on public corruption and abuse of the franchise. Approximately 75 percent of the program's resources are presently devoted to operational responsibilities for investigation and litigation of cases and matters, while about 25 percent of its resources are devoted to support of United States Attorney activities. In addition to the cases it has developed itself or cases that arise out of its special initiatives, the program is responsible for the prosecution of corruption cases in which United States Attorney personnel have recused themselves, and it routinely assists in the disposition of public corruption matters involving multi-district problems or unusually sensitive subject matter.

Accomplishments and Workload: The recent experience and projections for the future with regard to litigation for which the Public Integrity Section is directly responsible are summarized quantitatively in the following table:

Item	1988	1989	Estimates 1990	 1991
Matters:				
Pending, beginning of year	165	186	223	333
Opened	165	185	250	275
Closed	144	148	140	154
Pending, end of year	186	223	333	454
Cases (lead prosecution):				
Pending, beginning of year	30	31	40	40
Opened	31	40	35	35
Closed	30	31	35	35
Pending, end of year	31	40	40	40
Disposition of defendants in cases litigated:				
Convictions	29	55	55	55
Acquittals/dismissals	1	4	4	...
Other dispositions (transfers to U.S. Attorneys, deaths)	0	6	6	...

Although much of the workload increase is expected to result from the enactment of proposed changes to the conflicts of interest statutes, an increase in workload is also anticipated as a result of the change in administration. The increased number of referrals resulting from the "changeover" is a direct result of the Section's efforts to sensitize investigators and the general public to the conflicts laws, encouraging referrals and seeking to ensure that it becomes known that these are matters we take seriously. Another factor which weighs significantly in the workload projections involves the expanded coverage of the Independent Counsel Statute.

--Independent Counsel Allegations. The Section is responsible for all Independent Counsel matters under the Ethics in Government Act. The Section supervises any necessary preliminary investigation, and prepares a recommendation to the Attorney General as to whether the Independent Counsel provisions have been triggered and whether a further investigation is warranted. The Section has been able to apply a uniform standard and to develop a consistent procedure applicable to each case, ensuring that these matters are properly handled within the stringent time limits of the Act. In 1987, the Section handled several investigations and inquiries under the Act involving allegations against high government officials.

--Investigations of Federal Judges and Federal Law Enforcement Officials. The Public Integrity Section has exclusive jurisdiction over allegations against Federal judges. In 1987, the conviction of Chief Judge Walter Nixon of the Southern District of Mississippi on charges of perjury was sustained by the 11th Circuit in an appeal that was handled by the Section. The Section also handles cases involving attempts to corrupt the judicial system, such as the conviction of an individual in New York who solicited money, claiming falsely that he could bribe Federal judges.

Cases involving corruption of Federal law enforcement officials are also a top priority of the Section. For example, in 1987, the 9th Circuit Court of Appeals affirmed the perjury conviction of an FBI agent.

--Election Crimes. A special Election Crimes Branch has been part of the Section since 1980, and it has made considerable progress in making election fraud a national priority. The Branch has three major functions. First, it prosecutes selected cases, usually in conjunction with the United States Attorney's office in the District, such as one ongoing project in Indiana in which over 20 convictions for vote fraud and related offenses have already been obtained. Through such prosecutions and accompanying appellate victories, obscure areas of election fraud law have been clarified, endorsed by the courts, and used with increasing frequency around the country. Second, the Branch provides advice and support to the United States Attorney Offices in the application of election fraud and campaign financing laws to the myriad situations that arise in the course of a campaign and election. Finally, in order to encourage greater awareness of election crimes, the Branch has taken on a major role in training prosecutors and election officials, giving lectures on the various statutes available to combat these offenses, and publishing a comprehensive election crimes manual. During 1988, the Branch published a completely revised edition of its election crimes manual, Federal Prosecution of Election Offenses, which was distributed to every Assistant United States Attorney and has been offered for sale to the public by the Government Printing Office. This manual is the standard reference work for this subject within the Federal law enforcement community.

--Conflicts of Interest. A special Conflict of Interest Crimes Branch has been part of the Section since 1983. This area of the criminal law is complex and technical, and is only beginning to take on substance through litigation. The Section's Conflicts of Interest Crimes Branch handles several conflicts prosecutions each year, and fields many requests for advice from other Federal agencies and prosecutors. In 1987, the Section obtained the conflicts conviction of a high-level Health and Human Services official who was structuring Federal contracts for his personal financial benefits. The Branch is also devoted to formulating and reviewing legislation in the ethics law area and preparing Departmental officials for congressional testimony concerning these laws. In addition, beginning in 1989, and continuing through the foreseeable future, the Section will be playing a substantial role in the investigation and prosecution of corruption in the area of Defense procurement growing out of the Ill Winds investigation in the Eastern District of Virginia and elsewhere.

--Other Section Priorities. The Section has developed valuable expertise and close working relationships with the CIA, the NSA, the State Department, and other agencies with sensitive or international operations, enabling it to investigate and/or prosecute crimes involving sensitive or classified information, and crimes which occur, in whole or in part, overseas. In the past, these cases have received little attention because they are plagued by evidentiary problems, diplomatic complications, extremely expensive travel, uncooperative witnesses, and evidence beyond the reach of process. Despite these problems, the Section has actively pursued overseas corruption cases, and has successfully prosecuted American officials for crimes committed abroad.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Public integrity..	34	32	$2,738	38	34	$3,000	4	2	$262

An increase of 4 positions (3 attorneys and 1 support staff), 2 workyears and $262,000 is sought for 1991 for the Public Integrity program. The need for these positions continues in order for the Section to fulfill its responsibilities with regard to conflict of interest issues, Independent Counsel matters, and election crimes. By the end of 1989, the backlog of investigative matters was 20 percent greater than in 1988 and will increase an additional 50 percent by the end of 1990. The number of cases pending rose 30 percent in 1989 from the previous year.

The Ethics Reform Act of 1989, enacted January 3, 1990, will continue expansion of conflicts-of-interest workload. The new legislation reflects the recommendations of the President's Commission on Federal Ethics Law Reform, which completed a study on March 9, 1989. Workload increases in this area are anticipated for several reasons: all three branches will be covered by the principal proscriptions of the conflict-of-interest laws; inclusion of misdemeanor as well as felony sanctions, resulting in increased numbers of prosecutions; addition of civil sanctions requiring expeditious handling of referrals and coordination with the Civil Division; provision of subpoena power to agencies which must be coordinated with the Department of Justice; and creation of new regulatory standards that will require Public Integrity to engage in extended consultation with the Office of Government Ethics.

Independent Counsel matters will increase. The Administration has proposed an amendment to the Independent Counsel Act which will include all Members of Congress as persons covered by the Act. This legislation would, in effect, continue the workload impact of the recently rescinded Attorney General

Order No. 1297-88 except that there would be no provision to allow investigations of Members of Congress which grow out of ongoing investigations to be handled by the Department or United States Attorneys' Offices. All Congressional cases will have to be treated as Independent Counsel matters. Workload in this area is already overwhelming, and any further increase requires additional personnel.

The Election Crimes Branch has made considerable progress in making the prosecution of crimes against the electoral process a national priority, and in developing and implementing investigative and prosecutive strategies to maximize the ability of Federal prosecutors to achieve jurisdiction over and respond to this type of corruption. The ability of staff to respond to demands has been diminished in the last several years. For example, the Section was unable to respond to a request from the U.S. Attorney in the Southern District of Georgia to take over the operational facets of several aggravated matters involving voter fraud within that District which arose during 1988.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Fraud................................	117	104	$8,555	117	104	$8,951	117	104	$8,951	...	...	...

Long-Range Goal: To reduce the incidence of white collar crime through a comprehensive program of prevention, detection, investigation, prosecution, and punishment of white collar crime offenses.

Major Objectives:

To conduct fraud prosecutions that require resources exceeding the capacity of individual United States Attorneys.

To assist in the formulation of prosecutorial policies and the development of model prosecutions, especially through the conduct of selected litigation, which will serve to demonstrate the viability of particular statutes, theories or techniques.

To develop and enhance local, state, federal and international law enforcement cooperation in combatting white collar crime.

To identify recurring illegal schemes and devise new practices and procedures for minimizing opportunities for criminal conduct.

To provide specialized training to prosecutors and investigators on effective techniques and procedures for investigating and prosecuting white collar crime cases.

Base Program Description: The Fraud Section's overall objectives are focused on the priorities of the Economic Crime Council as announced by the Attorney General. The top priorities are: Defense procurement fraud and financial institution fraud. Other Council areas of special emphasis are fraud in the securities and commodities markets; fraud involving government benefits, contracts and loans such as HUD and health care providers; international white collar criminal activity; career white collar criminals and locally devastating economic crimes. The primary function of the Fraud Section is the conduct of major criminal investigations and prosecutions. The selection of specific investigations is based on a variety of criteria, including: magnitude of the alleged fraud scheme; ability of United States Attorneys' offices to handle the case; complexity; unique fact pattern or theory of prosecution/investigation; and, contribution to long range prosecutorial goals. Many of the investigations are complex and lengthy, requiring over two years to develop. They are developed by a team of investigators and auditors directed by Section prosecutors.

The Section, through the Defense Procurement Fraud Unit, prosecutes nationally significant defense procurement fraud cases drawn from the nearly $600 million per day spent by the Department of Defense (DOD). The Unit consists of ten Fraud Section attorneys, four attorneys provided by DOD, four DOD criminal investigators and a Defense Contract Audit Agency auditor. The staff focuses on investigating and prosecuting allegations of product substitution, defective products, cost mischarging, defective pricing, corruption and kickbacks. (An additional three attorneys from the Fraud Section are assigned to the Ill Wind investigation in the Eastern District of Virginia).

The Unit staff provides frequent assistance to United States Attorneys' offices, acting as an informational source on legal issues, as well as providing prosecutive guidance and information on the use of complex criminal statutes that are unique to procurement prosecutions. Furthermore, they evaluate investigative work and the adequacy of proposed indictments for United States Attorneys' offices. In the area of financial institution fraud, eleven Section attorneys have been spending all or a substantial part of their time on investigations and trials (46 convictions as of December 1989), undertaken by the Dallas Bank Fraud Task Force. Twelve new Section attorneys will be assigned to the Task Force as a result of the funding made available through the Financial Institution Reform Recovery and Enforcement Act of 1989. (An additional twelve attorneys will be assigned to such cases elsewhere). The Task Force is addressing fraud associated with the serious financial institution crisis centered in Dallas. In addition, one Section attorney has been assigned as a member of a trial team handling a major case brought by the United States Attorney for the Northern District of Texas and involving five failed savings and loan institutions and a group of land developers in Dallas. The Section is also leading a major investigation concerning abuse of banks by land developers in Oklahoma and expects to support other United States Attorneys' offices with individual cases and investigations when requested. In all, 14 Fraud Section attorneys are currently assigned directly to financial institution cases, with additional attorneys providing management and other support.

The Section also provides both leadership and support in more traditional fraud areas: the PTL investigation and trial; the Robert Morris computer virus case; the bribery of IRS officials to obtain retail gasoline tax certificates on Long Island; and an off-shore reinsurance scam operating out of Kansas City, Miami, and the Caribbean, to name a few. We have also assigned three attorneys to Oklahoma City and two to Denver to prosecute HUD frauds.

Section attorneys also provide staff support to projects of the Economic Crime Council with the Section Chief serving as Executive Director of the Council. The Section also staffs the work of the Interagency Bank Fraud Working Group and the Interagency Securities and Commodities Fraud Working Group. Through this work in particular, Section attorneys maintain ongoing liaison with several Inspectors General and regulating agencies. The Section devotes considerable time to training attorneys and investigators. Two Economic Crime Enforcement Conferences are given each year and there is also a Defense Procurement Fraud course and a Fraud and Financial Crimes course scheduled for 1990. More courses for banks and securities are planned for 1991. Section attorneys also teach at the Federal Law Enforcement Training Center and many other *ad hoc* courses.

Accomplishments and Workload: The recent experience and projections for the future with regard to litigation for which the Fraud Section is directly responsible are summarized quantitatively in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991

Pending, end of year	43	67	76	101

Several hundred matters in the Dallas Bank Fraud Task Force and in the Oklahoma City HUD investigations are listed as one overall matter for each city, thereby accounting for the apparent decrease in intake in 1989 and 1990.

Disposition of defendants in cases litigated:	1988	1989	Estimates 1990	Estimates 1991
Convictions	56	103	84	84
Acquittals/dismissals	2	20	2	2
Other dispositions (transfers to U.S. Attorneys, deaths)	1	1	1	1
Monetary Recovery ($000)	$64,363	$30,120	$50,000	$50,000

Monetary recoveries for 1988 include $25.2 million pursuant to the DOD Voluntary Disclosure Program. These recoveries are no longer included in Section statistics.

Twenty-nine convictions were obtained by the Defense Procurement Fraud Unit in defense procurement fraud cases during FY 1989. One of the Unit's major investigations this past year involved defective pricing by Boeing Military Airplanes of Wichita, Kansas, a division of The Boeing Company. The investigation, which ended with an $11 million civil settlement, established that Boeing had proposed aluminum prices during price negotiations of several KC-135 Reskin Kit contracts in 1983 and 1984, which were higher than Boeing expected to pay. Additionally, Boeing agreed to the disallowance of attorney's fees of nearly $2 million. This represents one of the ten largest civil settlements ever reached with a defense contractor.

In the first case involving perjury and obstruction of Armed Services Board of Contract Appeals (ASBCA) proceedings, the Unit returned an indictment in the Middle District of Florida against a production supervisor at E-Systems, Inc. The indictment charges that the employee falsely denied that she and others falsified documents pertaining to production and supply contracts for the VCR-12 radio, the Army's principal vehicular-borne tactical communications system. In addition, in connection with a voluntary disclosure handled by the Unit, a plea of guilty was obtained from a former division manager of Watkins-Johnson Company charging him with conspiracy to commit fraudulent labor mischarging on DOD contracts. The manager had directed his employees in a systematic labor mischarging scheme, by which the company fraudulently inflated historical labor costs and used the costs in support of proposals for follow-on contracts. Approximately $1.8 million was recovered in a civil settlement from Watkins-Johnson Company.

The Unit also has a primary role in the Defense Department's Voluntary Disclosure Program. Under this program, which was implemented in 1986, the Unit reviews, coordinates and prosecutes criminal matters which are voluntarily disclosed by defense contractors. In 1989, over $29 million was collected by DOD; a total of $82.9 million since its inception.

During 1988 and 1989, the Fraud Section assumed additional responsibilities in the Government, consumer and institutional fraud arena. The Section's financial crimes task force in the Western District of Oklahoma was expanded, adding two additional attorneys to the HUD fraud enforcement effort. To date, the task force has obtained 23 felony convictions, $11,000 in fines, and $2,409,489.73 in restitution orders. The Section has also committed two attorneys to a HUD fraud task force in the District of Colorado beginning in early 1990.

The Section also successfully concluded the prosecution of televangelist James Bakker, resulting in a sentence of 45 years imprisonment and a $500,000 fine, and presented for indictment the computer fraud case against Robert Morris (involving the computer virus launched from Cornell University).

Fraud in savings and loans and in banks continues to be a serious national law enforcement problem. A number of convictions for fraud, associated with bank failures, were obtained by Section attorneys in 1987, 1988 and 1989 in Oklahoma, Oregon, Wyoming, Texas and Kansas. In Dallas, the Task Force, now consisting of eleven Section attorneys, three Assistant United States Attorneys, one Special Assistant United States Attorney from the Federal Home Loan Bank Board, more than twenty FBI agents, and a contingent from the Internal Revenue Service, has been conducting investigations and prosecutions stemming from referrals involving over four hundred subjects and over twenty financial institutions. The Task Force will be expanded to twenty-two Section attorneys through the Financial Institutions Reform, Recovery and Enforcement Act (FIRREA). The Task Force has brought felony charges against 55 individuals and obtained 46 convictions as of December 1989.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Narcotic & dangerous drug prosecution..	74	47	$3,662	74	67	$5,748	73	66	$5,743	- 1	- 1	- $5

Long-Range Goal: To combat the growth of major national and international criminal enterprises involved in drug trafficking and money laundering.

Major Objectives:

To assist in the formulation of Federal drug prosecution policies, including the development of innovative investigative and prosecutorial methods and the enhancement or modification of existing statutory authorities that foster more effective drug enforcement.

To prosecute directly and/or to assist U.S. Attorneys in major international and multi-district cases involving the most significant violators and to implement innovative prosecutorial methods, especially in the area of narcotics-related financial investigations.

To furnish instruction that will improve the effectiveness of federal enforcement agents and prosecutors who are responsible for investigating and litigating drug cases.

To supervise and participate in litigation concerning: the Money Laundering Control Act, 18 U.S.C. Section 1956, 1957; the Bank Secrecy Act, 31 U.S.C. Section 5311 et seq.; and the Controlled Substance Act 21 U.S.C. Section 801 et seq.

To promote interagency and inter-jurisdictional cooperation in the conduct of drug investigations and drug prosecutions.

To provide legal advice to Department of Justice officials in support of the Organized Crime Drug Enforcement Program and to otherwise assist the Director in matters pertaining to policy, implementation and evaluation of the program.

To assist the Department in its role of promoting better narcotics law enforcement by assisting State and local authorities to improve statutory tools and training.

To assist the Department in its role of improving international programs for narcotics law enforcement in particular by assisting multinational organizations and states in implementing the statutory requirements imposed by the U.N. Convention Against the Illicit Traffic in Narcotic Drugs and Psychotropic Substances.

Base Program Description: This program works to support the national drug enforcement effort. It supports both the program and policy efforts developed in Washington and the prosecutive efforts being undertaken by the Organized Crime Drug Enforcement Task Forces and the U.S. Attorneys' Offices. In addition, it develops unique and ground breaking methods of investigating narcotics enterprises which, when successful, are taught to field offices. In the area of national program and policy efforts, the Section is responsible for the purely narcotics law enforcement areas of bilateral and unilateral international efforts undertaken by the Department including support for the seven projects of CICAD, the Narcotics Commission of the Organization of American States. It also staffs the efforts of the U.N. Convention Against the Illicit Traffic in Narcotic Drugs and Psychotropic Substances, including negotiating and implementing the 1988 multilateral convention. It works on legislative and regulatory changes in the areas of narcotics and money laundering.

The Section leads in the development and implementation of the prosecution portion of the national narcotics strategy. It leads in domestic and international narcotics and money laundering training, the former demonstrated by one money laundering prosecution training session and two money laundering and advanced forfeiture conferences given or scheduled for 1989; the latter by five international judicial seminars given or scheduled for 1989. The Section advises the field and supervises the utilization of some narcotics statutes. It reviews sensitive initiatives such as wire taps, witness protection, immunities, release of FOIA information, undercover operations (through the undercover review committee), and the use of classified methods to enhance investigation. It is the primary contact of the Department in implementing Presidential Directive 27 for interagency coordination. The Section prepares and reviews other agencies' congressional testimony, statutory initiatives and congressional correspondence. It responds to governmental and private citizen correspondence. It prepares teaching materials including the quarterly Narcotics, Forfeiture, and Money Laundering Update.

In the area of litigative support, the Section's policy and program goals are promoted by having a staff of trial attorneys whose policy and legal advice to the field is current and authoritative. Each of the attorneys tries current cases in support of the needs of the U.S. Attorneys' Offices. These cases arise when the U.S. Attorney is required to recuse himself, or the U.S. Attorney's Office temporarily lacks the experienced personnel to investigate and prosecute a particularly sophisticated case or when the Section attorneys are developing an innovative program to address the drug crisis. This latter instance is best exemplified by the narcotics money laundering task forces and should be followed by ground breaking efforts in the areas of drug diversion control, crack house programs, drug paraphernalia programs and diversion of essential and precursor chemicals. The Section litigates in the U.S. Courts of Appeals the appeals from the decisions of the Administrator of the Drug Enforcement Administration (DEA) to schedule drugs and license drug dispensers, a case load significantly increased by the increased statutory authority given the Administrator.

Accomplishments and Workload: The recent experience and projections for the future with regard to litigation for which the Narcotic and Dangerous Drug Section is directly responsible are represented quantitatively in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Matters:				
Pending, beginning of year	31	68	93	117

Other dispositions (transfers to U.S. Attorneys, deaths)	...	1	...	...

The number of available attorney workyears has declined over the past two years while the number of long term complex cases and investigations the Section has been called upon to handle have increased. Concurrently, the number of legal support matters have increased. As a consequence, the ability of the Section to support U.S. Attorneys' Offices was reduced. With the addition of new resources in 1990, increased numbers of investigations and cases will be opened and closed. Additionally, pilot programs involving drug paraphernalia and money laundering prosecutions, drug gangs and urban crime centers will be initiated and monographs on drug diversion from the legitimate to illegitimate markets and money laundering will be published.

Internal security....................	44	34	$2,691	44	41	$3,520	43	40	$3,515	- 1	- 1	- $5

Long-Range Goal: To enforce, in an effective and uniform manner, approximately 100 criminal statutes and regulations affecting the national security and foreign relations of the United States.

Major Objectives:

To investigate and litigate cases and matters in the area of national security.

To provide oversight and supervision of all prosecutions involving the Neutrality statutes, the Espionage statutes, the Arms Export Control Act, the Export Administration Act and the Classified Information Procedures Act.

To provide legal support and investigate guidance to all Federal investigative agencies engaged in national security matters.

To administer and enforce the Foreign Agents Registration Act (FARA) and two additional registration statutes.

To enforce the Federal Regulation of Lobbying Act, a conflict of interest statute, and a portion of the Federal Election Campaign Act of 1976.

To provide assistance to Members of Congress and all other appropriate officials involved in the regulation of lobbying.

Base Program Description: This program enforces statutes and regulations relating to the national security and foreign relations of the United States by: supervising investigations and prosecutions involving national security and foreign relations; providing legal and policy guidance to the U.S. Attorneys, law enforcement agencies, the U.S. intelligence community, and the intelligence agencies of allied nations in the area of national security litigation; administering and enforcing the FARA, including the registration of representatives of foreign governments and entities; supervising investigations, conducting inspections and conducting all FARA-related criminal and civil litigation; providing specialized legal support to U.S. Attorneys in the areas of policy interpretation, legal research, and the drafting of indictments, pleadings and other legal papers; directly participating in criminal litigation, including grand jury proceedings, trials, appeals, and related legal actions; developing, analyzing and evaluating proposed legislation related to the internal security field; serving as the focal point for interagency coordination in cases such as espionage, neutrality, arms export control and export administration violations and cases involving the Classified Information Procedures Act; participating in international conferences involving the enforcement of NATO export control mechanisms through the Coordinating Committee for Multi-National Export Controls (COCOM); and participating in extremely sensitive matters such as prisoner exchanges with Soviet bloc countries.

Accomplishments and Workload: The recent experience and projections for the future with regard to litigation for which the Internal Security Section is directly responsible are summarized quantitatively in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991

The overall increase in the number of cases and investigations has resulted from the expanded case work of the Export Control and Espionage Units, and the increase in registrants and matters handled by the Registration Unit. There continues to be an increase in issues involving the Classified Information Procedures Act arising out of criminal prosecutions involving espionage and drug related offenses. For example, Section attorneys have expended a substantial amount of effort in assisting the Independent Counsel in the handling of hundreds of thousands of pages of classified material during the investigation and prosecution of the Iran/Contra cases, and providing important legal advice on the handling of national security issues during litigation.

The additional resources provided by the 1990 Budget will greatly enhance the investigative and prosecutive capabilities of the Department. This Section anticipated, prior to the availability of these additional resources, that investigations and prosecutions would increase by 8 and 14 percent. The additional investigative resources will result in a significant increase in the number of investigations conducted into the illegal export of weapons and strategic technology. The additional positions provided to the U.S. Attorneys' Offices will result in a significant increase in the prosecution of these cases. These increases, as well as the increased investigation and prosecution of drug related offenses, will also cause a corresponding increase in issues involving the Classified Information Procedures Act (CIPA).

General litigation & legal advice.....	78	55	$4,383	78	71	$6,143	78	71	$6,143	...	...	...

Long-Range Goal: To achieve directly, or through assistance to the U.S. Attorneys, the prompt disposition of all matters within the six major law enforcement responsibilities of the program, and to improve the efficiency and effectiveness of Federal, State and local criminal law enforcement efforts through the encouragement of improved intergovernmental coordination and cooperation.

Major Objectives:

To develop and implement enforcement programs in certain key statutory areas where special requirements indicate the need for centralization.

To develop and prosecute major cases under a vast range of statutes due to recusal, lack of resources or lack of pertinent expertise in U.S. Attorney Offices.

To defend civil suits seeking to obtain information on or to interfere with criminal justice activities and national security operations.

To provide support to the U.S. Attorneys in the conduct of all litigation within the program's subject areas.

To coordinate and participate in crime resistance programs related to the program's statutory responsibilities, including the encouragement of voluntary involvement by corporations and individuals in the private sector in crime resistance efforts.

To provide legal and policy advice to the Assistant Attorney General, Deputy Attorney General, and Attorney General, as well as other components of the Department, on issues of major importance to the Department.

Base Program Description: The six major substantive areas addressed by the General Litigation and Legal Advice Section are: (1) Crimes Against the Public - This includes kidnapping, extortion, bank robbery, riot, firearms and explosives violations, arson, fugitive felons, motor vehicle theft, false identification crimes, interstate transportation of stolen property, and offenses on Federal or Indian reservations or on the high seas. (2) Crimes Against Government Operations - This includes attacks on Federal officials (including the President, Vice President, Congressmen, and designated Federal agency personnel), attacks on candidates for Federal office, unlawful electronic surveillance, theft or destruction of Government property, counterfeiting, postal depredations, obstruction, perjury, false personation, and immigration offenses. (3) Regulatory Enforcement - This relates to violations of criminally enforceable regulations which have been promulgated by such agencies as the Departments of Agriculture, Commerce, Interior, Labor, State, Transportation, and Health and Human Services as well as the Nuclear Regulatory Commission. These violations most frequently pertain to the protection of health, safety, and welfare. Included among these areas of regulation are offenses related to the knowing mishandling of nuclear materials, and flagrant breaches of mine or occupational safety standards. This area also includes trademark, copyright, customs, and industrial espionage violations. (4) Terrorism - This includes the supervision of all terrorism matters, even though certain statutes applicable to particular incidents are normally the responsibility of other Sections. In addition, certain statutory areas are specifically assigned including hostage-taking, air piracy, attacks on foreign officials and official guests of the United States, destruction of aircraft and aircraft facilities and rewards. This area also includes the Section's Counter-Terrorism Management Group. (5) Post-Conviction and Special Matters - This relates to the defense of suits challenging actions by, or procedures of, the Bureau of Prisons or Parole Commission (habeas corpus, coram nobis, etc.). It also encompasses the administering of Federal statutes pertaining to juveniles, mental competence, sentencing, prisoner transfer treaties, detainers, and prison offenses. (6) Special Civil Matters - This includes the defense of civil injunctive actions instituted against the Government or its agents as a result of steps taken, or allegedly taken, in the course of criminal or national security investigations.

Approximately 75 percent of all Federal criminal statutes are assigned to the program, including many violent crimes and most Federal "street" crimes. In priority or sensitive criminal areas, the program serves as an enforcement entity, prosecuting and assisting in the prosecution of cases, and coordinating the various U.S. Attorney Offices and investigative agencies. When a matter is likely to merit prosecution by Section attorneys, the agencies immediately advise the Section of the initiation of an investigation, thus affording the opportunity for Section attorneys to provide guidance on crucial aspects of the investigation. In a more general way, the Section supports litigation by drafting or commenting on proposed legislation. Legislation can overcome the long-run effects of an adverse decision and usually has an effect on both the scope and nature of future litigation. To conserve Federal litigation resources, Section attorneys also interact with the private sector, e.g., industry and labor, and Federal and non-Federal enforcement agencies, regarding adoption of crime resistance measures.

Accomplishments and Workload: The recent experience and projections for the future with regard to criminal litigation for which the General Litigation and Legal Advice Section is directly responsible are summarized quantitatively in the following table:

Item	1988	1989	Estimates 1990	 1991
Matters:				
Pending, beginning of year	41	46	33	36
Opened	46	41	60	80
Closed	41	54	57	77
Pending, end of year	46	33	36	39
Cases (lead prosecution):				
Pending, beginning of year	14	14	13	14
Opened	4	7	13	22
Closed	4	8	12	18
Pending, end of year	14	13	14	18
Disposition of defendants in cases litigated:				
Convictions	10	10	14	18
Acquittals/dismissals	1	1	1	2
Other dispositions (deferred prosecution, deaths)	2	1	1	1

In addition, during 1989, Section attorneys handled 10 criminal cases in the Courts of Appeal and 10 civil cases in the District courts and/or Courts of Appeal.

Currently, the primary enforcement initiatives of the General Litigation and Legal Advice Section involve combatting terrorism, career criminals/weapons violations, immigration offenses, and nuclear safety. Increases in investigations and cases are due to increased terrorist activities, increases in workload anticipated from President Bush's 1990 violent crime initiative, and expanded activity in career criminals/weapons violations and nuclear safety initiatives.

--Terrorism. The Section is combatting terrorism through exhaustive investigation and vigorous prosecution of persons responsible for terrorist acts. To upgrade its response to terrorism, the Department created within the Section a Counter-Terrorism Management Group, headed by a senior attorney experienced in terrorism prosecutions. The signal accomplishment was the conviction and sentencing to 30 years of Fawaz Yunis, a Shiite Moslem, for aircraft hijacking, hostage-taking, and conspiracy as a result of the hijacking of a Royal Jordanian aircraft at Beirut, Lebanon, with Americans on board. This was the first conviction under U.S. law of an international terrorist for a terrorist act committed outside the U.S. His arrest represented the first overseas arrest by U.S. law enforcement officials of a suspected terrorist being sought under U.S. laws.

Other investigations currently pending in the Section include, among others: (1) the hijacking of TWA Flight 847 by Shiite terrorists; (2) the attempted bombing of the U.S. Embassy at Jakarta, Indonesia; (3) the bombing of a Pan Am Airlines jet en route to Honolulu, Hawaii; (4) the bombings of USO Clubs in Barcelona, Spain, and Naples, Italy; (5) the murder of a U.S. military attache in Athens, Greece; (6) the bombing of the American Embassy in Rome; (7) the murder of four U.S. Marines in El Salvador; and (8) the bombing of Pan Am Flight 103 in route to New York from Great Britain; (9) the murder of an U.S. Army officer in Manila; (10) the abduction of a Marine Lieutenant Colonel, assigned to the U.N. Truce Supervision Organization in northern Israel; and (11) the bombings of U.S. troop trains in West Germany. A Section attorney is participating in the prosecution of 16 defendants, many of whom are leaders of violent Puerto Rican independence groups, for the robbery of $6,956,520 from a Wells Fargo facility. So far, six defendants have pled guilty or been convicted.

--Weapons/Career Criminal Initiative. During 1990, enforcement relating to career criminals is one of the Section's initiatives. The Section will assist United States Attorneys' Offices in assembling career criminal task forces to target career offenders and reduce the crime rate by a vigorous attack on recidivists. The task forces will emphasize triggering available mandatory minimum penalties under the Armed Career Criminal Act, the Anti-Drug Abuse Act of 1988, and the Sentencing Reform Act. Where appropriate, Section attorneys will participate on such task forces and directly participate in prosecutions. The Section will monitor the guidelines restricting federal plea bargaining in weapons and/or career criminal cases to ensure that dangerous felons receive the maximum penalties Congress has mandated and encourage the use of pre-trial detention under the "danger to the community" provision of the Bail Reform Act of 1984. The Section will continue working with other elements of the Division and Department to amend the firearms laws to provide greater penalties for those violating them, to keep more dangerous weapons under regulation, and to keep firearms from a broader spectrum of undesirables. Efforts will be made to induce the States, through the Executive Working Group to strengthen their firearms statutes in similar fashion and, in particular, to prevent the automatic restoration of the right of dangerous convicted felons to possess firearms.

—Immigration Offenses. The decision to commit the Section to an enforcement initiative in this area reflects a commitment to assist the Immigration and Naturalization Service (INS) in its enforcement of the Immigration Reform and Control Act of 1986. By enacting this legislation, Congress recognized that "employment is the magnet that attracts aliens here illegally." This enforcement initiative is designed to complement INS' own efforts and to promote the declared policy of the Congress to remove these economic incentives to illegal immigration by penalizing employment of illegal aliens. To that end, the Section litigates selected cases, develops policy, reviews proposed INS undercover operations, participates in training exercises and assists in implementing an enforcement program.

—Nuclear Safety. This initiative is based on the potentially catastrophic consequences which can emanate from nuclear disasters and the difficulties inherent in prosecuting nuclear regulatory cases. The Section reviews all Nuclear Regulatory Commission referrals of criminal investigations: referring to the appropriate U.S. Attorneys' Offices, those referrals which are not sufficiently complex to merit Section resources; and promptly analyzing the prosecutive merit of all other referrals, declining those which merit no action and pursuing (either directly when warranted or by monitoring the efforts of U.S. Attorneys) the timely investigation and possible eventual prosecution of the meritorious complex referrals. A Section attorney obtained the conviction of a hospital technician for knowingly injecting overdoses of radioactive drugs into patients. Section attorneys and personnel of the Nuclear Regulatory Commission have developed a memorandum of understanding relating to criminal referrals and the problems of parallel administrative and criminal proceedings, which are particularly difficult in the field of nuclear power because of significant public health and safety consequences. In a related health and safety area, Process Technology, Inc., pled guilty to a violation of the Federal Meat Inspection Act resulting from the illegal irradiation of 38,880 pounds of pork tenderloin for export. This was the first case referred by the Department of Agriculture concerning illegal irradiation of food.

In addition, the Section defends civil suits seeking to obtain information or to interfere with criminal justice activities and national security operations. For example, Section attorneys successfully contended on appeal that there is no constitutional requirement for a post seizure probable cause hearing for vehicles seized by the Immigration and Naturalization Service for transporting illegal aliens. The Section sustained Drug Enforcement Agency regulations governing the use of peyote by religious groups. The Section was also successful in having the District Court reinstate the validity of Bureau of Prisons regulations concerning entitlement to reductions in minimum parole eligibility. In another case, the Court of Appeals upheld the Bureau of Prisons regulations permitting involuntary medication of mentally ill inmates with antipsychotic drugs.

The Section also supports United States Attorneys and other Department components in the conduct of other litigation. For example, a Section attorney participated in the investigation and prosecution of six individuals for their participation in the shooting at two trucks carrying coal during a violent coal strike that resulted in one driver being killed and the other wounded. Another attorney successfully prosecuted the first case under the Occupational Safety and Health Administration Act of 1970 in which the defendant was sentenced to incarceration.

Crime resistance is often the most cost effective way to reduce crime. In this regard, the Section has worked with the National Committee on Uniform Traffic Laws and Ordinances to improve the provisions of the Uniform Vehicle Code (which serves as the model state code for vehicular matters) relating to the titling and registration of motor vehicles, controls over vehicle salvage, and criminal laws relating to the theft and disposition of stolen vehicles. The Section has also urged the National Highway Traffic and Safety Administration to promulgate voluntary Federal component identification standards, thereby encouraging more vehicle manufacturers and owners to apply the vehicle identification number (VIN) to additional components of the vehicle in order to deter theft. The Section has also lectured and participated in seminars to spread awareness in the law enforcement community about the new mandate on Federal component identification standards that requires the VIN to be placed on up to 14 components of high theft passenger cars.

The Section regularly provides legal advice to the various components of the Department on complex issues. For example, in terrorism cases, Section attorneys advise on the extent and nature of our extraterritorial law enforcement jurisdiction. The Section has also prepared Attorney General guidelines under the Anti-Drug Abuse Act of 1988 on FBI investigations of felonious killings of State and local law enforcement officers. Section attorneys have developed a new memorandum of understanding with the FCC concerning theft of cable programming and have prepared a copyright monograph that describes the copyright statutes and details methods of proving copyright cases. The section has also participated in the development of new international conventions relating to terrorist acts committed at international airports and against maritime shipping. Implementing legislation is now being prepared. Further, the Section is coordinating the preparation of an Indictment Form Book which will serve as a resource for all Federal prosecutors.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Office of special investigations......	45	44	$3,731	45	44	$3,893	43	42	$3,882	- 2	- 2	- $11

Long-Range Goal: To locate, investigate, denaturalize and deport individuals who concealed activity committed during World War II involving the persecution of others because of race, religion, national origin, or political opinion, in order to gain entrance to the United States.

Major Objectives:

To identify all alleged Nazi war criminals living in the United States.

To review and investigate systematically all relevant allegations received by the program.

To prosecute appropriate cases.

To develop and maintain working relationships with foreign governments having information relating to the activities of suspected Nazi war criminals.

To prevent entry of Nazi persecutors into the United States.

Base Program Description: This program detects, identifies, investigates, and, where appropriate, takes legal action to denaturalize and/or deport any individual who assisted the Nazis by persecuting any person because of race, religion, national origin or political opinion, who later was admitted as an alien into, or became a naturalized citizen of, the United States. The activities of this program include historical research, file review, investigations, witness interviews in the U.S. and abroad, litigation support, and denaturalization/deportation litigation before administrative bodies and U.S. courts. There are four major phases of work: (1) identification, consisting of matching a name of a United States resident to an allegation or suspicion of war crimes, and opening an Office of Special Investigations (OSI) file on that person; (2) investigation of suspects; (3) filing litigation; and, (4) appeals of judgment or other final orders. Four types of litigation action may be conducted: (1) if the subject is a naturalized citizen, a civil complaint may be filed in the U.S. District Court seeking a judgment of denaturalization; (2) for resident aliens (including denaturalized citizens), administrative proceedings are brought to seek their deportation; (3) criminal indictments may be pursued in cases which involve perjury (18 U.S.C. 1001) or other crimes within the statute of limitations; and (4) extradition. The litigation phase begins when the Complaint/Order to Show Cause/Indictment is filed; it ends with the judgment or the final order, and that is the basis for appeal.

Accomplishments and Workload: The recent experience and projections for the future of the Office of Special Investigations is summarized quantitatively in the following table:

			Estimates	
Item	1988	1989	1990	1991
Investigative Matters:				
Pending, beginning of year	600	581	512	512
Opened	20	38	50	50
Closed	39	107	50	50
Pending, end of year	581	512	512	512

Pending, beginning of year	27	23	22	19
Opened	7	6	5	4
Closed	11	7	8	6
Pending, end of year	23	22	19	17

Some of the most recent accomplishments of the Office of Special Investigations include the following:

-- Denaturalization of two additional war criminals in 1989, bringing the total denaturalized to date to 32.

-- Permanent departure from the U.S. of four Nazi war criminals in 1989, bringing the total of permanent departures to 32.

-- Continued rendering of assistance to Australia, Canada and now Great Britain, in their efforts to locate, investigate and litigate their own Nazi war criminals.

-- Successful negotiations with the Governments of Hungary, East Germany and the U.S.S.R., which resulted in our being given continued, if not expanded, access to their relevant documentation on the Holocaust.

-- Worked with the Immigration and Naturalization Service and the Department of State to exclude known Nazi war criminals from entering the United States.

OSI has been "proactive" in its investigations, not merely waiting for allegations from outside sources. A computer database and data retrieval system to assist in the identification of potential subjects for prosecution has been designed in house. The database is the most complete collection in the world of potential Nazi criminals and persecutors. This system has resulted in hundreds of investigative files and the institution of approximately 20 cases. Tens of thousands Nazi war criminals have been barred entry into the United States as a result of this system.

Program Changes:

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Office of special investigations..............................	44	41	$3,520	43	40	$3,515	- 2	- 2	- $11

Program change represents productivity and management savings of 2 position, 2 workyears and $11,000.

Long-Range Goal: To provide the legal assistance and central coordination necessary to maximize the effectiveness of Federal criminal law enforcement.

Major Objectives:

International Affairs

To promote the negotiation of treaties with foreign governments that will improve the ability of the United States to extradite fugitives, to acquire evidence, to transfer prisoners, and to accomplish other purposes which will aid the criminal justice system in the United States.

To assist Federal and state authorities in obtaining fugitives, evidence and legal assistance from foreign governments.

To represent, or supervise the legal representation of, foreign governments' extradition and evidence requests in U.S. courts.

To monitor the execution of Prisoner Transfer treaties so as to minimize any delay in transporting prisoners eligible for transfer to their countries of nationality.

Enforcement Operations

To provide effective and reliable service to Federal prosecuting attorneys in the implementation of the statutes and regulations that affect them.

To maintain a legal brief and policy memoranda bank and to integrate into the legal brief bank the briefs in opposition to petitions for writs of certiorari and the Solicitor General appeal memoranda that are generated by the Division.

To maintain an up-to-date U.S. Attorneys' Manual and prepare Criminal Division updates on a regular basis so that all portions of the Division's contribution to the Manual will remain current and informative.

To coordinate responses to Freedom of Information Act and Privacy Act requests pertaining to the Criminal Division.

To review requests for authorization of electronic surveillance and recommend authorization or disapproval of requests pursuant to 18 U.S.C. 2518 in an expeditious manner.

To perform the appropriate review of witness relocation requests and deal with the myriad matters associated with the Witness Security Program.

To renew requests from U.S. Attorneys to immunize witnesses in Federal cases pursuant to 18 U.S.C. 600 et. seq.

Asset Forfeiture

To litigate and assist U.S. Attorney Offices in litigating forfeiture cases where:
- (a) major cases arise in districts in which the U.S. Attorney Offices lack the expertise or personnel to conduct the case effectively.
- (b) backlogs of forfeiture cases arise because of other demands on U.S. Attorney Offices.

To advise and train investigative agents and Assistant U.S. Attorneys to make greater use of forfeiture provisions and better manage seized and forfeited assets.

To process and resolve petitions for remission and mitigation in judicial forfeiture cases.

To support directly the U.S. Marshals Service and investigative agencies in improving the management of seized and forfeited property.

To review all settlements in forfeiture cases in which the difference between the gross amount of the original forfeiture claim exceeds $60,000 but is less than $750,000.

To encourage coordination with state and local authorities on forfeiture matters.

To provide legal advice and assistance to United States Attorney Offices regarding the collection of criminal fines and appearance bond forfeiture judgments.

Base Program Description: This program seeks, through the Division's Office of International Affairs (OIA), to centralize, coordinate and execute the Department's responsibilities concerning international legal matters related to criminal law enforcement in the areas of extradition and international legal assistance. The handling of treaty negotiations, treaty implementation and international legal assistance requires effective liaison between OIA and numerous foreign and domestic entities, including Department of State, foreign governments and INTERPOL. To assure that extradition requests submitted by the United States meet the requirements of the relevant extradition treaties, OIA advises Federal and state prosecutors on the preparation of all United States extradition requests, OIA either directly represents, or supervises the representation of, foreign extradition requests before United States courts. Included among cases handled by OIA are some of the most important narcotics trafficking, fraud, and violent crime cases prosecuted in this country and abroad. Similarly, to assure that requests submitted by the United States seeking evidence from foreign countries under mutual assistance treaties in criminal matters meet the requirements of the applicable treaty, OIA, acting as the United States Central Authority under the treaties, advises Federal and state prosecutors on the preparation of all such requests, and screens or redrafts them prior to transmittal. Mutual assistance treaties with Canada, the Bahamas, and the Cayman Islands are expected to enter into force in 1990, greatly increasing the demands placed on the Office. When, because of the lack of a mutual assistance treaty, such requests must be made by letters rogatory, OIA performs essentially the same processing role. To promote the reciprocal representation by foreign governments of United States evidence assistance requests, OIA either directly represents, or supervises the representation of, foreign evidence assistance requests before [illegible] States courts. As with extradition, such evidence requests are generally related to some of the most important investigations and prosecutions in this country, e.g., investigations of the international laundering of vast profits of major narcotics trafficking organizations. OIA has also been instrumental in obtaining the execution of search warrants in foreign countries in connection with the unlawful export of advanced technology goods, such as computers which could be used in weapons guidance systems.

Through the Office of Enforcement Operations (OEO), the Criminal Division regulates the effective and appropriate use of sensitive investigative techniques such as wiretaps, consensual monitoring and witness relocations through the application of uniform procedural guidelines by specially trained attorneys and paralegals. These individuals maintain effective liaison with the U.S. Attorney Offices, Organized Crime Strike Forces, U.S. Marshals Service, the Federal Prison System, the Federal Bureau of Investigation, and all other applicable Federal, State and local investigative agencies. The Office of Enforcement Operations possesses full responsibility to review and approve or disapprove requests from U.S. Attorneys, investigative agencies, and Congressional committees to place individuals believed to be endangered by organized crime figures in the Witness Security Program. It is responsible for coordination among Government prosecutors, investigative agencies, and U.S. Marshals Service personnel, the conduct of cases requiring witness protection, and participation in litigation arising out of the program, in cases where the United States is named as a party by virtue of any action taken or not taken with respect to the program. (Title 18, United States Code, Section 3121).

The Office of Enforcement Operations is responsible for the review, adjudication, and coordination of all applications for electronic surveillance under Title III of P.L. 90-351, codified in Title 18, United States Code, Section 2510-2520, and is solely responsible for the final recommendation to be made directly to the Assistant Attorney General. It participates in and, as required, conducts litigation arising from the grant of an application for electronic surveillance, and is responsible for performing ongoing analysis, review, and in-depth evaluations of the implementation of 18 U.S.C. 2510-20. The Office also receives and processes all requests received from U.S. Attorney Offices and Organized Crime Strike Forces for witness immunity pursuant to 18 U.S.C. 600 et seq.; OEO makes the final recommendation to the Assistant Attorney General for approval or rejection of such requests. In addition, OEO provides the various components of the Division and the U.S. Attorney Offices with a wide range of litigative assistance and prosecutorial support, including the following: processing requests for witness hypnosis in the Federal judicial system; processing requests for consensual surveillance in selected cases in sensitive areas; processing requests for disclosure of tax returns, taxpayer information and return information pursuant to the Tax Disclosure Act of 1976, as amended; processing Freedom of Information Act and Privacy Act requests; responding to allegations of illegal electronic surveillance; processing requests for permission to seek issuance of a search warrant for documentary material in the possession of a disinterested third party; updating the Criminal Division's portion of the United States Attorneys' Manual; maintaining the legislative files and records of the Division; maintaining the Legal Reference Unit, a legal brief and policy memorandum bank for use by Division attorneys and paralegals; responding to citizen mail on criminal matters by the Correspondence Unit; and processing requests to subpoena attorneys on criminal cases and to reveal grand jury information to state and local prosecutors. The provision of these services is accomplished through close liaison between OEO and litigating components of the Criminal Division and the United States Attorney Offices. The Office of Enforcement Operations has recently taken responsibility for prisoner transfers. During 1987 and 1988, new prisoner transfer relations are expected to be implemented with at least three more countries, thereby increasing the number of cases handled each year.

Prosecution support also includes the Asset Forfeiture Office which was created in June 1983 through a reorganization of the Criminal Division. The responsibilities of this Office include the conduct of civil and criminal asset forfeiture litigation, the development of policies which incorporate asset forfeiture into an overall law enforcement program and the improvement of existing practices regarding the management of seized and forfeited assets. Forfeitures are an important part of law enforcement because forfeitures allow the Government to confiscate property that lawbreakers use to commit crimes, e.g., the airplanes and boats they use to smuggle narcotics into the country and the cash they use to buy drugs for resale. By removing this working capital from criminals, forfeitures make it more difficult for lawbreakers to operate. By seizing the fruits of crime, e.g, the stocks and bonds purchased with money traceable to drug sales, or a business acquired by a pattern of racketeering activity, forfeitures further deter lawbreaking by taking the profit out of crime. Forfeiting criminal profits also promotes justice, because criminals should not grow rich from their violations.

Accomplishments and Workload: A quantitative summary of the Prosecution Support workload is presented in the following tables:

Item	1988	1989	Estimates 1990	1991
Foreign Extradition:				
Requests Pending, Beginning of Year	344	341	298	308
Requests Received	192	147	200	225
Requests Closed	195	190	190	190
Requests Pending, End of Year	341	298	308	343
U.S. Extradition:				
Requests Pending, Beginning of Year	582	694	632	762
Requests Received	428	447	605	715
Requests Closed	316	509	475	515
Requests Pending, End of Year	694	632	762	962
Foreign Legal Assistance:				
Requests Pending, Beginning of Year	210	430	465	530
Requests Received	246	237	265	295
Requests Closed	26	202	200	200
Requests Pending, End of Year	430	465	530	625
U.S. Legal Assistance:				
Requests Pending, Beginning of Year	495	553	630	830
Requests Received	237	269	435	587
Requests Closed	179	192	235	270
Requests Pending, End of Year	553	630	830	1,147

This amounts to 106 pending matters per OIA attorney. These statistics represent the number of matters (formal cases, investigations, requests for advice and assistance) which are pending as of September 30, 1989. Matters can be considered pending because: the fugitive(s) has not been located; we are waiting for the requested information; or interim legal proceedings have not been concluded. The information on pending matters is now available as a result of the implementation of a database system to capture this information.

Item	1988	1989	Estimates 1990	1991
Witness Immunities issued	4,701	4,496	5,000	7,453
FOI/PA Requests Received	1,327	1,212	1,300	1,938

Closed	763	800	900	900
Pending, end of year	1,156	1,506	1,806	2,106

Founded in 1983, AFO has served as the de facto "general counsel's" office for all forfeiture matters affecting the Department and its component agencies. Historically, AFO's caseload has been primarily narcotics offense derived. However, with the passage of the Money Laundering Control Act of 1986, the newly enacted obscenity forfeiture laws, the new emphasis on RICO forfeitures and the recently enacted Savings and Loan legislation, the work of AFO transcends narcotics. Forfeiture is fast becoming the heart and soul of effective law enforcement Division-wide. The Anti-Drug Abuse Act of 1988 authorized hiring of 175 new forfeiture prosecutors for field U.S. Attorneys' Offices and 19 new Strike Force positions. The Savings and Loan legislation contemplates many new fraud prosecutors. This legislation contains extensive forfeiture provisions. Further, the President's 1990 initiative for violent crime will add 800 prosecutors to United States Attorneys' Offices. All of these will affect AFO's workload.

The Anti-Drug Abuse Act expanded the scope of money laundering forfeitures to include any real or personal property laundered as well as all property traceable to the transaction. With these new provisions, AFO will begin to handle money laundering forfeitures for a wide variety of crimes. Additional resources expected in 1990 will enable AFO to pro-actively initiate a wide variety of forfeiture prosecutions using money laundering offenses as its hook. For example, AFO has been meeting with members of the D.C. Metropolitan Police Force about specific car dealerships that knowingly sell cars to drug dealers for cash. Pro-actively targeting such businesses would result in extensive forfeitures and would be sobering to other businesses (e.g., real estate salespersons and sellers of boats and small airplanes) who willingly accept illegal money.

The 1988 workload data displayed for forfeiture cases reflects only cases in which the Asset Forfeiture Office has sole prosecutorial responsibilities. Beginning in 1989, data includes both sole and lead prosecution responsibilities. The 1989 data were projected based on actual numbers for the first six months of the Fiscal Year. Base 1990 figures reflect an increase in cases expected to result from increased seizures by the FBI, DEA and INS. The 1990 figures are also based on an increase in cases expected to result from proposed large increases in staffing of AFO and the U.S. Attorneys' Offices with substantial additional resources dedicated to Asset Forfeiture cases. The 1991 figures reflect a full year of those increased resources in AFO and the U.S. Attorneys' Offices increasing forfeiture cases.

Some of the most significant accomplishments of the Asset Forfeiture Office to date include the following: the forfeiture of several parcels of real estate in the Southern District of Florida valued in excess of five million dollars as part of Operation Man; the civil prosecution of over $1.5 million in real and personal property relating to the illegal drug profits of a drug dealer in the District of Maryland; forfeiture of over $22 million in drug related assets; participation in the seizure for forfeiture of several million dollars in Operations Cashweb and Expressway in the Southern District of Florida and the District of Connecticut; the civil prosecution of several cases in Texas, including a recent settlement in a net gain to the Government of over $1.2 million; successful completion of two national training seminars; publication of two forfeiture training manuals; and participation in over two dozen LECC (state/local) training conferences.

During the past year, the Office of International Affairs continued with its program of negotiating new treaties, primarily extradition and mutual legal assistance treaties. The Office completed a six-year effort to replace the extradition treaty with Switzerland, and signed a Memorandum of Understanding with the Swiss clarifying the existing Mutual Assistance Treaty. The process of replacing outmoded extradition treaties and negotiating new mutual assistance agreements continues as resources permit. Supplemental extradition treaties were negotiated with Canada, the Federal Republic of Germany and Spain. OIA attorneys participated in the Council of Europe's multilateral negotiation of a judicial assistance treaty and the new Multilateral Convention of Narcotics (signed by the Attorney General during December, in Vienna, Austria). Six previously negotiated mutual legal assistance treaties (Canada, Mexico, Bahamas, Cayman Islands, Belgium, and Thailand) were reported out of the Senate Foreign Relations Committee and ratified by the full Senate. The Attorney General and other Department principals drew heavily on OIA's expertise in international affairs when preparing to participate in international law enforcement conferences during the past year.

The Office was able to provide prosecutors with expert advice and assistance on numerous occasions. Several of the most noteworthy instances included the assistance provided to U.S. Attorneys Offices during pretrial motions in the cases involving General Noriega, assistance provided to the U.S. Attorneys Offices in the investigation of the death of DEA Agent Enrique Camerena, and the assistance provided to the Federal Republic of Germany in the acquisition and preservation of evidence for the Hamadei trial. OIA also devoted substantial resources to requests for international assistance related to the Iran/Contra and Marcos investigations.

The Office also handled a number of significant cases involving the return of fugitives to the United States by way of extradition, including: Raul Vivas, a major money launderer identified in the PolarCap investigation, from Uruguay; ten Colombians involved with Colombian drug organizations (54 provisional arrest requests have been made to Colombia since August 1989); and defendants from Asian countries, especially Hong Kong, in complex investigations (e.g. Operation Bamboo Dragon, D.D.C., Operation Seahorse, N.D.C.A.); Linda Leary and her two sons, Paul and Richard Heilbrunn, who operated one of the largest drug trafficking operations in Indiana, from Austria; Adnan Mohammed Khashoggi, returned from Switzerland to stand trial in the Southern District of New York for mail fraud, obstruction of justice, perjury, and racketeering; Skender Krasniqi, returned to Cook County, Illinois, from Sweden for the murder of a Deputy Sheriff; and Gabriel Antonio Taboada, returned to South Carolina from Switzerland for the importation of over 1000 pounds of cocaine.

The Office further handled the extradition from the United States to other countries of several internationally significant fugitives, including Oen Yin Choy. Hong Kong requested the extradition of this former bank director who fled to the United States shortly before Hong Kong authorities discovered financial irregularities that cost shareholders of his bank millions of dollars. OIA litigated the second phase of the case after Oen's first unsuccessful trip to the Supreme Court. He is now in Hong Kong, awaiting trial. OIA also continues to provide support to the Southern District of New York in pursuing the extradition of two alleged Sikh terrorists sought by the Indian government on multiple charges of murder and armed robbery.

The importance of OIA's Rome office cannot be overlooked. This office serves as an international gateway in achieving successes which otherwise would not occur. For example, in the past eighteen months, three major fugitives, DeMuth, Chadwick and Butcher, charged in separate multi-count export control indictments in the United States, have been extradited from Italy to the United States. Two more such fugitives, Grandia and Van Amraat (the latter wanted for unlawful export of mustard gas precursors) have been arrested and are now the subject of extradition proceedings in Italy. The DeMuth, Chadwick and Butcher cases are the only successful extraditions from European civil law countries for export control violations and represent a significant breakthrough in the Department's export control prosecution program. Beyond representing an extraordinary precedent in Italy, they also serve as examples of the appropriateness of extradition for export control violations which can be cited in dealing with other European countries which have traditionally been less willing to entertain U.S. extradition requests in such matters.

In 1990, OIA will open two new foreign offices in Hong Kong and Mexico City. Hong Kong was selected because it serves as a "hub" city for major narcotics money laundering, servicing Japan, Singapore, Australia, Thailand and the Philippines. Selection of Mexico City reflects the growing number of cases involving Latin America. The benefits of establishing such offices will result in more expeditious handling of extraditions and judicial assistance matters. They will also be providing effective leadership direction to the various law enforcement components such as the DEA and FBI in these locations in developing stronger cases for prosecution.

The Director, Office of International Affairs, was named as the Department's coordinator for the European Communities' TREVI Group, which the United States has found to be the most significant international organization devoted to fighting terrorism. OIA currently devotes substantial resources to obtaining evidence and the return of terrorists for prosecution in the U.S. (as in the cases, U.S. v. Fawaz Yunis and U.S. v. Rashed) and to support foreign prosecution of terrorists (as in the Hamadei prosecution in West Germany and the prosecution in Italy of the Achille Lauro hijackers). OIA will direct resources received in 1990 to support this effort.

OIA will further increase resources used to obtain international assistance in the investigation and prosecution of organized crime cases and the extradition of organized crime fugitives. OIA is the coordinator of the Italian-American Working Group and expends considerable resources supporting that body's effort to increase bilateral cooperation in the fight against traditional organized crime. It has taken leading roles in efforts being made with regard to the Jamaican posses and Asian Organized Crime, chairing the U.S.-Jamaican Working Group. Additionally, OIA coordinates with and provides assistance to the Drug Enforcement Administration (DEA), Federal Bureau of Investigation (FBI), U.S. Customs Service, and federal prosecutors with regard to major drug money laundering cases which are international in scope. OIA's involvement generally begins in the early stages of investigation and continues until all fugitives are extradited, all necessary evidence from overseas is obtained, and all forfeitures are completed. OIA is also actively involved in providing assistance with regard to the many money laundering cases being investigated and prosecuted federally and by State and local law enforcement officials. Finally, resources will be used to fully implement the U.N. Drug Convention signed by the Attorney General in December 1988 and ratified by the U.S. Senate in November 1989.

During 1987 and 1988, over 1,400 electronic surveillance authorizations were processed to approval by the Office of Enforcement Operations. During 1986, 1987 and 1988 combined, close to 1,900 requests for electronic surveillance were recorded and processed. A survey indicates that over 95 percent of targeted interceptees indicted were convicted. The Office supervised the full revision of the United States Attorneys' Manual under guidelines set forth by the United States Attorneys. In 1988, the Office completed action on over 1,300 Freedom of Information Act (FOIA) and Privacy Act (PA) requests, defended 14 lawsuits seeking to compel disclosure of Division records under the FOIA or the PA, and continued to provide significant support to Division attorneys. In 1988, the Office of Enforcement Operations (OEO) received and processed in excess of 1880 matters relating to the Witness Security Program. These matters ranged from applications (351), to requests for psychological examinations (300), to production requests (450). The Office is also available to assist the more than 16,000 program participants at any time, as is consistent with the Department's continuing obligation to protected witnesses. In addition, in November 1987, OEO was given responsibility for prisoner transfers; formal approval authority was given in March 1988. In 1988, 105 prisoners were transferred, and 195 applications were received and processed. OEO received and reviewed in excess of 90 Victims Compensation matters in 1988. In 1990 and 1991, OEO expects significant workload increases to result from the addition of 800 prosecutors to the United States Attorneys' Offices. Almost all of these resources will be directed to the investigation and prosecution of criminal matters and will result in significant workload increases in the witness protection program, Title III applications reviewed, prisoner transfer requests received and granted and in the number of victims compensation matters. Two additional positions will be directed to handling these actions.

	1990 Appropriation Anticipated*			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Organized crime drug enforcement......	...	...	...	...	...	...	...	...	...	...	...	...

Long-Range Goal: To support the Drug Task Forces in investigating and prosecuting violations of Federal criminal laws that prohibit the importation, distribution, sale and use of harmful drugs.

* In 1990, resources for the Organized Crime Drug Enforcement program were transferred to the Organized Crime Drug Enforcement appropriation pursuant to Section 1055 of the Anti-Drug Abuse Act of 1988. These resources will be provided to the Criminal Division from the Organized Crime Drug Enforcement appropriations as a reimbursement.

Major Objectives:

To furnish assistance requested by Drug Task Force prosecutors to the full extent possible within the terms of applicable statutes, Departmental policies and procedures, case law, international conventions and bilateral treaties.

To provide regular communications and instruction to Drug Task Force prosecutors so as to improve their efficiency and their effectiveness.

To participate in the litigation of certain Drug Task Force cases for which Division personnel have developed special expertise.

Base Program Description: The Administration's law enforcement initiative against organized drug traffickers has increased the demands on the Criminal Division to provide certain types of prosecutorial assistance and to participate directly in the development of particular cases. For example, many Drug Task Force investigations depend upon electronic surveillance to obtain evidence on the activities of wrongdoers. By law (28 U.S.C. 2516), all electronic surveillance must be authorized by the Attorney General or a designated Assistant Attorney General. Before authorization, each application is reviewed by Division personnel, and a recommendation is made to the Assistant Attorney General. Then, following authorization of either a wiretap or the wireless interception of communication, reports must be collected and reviewed on the fruits of the surveillance. In addition to employing electronic surveillance techniques, many Drug Task Force prosecutions rely on witnesses whose personal safety is endangered by criminal elements. A prosecutor seeking to arrange for the protection of a witness — *e.g.*, by providing guards, by relocating the witness out of the danger area, by securing a new identify for the witness, etc. — must submit a request to the Division for review as to the qualification of the witness for the program and a determination as to the level of protection to be afforded to the witness.

Accomplishments and Workload: A quantitative summary of the work of the Criminal Division in support of the Task Forces follows:

Item	1988	1989	Estimates 1990	Estimates 1991
Electronic surveillance applications reviewed	160	142	160	253
Witnesses accepted in protection program	163	134	188	416
Extradition requests transmitted	132	143	188	220
Judicial assistance requests submitted	88	97	155	211

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
National obscenity enforcement unit	20	19	$1,573	20	20	$1,712	20	20	$1,712	...	...	...

Long-Range Goal: To coordinate, spearhead and increase the effectiveness of the Federal anti-obscenity/anti-child pornography effort as one of the top criminal justice priorities for the Department of Justice.

Major Objectives:

To prosecute major producers and distributors of obscenity and child pornography.

To initiate new investigative and litigative approaches utilizing all statutory and other appropriate criminal and civil remedies against distributors and producers of obscenity and child pornography.

To maintain national goals, priorities and standards while coordinating joint program planning and evaluation by Federal and State agencies charged with prosecuting similar cases.

To provide intensive training for prosecutors, investigators, and other law enforcement officials from all levels of government in obscenity, organized crime, and child sexual exploitation issues resulting in more effective and numerous investigations and prosecution case strategies.

Base Program Description: The National Obscenity Enforcement Unit (NOEU) comprises this decision unit. The staff of the National Obscenity Enforcement Unit provide expertise in obscenity and child sexual exploitation issues, act as lead or co-counsel in cases prosecuted, conduct seminars, and provide advice to United States Attorneys and investigative agencies.

Accomplishments and Workload: The recent experience and projections for the future with regard to litigation for which the National Obscenity Enforcement Unit is directly responsible are summarized quantitatively in the following table:

			Estimates	
Item	1988	1989	1990	1991
Matters:				
Pending, beginning of year	32	23	73	57
Opened	10	55	59	50
Closed	19	5	75	50
Pending, end of year	23	73	57	57
Cases (lead prosecution):				
Pending, beginning of year	5	11	5	47
Opened	14	5	60	25
Closed	8	11	18	18
Pending, end of year	11	5	47	54

Convictions	7	16	18	23
Acquittals/dismissals	1	1	...	...
Other dispositions (transfers to U.S. Attorneys, deaths)	1	...	...	...

In the brief time since the Unit was formed, it has made significant progress in achieving the Attorney General's priorities in obscenity and child pornography. In 1987, the Unit presented numerous training seminars for prosecutors and law enforcement officials from all levels of government. These seminars focused on obscenity and child sexual exploitation issues. Also during 1987, the lawyers from the Unit served as co-counsel in the first use of the Racketeer Influenced and Corrupt Organizations (RICO) Statute with obscenity predicates in a trial that ended successfully with convictions and substantial forfeitures. The Unit also coordinated and assisted in planning the two largest child pornography undercover investigations--Project Looking Glass and Operation Borderline. These two projects produced over 200 indictments for violations of the federal Sexual Exploitation of Children statutes. Currently, NOEU staff are participating either as lead or co-counsel in many of the cases brought for prosecution. Several important milestones were reached in 1988 in obscenity and child sexual exploitation prosecution. These include:

-- An obscenity-based RICO indictment of Reuben Sturman, identified by the Attorney General's Commission on Pornography as perhaps the world's largest distributor of obscene materials;

-- An obscenity-based RICO indictment of Rubin Gottesman as part of an undercover operation (Perfect Picture), directed against large-scale organized criminal enterprises which distribute illegal obscenity;

— Assistance in the first Federal obscenity indictment and conviction in Los Angeles in a decade, resulting in a substantial period of incarceration and heavy fines; the assistance in the creation of the Los Angeles Obscenity Task Force designed to help clean up what the U.S. Attorney for the Central District of California has called "the smut capital of the country;"

— The indictment of twenty corporations in Project PostPorn (a nationwide operation) for distributing obscenity through the mails. These companies are believed to comprise as much as three-fourths of all such distributors in the nation;

-- The implementation of extensive international and national pornography investigations with the U.S. Customs Service;

— The suspension and coordination of sensitive undercover operations in the area of child pornography; and

— The publication of two prosecution manuals for Federal and State prosecutors on child exploitation and obscenity cases.

The NOEU staff is developing a data base management system which will allow them to capture detailed information concerning the number and types of convictions, indictments, states and districts involved, dispositions made, the dollar value of forfeited property, and fines assessed. Beginning with 1987, cases included in the figures represent a plan to target large scale distributors, producers and organized crime associates as opposed to small retailers that can be addressed at a local level. This plan will call for long term, complex investigations of greater magnitude.

Long-Range Goal: To guide the administration of federal criminal justice in an effective, fair and consistent manner.

Major Objectives:

To supervise the development and implementation of Department policy so as to assure an effective, fair and consistent administration of Federal criminal laws.

To establish priorities and to provide general supervision of national enforcement of Federal laws.

To develop and implement policies relating to the efficient administration of the Division.

To provide administrative services necessary to the operations of the Division.

To analyze all legislative proposals developed within the Congress and the Administration which affect either the substance or procedure of the Federal criminal justice system, and to furnish advice, as appropriate, on the probable effect of such proposals on Federal law enforcement.

To analyze policy and management issues relating to criminal enforcement programs in order to identify and resolve problems.

To assist in developing Division policies and enforcement programs, and help coordinate the exchange of information with other components of the law enforcement system, including operating agencies and research institutions.

Base Program Description: The Office of the Assistant Attorney General carries out its policymaking, supervisory and liaison functions through the Assistant Attorney General, four Deputy Assistant Attorneys General, two Special Counsel, a Senior Counsel and support staff. Included in the Office of the Assistant Attorney General is the Office of Law Enforcement Coordination which is assigned responsibility for staffing the Executive Working Group for Federal-State-Local Prosecutorial Relations, for reviewing Federal district law enforcement plans, for managing the Division's program to abolish concurrent jurisdiction enforcement lapses, for supporting the Division's Crime Prevention Committee, for overseeing the Division's involvement in regional Law Enforcement Coordinating Committees, and for staffing other intergovernmental law enforcement management initiatives which were previously fragmented among several Division offices.

Administrative services are provided by the Office of Administration. Six operational units work closely with other organizational entities of the Criminal Division, the Department and other Federal agencies, to ensure that the Division's administrative services are provided in an efficient, timely, and cost-effective manner; the Office of the Director; the Personnel Unit; the Fiscal Unit; the Mail, File and Records Unit; the Procurement, Space and Security Unit; and the Management Information Systems staff. This last unit was established in 1984 to develop and install top priority automated data processing systems for caseload management information and correspondence tracking, and to provide selected ADP applications in support of investigations and litigation.

The Office of Legislation draws upon expertise that spans the entire breadth of criminal law, as well as familarity with congressional organization, rules, and procedures to conduct the Division's relations with the legislative branch, as well as its relations with the United States Sentencing Commission and the Judicial Conference's Advisory Committee on Criminal Rules. Close liaison is maintained with Members of Congress and their personal and committee staffs, many of whom look to this Office directly for advice and assistance concerning the criminal code and rules of procedure, drafting assistance, and oral and written briefings on the practical effect of legislation. The Office works closely with the Department's Office of Legislative Affairs, ranking officials of the Department and the Division, and the Federal investigative agencies. The Office of Legislation is also heavily involved in implementing the Sentencing Guidelines. The Director has been designated as the Division's Sentencing Coordinator and in that capacity chairs a multi-Division sentencing working group that meets periodically to discuss sentencing issues and resolve policy questions. The Office maintains frequent contact with the staff and members of the Sentencing Commission and attends its meetings. The Office furnishes comments on the Guidelines and develops recommendations for amendments.

Similarly, the Office prepares comments on and develops proposals for amendments to the Federal Rules of Criminal Procedure. The Office Director often substitutes for the Assistant Attorney General at meetings of the Judicial Conference's Advisory Committee on Criminal Rules, and serves as the Departmental contact source and spokesperson on most matters pertaining to the Rules. In addition, specific Office of Legislation personnel have been tasked with several ongoing special responsibilities such as providing advice on ethics matters to employees of the Division.

The Office of Policy and Management Analysis provides the Division with the analytical capabilities needed to perform program development, policy analysis, and management improvement functions. The Office advises the Assistant Attorney General on developing priorities for the Division, the Department, and Federal law enforcement generally. Most of the Office's projects are joint efforts with personnel from other units, such as the Inspector General. The Office's professional staff includes analysts with expertise in public policy, business administration, criminology, economics, organization behavior, program evaluation, information systems, statistical methods and related areas.

Accomplishments and Workload: The Office of the Assistant Attorney General continues to provide the Federal criminal justice system with national leadership, centralized coordination and effective direction. The role of the Assistant Attorney General manifests itself mainly in communications imparted to other governmental entities and, by extension, to the public. The legislative proposals transmitted to the Congress represent the Division's position regarding the changes which are needed to improve the criminal justice system. The arguments formulated for presentation to the

Supreme Court and courts of appeal reflect the considered experience of the Division as to the constitutional and statutory interpretations which will best support the enforcement of Federal laws in the long run. And finally, communications delivered to other law enforcement executives, Federal and non-Federal, in speeches, meetings, and correspondence serve to focus attention on the most pressing problems facing the criminal justice system and the means available to law enforcement executives to address those problems.

In the last year and a half, the Office of Administration initiated or completed several management improvements to increase the efficiency of various organizational components in the Division. The Office has: 1) Eliminated manual production of standard correspondence and forms through automation in two offices; 2) Developed and implemented two computer systems to assist the Office of Special Investigations in its name search capability and investigation of suspected Nazi concentration camp guards and other alleged war criminals; 3) Developed a computer capability to automate the name clearance process with the FBI for new employees of the Division and Main Justice; 4) Completed the automation of the Internal Security Section's Foreign Agents' Registration System, facilitating the production of its annual report to Congress; 5) completed the re-design of a major computer application used by the Division's Office of International Affairs to track extradition requests; 6) initiated the re-design of a computer application designed to track gambling device registrations for the Division's Office of Enforcement Operations and began the development of an attorney subpoena application for OEO; 7) initiated an in-house training program for all Division employees in computer security; 8) completed a feasibility study for the enhancement of appellate briefs processing for the Appellate Section; 9) initiated the design of a computerized document retrieval function to be used in conjunction with the Division's Automated Case Tracking System (ACTS); and 10) initiated and completed a bank fraud tracking application as a featured subset of the Division's ACTS system and automated form letters and case profile/file document information forms for the Defense Procurement Fraud Tracking application, also a featured subset of the Division's ACTS computer system. Staff also developed the Division's secure communication system - STU III. This new STU III System replaces older units locally as well as in all Organized Crime Strike Force Field Offices. The staff also completed a major procurement contract for data entry services required by the Asset Forfeiture Office to expedite processing of Equitable Sharing Requests.

The Office of Administration has continued to increase the Division's investment in general and legal automated information systems in 1989. In June, a new mid-range business computer was acquired, doubling our capacity for case tracking, time keeping, litigation support and management information applications. The vital correspondence control and tracking application was entirely re-written to reflect changing requirements. In September, the first order for Project EAGLE office automation equipment was placed resulting in the acquisition of two computers, custom designed to provide word processing, electronic mail, automated calendars, spreadsheets, and data base access for 270 employees. The associated Project EAGLE telecommunications network will soon connect Division offices nationwide and overseas with dependable, high-speed data transmissions.

During the past twelve months, the Office of Legislation completed or began work on a number of legislative initiatives including drafting the titles pertaining to firearms, ammunition clips which facilitate the criminal misuse of assault rifles, the death penalty, and the exclusionary rule in the President's Comprehensive Violent Crime Control Act of 1989. The bill has been introduced as S. 1225 and H.R. 2709. The Office also contributed to the development of the Governmentwide Ethics Act of 1989, major portions of which were enacted in P.L. 101-194 on November 30, 1989, and played a major role in the development of the enforcement provisions of the Financial Institutions Reform, Recovery and Enforcement Act of 1989, P.L. 101-73 (the "Savings and Loan Bill," effective August 9, 1989), which greatly enhanced criminal and civil penalties applicable to fraud directed at federally insured financial institutions. Drawing on its longstanding expertise in the area, the Office contributed to the development of a death penalty provision for drug "kingpins" in cases where a death does not result which the Administration plans to offer in the near future and has drafted legislative proposals (1) to facilitate "sting" investigations involving stolen or counterfeit property (introduced as H.R. 3760), (2) to expand forfeiture in the area of fraud offenses, and (3) to provide for State concurrent criminal jurisdiction in certain places where only federal jurisdiction now exists. The Office also developed several amendments to the Federal Rules of Criminal Procedure which are in various stages of review within the Judicial Conference prior to their submission to Congress.

The Office has continued its extensive involvement with implementation of the guideline sentencing system. It prepared directions to all prosecutors regarding the handling of the backlog of sentencing matters when the Supreme Court upheld the constitutionality of the sentencing guidelines in United States v. Mistretta, participated in the development of directions from the Attorney General to all prosecutors concerning case settlement under the Guidelines, and chaired the Sentencing Working Group, composed of representatives of the various litigating divisions and the United States Attorneys.

The Office coordinates sentencing guideline policies for the Department for communication to the Sentencing Commission through its Ex Officio member, appointed by the Attorney General. In this regard, the Guideline amendment proposals published by the Commission in 1989, developing many responses itself and seeking the views of other components of the Department and of the Sentencing Subcommittee of the Attorney General's Advisory Committee of United States Attorneys. Many of the Department's suggestions were implemented by the Sentencing Commission. The Office also developed an entire chapter of sentencing guidelines, relating to the sentencing of organizations which became the basis of a proposed guidelines chapter recently published in the Federal Register for comment, and has developed regulations for the collection of criminal fines currently under review by Department components and the Internal Revenue Service. Finally, the Office has informed the Commission of the need for guideline amendments in several important areas and has worked with Commission staff and the Ex Officio Member in the development of these proposals.

During 1989 and early 1990, Office of Policy and Management Analysis (OPMA) analysts provided key staff support in the areas of Sentencing Guidelines, national drug enforcement policy, asset forfeiture, organized crime, international issues, white collar crime and Criminal Division management. In particular, OPMA was responsible for monitoring a variety of issues relating to the new Guidelines and represents the Department on the Research Advisory Committee of the U.S. Sentencing Commission. OPMA staff worked with Division managers in reviewing alternative approaches to organizational sentencing and helped prepare the Division's proposal to the U.S. Sentencing Commission on organizational sentencing. The proposal became the basis for the Commission's December 1989 draft of Organizational Sentencing Guidelines.

In March 1989, the Office of National Drug Control Policy (Drug Czar) replaced the National Drug Policy Board, and all staff work on drug policy issues shifted to the Office of the Attorney General (OAG). OPMA has provided staff support to the OAG. In particular, the Office participated in a comprehensive inter-departmental review of international drug law enforcement issues, as directed by the National Security Council; prepared a position paper on proposed money laundering initiatives; and did work in other areas such as domestic cannabis suppression, interdiction efforts, and civil commitment issues.

OPMA provided continuing support to the Asset Forfeiture Policy Advisory Committee (AFPAC) on a variety of policy and management issues including equitable sharing procedures, adoptive forfeiture policies, revision of the Attorney General's Guidelines on Seized and Forfeited Property, and management of the Assets Forfeiture Fund.

OPMA continues to assist in efforts against non-traditional organized crime, especially Asian Organized Crime (AOC) groups and the Sicilian Mafia. OPMA prepared a proposal, subsequently approved by the Attorney General, to create a standing International Asian Organized Crime Coordinating Group to improve the level of cooperation among nations against AOC. The Office will assist in preparing for a preliminary international conference. In a cooperative effort with the FBI and the Royal Canadian Mounted Police, OPMA is conducting field interviews and other research on the organization and activities of the Sicilian Mafia and other Italian Organized Crime groups in North America. Study objectives include assessing the relationship between the LCN and the Italian groups and defining the scope of Italian organized criminal activities in the United States.

OPMA staff have been involved in several international matters. The Office provided staff support to the Legal Questions Subgroup of the Financial Action Task Force (FATF). Mandated by the last Economic Summit, the FATF must provide the Group of Seven countries with recommendations to improve international cooperation in combatting money laundering. Staff also analyzed information on various visa issues and prepared the Criminal Division's position on the law enforcement implications of expanding the U.S. Visa Waiver Pilot program to six additional European countries. In addition, OPMA recently prepared the U.S. response to an extensive United Nations questionnaire on capital punishment, including compilation of relevant statistics and summaries of state and federal laws.

The Office also undertook a variety of projects in support of Criminal Division initiatives against white collar crime. The Office performed work related to Criminal Division concerns for the Executive Office for U.S. Trustees (EOUST). Staff performed extensive field work to identify problems in procedures for referring bankruptcy frauds for criminal prosecution and briefed EOUST on the findings. At the request of the Economic Crime Council Operations Committee, OPMA reviewed relevant literature and surveyed U.S. Attorneys' Offices and the Criminal Division to prepare a report on scientific jury selection practices. The results of this study were presented at a recent Economic Crime Conference.

In the area of Criminal Division management, OPMA prepares the Weekly Reports to the Attorney General for the Division. Staff also coordinated and participated in an internal study of the Criminal Division's organization and functions that examined the operations of each section and office. OPMA analysts collected and presented suggestions on ways the Department might improve retention of experienced prosecutors and did a comparative pay and career path study of OCRS Strike Force attorneys and AUSAs. The Office also prepared the Division's comments on the recent JMD Management and Planning Staff Report on Attorney Recruitment and retention in the Legal Division and responded to other studies as well.

As a special project, OPMA conducted some to work for the Bureau of Prisons related to the Witness Security Program. For example, staff performed a survey of state correctional organizations to determine where there are potential legal impediments to transferring prisoners in state custody to the federal prisons under the Witness Security Program. The Office also prepared an information packet for the states describing the International Prisoner Transfer Program.

OPMA continues to work on projects that generally support the Division's mission. The Office monitored the use of pretrial detention by analyzing data on such diverse aspects as court motions, defendant characteristics, length of detention, and case outcomes. OPMA participated in the Division's Fine Collections Working Group and is studying procedures for referring collections matters to U.S. Attorneys' Offices. The Office reviewed and commented on several research studies and advised researchers on the concerns and interests of the Criminal Division and the Department.

The new 1990 resources will enable the Office to effectively carry out new initiatives along with its ongoing responsibilities. OPMA currently has six policy analyst positions, the Director, and one secretary. Two areas requiring significant new commitments from OPMA staff are the emerging areas of organized crime and management initiatives for the Division. The FY 1990 positions will permit the Office to meet its responsibilities in new areas and to continue to actively support the Division and Department's drug enforcement efforts, respond to Division management issues, and upgrade its level of support to important interagency working groups, such as the Economic Crime Council.

Explanation of Analysis of Changes from 1989 Appropriation Request

Congressional Appropriation Actions. Congress denied $1,512,000 in program increases sought for Automated Litigation Support (ALS). Staffing increases of $2,902,000 and an increase in foreign counsel funding of $364,000 were also denied.

Sequestration. These cuts were imposed in accordance with the Omnibus Budget Reconciliation Act of 1990 provisions.

This activity provides representation for the United States' interests in all types of civil cases and matters except those within the specialized fields of the other divisions of the Department. The litigation encompasses the full spectrum of legal problems encountered by private business enterprises because the departments and agencies of the Government are engaged in innumerable commercial ventures similar to those of a modern corporation, such as buying, selling, construction, shipping, production of energy, insurance, housing and banking. In addition, the Division litigates the significant policy issues associated with Government activities. Hence, the overall objective of Civil Division activity is to provide the Government with the best possible legal representation. While the Division operates as the Government's law firm, it also functions as a counselor and advisor for important Government programs that may become the subject of litigation.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Federal Appellate Activity..	67	73	$6,034	67	81	$6,561	74	84	$6,797	7	3	$236

Long-range Goal: To protect the interests of the United States at the highest levels of judicial review.

Major Objectives:

To prevail in appellate litigation challenging trial court or administrative decisions in favor of the United States.

To initiate and prevail in appeals in which the Government's opponents were successful at the trial court or administrative levels.

To protect the Government's interest at the highest level of appeal by preparing documents to be filed by the Solicitor General in the Supreme Court.

Base Program Description: Appellate litigation involves the spectrum of Government programs and policies. If the outcome of a trial involves huge financial losses, critical Government policies or Federal programs affecting the American public, the decision will almost certainly be appealed.

The financial stakes in appellate litigation are enormous. In 1988, $47 billion were at issue. By 1991, these stakes are expected to increase 17 percent to $55 billion. This caseload includes numerous tort claims, major bankruptcies and contract claims involving huge stakes. Entitlement programs involving billions of dollars in social and welfare benefits are also a frequent subject of hard-fought appellate litigation as plaintiffs go to court to have the qualifying rules rewritten.

Not infrequently, major policy initiatives are the subject of appellate review. Gun dealers challenged the ban on the importation of semi-automatic assault weapons. Drug testing cases are on appeal in circuits nationwide. The outcome of continuing litigation over the Decennial Census will affect apportionment, financing of public programs and business decisions. Challenges to Health and Human Services' abortion regulations prohibiting abortion advocacy in family planning projects funded under Title X of the Public Health Service Act are the subject of litigation. Immigration reform, national security, Freedom of Information Act and separation of powers cases are other critical areas handled by the Appellate Staff.

Adding to an already overwhelming caseload, new policies are certain to be challenged in court through the appellate level. We can expect the proposed regulatory reforms for Savings and Loans institutions to be the target of litigation. The Ethics in Government Act is certain to be challenged. Housing and Urban Development's attempt to remove suspected drug dealers from public housing will result in court action. By 1991 the Staff will be handling 2,246 new cases involving huge financial and policy stakes.

Workload and Accomplishments: The workload of the Appellate Staff is presented in the following table:

Appellate Litigation			Estimates	
	1988	1989	1990	1991
1. Handled by Appellate Staff				
a. Pending Beginning of Year	983	1,029	1,147	1,190
b. Received During Year	1,972	1,861	2,059	2,246
c. Terminated During Year	1,926	1,743	2,016	2,141
d. Pending End of Year	1,029	1,147	1,190	1,295
2. Handled in Branches				
a. Pending Beginning of Year	1,539	1,568	1,146	1,659
b. Received During Year	1,097	1,264	1,663	1,754
c. Terminated During Year	1,068	1,686	1,150	1,330
d. Pending End of Year	1,568	1,146	1,659	2,083
3. Received and Referred to U.S. Attorneys	1,225	1,173	1,169	1,157
Direct Dollars at Issue (Million)	$46,558	$52,651	$53,641	$55,019

Skinner v. Railway Labor Executives' Association; National Treasury Employees Union v. Von Raab. Both cases, decided together by the Supreme Court, deal with the constitutionality of drug testing. In *Skinner*, by a 7-2 vote, the Supreme Court reversed a Ninth Circuit decision and held constitutional a Federal Railroad Administration regulation that requires railroads to perform drug tests on railway crew members after certain accidents or safety violations. In the latter case, the Supreme Court, by a 5-4 vote, affirmed in part and vacated in part the Fifth Circuit decision which upheld the drug testing program of the Customs Service against a Fourth Amendment challenge. The Court upheld the program insofar as it tested employees who apply for promotion to positions directly involving the interdiction of illegal drugs or to positions which require the carrying of firearms; it remanded for further proceedings concerning the testing of employees who seek promotion to positions where they would handle classified information. Numerous other cases pending in the courts of appeals involving drug testing -- particularly random drug testing programs, which were not directly at issue in *Skinner* and *Von Raab* -- are now being brought to largely favorable dispositions in light of these Supreme Court decisions.

Independent U.S. Tanker Owners Committee v. Skinner. The Merchant Marine Act authorizes the Secretary of Transportation to provide construction differential subsidies to vessels, but the vessels that receive subsidies may not, except in certain narrow circumstances, operate domestically. The current dispute concerns the Independent U.S. Tanker Owners' challenge to the promulgation of a 1987 rule reaffirming the propriety of accepting subsidy repayments of more than $100 million from certain vessels in return for allowing domestic operations. The district court struck down the rule, and we appealed to the D.C. Circuit. The court of appeals reversed, thereby saving the taxpayers approximately $150 million.

Dukakis v. U.S. Dept. of Defense; Perpich v. U.S. Dept. of Defense. The Montgomery Amendment provides that State Governors cannot withhold their consent to a two-week overseas training assignment of National Guard units based upon objections to the location or purpose of the training. Two separate actions challenged the constitutionality of the Amendment. In the former case, the district court upheld the Amendment as consistent with the Army and Necessary and Proper Clauses of the Constitution, accepting our argument that members of a state National Guard unit were ordered to duty in their Federal, not State, capacity. The First Circuit affirmed the district court's decision. In the latter case, a panel of the Eighth Circuit held the Amendment unconstitutional. Granting our petition for rehearing en banc, the full court of appeals ruled 7-2 that the Montgomery Amendment is valid, accepting our position that, "Congress' army power is plenary and exclusive." We recently filed a brief in opposition to certiorari.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Federal Appellate Activity	67	81	$6,561	74	84	$6,797	7	3	$236

The gravity of the Savings and Loan crisis prompted the development of far-reaching banking institution reform legislation. The Financial Institutions Reform, Recovery and Enforcement Act of 1989 (FIRREA) was enacted to increase accountability of financial institutions. The new policy to retrieve losses, prevent future fraud practices and safeguard the viability of this industry must be upheld. Without 7 additional positions (4 attorneys, 1 paralegal and 3 support staff), 3 workyears and $236,000 this vital bipartisan effort could flounder.

While estimates of the current pending caseload of the key financial institution regulatory agencies vary, they range as high as 27,000 cases for the Federal Deposit Insurance Corporation alone. These cases are currently being handled by private counsel paid by these agencies to represent their interests at a higher cost than if the Government were to litigate them. Until now, the Attorney General's involvement in banking cases has been limited. The Civil Division is currently handling over 100 cases. These cases include tort actions alleging tort damages arising from the regulatory agencies' actions in closing a bank; cases concerning the validity of regulations issued by the agencies; litigation protecting the financial interests of the Government as mortgagee; and, appellate litigation arising from appeals of these trial court actions. In this regard, the Appellate Staff has amassed considerable expertise in litigation concerning regulation of the banking industry and enforcement of the banking laws. Most notably in cases involving the Comptroller of the Currency, the Board of Governors of the Federal Reserve System and the Federal Deposit Insurance Corporation, its leadership is well-established.

Where major Government interests are concerned, expanded Departmental involvement in Savings and Loan litigation is desirable. The Civil Division intends to continue asserting the Government's interest in the areas of banking litigation it has traditionally handled. In addition, with adequate resources the Civil Division will take on lead cases involving: restructuring of financial institutions; collections activities; enforcement of new civil penalty provisions; and, challenges to agency orders removing from office savings and loan officials who have engaged in illegal activities. Because civil penalty provisions increase penalties, litigation will be generated to both enforce and defend such assessments. The Division will personally handle only the most complex, policy-sensitive litigation. During 1990 we anticipate handling 240 cases at the trial stage. Given the enormous stakes in these cases, decisions favorable to the Government will be challenged, and we expect the Appellate Staff to handle the majority of these critical appeals by 1991.

This increase cannot be absorbed within the existing staff. A unified, effective approach to upholding this initiative necessitates an infusion of resources for the Appellate Staff.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Torts Litigation...........	210	209	$31,091	210	211	$31,884	216	214	$32,291	6	3	$407

Long-range Goal: To protect the U.S. Treasury by successfully defending against unwarranted claims, preventing excessive losses from meritorious claims and maximizing the monetary recovery for injury and damages to Government property.

Major Objectives:

To prevail in the defense of tort actions brought against the Government, its agencies and individual Federal employees.

To initiate and prevail in affirmative actions when the Government has sustained injury or expended resources on behalf of another party.

Base Program Description: The Torts Branch serves as guardian of the public fisc, defending the Government where plaintiffs seek monetary damages for alleged neglect or wrongful conduct and initiating actions to recover injury and damages to Government property. The monetary implications of this caseload are staggering, with claims in 1989 exceeding $84 billion. The upward trend will persist, with dollars at issue reaching $108 billion by 1991. The lion's share of these suits is defensive and, therefore, non-discretionary. Despite the fact that the Branch has little control over the number and size of incoming suits, our attorneys perform remarkably well, holding adverse judgments to less than one percent of amounts claimed.

In many of the suits, the Government s involvement in the event precipitating the tort action is elusive, at best. The most common of these types of claims involve aviation disasters such as the Detroit Northwest plane crash or environmental accidents such as the Exxon Valdez oil spill. These suits are unpredictable and, without warning, the Government can be pulled into resource-devouring litigation involving hundreds of plaintiffs and massive discovery requirements.

The Torts Branch also represents and defends Federal employees sued personally for money damages as a result of official conduct. The growth in these cases is attributable to an increasing number of constitutional tort (Bivens) suits against Federal employees, particularly those in the Federal law enforcement and intelligence communities.

Other litigation involves the actions of Federal agencies directly. In these cases, individuals seek to recover damages for alleged injuries caused by agency actions. These cases include numerous radiation and toxic substance claims involving Government or Government contractor activities. Discovery tends to span decades — including events that reach back as far as World War II. The litigation's subject matter is highly scientific and arcane and document collections are voluminous. A growing number of our suits involves financial institutions suing regulatory agencies for actions taken to restructure and shore up the Nation's Saving and Loan industry.

The Torts Branch is also responsible for representing the Government's interests in litigation arising from the National Childhood Vaccine Injury Act of 1986, as amended,— a program of no-fault compensation adjudicated through the United States Claims Court and appealable to the United States Court of Appeals for the Federal Circuit. The 1990 budget, recently enacted, grants the Civil Division $1 million from the Vaccine's Trust Fund to utilize for this litigation during the remainder of the current fiscal year. This will be used to staff these cases and provide AIS for document control and case tracking.

Workload and Accomplishments: The workload of Torts Litigation is presented in the following table:

Torts Litigation			Estimates	
	1988	1989	1990	1991
1. Personally Handled				
a. Pending Beginning of Year	4,781	5,111	5,236	5,529
b. Received During Year	1,135	1,114	1,527	1,253
c. Terminated During Year	805	989	1,234	1,221
d. Pending End of Year	5,111	5,236	5,529	5,561
e. Dollars at Issue (Million)	$68,152	$84,873	$95,970	$108,553
2. Received and Referred to U.S. Attorneys	3,289	3,220	3,253	3,282

Aviation and Admiralty Litigation. The past year has witnessed intensive activities in several major air carrier crash cases. The Government was totally exonerated from approximately $200 million in liability in the Delta 191/DFW trial, which concluded in May 1969. The second of four planned trials in the World Airways/Boston runway overshoot case was settled recently with the U.S. paying only $7 million instead of the more than $60 million sought by our co-defendants. The FAA was held not liable for the Continental/Denver DC-9 takeoff crash. The cases filed against the Navy arising out of the Iran Air shoot-down in the Persian Gulf were dismissed. In the Pan Am 103/Lockerbie litigation, our motions to dismiss the U.S., former Secretary of State George Schultz and two U.S. ambassadors resulted in the voluntary dismissal of actions filed on behalf of two passengers. Our admiralty specialists recovered over $10 million in admiralty ship mortgage foreclosure cases and over $750,000 for the loss or damage to Government property.

Federal Torts Claims Act (FTCA) Litigation. In the aftermath of the failure of a bank or thrift institution, claims sometimes arise in the context of third-party suits against the United States after the regulatory agency sues the directors, officers and/or controlling shareholders of the defunct financial institution. In FSLIC v. Smith, the third-party plaintiff claimed that he was fraudulently forced to sign a note to purchase stock in an institution on the verge of collapse and that FSLIC was involved in the day-to-day operations of the institution. The third-party plaintiff argued that FSLIC had assumed a duty to purchase the stock to assure that the sales would comply with securities laws. The court dismissed the suit on the ground that the third-party plaintiff had failed to comply with the mandatory requirements of the FTCA. Similarly, we prevailed in a suit questioning whether the FTCA's requirements are applicable in bankruptcy proceedings (Anderson v. FDIC).

Asbestos Litigation. In the past year, the Branch defeated three major attempts by asbestos manufacturers to challenge rulings favorable to the Government. The Supreme Court denied review of the Federal Circuit's affirmance of the district court's dismissal of all third-party tort and contract claims arising out of injuries to employees of a public shipyard. The Supreme Court also denied review of the Federal Circuit's ruling that all of Johns-Manville's Claims Court complaints arising out of public and private shipyards must be dismissed and of the Third Circuit's holding that third-party tort actions arising out of injuries to Federal shipyard workers based on "dual capacity vessel owner" responsibilities must be dismissed as a matter of law. At the appellate level, the Fifth Circuit affirmed the dismissal of suits based on alleged injuries to longshoremen who offloaded asbestos destined for GSA strategic stockpiles. Voluntary dismissals were secured of third-party suits brought by companies in Ohio, arising out of asbestos-related injuries to Great Lakes seamen. At the trial level, the Branch secured dismissal of omnibus tort suits in the District of Columbia brought by two asbestos product manufacturers to the extent those suits were premised on tort payments made to public shipyard employees. In the largest monetary victory yet in the asbestos litigation, the Branch secured dismissal of all Claims Court complaints brought by six asbestos product manufacturers. In those cases, the manufacturers sought in excess of $9.3 billion from the United States. The Branch filed a motion to dismiss the remaining asbestos litigant in the Claims Court.

Toxic Tort Litigation. The Branch is defending an increasing number of complex toxic tort cases stemming from activities of military installations and defense contractors. The Court recently granted a motion for summary judgment in Barratt v. United States, in which more than 120 plaintiffs alleged personal injuries and property damage arising from alleged groundwater contamination as a result of operations at the Cornhusker Army Ammunition Plant, a Government-owned, contractor-operator munitions facility. The Branch successfully defended Thompson v. United States, a two week trial in which plaintiffs alleged personal injuries resulting from improper storage and removal of zinc-phosphide treated oats, and Starrett v. United States, a three-week trial in which plaintiffs alleged personal injuries and property damage as a result of groundwater contamination from ordnance demilitarization operations at the Bangor Naval Submarine Base.

Automation Litigation Support (ALS) Accomplishments. In 1989, the Division's ALS program played an instrumental part in the successes of the largest and most complex Torts Branch cases. In the massive nationwide asbestos litigation, the Division's computerized support system played a critical role in obtaining the largest single monetary victory in the history of the Division — a dismissal of $9.3 billion in claims brought by six asbestos industry leaders in the Claims Court. ALS was also pivotal to the Government's successful defense in the Delta aviation disaster case (the longest aviation trial in history), which saved the taxpayers $200 million. ALS provided a variety of pre-trial and trial databases as well as a large trial support team available throughout the proceeding on a flexible schedule.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Torts Litigation	210	211	$31,884	216	214	$32,291	6	3	$407

In the wake of a growing number of bank failures, a steep rise in suits against the United States is anticipated. Frequently, the officers of a failed bank seek damages against the United States on the grounds that regulatory agencies carry responsibility for the actions of bank officers. As banks become more desperate, their attempts to thwart the Administration's enforcement efforts will intensify. Monetary stakes are significant and growing. Already this year, the Branch is handling cases in which $1.2 billion is at stake, and receipts will continue upward as more banks fail. A program increase of 6 positions (3 attorneys, 1 paralegal and 2 support staff), 3 workyears and $407,000 is required to defend these cases. Of this increase, $200,000 is for Automated Litigation Support (ALS) services.

The policy implications of bank litigation cases are immense. In terms of determining the discretionary function of bank regulators, these cases are crucial. Many of the defensive cases addressed by the Torts Branch are the outgrowth of affirmative law enforcement suits filed on behalf of the Federal Deposit Insurance Corporation (FDIC), Federal Savings and Loan Insurance Corporation (FSLIC), now the Savings Association Insurance Fund, or other bank regulators. In response, former officers, directors and controlling stockholders of failed banks or thrifts who allegedly committed fraudulent practices have initiated tort claims against the United States or the bank regulators. One case now on appeal, Gaubert v. United States, challenges a host of regulatory activities leading to the plaintiff's removal as a controlling influence in Savings and Loan institutions. The court decision will have broad implications for the ability of bank regulators to take a direct hand in banking affairs prior to closing an institution.

Both this Administration and the Congress have taken a stand to mend the ailing Savings and Loan industry. With the enactment of Savings and Loan legislation, an upsurge of regulatory and enforcement action is a certainty. The intention is to hold institutions accountable for their fraudulent activities. To the extent that the institution can counter these efforts through unmeritorious claims and escape its legitimate responsibilities, the entire policy will be undermined. By 1991, the caseload is expected to increase to over 100 complex and labor-intensive cases — topping the 1989 caseload by 41 percent. Without an infusion of resources, the Branch cannot possibly absorb this additional work and successfully uphold this crucial legislation.

In addition to staffing increases, $200,000 is needed for ALS. Due to the nature of banking litigation, document production and the number of depositions are voluminous and require computerized access to transcripts to obtain factual support for legal arguments and for cross-examination at trials. Successful conclusion of these cases hinges on the availability of specially designed information gathering and retrieval capabilities available through ALS.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Commercial Litigation......	277	266	$29,660	277	268	$30,660	330	295	$33,800	53	27	$3,140

Long-range Goal: To protect the financial interests of the United States through the recovery and collection of monies owed the Government and through the assertion of the Government's commercial interests in defensive litigation.

Major Objectives:

To save the Government money by winning lawsuits and obtaining favorable settlements of contract, intellectual property, international trade and Government employment litigation brought against the United States.

To collect money owed the United States as a result of defaulted contracts, unpaid loans, unsatisfied judgments, breach of grant agreements and misuse of benefit programs.

To recover funds lost through fraud and corruption in Government programs and throughout the Savings and Loan industry and to deter future losses by collecting the statutory penalties allowed for such violations.

To defend Government policies and programs challenged in litigation involving money damages.

Base Program Description: Charged with protecting the financial interests of the United States, the Commercial Litigation Branch defends actions seeking money judgments against the United States and initiates civil action to collect money owed the United States as a result of various commercial and statutory activities. The Branch also conducts litigation arising from fraud, bribery and official misconduct such as that uncovered in the Savings and Loan industry; the collection of civil fines and loan defaults; and challenges to Government personnel actions.

The Branch's caseload is largely defensive. Contracts cases in Claims Court and the District Courts are increasing as are the Branch's responsibilities in the Federal Circuit Court of Appeals (CAFC). CAFC cases, in particular, are expected to rise sharply due to recent enactment of the Veterans' Judicial Review Act. Dollars defended are massive -- projected to reach $12 billion by 1991. Despite its growing defensive responsibilities, the Branch has devoted increasing resources to affirmative litigation. Bankruptcy and loan default cases involve numerous Government entities that have significant monetary exposure. Efforts to recover money lost through fraud, waste and abuse in Government programs have intensified substantially with the enactment of major anti-fraud statutes and stepped-up efforts to target and punish procurement fraud. Savings and Loan fraud cases will balloon under the new initiatives to enforce banking regulations. The Branch will seek recovery of more than $18 billion in 1991.

Workload and Accomplishments: The workload of Commercial Litigation is presented in the following table:

Commercial Litigation			Estimates	
	1988	1989	1990	1991
1. Personally Handled				
a. Pending Beginning of Year	4,345	5,044	4,489	5,614
b. Received During Year	2,027	2,132	2,795	2,957
c. Terminated During Year	1,328	2,687	1,670	1,961
d. Pending End of Year	5,044	4,489	5,614	6,610
e. Dollars at Issue (Million)	$24,199	$25,992	$28,482	$30,370
2. Personally Handled - Pending Court of International Trade	6,391	4,542	4,248	4,137
3. Received and Referred to U.S. Attorneys	9,063	6,453	5,942	5,241

General Commercial Litigation. The Branch is handling significant litigation in bankruptcy courts, district courts and courts of appeals arising out of the Government's interests in the energy, maritime, steel and utility industries. In *United States v. Panhandle Eastern Corp.*, Branch attorneys also represented the Maritime Administration in proceedings involving guaranteed ship financing bonds; the judgment they obtained was affirmed by the court of appeals, and Panhandle paid $146 million in satisfaction. In the utilities field, Branch representation of the Rural Electrification Administration (REA) has expanded to nearly $9 billion in defaulted loans to rural cooperatives made or guaranteed by REA; Branch attorneys negotiated the successful restructuring of over $3 billion of these loans, thereby avoiding bankruptcies and maximizing REA's return.

Fraud Litigation. In 1989, $276 million was obtained in fraud judgments and settlements, an increase of more than 20 percent over last year. Department of Defense (DOD) procurement fraud continues to constitute the largest portion of the Fraud Unit's caseload, particularly cases involving defective pricing and cost-mischarging. $170 million was recovered in 1989 for DOD fraud, with an additional $30 million recovered in DOD cases in the first two months of 1990. In addition, over 165 matters are pending as a result of the DOD program that encourages defense contractors to make disclosures of their own fraud, and the 1986 Amendments to the False Claims Act which authorize private citizen suits on behalf of the Government.

Foreign Litigation. In In re Japanese Construction Contract Fraud, the Branch investigated possible remedies under Japanese law arising out of an order of the Japan Fair Trade Commission concerning bid-rigging on construction projects in Japan funded for the U.S. Naval base in Yokosuka, Japan. As a result, the United States recently entered into a memorandum of intent to accept over $31 million from 99 Japanese companies in partial settlement of the bid-rigging case. This is the largest recovery ever in foreign litigation for the Government.

International Trade Litigation. In U.S. v. Daewoo Corp., a customs fraud case, Branch attorneys reached a settlement under which the defendants will pay $34 million to the United States, the largest penalty ever paid in a customs fraud case. During 1980-1982, Daewoo engaged in a deliberate scheme concealing the true low prices of its steel products by declaring false prices to the Customs Service, thus evading anti-dumping investigations and the imposition of anti-dumping duties. In Nissan Motor Corp. v. United States, the Branch successfully argued that a complete automobile fabrication plant imported into a foreign trade zone was not entitled to duty-free treatment simply because it was imported into a foreign trade zone. The Government thus retained over $3 million in assessed duties and established a very important precedent.

Claims Court/Federal Circuit Litigation. In Hughes Advanced Systems Company, a team of Commercial Litigation Branch attorneys successfully defended the award of a multi-billion dollar contract to modernize the nation's air traffic control system. Had the Government failed to prevail in this case, the award of the contract would have been stalled for some years creating air traffic delays and, possibly, jeopardizing air traffic safety.

Automated Litigation Support Accomplishments. ALS has been critical to the management of major customs and contracts cases. In Daewoo, a data base of over 30,000 key documents confirmed the pricing violations occurrences through analysis of transactions, strengthening the Government's assertions in this case and enabling the record settlement. In Doyle v. U.S., an overtime pay dispute with potentially $500 million at stake, a data base has been established to manage up to 25,000 claimants. The data base has been useful in exposing instances in which opposing counsel has filed new consent forms naming individuals who had already filed.

Program Changes:

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Commercial Litigation	277	268	$30,660	330	295	$33,800	53	27	$3,140

As the leading force in protecting the Government's financial interests, the Branch must implement recent Congressional enactments and help put the Savings and Loan industry back on solid footing. To meet these responsibilities, a program increase of 53 positions (33 attorneys, 4 paralegals and 16 secretaries), 27 workyears and $3,140,000 is necessary. Of this increase, $1,127,000 is for Automated Litigation Support services.

Veterans' Judicial Review Act: The enactment of the Veterans' Judicial Review Act repealed statutory limitations on judicial review of the Department of Veterans' Affairs regulations. In the past, veterans have been barred from appealing their benefits eligibility decisions beyond the Board of Veterans' Appeals. In addition, veterans were barred from paying attorney fees for appeals to the Board of Veterans Appeals in excess of $25, a factor which limited the number of cases filed. The Veterans' Judicial Review Act has radically changed both these provisions and is expected to open a floodgate of litigation. An increase of 12 positions, 6 workyears and $485,000 is required to adequately litigate these cases.

The bill establishes a three-tiered structure for review of a denial of benefits. A veteran who is denied benefits by the Department of Veterans' Affairs (VA) may appeal the denial to a Board of Veterans' Appeals (BVA). If dissatisfied with the BVA's decision, the veteran may appeal to the newly established Court of Veterans' Appeals. If either party, the veteran or the VA, is dissatisfied with a decision of that court, the dissatisfied party may appeal to the Court of Appeals for the Federal Circuit. It provides that the VA is to be represented before the Court of Veterans' Appeals by its office of General Counsel. The Act further stipulates that the VA will be represented in the Federal Circuit by the Department of Justice. The Civil Division represents the Government's interest in civil matters before this court.

Each year approximately 26,000 cases are filed in the BVA. There is currently a pending caseload of 46,000 cases at the Board which could be appealed. The law encourages appeals by eliminating the prior ceiling on attorneys' fees and allowing for reasonable fees to be paid to attorneys representing veterans who appeal. Moreover, the availability of judicial review may prompt a large number of potential claimants to reassert claims which had been denied previously at the Board level. In addition, the bill grants exclusive jurisdiction to the Federal Circuit to entertain challenges to regulations of the VA pursuant to the Administrative Procedures Act. The new provisions will result in the need for the VA to promulgate comprehensive new regulations. The large number of interested beneficiaries and the existence of active advocacy groups are likely to result in a significant number of challenges brought against these regulations. It is therefore anticipated that a substantial number of cases will be filed in the Federal Circuit.

These are high-stakes, resource-intensive cases. While the facts of the case are not subject to judicial review, litigation will focus on the application of the rules and regulations and the legality or constitutionality of those regulations. As a result, these cases will require a significant devotion of attorney time to research and develop the cases. As these cases will be at the appeal stage, the precedential impact of an individual case loss is far more substantial than at the district court level. The determinations on benefits made by the Federal Circuit will have tremendous implications for the U.S. Treasury. Since these cases cannot be delegated, the only option for handling them is to delegate cases in other litigative areas.

Bank Litigation: The need to resolve the Savings and Loan Crisis and restore confidence in the nation's financial institutions led to the enactment of the Financial Institutions Reform, Recovery and Enforcement Act of 1989 (FIRREA). This complicated legislation restructured the financial institutions and increased the accountability of the institutions' management. According to the Barnard Report, there are 357 insolvent financial institutions under criminal investigation and 3,340 pending FBI investigations involving losses in excess of $3 billion. Many of these current investigations may lead to complex civil fraud litigation. In addition, liquidation of financial institutions will trigger numerous high-stakes lawsuits. At present, such cases are handled by private counsel hired by the banking agencies at a rate of $150 per hour — far in excess of what the Government pays. Central control of this litigation is essential to ensure the protection of the Government's interests. Resources are needed to enable the Branch to take over lead cases and ensure central control over this litigation. This will translate into a 24 percent increase in receipts between 1990 and 1991 which cannot be absorbed with existing resources. To litigate these cases successfully, 30 positions, 15 workyears and $1,731,000 are required. Of this increase, $650,000 is required for Automated Litigation Support services.

Collection activities will have to be undertaken for the assumed loans and other financial obligations purchased by the regulatory agencies as part of the restructuring of the financial institutions. This is already an extensive area of litigation and, as more financial institutions are restructured, will become even more prominent. Painstaking investigation, requiring the expertise of financial analysts and counsel in foreign countries, will have to be undertaken to pursue assets of wrongdoers at or borrowers from financial institutions. A significant percentage of these collection activities will require personal involvement by Civil Division attorneys to resolve major policy and financial questions that have an impact on the U.S. Treasury.

Other cases will involve collections activities related to loans and other financial obligations purchased by the financial institutions, as well as guarantees made or assumed as part of the restructuring or liquidation of banks or Savings and Loans. Many of these will be complex takeovers, requiring special handling. Additional litigation arising out of the financial institutions' role as a holder or mortgagor will also arise. These cases are potentially very complicated, involving breaches of fiduciary obligations. In the event that bank officers file counter-claims against the regulating agency, litigation may increase in complexity.

Substantial fraud referrals are anticipated from heightened Savings and Loan enforcement activities. It is estimated that 25 to 30 percent of all failures in the savings industry are attributable to fraud; in 1988, fraud accounted for an estimated $2 billion in losses. FIRREA includes resources for criminal investigators to detect savings and loan fraud for criminal prosecution. As a result, an increase in cases involving civil penalties is inevitable. These resource-intensive cases cannot be handled within existing resources.

The Branch requires an AIS increase of $650,000 to bring these cases to a successful conclusion. The extensive document discovery and detailed research into the financial transactions, correspondence and records of the financial institutions involved necessitate the use of AIS to provide the organization and analysis needed to process this breadth of information. With billions of dollars at stake, adequate preparation for these cases — including organizing research materials assembled by our client agencies — is imperative.

Medicare: The Department of Health and Human Services, Health Care Financing Administration (HCFA) will be making a concerted effort to recover over $10 billion owed by major insurance companies due to erroneous overpayments in the Medicare program. To secure the Government's funds, the Commercial Branch requires a program increase of 11 positions, 6 workyears and $924,000. Of this increase, $477,000 is for AIS services.

In 1982, the Congress passed legislation requiring that employer plans, rather than Medicare, be the primary source of payment for medical care for employed individuals ("working aged"). The HCFA presently has over 100 cases seeking to recover Medicare overpayments for medical care to individuals whose medical expenses should have been paid under employer group health plans. HCFA alleges that major insurers — Blue Cross/Blue Shield, Travelers, Aetna — were aware of the change in the law but deliberately circumvented it by letting Medicare pay as the primary insurer. Often, the insurance company refused to process claims from the working aged without proof of a Medicare payment.

The Division has received referrals from the HCFA and has filed suit in three cases to date. As the HCFA continues to gather evidence and send referrals to the Division, much work will be required to initiate the cases and ultimately recover the defrauded funds. These will be exceptionally complex cases. In addition to the need to establish the extent of each insurance company's liability, proving damages will require enormous effort because millions of claims are at issue in each case, and all the information necessary to establish the amount due is in the control of the insurance companies. The ability to bring and prevail in these cases is dependent on adequate resources. Without the requested program increase, HCFA's efforts to regain these funds will be for naught, and the Treasury will suffer enormous losses.

A program increase of $477,000 for AIS is also required to screen and organize the millions of claims involved in this document-intensive litigation. Paralegal support will be needed to assist attorneys in reviewing the thousands of insurance forms and other related material these cases will involve. AIS services are essential during the discovery process because all of the documentation necessary to establish damages is in the control of our opponents. Without AIS, Civil Division attorneys will waste valuable time thumbing through scores of claims and other documents instead of preparing for litigation. Our opponents are well-financed insurance firms who have state-of-the-art litigation support. To prevail against them, our attorneys require these vital services.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Federal Programs...........	151	140	$12,462	151	140	$12,940	181	154	$14,524	30	14	$1,584

Long-range Goal: To successfully defend against challenges to Federal civil programs, policies and initiatives and to enforce remedies for statutory violations of Federal programs.

Major Objectives:

To prevail on behalf of the United States in civil litigation in defense of the programs, policies, initiatives and decisions of the President, Executive Branch agencies and officials of the Legislative and Judicial Branches.

To initiate and prevail in affirmative litigation aimed at remedying statutory and regulatory violations.

To increase the accountability of financial institutions by aggressively pursuing regulatory enforcement actions.

Base Program Description: The programs and policies of the Federal government have a pervasive effect on the public. It is not surprising that as society has become increasingly litigious, the public is turning to the courts to influence Federal programs and policies. The Branch must vigorously defend against legal challenges to a growing number of vital Government policies and programs to ensure they are not stymied through the judicial process.

Given the vast array of Government activities spanning some 185 agencies, Members of Congress, the Federal judiciary, Cabinet members and other Federal executives, officers and employees, this litigation is broad and diverse. Much of our litigation involves entitlements programs. This litigation has potentially massive impacts on the Federal Treasury. Judicial decisions, such as the recent Agent Orange ruling, can entitle plaintiffs to Federal benefits costing millions of dollars over the life of the program. Other litigation is crucial to the support of major Government policies and initiatives. The Branch, steeped in litigation challenging agency drug testing programs, has a central role in promoting a drug-free Federal workplace. The Branch also plays an important role in regulatory enforcement efforts. Such enforcement litigation is of growing importance, particularly as the Government seeks to solve the Savings and Loan crisis and restore confidence in the nation's financial institutions.

Workload and Accomplishments: The workload of Federal Programs is presented in the following table:

Federal Programs Litigation			*Estimates*	
	1988	1989	1990	1991
1. Personally Handled				
a. Pending Beginning of Year	931	966	991	1,080
b. Received During Year	281	340	374	453
c. Terminated During Year	246	315	285	300
d. Pending End of Year	966	991	1,080	1,233
e. Dollars at Issue (Million)	$1,467	$1,592	$1,773	$1,996
2. Received and Referred to U.S. Attorneys	2,842	2,539	2,540	2,463

Drug Testing Litigation. The Federal Programs Branch represents the Government and its officers in cases of national importance involving significant constitutional and statutory challenges. For example, in support of the Nation's efforts to combat illegal drug use, the Branch is defending over 50 cases challenging, on Fourth Amendment and other constitutional and statutory grounds, civilian drug testing programs for Federal employees holding sensitive positions and private employees holding sensitive positions in the transportation industry. Among the agencies whose drug testing programs have been challenged in court are the Department of Defense, the Department of Justice, the Executive Office of the President, the Department of Transportation, the Customs Service and the Secret Service. In addition, the Transportation Department's program requiring private employers in the transportation industry to screen their safety-sensitive employees for drug use has been subjected to challenges from all sectors of the transportation industry. The Branch has recently achieved substantial victories in upholding drug testing regulations governing employees of urban mass transit systems and merchant mariners.

Separation of Powers. The Branch has been active in a number of suits involving separation of powers principles. For example, in *People of the State of Illinois v. Cheney* and *National Federation of Federal Employees v. Department of Defense* it is defending against challenges to the constitutionality of the Base Closure and Realignment Act on separation of powers and unlawful delegation grounds. In *Burton v. Baker* it successfully defended in district court a suit brought by four congressmen seeking to enjoin President Bush's arrangement not to obligate Contra aid funds without the agreement of four committee chairmen, claiming it amounts to an unconstitutional legislative veto.

1990 Census. As with the 1980 Census, numerous suits are expected challenging various aspects of the Census Bureau's plans to conduct the 1990 population count. Among the areas of dispute are questions of statistical adjustments for undercounts in certain areas, of military personnel and others stationed overseas and of inclusion of undocumented aliens in the United States. The Branch has already successfully defended *Ridge v.*

Verity involving the "illegal alien" issue. A result of an interim settlement reached in City of New York v. Department of Commerce, the issue of whether to statistically adjust will be reexamined after the census is taken. Both issues are extremely important because of their potential effect on the apportionment of Congressional seats. As the census draws nearer, additional suits are anticipated.

Temporary Ban on Import of Assault Weapons. The Branch successfully resisted efforts by importers of semi-automatic assault rifles to overturn the President's March 1989 decision to suspend temporarily the import of such weapons pending a study by the Bureau of Alcohol, Tobacco and Firearms (ATF) of their suitability for sporting purposes under 18 U.S.C. Section 925. In Gun South, Inc. v. Brady, the Eleventh Circuit Court of Appeals overturned a district court decision invalidating the ban, finding that the temporary suspension was a reasonable response to the proliferation of imported assault rifles (applications to import more than 750,000 rifles were pending at the time of the ban) and their growing use in criminal activities. Two district courts also denied requests for preliminary injunctions to overturn the suspension order. ATF has now found that 42 of the 50 weapons temporarily banned from import, including the AK-47 and the Steyr AUG-SA at issue in the cases, should be permanently barred from entry into the United States because they are not particularly suited for or readily adaptable to sporting purposes. The Branch was successful in getting the plaintiff to dismiss Gun South and to seek to import only under the exception for sales to law enforcement agencies.

Automated Litigation Support (ALS) Accomplishments. The capabilities provided by ALS were instrumental in obtaining a settlement favorable to the United States in Santos v. the United States. In the Santos action, the plaintiffs alleged monetary losses and emotional injuries as a result of the flood suffered by the town of Alviso, California, after heavy rains caused a dam and nearby river to overflow. The United States intervened on behalf of the Federal Emergency Management Agency (FEMA), seeking to recover the insurance payments from the City of San Jose and the Santa Clara Valley Water District, among others, alleging they were responsible for the flooding. 50,000 pages of evidentiary documents were microfilmed, coded and loaded to the data base. In addition, 55 depositions — more than 100,000 thousand pages of transcripts — were digested. ALS enabled the United States to match the organizational resources applied by the defendants and force them into a more reasonable settlement posture. One million of the $1.5 million in claims FEMA had paid out was recovered pursuant to the settlement.

Program Changes:	1991 Base Perm. Pos.	 WY	 Amount	1991 Estimate Perm. Pos.	 WY	 Amount	Increase/Decrease Perm. Pos.	 WY	 Amount
Federal Programs.............................	151	140	$12,940	181	154	$14,524	30	14	$1,584

To meet the expected rise in litigation resulting from the troubled savings and loan industry and implementation of new policies in key Governmental programs, the Federal Programs Branch requires an increase of 30 positions (19 attorneys, 3 paralegals and 8 support staff), 15 workyears, and $1,584,000. Of this amount, 450,000 is for Automated Litigation Support.

Savings and Loan Litigation: As a result of the Financial Institutions Reform, Recovery and Enforcement Act of 1989 signed by the President recently, we expect increased regulatory enforcement actions involving financial institutions to enforce administrative orders and for civil penalties. The new legislation authorizes the Attorney General to bring actions to recover civil penalties for violation of numerous criminal statutes. This authority is expected to enhance enforcement by providing a civil remedy in those cases involving serious violations that might not be suitable for criminal prosecution. The legislation also gives the Attorney General administrative summons authority for such cases and authorizes the disclosure of grand jury information to Civil Division attorneys for the new civil penalty cases. A threefold increase in Federal Programs bank litigation receipts is expected from 1988 to 1991. Potentially billions of dollars are at stake. Central control over this litigation is essential to successfully guide reform efforts. These cases will involve highly-complex legal issues and fact-intensive investigations that cannot be absorbed by existing staff. To meet this mandate, 17 additional positions, 8 workyears and $1,045,000 are essential. Of this increase, $450,000 is for ALS services.

In addition to an increase in affirmative litigation, it is expected that the number of defensive suits involving financial institutions will increase greatly as a result of the legislation. The first cases challenging the statute are already being defended. As regulators implement stricter controls embodied in the new law, including closing insolvent and faltering institutions in dire financial circumstances, Constitutional challenges to the new law and its implementing procedures will intensify. To implement the stronger regulations and penalties, it is imperative that sufficient funding be provided for legal resources to uphold and assert the regulations. Without additional staff, efforts to solve the Savings and Loan crisis will falter.

A program increase of $450,000 for ALS services is also required. These services will be required to organize effective discovery of documents and extensive data base systems for the onslaught of Savings and Loan cases. The full gamut of litigation support will be required including microfilming, document coding and document data bases to control the huge number of documents that will be produced. Mastery of this information will be critical to establishing incontrovertible proof of violations and gaining favorable action on civil penalties to deter future violations.

Other Policy Sensitive Litigation: The Branch expects substantial new litigation involving highly visible policy areas of Housing, the Census, Drug Testing and Health and Old Age Care. Due to significant new legislation and program reforms in these areas, the Branch will not be able to successfully defend and enforce Federal policies without an additional 13 positions, 6 workyears and $539,000.

HUD Litigation. As part of the continuing initiative to rid public housing of drug related activities, the Secretary of HUD has determined that since state laws provide adequate due process, local public housing authorities may waive their administrative grievance procedures in cases of evictions involving drug matters. The initial case challenging this policy has been brought in Connecticut. Additional challenges are inevitable. Additional resource strains will come from attacks on a variety of fronts. Recent legislation concerning the statutory limitation on HUD's obligation to make retroactive payments for Section 8 rent increases has already resulted in cases; more are expected to be filed through 1991, including constitutional challenges. The Branch also anticipates increasing litigation over the restriction barring HUD-insured multi-family housing owners from prepaying their mortgages. Moreover, the Branch predicts growing numbers of cases involving the homeless, implicating HUD as the lead agency for confronting homelessness.

1990 Census. Over 50 suits were filed challenging the 1980 census and its results. The Branch expects a similarly large number of new cases to arise through 1991 objecting to various aspects of the 1990 Census. As with past censuses, actions by numerous jurisdictions and public interest groups challenging the accuracy of census results and procedures or claiming mismanagement are inevitable. Challenges to the expected July 15, 1991 Census Bureau decision whether to statistically adjust the census figures also loom ahead. Additionally, challenges to the methods utilized for counting overseas military and Federal employees are highly likely. Although the census will not be taken until April 1, 1990, the first cases were filed in 1988. Final census results will not be issued until almost a year after the census date. This creates a huge window of opportunity for attacking the census, running through at least 1991. Without additional staff, Federal Programs will not be able to properly fulfill its mandate to effectively defend census challenges.

Drug Testing. In previous litigation, the Branch established the value to society of workplace drug testing as a tool to combat drug use. Now it expects to face extensive litigation over drug testing issues. As more agencies are able to initiate programs, both with respect to their own and contractors' employees and with respect to heavily regulated areas of the private sector, there will be an increasing number of suits to determine the scope of testing. Also, there will be increasing litigation to establish the consequences of testing, both in terms of proof and procedures following a positive test, and the resultant disciplinary or rehabilitative actions. Growing public support of drug testing increases the likelihood of far-reaching congressional action. Only with increased resources will Federal Programs be able to successfully defend this crucial component of the war on drugs.

HHS Litigation. In the aftermath of substantial alterations to the Medicare payment system, the Branch expects increased litigation for the Health and Human Services Department. In the Medicare area, recent statutory changes designed to save the Government billions of dollars by mandating more uniform systems of reimbursement for physician and hospital services will engender vigorous litigation. Other Medicare and Medicaid program changes such as nursing home reform have already engendered much recent litigation by providers and public interest advocacy groups.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Consumer Litigation........	35	34	$2,928	35	39	$3,227	35	39	$3,227	...	...	...

Long-range Goal: To protect the interests of consumers from defective or harmful products and from unfair and deceptive trade practices.

Major Objectives:

To provide effective enforcement of Federal consumer protection statutes through institution of affirmative civil litigation.

To consider the prosecutorial merit of criminal matters under consumer protection statutes and initiate or assist in the conduct of appropriate criminal proceedings.

To represent the United States in defensive litigation when initiatives and programs of the principal consumer protection agencies are challenged.

Base Program Description: The Office of Consumer Litigation is responsible for litigation under Federal statutes that protect public health and safety and regulate unfair and deceptive trade practices in interstate commerce. The Office defends the programs, policies and decisions of the Government in consumer-related areas and enforces those policies by both civil and criminal sanctions in order to avert health risks to the public and deter economic fraud.

The Office initiates affirmative litigation to ensure that unsafe and adulterated foods and drugs do not reach the marketplace, protects the integrity of the drug approval process and enforces Federal policies in the regulation of foods. Referrals from the Food and Drug Administration (FDA), which necessitate the initiation of criminal prosecutions, constitute a major and growing focus of the Office's work. Once mostly relatively simple misdemeanor cases, FDA referrals now are largely felony prosecutions for diverse illegal activity.

Other litigation the Branch initiates covers hazardous and unsafe consumer products, unfair debt collection and consumer credit practices, franchising and door-to-door and mail order sales. The Office also seeks the enforcement of administrative orders relating to price-fixing and divestiture, unfair and deceptive advertising practices, and cigarette and automobile labeling. The Branch defends the Government in challenges to Federal policies and initiatives aimed at protecting the public in its purchases of foods, drugs, devices and consumer products.

Workload and Accomplishments: The workload of Consumer Litigation is presented in the following table:

Consumer Litigation			Estimates	
	1988	1989	1990	1991
1. Personally Handled				
a. Pending Beginning of Year	279	352	416	500
b. Received During Year	192	249	276	277
c. Terminated During Year	119	185	192	212
d. Pending End of Year	352	416	500	565
2. Received and Referred to U.S. Attorneys	177	202	246	291

FDA Litigation. The Office of Consumer Litigation continues to lead a nationwide crackdown on the black-market in illegal steroid drugs. Efforts of the Office have resulted in the successful prosecution of approximately 200 individuals, with numerous terms of imprisonment imposed and approximately $1.2 million in fines assessed. With the participation of the FBI, FDA, Postal Service and Customs Service, these efforts have resulted in the seizure of over $13 million in illegal steroids. The Office also continued its investigation into the smuggling and illegal distribution of unapproved bulk animal drugs for use in food-producing animals, resulting in the convictions of two companies and 17 individuals and seizure of more than 30 tons of adulterated and misbranded animal drugs. Additional highlights of Food, Drug, and Cosmetic Act enforcement action include guilty pleas by an official of a St. Louis drug firm and a corporate distributor to 17 violations involving E-Ferol, a drug linked to the deaths of 38 premature infants, concluding a major case. A Miami corporation pled guilty to 24 misdemeanors and one felony involving distribution of defective heart pacemakers and making false statements to FDA and paid a fine of $623,000. Also, the final phase of the Beech-Nut phony apple juice case was concluded when the former president of the corporation pled guilty to 10 felony violations of the Act, following an earlier plea by the corporation that resulted in payment of a $2 million fine.

Consumer Product Safety Commission (CPSC) Litigation. The Office successfully opposed an effort to prevent the CPSC from enforcing a 1988 congressional ban on distribution and use of butyl nitrite ("poppers") as an inhalant aphrodisiac. Litigation was also concluded against two manufacturers of playground equipment for failure to report defects causing serious injuries to a large number of children, resulting in consent decrees and payment of civil penalties. The Office also filed five injunctive actions against importers of hazardous fireworks seeking to require testing of the fireworks to assure compliance with the Federal Hazardous Substances Act.

Federal Trade Commission (FTC) Litigation. On behalf of the FTC, the Office pursued litigation against a major magazine subscription telemarketing firm and numerous affiliated regional dealers, charging them with millions of dollars of deceptive sales via telephone to hundreds of thousands of consumers throughout the country. The Office also obtained civil penalties and injunctive relief in a number of cases enforcing the FTC's Used Car, Home Insulation, Mail Order and Funeral Practices Rules, as well as the Equal Credit Opportunity Act.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Immigration Litigation.....	40	40	$4,233	40	48	$4,670	40	48	$4,670	...	...	...

Long-range Goal: To protect the interests of the United States by successfully defending challenges to Federal civil immigration programs, policies and initiatives, and conducting civil litigation under the immigration and naturalization laws.

Major Objectives:

To prevail in all civil immigration litigation arising under the Immigration and Nationality Act and related laws, including appellate litigation challenging trial court or administrative decisions in favor of the United States.

To enforce programs undertaken for the purpose of facilitating the apprehension, detention and expulsion of aliens who lack lawful authority to remain in the United States and to represent the United States in civil litigation brought against officers of the Immigration and Naturalization Service and other immigration-interested agencies in their official capacities.

Base Program Description: The Office of Immigration Litigation is responsible for handling a wide variety of immigration cases: individual challenges to enforcement programs and administrative decisions, class action attacks on statutes and procedures and suits directed against Government officials responsible for immigration enforcement. The Office of Immigration Litigation also defends petitions for review filed by individual aliens in the courts of appeals to challenge deportation orders, and actions brought by aliens in the district courts attacking the circumstances of their confinement and/or orders of exclusion from the United States. These cases have the potential for severely hampering the ability of the Immigration and Naturalization Service (INS) to enforce the laws enacted by Congress and for weakening the Government's ability to respond to the influx of illegal aliens. Such suits typically involve requests for temporary restraining orders and/or preliminary injunctions, extensive discovery and trial.

The Office is defending major class actions challenging the legalization provisions of the Immigration Reform and Control Act of 1986 (IRCA) — the most substantial overhaul of the American immigration law in 35 years — as well as procedures adopted by the INS to implement it. As aliens are denied legalization, the Office is now receiving a growing number of individual challenges to legalization determinations. To deter future illegal immigration, the Office will also bring affirmative employer sanctions cases as the INS moves from education to enforcement. Recent enactments, such as Title X of the Foreign Relations Act, strengthen existing statutes which permit the exclusion and deportation of aliens involved in acts of violence, and the Office is playing an increasingly critical role in efforts to bar or expel alien terrorists from the United States. In addition, the Office of Immigration Litigation is currently participating with INS in a joint review of Mariel detainees who are candidates for repatriation to Cuba. The determinations are expected to spawn new litigation because aliens who have been denied parole or ordered repatriated to Cuba likely will pursue all possible administrative and litigative remedies.

Workload and Accomplishments: The workload of the Office of Immigration Litigation is presented in the following table:

Immigration Litigation			Estimates	
	1988	1989	1990	1991
1. Personally Handled				
a. Pending Beginning of Year	406	339	379	435
b. Received During Year	371	497	540	512
c. Terminated During Year	438	457	484	481
d. Pending End of Year	339	379	435	466
2. Received and Referred to U.S. Attorneys	587	457	624	796

The Office directly handles the most complex and sensitive trial and appellate immigration matters, which frequently raise significant challenges to the Nation's ability to control its borders. Notable examples include:

Catholic Social Services v. Meese. This class action broadly challenges the procedures adopted by the Attorney General to implement the Immigration Reform and Control Act (IRCA) and seeks to limit the ability of the INS to regulate the entry and employment of any alien who might apply for benefits under the new act. After a successful interlocutory appeal reversing an injunction, the Office now confronts additional trial court challenges to continuing INS efforts to respond to the more than one million aliens who have applied for IRCA benefits. Here and in other pending IRCA class action suits (*e.g.*, *Ayuda v. Meese*), plaintiffs seek to expand the categories of aliens who may apply for legalization and to extend the statutory application period. In *Ayuda*, the Office on July 18, 1989, secured a major appellate victory concerning the courts' jurisdiction to review the agency's adjudication of claims for IRCA benefits.

Matter of M.A. As political turmoil and socioeconomic misfortune in Central America and elsewhere bring many thousands of aliens to the United States who cannot otherwise qualify as lawful immigrants, asylum and withholding of deportation cases continue to be a substantial and expanding area of litigation. Despite the guidance of the Supreme Court's decisions in *INS v. Stevic* and *INS v. Cardoza-Fonseca*, significant issues remain concerning the availability of refugee status and the appropriate role of the Federal courts in reviewing individual asylum determinations. *Matter of M.A.* is typical of the numerous cases involving important questions concerning the alien applicant's obligation to establish a well-founded fear of persecution.

Velasquez v. Still. With increased frequency, district court actions are brought to challenge the methods by which INS seeks to detect and apprehend aliens who have entered or remained in the United States without lawful authority. A number of such suits, such as this California class action challenging joint operations in which the INS supported the service of arrest and search warrants by state and city police, target the relationship between Federal and local law enforcement agencies in an effort to disrupt or discourage cooperative efforts in matters bearing upon aliens. In *Velasquez* and similar cases, the Office has successfully resisted the demands for injunctive orders restricting such cooperation.

Mester Manufacturing Co. v. INS. Employer sanctions are central to immigration reform, and *Mester* is the first sanctions case to reach the courts of appeals. The Ninth Circuit has upheld both the constitutionality of IRCA's sanctions and INS's enforcement efforts against the employer in question. Although most of INS's actions to enforce the statutory bar to unauthorized employment are resolved at the administrative level (with the payment of fines and subsequent compliance by cited employers), a growing number of cases are being brought to court.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Management and Administration...........	104	104	$6,592	104	114	$7,312	104	114	$7,312	...	...	...

Long-range Goal: Direct the conduct and supervision of all litigation and other matters delegated by the Attorney General to the Civil Division in a fair, consistent, economical and successful manner.

Major Objectives:

To manage the Civil Division with executive leadership and planning while creating a proper balance between administrative oversight and attorney autonomy.

To implement management initiatives and productivity improvements, reduce costs, provide administrative and Automated Litigation Support services and effectively manage the Division's financial resources.

To secure, develop and retain a competent and motivated staff while maintaining a work environment conducive to effective litigation and maximum productivity.

To present to the Department legislative proposals to promote the efficiency and effectiveness of the civil justice system.

Base Program Description: As the "Government's lawyer," the Civil Division represents over 185 agencies in tens of thousands of cases which present a potential loss to the Treasury of more than $140 billion annually in direct awards, higher program costs or changes in anticipated revenue. Annually the Division handles thousands of court challenges to the statutory integrity of the numerous Federal programs established by the Congress as well as challenges to the domestic and foreign policies of the United States.

Workload and Accomplishments: The workload and accomplishments of the Management and Administration program are the sum of the workload and accomplishments of the Division's branches and offices.

Management and Administration			Estimates	
	1988	1989	1990	1991
1. Personally Handled

c. Terminated During Year*	6,664	9,138	7,105	7,396
d. Pending End of Year	19,232	17,200	18,596	19,867
e. Dollars at Issue (Million)	$140,376	$165,108	$179,866	$195,938
2. Received and Referred to U.S. Attorneys	17,183	14,044	13,774	13,230

* An intensive review of old case files in 1989 resulted in the termination of hundreds of cases which should have been closed in prior years. This "bubble" in terminations resulted in a dramatically lower pending count at the beginning of 1990, but did not signify a "real" reduction in work.

Accomplishments and Workload: Phenomenal success was achieved in 1989 — particularly with respect to efforts to protect the public fisc. The Division prevailed in the vast majority of defensive cases, saving the Treasury millions of dollars. In addition, awards and settlements were secured in a wide range of affirmative litigations including procurement fraud, bankruptcy, loan defaults, bribery and kickbacks, pollution cleanup and customs and loan fraud. Highlights of the 1989 litigative record reveal that total collections far exceeded adverse claims awarded, generating a substantial net yield to the U.S. Treasury.

- Affirmative Awards. The Division secured a phenomenal $521 million for the Government in court-imposed awards and negotiated settlements. This is 30 times larger than the comparable figure for 1981.

- Collections. Although many awards and settlements require long-term servicing, the Division collected in cash for the Treasury or its client agencies a record total of $362 million.

- Defense Against Monetary Claims. In cases defended by the Division, claimants sought a payout by the Government of more than $20 billion. Over 99 percent of these claims were defeated, and Government losses were held to less than $125 million.

- Return on Taxpayer Investment. Given a 1989 operating budget of less than $84 million, the Division's accomplishments translated into a dramatic return over investment to the Nation's taxpayers. For every dollar appropriated to the Division in 1989, four dollars were collected in cash, six dollars were secured in judgments and settlements and 248 dollars in claims against the Government were defeated.

Congressional Appropriation Actions: Congress eliminated mandatory and program increases totaling 3 positions, 2 workyears and $2,586,000 which were targeted for affirmative and defensive environmental and general litigation cases.

Sequestration: Budget cuts amounting to $422,000 were imposed in accordance with provisions of the Omnibus Budget Reconciliation Act of 1990.

This budget activity includes resources for defensive and affirmative environmental litigation including criminal prosecution to force polluters to clean toxic waste dumps and meet Federal standards for air and water pollution. Additionally, civil suits and matters relating to title, possession and use of federal land and natural resources, as well as civil litigation involving Indians and Indian affairs, are handled by this program.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount
Federal Appellate Activity	25	26	$2,120	25	26	$2,219	25	26	$2,219	...	...	...

Long-Range Goal: To defend or assert the government's position in Land and Natural Resources Division cases in the appellate courts.

Major Objectives:
To defend successful trial court decisions and to file appeals from adverse decisions in all cases where appellate review is warranted.

To fully satisfy client agencies by formulating legal positions in appellate cases that best represent their interests.

To monitor private party cases and participate as *amicus curiae* in selected cases.

se Program Description. The Appellate unit of the Land and Natural Resources Division handles 90 percent of the appellate litigation arising from Division ses, and works closely with the U.S. Attorneys and Division attorneys handling the remainder. Most work involves coordinating the positions of client agency staff and trial section attorneys, analyzing the cases for appeal, seeking permission from the Solicitor General's Office to appeal adverse decisions, and preparing briefs and oral arguments. The unit also prepares draft briefs for the Solicitor General.

Within the past two years, the Section has become increasingly aware of instances of private lawsuits making new case law in environmental areas of direct concern to the United States, but which do not involve the United States or any federal agency as a party. Such suits can raise significant questions regarding interpretation of a statute (e.g., CERCLA), or regulations under such a statute, which may be controlling in subsequent litigation involving the Division. The Section is currently undertaking a deliberate effort, in conjunction with the Policy, Legislation and Special Litigation, Environmental Enforcement and Environmental Defense Sections, to identify these cases in a timely manner. This effort, while potentially very beneficial to the government's environmental concerns, will be particularly resource-intensive as the need for attorneys to "get into" a case not previously in the Division, write a memorandum to the Solicitor General recommending *amicus* participation, and subsequently write the brief itself, must all be accomplished within a relatively brief span of time.

Accomplishments and Workload: Accomplishments of the Appellate program are presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Cases/Matters pending, beginning of year	969	1,023	1,041	1,091
Cases/Matters received	288	286	325	325
Workload Production Estimates:				
Cases/Matters closed	234	268	275	275
Briefs Filed	300	239	275	275
Oral Arguments	119	120	145	150
Memos for the Solicitor General	131	107	130	130
Substantive Motions	132	96	130	130
Cases/Matters pending, end of year	1,023	1,041	1,091	1,141

The accomplishments of the Section's work is reflected in the quality and wide array of cases it handles. Among the more notable this past year was *Sylvester v. U.S. Army Corps of Engineers* (Ninth Cir.) which concerned the scope of review of decisions by agencies under the National Environmental Policy Act. Under NEPA, a federal agency must prepare an environmental impact statement for federal projects having a significant effect on the quality of the human environment. The difficulty arises when a federally permitted activity is only a small part of a larger non-federal project — and there is disagreement as to how much of the larger project should be considered to be an "effect" of the federal activity. The court held that the scope of an agency's duty to consider environmental effects of its projects, as determined by that agency, should be accorded deference -- in this case a rather narrow scope as the controversy revolved around a golf course situated in a large multi-component resort development. The decision is important in reducing the potential for suits under NEPA to tie-up or block essentially non-federal projects.

In *United States v. 594,464 Pounds of Salmon*, a significant victory of a different sort was won. Here the Court upheld the seizure of salmon under the Lacey Act, because the fish had been exported to the United States from Taiwan in violation of a Taiwanese "regulation". The Taiwanese legal system is unlike the legal systems in the West, and the "regulation" violated was technically neither a statute nor regulation as we use the terms. Nonetheless, the court found that it qualified as "law" under the Lacey Act, and upheld the seizure. The decision is expected to strengthen the hand of the government in using the Lacey Act to apply foreign laws for the protection of fish and wildlife. Additionally, such an application enables us to underscore our commitment to international cooperation.

In United States v. Fisher, the Seventh Circuit upheld the right of EPA under CERCLA to enter land (in this case an NPL site) when "...there is a reasonable basis to believe there may be a release or threat of a release of a hazardous substance of pollutant". The court found that the statutory test which the United States must meet was "undemanding" and affirmed the district court's injunction allowing the EPA on the land.

Finally, the Section has already begun to handle criminal cases and this trend will accelerate as more agents come aboard and more training is completed. One such appellate case this past year was United States v. Greer. The decision was gratifying because it reinstated the jury verdict in which the owner of a waste recycling and transportation business was convicted of dumping hazardous wastes and failing to report the dumping.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount
Land Acquisition..	32	28	$2,898	32	28	$3,025	32	28	$3,025	...	...	...

Long Range Goal: To obtain real property necessary for public purposes through condemnation proceedings which exercise the sovereign power of eminent domain, securing the lowest possible compensation awards consonant with fairness to both landowners and the government.

Major Objectives:

To secure the lowest possible compensation awards consonant with fairness to both landowners and the government.

To achieve and maintain a current status in the condemnation caseload (i.e., to reduce the pending caseload to the point where the backlog does not exceed the annual input).

Base Program Description: By means of the land acquisition program, properties needed for Congressionally authorized purposes, but which acquiring agencies are unable to directly purchase, are obtained through condemnation proceedings in which just compensation is determined and awarded to property owners. Acquisition by condemnation is a means of last resort; agencies are required by law, to the greatest extent practicable, to make every reasonable effort to acquire property by negotiation and direct purchase before requesting condemnation. A top priority is to move these high-exposure cases expeditiously.

The unit condemns land for a myriad of federal public purposes authorized by Acts of Congress. Examples include the improvement and protection of navigable waterways, flood control, military facilities, national parks, forests, lake shores and seashores, scenic and wild river systems, reclamation and irrigation of arid lands in western states, electric power generation and transmission facilities, wildlife preserves, airports and air traffic control facilities, and buildings, offices and facilities for federal agencies. Unless the government is able to exercise eminent domain to acquire these lands, the public purposes for which they are needed will be frustrated.

The Land Acquisition Section includes units devoted to appraisal analysis, title research and opinions, and condemnation litigation. In most condemnation cases, the issue placed before the district courts is the fair value of property taken by the government, and thus the unit is heavily dependent on expert analysis and testimony.

Accomplishments and Workload: Accomplishments of the Land Acquisition program are presented in the following table:

Item	1988	1989	Estimates 1990	 1991
Tracts pending, beginning of year	5,763	5,768	5,618	5,968
Tracts received	794	560	1,350[1]	1,350
Tracts closed	789	710	1,000	1,100
Tracts pending, end of year	5,768	5,618	5,968	6,218
Preliminary Opinions of Title Prepared	121	110	150	150
Final Opinions of Title Prepared	24	79	125	125
Agency-delegated Title Opinions Reviewed	2,044	1,352	2,200	2,200
District Court Title Hearings (Tracts)	6	...	10	10
Appraisal Reviews (Tracts)	786	433	810	810

The workload of this section involves condemnation litigation as well as the work of separate Title and an Appraisal Units. In 1989, the Section handled claims of over $86 million for property which government-contract appraisers valued at $30 million. This difference of $56 million was the critical issue in the Section's lawsuits. During 1989, courts awarded judgments totaling $39.6 million, representing a savings of $46.4 million achieved by the program or, put differently, a government savings of nearly $5 for every contested dollar awarded.

With the advent of the Equal Access to Justice Act (EAJA), another dimension was added to the more traditional litigation of this section. Increasingly, the conclusion of condemnation proceedings can mark the beginning of an EAJA mini-trial where the government is tasked with establishing whether the position of the government was "substantially justified" and, additionally, contesting the amount of the fees, costs and expenses claimed by the prevailing parties. These proceedings potentially occur in every case in which the private party prevails at trial (i.e., obtains a judgment that is closer to their valuation evidence than to the government's). Another law expected to affect the section's workload in 1991 is the November 1988 enactment of the tax bill, P.L. 100-647, which had as a rider, the taking of an additional 600 acres of land for the Manassas National Battlefield Park. In taking this land, Congress wielded an unusual and seldom-used power, a legislative taking, and acquired title to the property immediately by operation of law. This extraordinary power was used to prevent the land from being developed into a shopping center and some 100 homes.

Turning to significant cases handled this past year, one of the most notable was U.S. v. Kirby Forest Industries which was handled in conjunction with the United States Attorney for the Eastern District of Texas. Following the Supreme Court's earlier remand, a trial was heard and the government obtained a favorable award resulting in a refund of $1.5 million on the award previously granted. Additionally, the program obtained a very favorable trial award of $1.1 million in a minerals case, saving the government $13.9 million on the property owner's claim of $15 million.

---

[1] Workload in 1990 and 1991 is expected to be significantly higher than prior years as a result of the Act to Establish the Big Cypress National Preserve Addition in the State of Florida, which was signed into law April 29, 1988. The Act provides for the acquisition of 146,000 acres of land to be substantially completed within five years of enactment of the Act. The National Park Service anticipates approximately 2,500 tracts of land will be referred for condemnation. The agency further advises that it will be about 15 months after enactment of the bill before it will begin referring tracts, thus we anticipate the first receipts sometime in August of 1990 to be followed by approximately 500 tracts per year during the succeeding five-year period.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount
Environmental Protection....................................	178	161	$16,348	178	177	$17,745	224	202	$24,313	46	23	$6,568

Long Range Goal: To defend and enforce federal programs to protect wildlife and the environment without undue economic costs, and to promote voluntary compliance with the Nation's environmental protection laws.

Major Objectives:
To seek and obtain stiff criminal penalties and incarceration for persons and corporations involved in illegal dumping, and in illegal plant and wildlife trading.

To recover monies spent by or on behalf of federal agencies for damage to natural resources within their control.

To vigorously enforce legal standards and limits on pollution and waste discharges.

To maintain the rational, coherent operation of agency programs through the defense of agency actions and rules and regulations in court.

To successfully defend environmental programs and regulations from narrowly restrictive or overly broad interpretation.

To defend federal agencies whose facilities are the subject of litigation, while encouraging full compliance with environmental standards.

Base Program Description: The Environmental Protection unit is comprised of the Environmental Crimes, Environmental Defense, Environmental Enforcement, and Wildlife and Marine Resources Sections. The Environmental Crimes Section prosecutes criminal violations of environmental protection statutes such as the Clean Air Act, Clean Water Act, Resource Conservation and Recovery Act, and Toxic Substances Control Act, where the standards for criminal as opposed to civil sanctions involve willful, knowing violations. This criminal initiative was undertaken first in 1982 when a Crimes Unit was established as part of the Environmental Enforcement Section. In 1987, as a result of the success of the program, a separate Environmental Crimes Section was created within the Land and Natural Resources Division.

The Environmental Defense Section defends rule-making, regulatory and permit actions and decisions made by the Environmental Protection Agency, the Army Corps of Engineers, and the Coast Guard, and represents federal agencies sued for violations of environmental laws. The Section's cases include petitions for review of agency regulations in the appellate courts, and district court cases involving permit decisions, federal facility lawsuits, and dredge and fill actions in navigable waterways. In addition to its defensive caseload, the Section has responsibility for affirmative litigation to enforce the wetlands laws.

The Environmental Enforcement Section conducts affirmative civil litigation to control and abate pollution. This program is primarily responsible for judicial enforcement of Environmental Protection Agency programs which regulate discharges into the Nation's air and water, and govern pesticide operations, solid waste storage, and nuclear waste, and natural resource damages on behalf of many other federal agencies. Approximately 90 percent of civil enforcement actions are personally handled by Environmental Enforcement Section staff attorneys. The Section also has primary responsibility for Superfund litigation to compel site cleaning and to recover federal funds.

More so than any other program element within the Division, the Environmental Enforcement Section makes money for the government. Since 1988, it assessed more than $50 million in civil penalties, stemming from enforcement actions directed at a number of major Fortune 500 companies. But revenue aside, this section is the principal civil enforcer of the federal environmental laws and therefore largely responsible for upholding the President's mandate "...to use every tool at their disposal" to enforce the environmental laws[2]. Specifically, they are charged with responding to the President's call for "...faster cleanups and tougher enforcement of penalties against polluters." To this end, the section not only brings suits against violators referred by the staff of 3,500 EPA enforcement personnel as well as other federal agencies, but engages in extensive client counseling activity, reviewing and commenting on literally hundreds of EPA policy documents each year and working closely with other Division, Department and Congressional personnel to draft and revise legislation as the need arises. Section personnel also expend considerable time addressing environmental and educational conferences throughout the country; since 1988, EES attorneys made over 75 such appearances.

The Wildlife and Marine Resources Section handles civil and criminal litigation to halt the growth in illegal wildlife and plant trade, and to defend federal agency regulations concerning wildlife and plants and federal programs such as dam construction which are challenged on wildlife damage grounds.

Accomplishments and Workload: Accomplishments of the Environmental Protection decision unit are presented sequentially by program element:

			Estimates	
Item	1988	1989	1990	1991
Cases/Matters pending, beginning of year	3,302	3,756	4,259	4,694
Cases/Matters received	1,264	1,088	1,465	1,735
Cases/Matters closed	810	585	1,030	1,150
Cases/Matters pending, end of year	3,756	4,259	4,694	5,279

Environmental Crimes - Since its October 1982 inception as a sub-unit within the Environmental Enforcement section, the Environmental Crimes program has returned indictments against 569 corporations and individuals; thus far, 432 defendants have pled or been found guilty resulting in $26.1 million in fines and the imposition of nearly 271 years of jail time, of which 102 years had been served as of October, 1989. The cases prosecuted have involved a broad spectrum of industry, including shipbuilders, oil refineries and pipelines, tanneries, demolition companies, chemical storage facilities, wood preservers, printing companies, emissions testing laboratories, food processors, dairies, auto body shops, dry cleaners, and companies whose sole or primary business is the handling of hazardous waste. These include a number of large, Fortune 500 companies such as Nabisco, Ralston-Purina, Keebler, W.R. Grace & Co., Orkin Exterminating, Ocean Spray, and Pennwalt.

A number of notable (and resource-intensive) environmental crime cases were concluded this past year, beginning when a Federal judge found Orkin Exterminating (United States v. Orkin Exterminating Co., Inc.), responsible for the fumigation deaths of a Virginia couple and subsequently fined the nation's biggest pest control company the maximum $500,000 fine. Following a lengthy trial (six weeks) in United States v. William Dee, et al., a Baltimore jury returned verdicts against three civilian managers of the United States Army's Chemical Research and Development Command. The charges grew out of an investigation of a sulfuric acid spill into a Chesapeake Bay tributary which had caused a massive fish kill in September of 1985. The "Aberdeen" case is an important victory for the environmental criminal enforcement program in that it alerts responsible federal employees that they, as well as their private sector counterparts, will be held answerable to criminal charges if environmental laws are ignored. The section obtained its first jail sentences involving criminal wetlands violations and, just last month (December 1989), fines of nearly $300,000 and prison terms were imposed — including an 18-month jail term for the company president — on a major New England hazardous waste transporter (United States v. MacDonald and Watson Waste Oil Co.). And, following a two-year undercover investigation by the FBI, the program began working with the numerous documents and evidentiary records gathered concerning illegal hazardous waste and nuclear storage handling practices at the Rocky Flats plant near Denver Colorado.

---

[2] Presidential address to Congress, February 9, 1989.

In U.S. v. Ashland Oil, Inc., the company, in February 1989, pled nolo contendere to charges stemming from a spill of 700,000 gallons of diesel oil into the Monongahela River from a 48-year old storage tank, affecting drinking water supplies in three states and plant and animal life for 1,000 miles downstream. Ashland was sentenced to a fine of $2.25 million for violations of the Clean Water and the Refuse Acts — the second-largest environmental criminal fine, exceeded only by that imposed on Allied Chemical in the James River kepone pollution case. But as important as the fine imposed is the case law precedent established in Ashland which promises to be beneficial in guiding our criminal investigation and litigation involving the spill of 11 million gallons from the Exxon Valdez in Alaska. Since shortly after this massive spill in March, the Environmental Crimes Section has devoted several attorneys to the investigation of this major environmental disaster.

Environmental Defense - As a direct result of this program's involvement, landmark agreements were reached this year involving two of the federal government's most controversial nuclear production facilities.[3] Under terms of the Hanford Interagency Agreement, signed February 27, 1989, the Department of Energy has promised to seek $2.8 billion over the next five years to commence the cleanup of the production site in Washington state which has been called "...the nation's most contaminated weapons production site"[4], ending years of legal wrangling and paving the way toward accelerated cleanup of the reservation over the next 30 years and delineating specific cleanup deadlines and duties for the various state agencies and the EPA and DOE. Similarly, in Ohio v. Department of Energy, the program negotiated a consent decree which set out DOE's obligations to clean up hazardous wastes in a manner satisfactory to both the State of Ohio and the EPA. Significantly, these agreements are expected to serve as prototypes for other such sites and hasten substantive environmental compliance as quickly as possible so that federal agencies can use their resources to achieve a cleanup rather than underwrite the cost of protracted litigation. (For example, in the instance of Ohio it has been estimated that the consent decree saved the government $2 million in litigation cost alone.)

On a different note but also related to this section's Federal Facility workload, was the April, 1989, decision of the Ninth Circuit upholding the government's position vis-a-vis civil penalties in United States v. Washington. Under the environmental statutes, sovereign immunity has been waived for substantive compliance, and the government must set a positive example of abiding by the very laws it enforces against private industry. However, we have maintained that sovereign immunity has not been waived for the payment of civil penalties by federal agencies. This issue has been litigated or is pending in approximately 12 district court cases. The potential exposure of the Treasury for such penalties is high, with estimates in current cases ranging above $10 million.

In H.W.T.C. v. E.P.A., another major decision this year, the Court of Appeals for the District of Columbia (cert. denied) further articulated who may and may not sue to challenge government regulatory action. It limited access to the courts for parties who have only a limited or academic interest in a regulatory regime. The decision prohibited an industry whose members were not directly impacted by the regulations from bringing challenges to them, applying the Constitutional principle of standing to bring suit. As a result, federal courts will not be burdened with lawsuits brought by parties who have merely a philosophical dispute with the government, rather than a real concrete interest in the particular program.

---

[3] Overall, the Energy Department plans to spend $2.4 billion in 1990 and up to $3.7 billion each of the following four years to bring the nation's nuclear weapon production plants into compliance with environmental and safety laws (The Washington Post, July 31, 1989; p. A-1).

[4] The Washington Post, February 28, 1989, p. A-6.

Environmental Enforcement - Over the past eight years, Environmental Enforcement section cases have resulted in civil penalty assessments in excess of $125 million; over $50 million since 1988.

Among the more notable cases handled by the section this past year was U.S. v. Ford Motor Company which was finally settled after the U.S. Supreme Court denied Ford's petition for a writ of certiorari. The case involved the largest penalty ($1.75 million) for violation of volatile organic compound emission limits. In addition, the consent decree includes a certification by Ford that it has closed and ceased operation of six noncomplying vinyl coating lines until it obtains state operating permits. In U.S. v. Borden Chemicals, a consent decree was entered settling this case for $1.25 million and extensive injunctive relief. The defendant violated EPA's rules controlling vinyl chloride emissions at its complex in Geismar, Louisiana. The settlement was twice the amount of the largest vinyl chloride settlement previously obtained. Finally, following a 31-day trial, the District Court in the Northern District of Indiana issued a 200-page opinion in U.S. v. Environmental Waste Control, ruling in the government's favor on virtually every issue in this complex RCRA case involving a hazardous waste landfill. The court held that the defendants had lost interim status and ordered the landfill closed permanently. It also ordered the defendants to carry out a government-recommended corrective action plan and imposed a civil penalty of nearly $2.8 million.

Fiscal 1989 saw two major environmental enforcement initiatives under the Clean Air Act and the Clean Water Act. In August 1989, the Enforcement Section filed 13 lawsuits against 45 corporate and individual defendants alleging violations of federal clean air requirements governing the proper removal and disposal of asbestos from buildings. These 13 actions were the most recent of the department's ongoing efforts to enforce the asbestos removal regulations. In the preceding five years, the Enforcement section filed 120 civil actions in federal courts alleging violations of EPA's asbestos rules. In a second enforcement initiative, the section filed suit against the cities of Detroit, El Paso, Phoenix and San Antonio for violating the Clean Water Act by failing to control industrial discharges of toxic waste waters into their sewage treatment systems. Twenty other cities were named in recent judicial actions for similar violations.

Wildlife and Marine Resources - Building on its role as the chief legal advisor and prosecutor for the Fish and Wildlife Service, the Section completed several noteworthy prosecutions involving widespread violations of migratory bird hunting laws, illegal big game hunting in national parks and wildlife refuges in Alaska and Virginia, and smuggling of polar bear hides into the United States. These prosecutions were multi-jurisdictional in scope and frequently involved as many as forty to fifty defendants. An example of such an undercover investigation was dramatically recounted in TIME Magazine (February 20, 1989; p.18.):

> "...waterfowl numbers have been plummeting [in Texas] in the face of droughts, habitat loss and illegal hunting and because a preliminary investigation uncovered widespread flouting of the wildlife laws...investigators simply masqueraded as duck hunters. Of the 42 hunting clubs visited, an astonishing 41 violated basic waterfowl-protection laws. In the course of the [undercover] operation, agents regularly documented egregious violations. At one posh club, for instance, an undercover agent was asked by unsuspecting guides to videotape a hunt during which 13 hunters slaughtered 204 birds (139 over the limit for that group). When a guide yelled to spook hundreds of geese clumped together in a pond, hunters fired blindly into the rising cloud of birds. After the fusillade, the water was littered with dead and wounded snow geese."

The subsequent prosecution resulted in 38 convictions, over $350,000 in fines and civil penalties, and nearly 30 years of incarceration. A large number of vehicles and airplanes used in the commission of the offenses were also forfeited.

Program Changes:

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount
Environmental Protection..........	178	179	$17,745	224	202	$24,313	46	23	$6,568

For 1991, increases of 46 positions, 23 workyears, and $6,568,000 are requested for the Environmental Protection program. This includes an increase of $3.9 million for automated litigation support for the Exxon Valdez natural resource damage litigation. The increases would be distributed among all of the four activities in this program, i.e., Environmental Crimes, Environmental Defense, Environmental Enforcement and Wildlife and Marine Resources.

The requested increase will enable the Division to combat the demands of:

- Environmental Law Training and Consultation — be it for AUSAs, EPA investigators, FBI agents, state/local officials or operators of federal facilities, the demand for advisory services is expected to skyrocket in the wake of new laws, increased sanctions, and heightened public awareness of environmental issues (e.g., Exxon Valdez and Aberdeen). The FBI, for example, is requesting 102 additional positions in 1991 for environmental crime. These must be viewed against a backdrop of growing public cynicism and proposed legislation (e.g., H.R. 3785 last year, H.R. 1056 this year) which seeks to limit or waive sovereign immunity;

- Drafting and Implementing New Legislation and Regulations — ranging from the Ocean Dumping Ban and the Medical Waste Tracking legislation enacted pre-election in the wake of last summer's littered beaches to the newly-amended Federal Insecticide, Fungicide, and Rodenticide Act and recently-effective bounty provisions stemming from enactment of SARA. Apart from the considerable resources expended on enforcing the laws, each of the program elements herein works with the PLSL section to draft and revise existing legislation as experience and case law develop; current examples include devising a new penalty structure for oil spills, and commenting on proposed revisions to the Clean Air Act; and,

- Environmental Initiatives — ranging from the President's official endorsement of "no net loss" interim policy for wetlands to the Secretary of Energy's unprecedented denouncement of mismanagement at the nation's nuclear weapons facilities and the policy reversal embodied in EPA Administrator Reilly's efforts to redirect $75 million and hire 500 new enforcement officers to halt the nation's polluters — this Administration has clearly signaled a renewed commitment to enforcement of environmental laws.

These demands and their effect on each of the program elements are discussed below:

Environmental Crimes — For 1991, this program is requesting 12 additional positions (5 attorneys, 3 paralegals and 4 support), 6 workyears and $642,000. The agencies involved in environmental investigations look to the Environmental Crimes Section for leadership and direction. To meet the obligations and expectations inherent in that role, and to maintain a standard of professionalism in the program, we must have both sufficient resources and a suitable organization structure. To fulfill this leadership role necessitates a closer alignment with the EPA and FBI regional divisions as well as the Offices of the United States Attorneys. Starting with the increase of 12 positions in 1991, and continuing in 1992, we intend to establish three internal units, with workload divided geographically, each headed by a supervising attorney. This will lead to approximately three attorneys devoted to the work of each EPA region, which we view as de minimis coverage given that large investigations/cases consume the full-time attention of more than one attorney, e.g., 4,000 hours have been devoted to the Baytank prosecution so far. This core level of staff is essential to allow the section to handle both routine matters across the country, and large, resource intensive cases such as Exxon Valdez and Rocky Flats.

Each unit will have at least one paralegal and two secretaries. Decisions to open cases will, in the first instance, be made by the unit supervisor and prosecutive decisions likewise, in the first instance, will be reviewed and approved by the unit supervisor. Such a structure corresponds to that found in the criminal divisions in the U.S. Attorneys offices and, we feel, will encourage prompt yet adequate review of investigative issues and prosecutive decisions. A major premise underlying the new structure is the notion that agency rapport is essential. The Chief and the Assistant Chief will continue to meet regularly with supervisory agents of EPA and FBI[5] to coordinate investigative efforts and policies. In the same vein, the Section leadership has recently proposed that the Attorney General's Advisory Committee consider creating a new subcommittee on environmental law. To meet the needs of the districts, the Section will target attorney applicants who have litigative experience. Our goal is to establish a direct line of communication between Washington and the field; one where the callers come to know the "team members" on the other end. ECS attorneys will be sent to the districts to participate in the Law Enforcement Coordinating Committee programs to discuss the need for cooperative efforts of local, state, and federal officials in the enforcement of the environmental laws.

Another factor increasingly affecting this program's workload are the Sentencing Guidelines which were reaffirmed this year by the Supreme Court (United States v. Mistretta). Although the bulk of the current criminal caseload involves crimes committed before the effective date of the guidelines, by 1991 it is expected that the docket will be dramatically affected by the new penalties which are relatively high (e.g., 27-33 months of incarceration for a one-count conviction involving a fairly common type of hazardous waste violation). Faced with these prospects, we expect more defendants to risk trial -- replete with all the attendant extra resources trials demand. Within a year, guidelines for organizational sentencing should also be in place; it too is likely to raise the stakes for corporate defendants. Finally, the most resource-intensive aspect of the sentencing guidelines involves both individual and organizational defendants--the fact that some cases will require prosecutors to get drawn into lengthy hearings and other proceedings over factual issues. This was underscored in the U.S. v. Ashland Oil experience when, in order to obtain the harsher sanctions available under the Alternative Fines Act, much time and effort was expended in determining the gross loss and structuring a suitable method of proof and argument to present to the court.

Finally, the level of criminal referrals is expected to spiral as the fruits of training and hiring become apparent. The FBI has not only trained 325 agents in environmental crime[6] but continues to target resources to the area. A dramatic confirmation of this trend was apparent in the June 6, 1989, raid of the top-secret Rocky Flats nuclear weapons plant outside Denver, Colorado. Acting in concert with EPA investigators, approximately 70 FBI agents searched for evidence of illegal storage and dumping of radioactive and other hazardous wastes. The FBI also has authorized training for 12 field offices in 1989, and is incorporating a new one-hour block of instruction on environmental crime into its new agent training program. More importantly, for 1991, the FBI is requesting an additional 62 agents and 40 general support positions. For its part, EPA expects to increase its "street agent" strength from 38 to 53 in 1990 (+40%); they are also requesting another significant increase in 1991. When coupled with the newly-effective bounty provisions of SARA (Superfund Amendments and Reauthorization Act), we expect this blanket approach to the training of agents, technicians and lawyers to produce a surge in referrals come 1991.

Environmental Defense -- For 1991, this program element is requesting 15 additional positions (8 attorneys, 2 paralegals and 5 support), 7 workyears and $768,000 (including $200,000 for automated litigation support). The Environmental Defense Section (EDS) request is grouped into three distinct categories: Federal facility work; defending new legislation, and; enforcing the wetlands laws. The federal facility docket continues its unabated growth; consider:

	1985	1986	1987	1988	1989
Federal facility cases	45	82	103	145	187

---

[5] Recently, the FBI upgraded the priority assigned to environmental crime and, as of March 1989, 100 agents spread among 50 of the FBI's 57 field offices were involved in 195 environmental crime investigations. This represents a dramatic five-fold increase within the past four years. Similarly, in 1984, there were no indictments or informations involving environmental crime; in 1988, there were 59.

[6] All divisions which receive FBI field training are encouraged to invite state regulatory and enforcement officials; consequently, over 1,000 state and local law enforcement agents have been trained in environmental crime investigation -- an important byproduct of this ancillary training are the substantial dividends in terms of joint case development and case referrals.

Whereas the advice and consultation services offered by the Environmental Crimes Section are designed to encourage litigation, those offered by the EDS are designed, in large part, to limit or avoid litigation -- at least as it applies to Federal Facilities. As mentioned in the preceding "Accomplishments" portion of this document, EDS has made some trailblazing progress this past year -- progress aimed at expediting fair and efficient compliance with the law.

More specifically, it is the view of EDS that ~~the best~~ long-term approach to federal government compliance with environmental laws[7] is through the development of standard protocols for compliance agreements, and training for federal agency personnel so that non-compliance incidents can be resolved quickly, thereby avoiding protracted, expensive litigation costs. To this end, EDS has worked with the Departments of Defense and Energy to develop model language for hazardous waste clean up agreements with EPA; similarly, efforts are now underway to develop prototype agreements with States. In a somewhat different vein, EDS will be filing suit on behalf of the Department of Energy (DOE) against the State of Nevada to overcome the State's efforts to prevent DOE from continuing certain activities at Yucca Mountain, Nevada. DOE is required by the Nuclear Waste Policy Act to conduct site characterization activities at Yucca Mountain to determine its suitability as the Nation's first high-level nuclear waste and spent fuel repository. The outcome of this litigation could have a very significant impact on the Nation's ability to safely dispose of the great amounts of nuclear waste which have been generated and will be generated in the future.

Complementing these efforts have been the development and presentation of a series of training seminars in hazardous waste law. Within the past year, these have included: two environmental law presentations at the Legal Education Institute (LEI), attracting 120 government-wide lawyers each time, as well as additional LEI programs in the field; a two-day hazardous waste training course for the Department of the Interior; two-day environmental law courses planned for 50-70 Navy attorneys at three separate conferences during this fiscal year.

Apart from its advisory role regarding federal facilities, additional EDS resources will be needed to defend three discrete case types: 30-50 petitions for review arising from EPA's 850-page proposed RCRA regulations due in May of 1990; recent amendments to section 304 of the Clean Water Act which have unexpectedly resulted in 30 new cases over the past three months; and, an emerging new class of cases — Fee/Tax cases. Fee/Tax cases involve the obligation of federal agencies to pay certain fees assessed by state and local governments. Under the law, the federal government is immune from state and local taxation, but is required to pay reasonable administrative fees for services rendered by state and local governments (e.g., schooling of children in localities with federal installations). This past year, the EDS has initiated a working group of concerned executive branch agencies (Defense, Energy, Commerce and others) to develop a consistent legal approach to the many fees assessed under environmental statutes. For example, over the past year, the Defense Department has been assessed more than $2 million for such "fees" in California alone. Currently New York has filed four lawsuits seeking to collect certain contested environmental fees, in excess of $5 million and other states and localities are aggressively pursuing fee structures. As a result, these cases are a high priority with our clients and we expect both our affirmative and defensive caseload to be affected.

---

[7] Under CERCLA (Comprehensive Environmental Response, Compensation, and Liability Act of 1980; aka "Superfund") the federal government has the same responsibility for environmental compliance as any private party and is likewise liable for cleanup. Federal agencies are expected to fund such actions through their normal budget process (i.e., not use Superfund monies). This liability extends to the government's contractors and lessees. Since the government owns one-third of the nations's land area, this liability includes hazardous wastes sites at thousands of landfills, dumps, laboratories, military installations and hospitals, weapons productions plants and industrial facilities. In 1986, in SARA (Superfund Amendment and Reauthorization Act), Congress instructed EPA to create a federal agency hazardous waste compliance Docket, listing all hazardous waste sites owned, operated or formerly owned or operated by the government.

Turning now to the legislative category, additional positions are sought for defensive litigation arising from recent legislation or newly-issued regulations. Among the latter are RCRA permit cases where 1,500 land disposal facilities were to have been permitted by November 1988. As predicted in last year's budget for EDS, non-discretionary duty suits have arisen where EPA failed to meet its mandate and numerous defensive suits by environmental groups and permittees challenging the terms of the issued permits will continue to affect the section's workload over the next 2-3 years. Additionally, the 1988 Amendments to the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA) have expanded EPA's authority to review and authorize for use certain chemicals and products; these decisions are certain to be challenged by a full array of citizen groups, farmers and manufacturers. An example of such a challenge was Nader v. EPA which involved EPA's standard for the pesticide ALAR, used in crops such as apples. While EPA's action permitting very low levels of ALAR residue in processed food was upheld by the court, ALAR is one of many pesticides which EPA will be reviewing as part of its new duties under the FIFRA amendments. Proper control of pesticides under the FIFRA amendments is a high EPA priority, since pesticide use is a major, national source of ground and surface water contamination. EPA has already informed us that it is dedicating additional resources to this growth area and an additional 20 cases are likely in 1991.

Corresponding to the category of Major Initiatives is the President's widely-publicized endorsement of the "no net loss" doctrine as recommended by the 1988 National Wetlands Policy Forum, chaired by Governor Kean of New Jersey. EDS requests additional positions to ensure compliance with the recommendation that additional resources be devoted to enforcement. Already, the Administrator of EPA has responded to this policy initiative by upgrading EPA's wetlands enforcement program — a move expected to increase our related workload in three ways. First, referrals for judicial action will no longer come primarily from the Corps of Engineers as in the past. Instead, they will come from EPA which, under terms of the EPA-DOJ Memorandum of Understanding, requires action within 60 days of receipt. To properly staff such cases, resources must be available to assist in the pre-referral review. We will also have to litigate the scope of remedy, including the necessary restoration of the wetland or mitigation in order to meet the "no net loss" provision. Relatedly, EPA's authority to assess administrative penalties for violations has been significantly expanded — leading to an additional 30-40 judicial challenges for the section. Finally, EPA is exercising its statutory authority to "veto" decisions of the Corps. Between 1984 and 1988, EPA exercised this authority only five times and there were only two lawsuits challenging such vetoes. By contrast, halfway into 1989 there have been four "vetoes" and two of these cases are already in litigation. These matters generally involve sensitive policy issues between the Corps of Engineers and EPA, as well as significant economic expectations by the parties seeking to fill the wetlands. As a result, the cases are resource-intensive and likely to generate an increase of second tier lawsuits seeking monetary compensation from the government for alleged losses suffered by developers.

Environmental Enforcement — This section is requesting 16 additional positions in 1991 (8 attorneys, 3 paralegals and 5 support), 8 workyears and $4,850,000 (including $4.1 million for automated litigation support). The Environmental Enforcement Section request will be used for the massive Exxon Valdez litigation, for the new class of natural resources damages cases, and for workload arising out of new legislation.

Civil litigation for natural resource damages arising from the massive oil spill into the Prince William Sound by the Exxon Valdez will be in full swing during 1991. Four natural resource trustees, the Departments of Agriculture, Commerce and the Interior, together with the State of Alaska, are pursuing restitution and recompense for lost or damaged natural resources. A case of this nature is fraught with complexities, ranging from relatively minor logistical concerns (travel to and from Alaska; arrangements for meeting with the numerous state and federal officials and their experts) to major litigation concerns (multi-million page evidentiary document collections; absence of clear precedent; contradictory applicable statutes). The Environmental Enforcement Section has taken the lead in coordinating solutions to these problems, big and small. In 1991, a major investment of $4.1 million for automated litigation support is needed to stay on top of this immense litigation.

Similar in strategy, but smaller in scope, are a new class of non-EPA cases involving sites under federal jurisdiction where damages to natural resources occurred as a result of hazardous substance handling at the site. Acting as a "trustee" of the injured resources, a federal agency may ask EES to pursue a claim for "natural resources damages" against the private parties responsible for the contamination. A full-blown natural resource damages claim must be based on a damages assessment; such assessments often require sophisticated economic techniques to value non-market resources, requiring extensive expert testimony. Accordingly, these cases (notably AVX and similar claims under the Clean Water Act in Shell Oil and, most recently, Exxon for the Alaska oil spill) are enormously resource-intensive, involving issues of both law and economics. Moreover, unlike other CERCLA claims, these case may be jury-triable. In AVX, for example, two three-month jury trials against individual defendants are scheduled during 1990 and another three trials in this case are set for 1991. (Parenthetically, natural resource damages issues also arise when potentially responsible parties ask to be released from such claims as part of settlements with EPA; EES estimates that they will have to address such claims in the course of 50-75 settlements in 1991). To date, we have received eight natural resource damage cases and, based on the clients' plans to meet the statute of limitations, which for claims at many of the sites will run on March 20, 1990, the section expects to receive another 10-20 natural resource damages cases from Interior and Commerce.

By 1991, the section anticipates a significant surge in referrals stemming from legislation enacted by the 100th Congress. These include the Ocean Dumping Ban Act of 1988, which amended the Marine Protection, Research and Sanctuaries Act to prohibit further dumping of sewage sludge and industrial waste in the ocean and establish a scheme for phasing out currently permitted dumping; the Asbestos Hazard Emergency Response Act which addresses the removal of asbestos from school buildings; the 1988 Amendments to FIFRA (addressed in the discussion of the Environmental Defense Section above); The Shore Protection Act, which regulates the transportation of municipal and commercial waste in coastal waters of the United States; and the Medical Waste Tracking Act of 1988, which requires the implementation of a major demonstration program for "cradle to grave" tracking of certain medical wastes. Finally, legislation implementing the international MARPOL Protocol became effective on December 31, 1988 which requires signatories to take measures to regulate pollution from ships and prohibits almost any disposal into the sea of items made of plastic.

These legislative changes have already generated considerable activity. For example, we have negotiated consent agreements for EPA with New York City and eight other nearby municipalities for the cessation of ocean dumping and development of sewage sludge alternatives. For its part, the Coast Guard has recently adopted implementing regulations for MARPOL and final regulations for the Medical Waste Tracking Act became effective in late May of 1989.

The balance of this section's request is needed to supplement its existing programs which are struggling to meet the demands imposed by prior legislation, ranging from Toxic Substances Control Act requirements for the cleaning up PCBs along thousands of miles of natural gas pipeline to routine enforcement actions now complicated by bankruptcy filings. One noteworthy example of additional demand imposed by an existing case category involves non-EPA CERCLA cases. In addition to being responsible for all affirmative litigation on behalf of EPA, EES also represents other federal agencies (such as Defense or Interior) when the agency has identified private parties who may have contributed to pollution on its site. These cases, past examples of which include Shell Oil (aka Rocky Mountain Arsenal), Allied, and Ciba-Geigy, are tremendously resource-intensive and generally involve 20+ defendants, major corporations, voluminous document production, and from dozens to hundreds of depositions. Finally, federal departments and agencies are also required to survey every facility they own or operate and not only undertake cleanup actions but identify private parties who should be sued for their share of the cleanup costs incurred. These are called contribution actions and both the Departments of Defense and Interior are inventorying their hazardous waste sites in an effort to identify potential contribution actions. Working from a preliminary list of about 280 hazardous waste sites on its lands, Interior expects to refer 10 additional CERCLA contribution actions in 1990-1991 and Defense anticipates a similar number.

Wildlife and Marine Resources — The fourth and final program element in this decision unit is requesting three additional positions (2 attorneys and 1 paralegal), 2 workyears and $308,000, to enable it to keep pace with a workload that has grown, in terms of both numbers and complexity, over the past six years and is likely to continue given new legislation, increased client agency staffing and other developments.

The Wildlife Section's civil workload, which constitutes about fifty percent of its case time, primarily involves challenges to a wide variety of federal programs ranging from endangered species protection and restrictions on migratory bird hunting to international whaling regulation and wildlife refuge management. At least fifty percent of our civil docket comprises challenges under the Endangered Species Act (ESA) to federal programs such as timber harvesting, offshore and onshore oil and gas leasing, wetland and mineral development. These challenges frequently allege that federal actions, such as road-building or dam construction, will jeopardize endangered species and result in impermissible takings of such species through habitat modification. As one would suppose, such cases often have significant economic ramifications for both government and industry. Recent examples include the red-cockaded woodpecker litigation in Texas which threatens to shut down substantial amounts of timber harvesting in the Southeastern United States (Sierra Club v. Lyng; appeal pending) and environmental challenges on ESA and other grounds which have forced re-analysis of the environmental impacts of mineral leasing in the West (Connor v. Burford).

Another area of substantial civil litigation involves fisheries. The Department of Commerce has informed the section that salmon allocation in the Pacific Northwest will remain very contentious for the next several years. As a result of continued Congressional interest in enforcement against foreign fishing vessels that are illegally taking United States origin salmon on the high seas, we have reinstated an interagency group that is studying high seas boarding and enforcement issues and the Coast Guard is likely to dedicate additional resources to enforcement activities.

On the criminal side, the Fish and Wildlife Service (FWS), refers 85 percent of the criminal docket and much of this emanates from its Special Operations Unit here in Washington. This past year, the FWS has increased its agent staff by 10 percent. Also this past year, the FWS opened its own forensics laboratory, increasing its ability to do forensics identification, particularly in instances of wildlife deaths due to pesticide poisonings. A third development expected to increase this section's workload by 1991, is the likely conclusion of three multi-jurisdictional undercover operations currently underway. Finally, within the past year Congress passed new or amended legislation which will affect the section, including: Marine Mammal Protection Act; Elephant Ivory Act; reauthorization of the Endangered Species Act and the Marine Protection, Research and Sanctuaries Act (which authorizes the Department [which, in turn, has delegated to the section authority] to bring natural resource damage actions on behalf of the Department of Commerce for damage to marine sanctuaries).

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount
General Litigation..	110	111	$10,002	110	113	$10,517	110	113	$10,517	...	...	...

Long Range Goal: To defend and promote the public interest in federal land, water, mineral and Indian programs.

Major Objectives:
To successfully defend challenged federal programs and policies affecting the management and protection of public lands and natural resources.

To defend the Treasury against monetary claims arising from federal Indian and natural resources programs.

To represent effectively the interests of Indians where the United States is trustee, especially in water rights matters.

To provide legislative, public and Congressional liaison services for the Land and Natural Resources Division's programs.

Base Program Description: This program includes the General Litigation, Indian Resources and Policy, Legislation and Special Litigation (PLSL) Sections which are responsible for natural resources litigation, protection of Indian rights, and various legislative, policy and liaison activities respectively. Of these, the General Litigation section is the largest, and its cases span over 70 statutory areas administered by several dozen client agencies. Traditional General Litigation cases involve inverse condemnation, in which government actions are alleged to have taken private property; Indian claims for monetary relief from government inaction or mismanagement, defense of federal programs challenged for faulty environmental impact analyses; and, mineral leasing and mining cases on land and in the Outer Continental Shelf.

The United States has established trust relationships with various Indians and Indian tribes through a myriad of treaties, statutes and Executive orders. Under these authorities, the government is obliged to perform a number of functions on behalf of these tribes, including litigation to defend their rights. The Indian Resources Section of the decision unit handles these cases, the most important involving water rights. Many Indian reservations lie in the arid portions of the country where competition for water is fierce, and tribal rights to water must be established before reservation lands can be developed. Over 50 million acres of reservation lands, and the rights to major water systems in dry western states are at stake. Other cases in which the government represents the interests of Indians involve the establishment and protection of hunting and fishing rights, and suits to answer questions about tribal rights to self-determination.

Finally, responsibility to review and comment on legislative proposals for the Division's programs rests in the Policy, Legislation and Special Litigation Section (PLSL) of this program. Many environmental statutes are the subject of new legislative proposals, which benefit from analysis by the Division. After a bill is passed by Congress, the Section's responsibility involves analysis of new issues related to the implementation of the law, particularly in the first three years when few court decisions exist to give guidance on ambiguities that result from changes in laws. Complete screening of new legislation insures that the Division has detailed information on hand concerning the legislative history for use in litigation which arises after a bill becomes a law. Coordination between the various federal, state and local government agencies involved with environmental concerns and the conservation and development of natural resources is also within the purview of the decision unit, as is the initial development of Division policies in these areas.

Accomplishments and Workload: Accomplishments of the General Litigation program are presented in the following table:

			Estimates	
Item	1988	1989	1990	1991
Cases/Matters pending, beginning of year	4,211	4,810	5,075	5,350
Cases/Matters received	3,135	2,900	2,920	2,930
Cases/Matters closed	2,536	2,635	2,645	2,650
Cases/Matters pending, end of year	4,810	5,075	5,350	5,630

The General Litigation Section's purview spans some 70 federal statutes and involves widely disparate programs and clients. From 1987 to date, the section has reduced its already low payout rate on money claims against the government from a modest 15 percent to an even lower four percent. Liabilities avoided during that same time period totalled nearly $1.5 billion. Finally, the program had a banner year in 1989 as a "money-maker", with affirmative litigation returning over $31 million to the Treasury.

Among the significant cases handled by the General Litigation Section this year were the following. The Section successfully defended a challenge to AIDS research using biotechnology by the United States where the plaintiffs alleged violations of the National Environmental Policy Act, in Foundation On Economic Trends v. Bowen. In Florida Coalition for Peace and Justice v. George Bush, the Section successfully defended the United States in a suit seeking to declare unlawful and enjoin the launching of the space shuttle Atlantis and the Galileo spacecraft. Plaintiffs alleged a concern that the Galileo, carrying 50 pounds of plutonium fuel, might be involved in an accident resulting in irradiation of thousands of people and of space. The Section continues to advocate and pursue alternatives to litigation. Seeking to end a long, drawn-out dispute over the National Forest Service's use of herbicides in the Pacific Northwest, the Section joined other parties to the dispute in mediation. The parties used mediation successfully to end five years of litigation.

The Indian Resources Section also enjoyed success when Congress enacted legislation ratifying the settlement agreement negotiated by the section. The agreement quantified the water rights of the Ute Mountain Indian Tribe in Colorado (In re: Adjudication of Water Rights in Water Division No. 7). And in Montana, the section obtained a $30 million judgment against the State for illegal taxes on coal production on the Crow Reservation. Montana paid the judgment to the Bureau of Indian Affairs. (Crow Tribe v. Montana.) Finally, the Idaho Supreme Court adopted the section's argument (and the United States Supreme Court denied a petition for certiorari) that all water rights claimants had to be joined as parties in an action instituted in state court to quantify the water rights -- thus avoiding the need for involvement in myriad smaller suits.

The accomplishments of the Policy, Legislation and Special Litigation (PLSL) section include not only the processing of an ever-increasing number of FOIA requests (110 in 1987 v. an estimated 148 in 1989) together with a steady stream of controlled correspondence, citizen's mail and legislative proposals, but their recent effort to monitor citizen enforcement suits in the district courts. This latter activity is intended to identify private party consent decrees, primarily involving the Clean Water Act, which could impact not only government programs but the course of subsequent legal decisions where the government is a party. The work involves extensive coordination within the Division since several other sections (Environmental Enforcement, Environmental Defense and Appellate) often have various interests in these cases. The section reviews notices of intent to sue, complaints and consent decrees under many of the environmental statutes (over 200 such documents were received last year) and comments, participates as amicus curiae, or intervenes in certain of these cases when appropriate.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount
Management & Administration..................................	38	30	$3,345	38	33	$3,610	39	34	$3,650	1	1	$40

Long Range Goal: To efficiently and effectively manage the Land and Natural Resources Division, and to provide the administrative services and support necessary to carry forward the Division's programs.

Major Objectives:
To develop program initiatives to permit effective responses to Administration policy requirements.

To provide policy direction to the Division's program managers.

To ensure that all statutory obligations are met.

To increase productivity and effectiveness through management planning and office automation technology.

To recruit and provide training for highly competent and motivated staff.

To develop and maintain systems for improved fiscal planning and accountability.

To provide adequate administrative services, including space and facilities, mail and messengers, copying and supplies.

To update and improve automated management information systems.

Base Program Description: The Management and Administration decision unit includes the Office of the Assistant Attorney General and the Executive Office for Administration. Thus, this program provides overall direction and management of the Land and Natural Resources Division, and supervises and administers operations necessary to support the Division's litigative mission. Responsibilities of the unit include: budget preparation and execution; financial management; development, operation and maintenance of management and automated support systems; workload and resource requirements analyses; recruitment; processing of personnel actions; management of space and facilities; provision of office equipment and supplies; processing mail; and the provision of messenger, copying and printing services.

Program Changes:

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount
Management & Administration	38	33	$3,610	39	34	$3,650	1	1	$40

This program requests one additional position and $40,000 for the Executive Office for litigation support activities. At first blush, the size of this Division's Management and Administration component might appear roughly comparable to those of other divisions in the Department — on a relative basis. But closer examination reveals that, in addition to its appropriated budget and personnel resources, Division management also will oversee in 1991 the personnel needs of 212 Superfund positions and a reimbursable budget of $40 million. The attendant administrative workload, when coupled with the 1991 litigative program requests, necessitates continuing, modest increases in the Management and Administration decision unit over the next several years. The position requested will be used by the Litigation Support Group to handle the planned growth in automated litigation support in the Division. In light of the 1990 and 1991 ALS budget requests, litigation support case managers will be managing approximately 90 cases and a litigation support budget over $17 million; a far cry from just six years ago when the Division's budget for this activity hovered around $1 million. In the ensuing years, our experience has been that each case manager should oversee an ALS budget of roughly $800,000-850,000. Nevertheless, the 1991 request envisions Lands Division personnel managing well over $1 million each.

OFFICE OF LEGAL COUNSEL

Salaries and Expenses, General Legal Actvities

Summary of Requirements
(Dollars in thousands)

Long Range Goal:

To assist the Attorney General in his role as legal adviser to the Executive Branch, and to provide timely, thorough and reliable legal analysis in response to requests for opinions from the President, the White House staff through the Counsel to the President, the Attorney General, Justice Department components and the heads of executive agencies.

Major Objectives:

To enhance the Office's ability to assist the Attorney General in his role of providing general legal advice to the President and Executive Branch agencies; to improve the Office's usefulness in resolving intra-Executive Branch disputes over legal questions.

To enable the Office better to assist other components of the Department of Justice where litigation or proposed legislation raises constitutional issues or issues of general concern to the Executive Branch.

To expedite performance of its role of approving Executive Orders and Orders of the Attorney General as to form and legality.

To continue the practice, begun in 1977, of making publicly available in published form those Office of Legal Counsel opinions that are of general interest to the public.

Base Program Description:

The principal duty of the Office of Legal Counsel is to assist the Attorney General in his role as legal adviser to the President and Executive Branch agencies and as arbiter of legal disputes within the Executive Branch. The Office also provides general legal assistance to other components of the Department, especially where litigation or proposed legislation raises constitutional issues or general issues of executive authority. It reviews for form and legality all executive orders and proclamations proposed by the President, as well as all proposed orders of the Attorney General and all regulations requiring his approval. In addition, the staff is also involved in coordinating the work of the Department regarding treaties, executive agreements and international organizations, and performs a variety of special assignments referred to the Office by the Attorney General, the Deputy Attorney General or the Associate Attorney General. The Office has responsibility for advising the Office of Government Ethics on matters of law in the area of conflict of interest, and the Assistant Attorney General serves as ethics counselor to the Office of the Attorney General, the Deputy Attorney General, the Associate Attorney General and the Solicitor General.

The President has directed the Attorney General to establish and convene a General Counsel's Consultative Group consisting of the general counsels of the principal Executive branch components. The purpose of this Group is to improve coordination and consistency in handling of important legal issues of common concern throughout the Executive Branch, particularly legal matters bearing upon the President's constitutional responsibilities and authority. The President has stressed to the Attorney General that he intends his Administration to be faithful to the principle of separation of powers. In this regard, he believes it is his constitutional duty to ensure that the Executive branch maintains its unitary character. The President has advised the Attorney General that he expects all of his attorneys throughout the Executive branch to make this one of their highest priorities. The Assistant Attorney General for the Office of Legal Counsel chairs the General Counsel's Consultative Group.

At the request of the Attorney General, the Assistant Attorney General for the Office of Legal Counsel represents the Department of Justice on various groups that report to the National Security Council.

The Attorney General has directed the Office of Legal Counsel to represent the Department of Justice on the Administrative Conference of the United States, as appropriate, on regulatory reform matters.

The Attorney General has requested that the Office of Legal Counsel advise and assist him in the selection and appointment of Federal judges.

The statutory authority pertaining to the Office of Legal Counsel is 28 U.S.C. 511-512. There are no pending or proposed legislative changes which would affect this Office.

The Office of Legal Counsel does not initiate any programs nor does it have control over the volume of its work, which results from requests for opinions and legal advice from the President, the White House staff, the Attorney General, members of the Cabinet and Executive Branch agencies and other Department of Justice officials.

A small number of requests are considered appropriate for formal Attorney General opinions, which are drafted preliminarily in OLC and reviewed, revised and approved by the Attorney General. Most requests result in the preparation of legal opinions signed by the Assistant Attorney General or one of the Deputies based upon the research of one or more of the 21 staff attorneys. Other requests result in the provision of oral advice to the client.

Since 1977, at the direction of the Attorney General, this Office has published selected formal opinions. Volumes covering the years 1977 through 1982 have been issued and the 1982 volume will be issued shortly.

OLC's role in the Department's legislative program has increased dramatically in recent years, and includes drafting legislative opinions, testimony, Presidential signing statements and veto messages. OLC has taken a major role in either testifying or preparing testimony in connection with pending legislation of interest to the Department and the Administration, and has assisted in the drafting of legislation. It has also provided advice to the litigating divisions and the Solicitor General on constitutional issues relating to presidential authority and separation of powers.

In addition, because of its expertise in certain areas, the Office has assumed an on-going advisory role to other Department components, on issues relating to immigration reform, Iran/Contra, the debt ceiling and budget reform, executive privilege, federalism, conflict of interest and ethics, and various independent counsel matters.

Accomplishments and Workload:

Accomplishments of the Office of Legal Counsel are presented in the following tables:

ITEM	1988	1989	1990	1991
Executive Orders and Proclamations	70	65	75	80
Opinions	535	560	600	650
Intradepartmental Opinions	625	700	800	850
Special Assignments	2,900	3,200	4,000	4,500

Explanation: The "Opinions" category is an estimate of advice given to the White House, OMB and other executive Departments and agencies. It includes both formal and informal advice as well as responses to requests for information.

The "Intradepartmental Opinions" category is an estimate of informal advice given to the Office of the Attorney General as well as other Departmental units, formal opinions and bill comments.

The "Special Assignment" category is an estimate of a number of different matters including informal advice, responses to oral requests for information and referral, citizen inquiries as well as review of Freedom of Information Act and Privacy Act requests.

During 1986-87, CLC provided legal opinions under Executive Order No. 12146 in a number of disputes between executive agencies. The Office responds to every request for dispute resolution it receives, and continues to enjoy a high degree of respect from executive agencies for its opinions.

During the past year, the Office has provided general legal advice to the President and the various departments and agencies of the Executive Branch on a wide range of constitutional and legal issues, particularly issues of executive authority and separation of powers and on questions relating more narrowly to the powers and duties of particular departments and agencies. It has rendered important opinions of the United States Sentencing Commission, drug testing, the fairness doctrine, the employment of private legal counsel, and the closure of the U.N. Observer Office of the Palestine Liberation Organization. It also took a leading role in supporting the Supreme Court nominations of Robert Bork and Douglas Ginsburg.

The Office has reviewed numerous executive orders for form and legality and given advice to the President concerning appropriate revisions. OLC has also reviewed all orders of the Attorney General during this period, most of them on very limited time schedules. In addition, in various emergency situations, the Office has been called on to advise the White House or the Attorney General.

Finally, work has begun on Volume 6 and 7 of the Opinions of the Office of Legal Counsel for 1982 and 1983. The volumes include formal opinions of the Attorney General signed during this period. In an effort to put in place a structure that will improve our speed and production of these volumes, we have recently hired specialized personnel to supervise collation and editing of this material. As these volumes are the only place that Attorney General opinions are now being published, we are making every effort to bring this important project up to date.

The Office has recently acquired the AMICUS Office Automation system. By joining the increasing number of Department units that employ this system, the Office will increase its efficiency and productivity through fewer computer malfunctions, speedier access to research tools such as JURIS, and quicker communications through electronic mail with other Department offices. The budget reflects the cost of acquiring and maintaining AMICUS as well as provision for the training of new personnel. Because the Office has a fairly high turnover of attorney personnel, it is expected that training and maintenance will be significant budget items during FY 1990 and 1991.

Justification of Program and Performance
Activity Resource Summary
(Dollars in thousands)

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Federal appellate activity....................	32	29	$2,248	32	29	$2,363	32	29	$2,363	...	...	...

Long-Range Goal: To reduce the incidence of unlawful denials of civil and constitutional rights.

Major Objectives:
To file on a selective basis, appellate level cases initiated by the government and serve as a friend of the court in appellate cases which have a substantial impact on federal civil rights enforcement.

To handle all appropriate appellate level litigation in the civil rights area rather than to have such cases handled by enforcement programs.

To provide legal counsel to government departments and agencies on civil rights issues, and legal counsel and research assistance, with respect to pending litigation, to other Division and Department programs.

To provide substantive support for the Division's legislative initiatives and to comment on the legislative proposals of others.

Base Program Description: A district court judgment may be reviewed in the courts of appeals or the Supreme Court. This program handles or supervises the handling of all appeals from both favorable and adverse judgments in which the government participated. Supreme Court cases require coordination with the Office of the Solicitor General. A favorable district court decision is meaningless if it is reversed on appeal. Thus, the success of the Division's front-line litigating programs depends on this program's effectiveness on appeal. In support of an effective civil rights enforcement program, personnel develops (as requested) new legislation or modifications or amendments to existing legislation in the interest of protecting the civil rights of all citizens; comment on the civil rights legislative proposals of others; and, provide legal counsel to federal agencies responsible for the administration and development of programs with civil rights implications which invariably present difficult legal and policy questions. The advice the staff provides is designed to ensure the legality of such programs, promote uniform policy application, and lessen the future possibility of expensive and disruptive litigation.

Accomplishments and Workload: Accomplishments of the Federal Appellate program are presented in the following table:

Item	1988	1989	Estimates 1990	 1991
Cases/Matters Received	136	124	140	140
Briefs Filed	67	56	70	70
Solicitor General Recommendations	30	22	34	34
Decision Not to Participate or Appeal	19	25	25	25
Legal Counsel and Research Assistance Provided	27	36	40	40
Legislative Comment and Testimony	10	158	170	170
Cases/Matters Handled	156	172	163	163

Workload projections for future years in all categories are based on considerations of the staff's production in previous years, and the level and complexity of activity in other litigating programs. It should be noted, however, that the work of this program is closely correlated to the number of cases brought by other litigating programs. In addition, Supreme Court activity is dependent upon the types of cases which the Court decides to hear. Prior to November, 1988, the program reported only those items requiring a formal comment. On November 4, 1988, principal responsibility for legislative matters was transferred to this program. Workload projections now reflect all legislative matters received for review by the Division.

From October 1, 1988, through September 30, 1989, the Division filed 19 papers in the Supreme Court and 37 in the courts of appeals. Eighty-nine percent of all merits decisions were in full or partial accord with the Division's contentions. The Supreme Court reached the merits in eight cases. In line with the position advanced by the United States, the Court held that a city ordinance requiring non-minority prime construction contractors to subcontract at least 30 percent of the value of city contracts to Minority Business Enterprises violated the Equal Protection Clause of the Fourteenth Amendment. The Court also did what we suggested as amicus in a voting case by summarily affirming a lower court ruling that a change in a school board policy granting the school board president power to require the approval of two board members to place an item on the agenda, where formerly the request of a single member was sufficient, was not a change with respect to voting within the meaning of Section 5 of the Voting Rights Act. The courts of appeals rendered 28 merits decisions, 25 of which were in full or partial accord with the Division's contentions. For example, relying extensively upon the theory we articulated as amicus, the Fifth Circuit held that the district court did not abuse its discretion in modifying a school desegregation plan to eliminate all remaining mandatory reassignments of elementary school students. In an employment discrimination case, the Third Circuit held that an international treaty granting foreign corporations the right to selection of executive personnel of their choice does not license discrimination on the bases of race, national origin, or age. In another employment case, the Eleventh Circuit held, as we had urged it to, that a federal employer's refusal to give an Asian American female chemist a preference during a Reduction-In-Force did not constitute a Title VII violation, even assuming that the employer's decision had violated its own affirmative action plan. In a criminal case, the Seventh Circuit held that the district court erred in disqualifying the Attorney General from supervising the grand jury that is investigating complaints of racial harassment against a black FBI agent who had named the Attorney General in a civil suit. In a housing desegregation case, the Second Circuit adopted the position advanced by the program and upheld the contempt adjudications of a city and four of its city councilmen for refusing to enact zoning legislation in compliance with a consent decree remedying the city's segregative housing practices.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Civil rights prosecution......................	45	41	$3,178	45	41	$3,308	45	41	$3,308	...	...	...

Long-Range Goal: To significantly reduce police criminal misconduct as well as criminal misconduct of other public officials who violate the federal criminal civil rights statutes; eliminate or substantially reduce violent activity by private citizens which interferes with federally protected civil rights on the basis of race, religion, national origin or sex, particularly interference by organized, violent hate groups such as the Ku Klux Klan and Aryan Nations.

Major Objectives:

To expeditiously respond to and cause to be investigated all valid complaints of potential criminal civil rights violations.

To present potentially meritorious incidents to grand juries for investigation and, where warranted, for indictment.

To try cases in which indictments have been returned or informations filed.

To review and authorize criminal civil rights prosecutions proposed by the U.S. Attorneys.

To ensure uniform and effective application of the federal criminal civil rights statutes throughout the country.

To reduce the amount of time required to review and make prosecutive determinations on matters investigated and to initiate prosecutions.

Base Program Description: This program is responsible for the investigation and prosecution of violations of federal criminal civil rights statutes which were designed to preserve personal liberties. Two of these laws, passed during Reconstruction, prohibit persons from acting under color of law, or in conspiracy with others, to interfere with an individual's federally protected rights, were amended in 1988 either to provide for greater penalties when violated (18 U.S.C. 242) or to apply to a broader class of victims (18 U.S.C. 241). In addition, the program assumed enforcement authority for a statute enacted in 1988, 18 U.S.C. 247, that proscribes interference with persons in the exercise of their religious beliefs, and the destruction of religious property, under circumstances involving interstate travel or the use of a facility or instrumentality of interstate commerce. Other statutes enforced include those which prohibit the holding of individuals in peonage or involuntary servitude, or the use of force or threats of force to injure or intimidate any person involved in the exercise of certain federal rights and activities. About 3,000 of the approximately 7,800 complaints and inquiries received each year are fully investigated by the Federal Bureau of Investigation (FBI). Line attorneys and paralegals are responsible for reviewing the complaints and investigations and making recommendations for further action. The results of approximately 50 to 55 investigations are presented to federal grand juries each year for additional investigation or indictment, and approximately 30 cases are tried annually. The Division continues to work closely with U.S. Attorneys on civil rights prosecutions, whenever their resources permit. Experience demonstrates that prosecutions handled jointly by this program and U.S. Attorneys' staffs have a greater likelihood of success. Program attorneys are familiar with the substantive issues that repeatedly arise while the Assistant U.S. Attorneys are familiar with local court practices. The seriousness of criminal civil rights violations and the need in a free society to bring sanctions to bear when such violations occur in order to maintain public confidence in our system of justice, demand that every effort be made, consistent with available resources, to prosecute all meritorious cases in which sufficient evidence exists to establish a violation.

Accomplishments and Workload: Accomplishments of the Civil Rights Prosecution program are presented below:

			Estimates	
Item	1988	1989	1990	1991
Complaints Received	7,603	8,053	8,053	8,053
Complaints Reviewed	6,968	8,133	7,584	7,584
Matters Investigated	2,892	3,177	2,923	2,923
Matters Terminated	2,743	3,138	2,876	2,876
Cases Filed	43	59	52	52
Cases Closed	41	48	48	48
Average time to close without prosecution (in months)	2.6	2.3	2.8	2.8
Average time to file a case	17.6	14.6	13.0	13.0

Workload estimates for 1990 and 1991 are, in some instances, below 1989 actuals. Increases in productivity in 1989 may be attributable to greater availability of attorneys who, in 1988, were involved in matters that consumed one-fourth of all grand jury activity that year, but which were completed by 1989. In addition, the ratio of pleas to convictions obtained in the program's cases has been increasing notably in the past two years, allowing attorneys to resolve matters more quickly, as shown by the increase in the number of cases closed. However, the positive influence of these factors may be short-lived and potentially offset in the future by current trends or events -- (1) the expanded and changed enforcement responsibilities being assumed by the program (enforcement of a newly-enacted statute and others amended with enhanced penalties, as well as the implementation of mandatory Sentencing Guidelines) and (2) by the need to train personnel hired to fill vacancies resulting from attrition.

Furthermore, as a result of management initiatives, the program is reducing the time it takes to bring a matter to prosecution. As a result, it may take longer to review those matters that do not have prosecutive merit. In addition, the program has established a task force to monitor acts of racial violence committed by Skinhead gangs. It should be noted that the unusually high number of 59 cases filed in 1989 may not be the most viable indicator for future litigation activity; to some extent, the high figure is attributable to the substantial number of pleas that often result from racial violence cases; and, in 1989, the program prosecuted more than twice the number of racial violence cases than in any prior year. Thus, projected activity is based upon the average of the past four years (1986-1989).

During 1989 the program received over 8,000 complaints alleging criminal interference with civil rights, approximately 3,200 of which were investigated by the Federal Bureau of Investigation. The results of 40 investigations were presented to federal grand juries; 26 indictments were returned and 33 informations were filed charging 84 defendants, including 21 law enforcement officials. Trials were held in 23 cases, resulting in conviction of 23 defendants and acquittal of 10 defendants. In addition, 68 defendants pled guilty to violations of criminal civil rights statutes leading to an overall success rate of 87 percent.

Incidents of racial violence continue to receive priority for prosecution. In fact, during 1989 the program prosecuted almost twice as many defendants, and more than twice as many cases, as in any preceding year. In New Jersey a local television news reporter and his mother pled guilty to intimidating a young Chinese woman who had signed a real estate contract for the purchase of a townhouse that the defendants were also interested in buying. They had made threatening telephone calls to her, spray painted racial epithets on the door of the town house, and had placed at an adjacent apartment the carcass of a dead chicken with a threatening note inside. The son received a four-month prison term and both defendants are to serve extensive probationary terms and a combined 1,500 hours of community service, in addition to paying a $5,000 fine and $4,000 in restitution to the victim.

In January 1989, after almost five years of litigation that involved repeated appellate reviews, the program was successful in convicting, through trial and guilty pleas, all ten Ku Klux Klan members who had been indicted for interfering with a march held by the Southern Christian Leadership Conference in Decatur, Alabama in 1979. Six of those pleas were obtained on the eve of trial. In California, a Skinheads sympathizer was tried and convicted for interfering with the housing rights of a black family by burning a cross at their home. The victims had resided in the neighborhood for ten years and had been active in the local NAACP. In Texas, 16 persons associated with a skinhead group called the Confederate Hammerskins were charged with threatening blacks and Hispanics for using a public park and for vandalizing Jewish properties; eight of those defendants pled guilty.

Six defendants in New Mexico pled guilty to conspiring to interfere with the housing rights of black university students in a matter which continued to be investigated after two other defendants were indicted last year for this same incident. In Indiana, two defendants pled guilty and two others were tried and convicted in a housing interference case; fearing a drop in property values, they had allegedly painted racial epithets on a house in their neighborhood that a black family had sought to purchase. As a result of the vandalism and protesting phone calls to the seller and real estate agents, the victims decided not to purchase the house. In addition, two men, including a leader of a local Klan chapter, pled guilty to beating a black man in the home that he shared with a white male in North Carolina.

Complaints alleging official misconduct, which account for the vast majority of the complaints received by the program, resulted in three Puerto Rico narcotics police officers pleading guilty to shooting at a young couple who had been parked in a secluded area. The officers, all of whom were inebriated at the time, had failed to identify themselves as police officers and shot at the couple when they tried to flee from the officers' approach; one of the victims was injured and rendered a paraplegic as a result. A fourth officer, who had shot the gun that wounded the one victim, had pled guilty to local charges and is serving a 12-year prison term. Two sheriffs deputies and a civilian in Georgia were indicted when the victim, who had been brought in for questioning regarding an alleged theft from the civilian, was beaten by the civilian in the presence of the deputies in order to coerce a confession; all three defendants were tried and convicted. A police officer in Cleveland was indicted and convicted for punching a woman in the mouth and for filing false charges against her. The officer had ordered the victim, who was parked and waiting to pick up her granddaughter from school, to move her car. When the victim did not move as rapidly as the officer desired, he assaulted her. Two New York City Transit police officers were convicted on eight counts of conspiring to violate the rights of citizens by intentionally making baseless sex abuse arrests of blacks, Hispanics and Asians. Four West Virginia law enforcement officers, two deputy sheriffs and two local police officers were charged with beating a victim while he was in custody and handcuffed. They were also charged with offenses arising from their efforts to obstruct the investigation and to file false charges against the victim to cover up his beating. All four officers were convicted at the trial. In New Jersey, a woman licensed to run a home for the mentally retarded was charged, in an eight count indictment, with causing the death of a resident who had been tied to his bed, gagged, and beaten, and with perjury.

After last year's Supreme Court opinion in United States v. Kozminski, et al., which set the standard for prosecuting involuntary servitude cases, i.e., that the defendant must use physical or legal coercion to compel the victim to work against his will, the Kozminski defendants pled guilty to other charges and were ordered to pay $6,000 in fines and $34,000 restitution to the victims. The Supreme Court also denied certiorari in a second appeal taken from the involuntary servitude conviction of seven members of a Michigan religious cult whose practices resulted in the physical abuse of many children, including a young boy who was beaten for refusing to work and who later died from his injuries. There has been a dramatic change in the numbers of involuntary servitude matters reported to and investigated by the program over the past five years.

In 1988 and 1989, the number of involuntary servitude investigations dropped by 70 percent compared to the number that were conducted in 1984, which was the peak year over a ten-year span. Of those complaints, those that involved migrant workers declined even more substantially — in 1989 the number of investigations of that nature was about 7 percent, and in 1988 less than 11 percent, of the 1984 number. Thus, it appears that one of the program's long range goals has been achieved, significantly reducing peonage and involuntary servitude violations, especially those affecting migrant workers.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Special Litigation............................	35	32	$2,821	35	32	$2,940	35	32	$2,940	...	...	...

Long-Range Goal: To establish and protect constitutional rights of institutionalized persons, mentally and physically handicapped persons of all ages, and persons confined in state and local prisons and jails and enforce federal laws prohibiting racial discrimination in all public facilities such as prisons and jails.

Major Objectives:
To investigate, upon reasonable cause, the conditions of confinement and treatment provided to persons in publicly operated institutions; obtain voluntary compliance in correcting any constitutional deficiencies or other violations of federal law; and, as a last resort, to initiate litigation on behalf of such persons when egregious conditions are found to exist.

To initiate and/or participate in litigation designed to remove racial discrimination from public facilities; establish constitutionally acceptable conditions of confinement, care and treatment of institutionalized populations; and, remove discrimination against handicapped persons.

To ensure compliance with existing judgments or consent decrees.

Base Program Description: This program is responsible for the enforcement of the Civil Rights of Institutionalized Persons Act (CRIPA) which authorizes the Attorney General to investigate and initiate civil actions on behalf of persons confined to publicly operated institutions wherein flagrant conditions deprive them of their constitutional rights. Such actions may be initiated only after appropriate state or local officials have been afforded a reasonable opportunity to voluntarily remedy unlawful conditions of confinement and have failed to do so. Persons involved include inmates of state prisons and local jails; clients of publicly operated mental health, mental retardation and juvenile detention centers; and, residents of nursing homes, and facilities for the physically handicapped and chronically ill. The program also has the responsibility of enforcing compliance with federal laws which prohibit discrimination in public facilities on the basis of a person's race, color, sex, religion or national origin. The Division may participate in private litigation to establish constitutionally acceptable conditions within an institution, and initiate and participate in litigation which has as its purpose the eradication of discrimination directed against handicapped persons. The program also initiates litigation when investigation indicates that a public facility practices racial discrimination in violation of federal civil rights laws. In addition, staff members monitor compliance with judgments or consent decrees previously entered in the cases on its docket by conducting on-site inspections, reviewing court-mandated reports, authorizing FBI investigations and, in appropriate cases, continuing contact with court-appointed monitors responsible for assuring compliance.

Accomplishments and Workload: Accomplishments of the Special Litigation Program are presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Cases Filed	3	3	5	6
Cases Closed	1	3	4	5
Cases Pending (end of year)	33	33	34	35
Matters/Complaints	1,089	1,201	1,250	1,250
Matters/General	118	121	130	130
Congressional/White House Referrals	51	46	50	50
Major Institutional Investigations Initiated	2	4	5	6
Major Institutional Investigations Closed	3	11	6	5
Major Institutional Investigations Pending (end of year)	36	29	28	29

During 1989, the program expended major resources and efforts on completing pending investigations and monitoring compliance with the many consent decrees obtained pursuant to the Civil Rights of Institutionalized Persons Act (CRIPA). These efforts revealed, in many instances, conditions at facilities which continue to fall below constitutional minima as well as serious difficulties in complying with consent decree requirements and related court orders. As a result, it was necessary to utilize more resources than had been previously anticipated on these matters to ensure that appropriate corrective action was taken. In one of the program's major CRIPA cases concerning the Fairview Training Center, a facility for mentally retarded persons in Salem, Oregon, a consent decree was successfully negotiated and was signed by the State and the U.S. and filed with the court in February 1989. The consent decree was subsequently entered as an order of the Court on April 14, 1989 and the program is closely monitoring the State's efforts in complying with the terms of the decree. The program also filed a complaint and accompanying consent decree in U.S. District Court in San Francisco, California requiring the County of Alameda to make improvements at the Santa Rita jail to ensure that the jail's inmates are incarcerated under conditions that comply with constitutional requirements. In another matter, the program filed a complaint alleging that conditions at the Crittenden County jail in Marion, Arkansas, fail to comply with constitutional requirements. Discovery is continuing in one other case involving the Buffalo Psychiatric Center in Buffalo, New York and additional enforcement action is contemplated in several other cases where states have not satisfactorily complied with consent decree requirements. In addition, the program initiated four new investigations pursuant to CRIPA. Three involve mental health institutions and one concerns a prison. Also, during the period, five investigations have been closed and three cases were dismissed, due to corrective actions taken by appropriate officials to remedy deficiencies identified by the U.S. during the course of CRIPA investigations. Currently, there are 17 CRIPA cases which are being monitored for compliance with consent decrees.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Voting....................................	68	66	$4,110	68	66	$4,287	84	74	$6,031	16	8	$1,744

Long-Range Goal: To prevent and eliminate systemic barriers to the full participation by racial and language minorities and overseas, blind, handicapped, disabled and illiterate citizens in the electoral process and to achieve effective remedies for those citizens in specific instances where their right to vote has been denied or abridged.

Major Objectives:

To prevent through the Section 5 preclearance program the implementation of new standards, practices and procedures that have the purpose or effect of denying or abridging racial and language minorities' right to vote throughout the 909 counties specially covered by the Voting Rights Act (VRA).

To assure the assignment of federal observers to those polling places within the specially covered counties where observer personnel are needed to document misdeeds in the electoral process or to ensure confidence of the minority community in the electoral process and actions of individuals conducting the elections, and provide a federal alternative for voter registration when the actions and practices of local authorities discriminatorily deny racial and language minorities' access to the voter registration polls.

To defend lawsuits that are brought against the United States under the special provisions of the VRA to preclear voting changes and to terminate coverage, and initiate lawsuits against jurisdictions that violate the preclearance requirements of Section 5.

To discover and remedy methods of conducting elections that dilute the voting strength of racial and language minorities, and actions of state and local election and voter registration administrators that prevent a full and fair exercise of the franchise by racial and language minorities, overseas citizens, and voters who are elderly, handicapped, blind, disabled, or are unable to read or write.

Base Program Description: This program is divided into two components. The Section 5 component, staffed by equal opportunity specialists under the supervision of attorneys, reviews changes in voting practices or procedures required to be cleared before they can be implemented by the jurisdictions that are specially covered under the VRA, their political subunits, and the states in which they are located. If a jurisdiction fails to carry its burden of proving that a change does not have a discriminatory purpose or effect, the program recommends to the Assistant Attorney General that he interpose an objection to the change. As an alternative to administrative preclearance, the VRA provides that jurisdictions may seek judicial preclearance through declaratory judgment suits.

The litigation component of the program handles these suits, brings suits against jurisdictions which implement voting changes which have not been precleared, and handles suits under the provision of the Act that allows jurisdictions to seek a judicial determination that they no longer need to be subject to the preclearance requirement. The litigation component also brings lawsuits to enforce the Act's minority language requirements, and to enforce other provisions of the Act and other voting laws that apply nationwide to remedy discriminatory practices and procedures relating to voting and voter registration. Enforcement of the 1975 exclusive English prohibition is handled through the administrative and litigative enforcement mechanisms described above. Both components assist in determining where federal observers are needed to observe election day activities (to report indications of interference with or abridgment of minorities' voting rights). In addition, staff members assist local elections officials in understanding their responsibilities for assisting language minorities and voters who are elderly, handicapped, blind, disabled or are unable to read or write in exercising their voting rights.

Accomplishments and Workload: Accomplishments of the Voting program are presented in the following table:

Item	1988	1989	Estimates 1990	1991
Defensive Litigation	5	3	4	6
Offensive Litigation	[illegible]	129	111	159
Section 5 Submissions Received	4,655	3,272	3,890	5,000
Section 5 Submissions Processed	4,655	3,272	3,890	5,000
Matters Received	79	62	55	70
Matters Terminated	50	45	40	50
Cases Filed	17	10	10	18
Cases Closed	19	15	10	11

Workload for this program activity cannot be measured by sheer numbers alone, because of the difficulty of each individual case. The reduction, during the last two years, in the number of cases filed, cases closed, and matters terminated is a reflection of their growing complexity. For example, over one half of the attorney staff was devoted to remedying discrimination in the election processes of just four jurisdictions: Arizona, Louisiana, New Mexico, and Los Angeles County, California. Similar, complex, personnel intensive litigation is undoubtedly the trend for the future. The 1990 estimates reflect that fact.

During 1989, submissions under Section 5 of the Voting Rights Act were received at a higher rate than the 3,041 submissions received during 1985, the last post-Presidential election year. The submissions reviewed during 1989 involved 143 changes to which objections were interposed including city, school district and county districting plans, changes in the Georgia and Louisiana judicial systems where judges are elected, the use of staggered terms, numbered posts and majority vote requirements in at-large elections, annexations to cities, run-off election procedures, and an absentee voting program for Dallas County, Texas. The program participated in ten lawsuits during 1989 (six as plaintiff, four as amicus curiae). Of the cases filed as plaintiff, two were filed under Section 2 and minority language provisions of the Voting Rights Act to challenge bilingual election procedures in the States of Arizona and New Mexico, two charged that the at-large method of election for a South Carolina city and North Carolina county board of education and county commissioners violates Section 2 of the Voting Rights Act, one was brought to enforce Section 202 of the Voting Rights Act which allows certain voters who move within thirty days of a Presidential election to vote based upon prior residence, and one was brought to enforce the Uniformed and Overseas Citizens Absentee Voting Act for a special Congressional election in Mississippi. The amicus participation successfully urged a three-judge court to use its remedial authority to enter a settlement proposal that provides minorities an opportunity to fairly participate in judicial elections in the State of Mississippi; urged the application of Section 2 to judicial elections in Georgia; responded to questions from other courts regarding the application of Section 5 to a referendum issue in Georgia; and, the application of Section 2 to issues involved in a challenge to the method of election in Birmingham, Alabama.

Consent decrees entered in 1989 included three actions under Section 2 that challenged the at-large method of electing North Carolina Boards of Education and county commissioners, and a South Carolina city council. Three actions pursuant to the Uniformed and Overseas Citizens Absentee Voting Act that facilitated absentee voting by overseas citizens in Florida, Mississippi and Wyoming special Congressional elections; one which compelled review under Section 5 of voting changes made by 30 Mississippi county school boards; one which resolved all of the claims in the program's lawsuit against the State of Arizona and Apache and Navaho Counties under Section 2 and the minority language provisions of the Voting Rights Act; and, one which resolved our claims against the State of New York under Section 202 of the Voting Rights Act. Under the special provisions of the Voting Rights Act that authorize the Attorney General to assign federal observers to monitor elections to ensure that the right to vote and to have the vote properly counted is not denied during the election process, 523 observers were assigned to cover elections in 17 counties in eight states during the year. In addition, the program continued to maintain contact with the Department of Defense's Federal Voting Assistance Program, the Federal Election Commission's National Clearinghouse on Election Administration, the Bureau of the Census, and the Office of Personnel Management to coordinate with and assist the personnel in those agencies who have responsibility for implementing programs relating to statutes enforced by the Division. Most significantly, the program entered into a memorandum of understanding with the Bureau of the Census to devise the most efficient methods and procedures by which Census will provide services for the program's review and analysis, beginning in 1991, of over 5,000 redistricting plans adopted by states, counties, cities, school boards and other jurisdictions to comply with Constitutional one person, one vote requirements.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Voting......................	68	66	$4,287	84	74	$6,031	16	8	$1,744

An increase of 16 positions (5 attorneys, 4 paralegals, 3 equal opportunity specialists, 4 clericals) and $944,000 for 1991 will allow the program to meet its basic responsibilities for enforcing the provisions of civil rights voting laws. The resources requested here are a direct result of the additional Section 5 workload generated by the 1990 Census and will provide the program with adequate continuing support to actively pursue investigations and litigation of complex Section 2 violations.

Three of the new attorney positions would be devoted to establishing a higher level of expertise in legal theory and analysis for the review of complex redistricting plans and other voting changes that require analytical development and presentation tantamount to that required from the program's litigating attorneys for the program's litigation recommendations. The submission of complex, theoretically difficult voting changes has become routine since the Voting Rights Act was amended in 1982, especially as jurisdictions have begun to adopt new and imaginative variations on traditional methods of electing officials. All of the program's attorneys will continue to be involved in the analysis of Section 5 submissions on an as-needed basis, and will devote significant portions of their time to Section 5 analysis during the period 1991-1993 when the largest number of redistricting plans begin to be submitted by jurisdictions that need to conform voting district populations to one-person, one-vote standards based on data from the 1990 Census. Three of the new attorney positions will allow such expertise to be applied to the Section 5 process on a continuing basis, with the added benefit of requiring the program's cadre of litigating attorneys to be interrupted in their focus on the program's litigation only during those times when there is an unusually heavy workload of difficult Section 5 submissions.

In order to make the most effective use of the expertise that the program has developed in litigating cases under Section 2 of the Voting Rights Act to combat the dilution of minorities' right to vote, the two remaining new attorney positions will directly augment the program's litigation efforts in lawsuits against states, large counties and cities (lawsuits such as the pending action that against Los Angeles County, California, and the recent action contesting the method of conducting judicial elections in Mississippi, require three to five attorneys each). These two additional attorneys also would join the existing permanent staff in a concerted effort by the program to assure, through litigation, that minorities' voting rights are safeguarded during the first post-Census elections under newly adopted redistricting plans in jurisdictions that are subject to Section 5 by: (1) obtaining court orders where necessary to compel those jurisdictions to obtain the requisite Section 5 preclearance of their redistricting plans prior to conducting an election under the newly adopted plans; and (2) defending lawsuits brought against the Attorney General by jurisdictions seeking judicial preclearance of redistricting plans to which the Attorney General has interposed an objection under Section 5. The litigation of these cases will begin in 1991 when redistricting plans are formulated by the State of Mississippi and its counties prior to their major quadrennial primary and run-off elections, and will continue into 1992 when, following Mississippi's general election, all 254 counties in Texas as well as all other states that are specially covered under the Voting Rights Act finalize their redistricting plans and use them in their statewide and Congressional primary elections, and many of the counties, cities, school districts and other smaller political units in those states similarly seek to adopt and use new redistricting plans in local primary elections. New attorneys would also participate in the program's review of redistricting plans that are submitted under Section 5 in preelection field investigations and election-day coordination that will be necessary to the assignment of federal observers to monitor polling place procedures under Section 8 of the Voting Rights Act when minorities qualify as candidates for office from newly drawn districts that allow minority voters a fair opportunity to elect persons of their choice.

The four paralegal specialists are essential to the conduct of the increasingly complex Section 2 fact investigations and analyses and to prepare trial exhibits to support the program's litigating attorneys. This will be especially important in cases brought in all parts of the nation attacking discriminatory redistricting plans that dilute minorities' voting rights where critical evidence must be introduced regarding the location of minority concentrations as shown by 1990 Census data, and regarding the impact of district boundary line changes in light of

1990 Census data. Section 2 dilution lawsuits require such substantial research, discovery and analysis that during the first 6 months of 1989 the program's paralegals devoted virtually all of their time to just four of the program's pending cases. Increased automation will create an even greater need for support staff to handle the increased volume of available factual data and analysis capabilities in Section 2 dilution cases. The paralegal staff also conducts a crucial element of the standard preelection surveys that are performed by the program to determine where and in what numbers federal observers are necessary to monitor polling place procedures. The additional paralegals are necessary to allow the program to conduct the expanded surveys that will be required in the light of the expanded opportunities for minorities to achieve election in fairly redistricted jurisdictions following the 1990 Census.

Three Equal Opportunity Specialists positions are requested to provide a much-needed and long-awaited permanent cadre to process and analyze the tens of thousands of voting changes contained in the thousands of submissions received each year under Section 5 of the Voting Rights Act. These positions will enable the program to increase its staff of trained Equal Opportunity Specialists that continues to be augmented by three-month student volunteers and other full-time temporary personnel. (The number of student volunteers available to serve in these positions usually is fewer than needed and the program's investment in extensive training of all of these temporary persons to perform Section 5 analysis is swiftly lost when they return to school or leave to seek permanent employment.) These additional equal opportunity specialists will result in an immediate benefit to the program since they will handle the analysis of many of the simpler, routine voting changes during their on-the-job-training, allowing the present permanent staff to focus their expertise on the more complex submissions including those involving redistricting plans. By 1992 these newer specialists will have gained expertise sufficient to allow them to perform the review of redistricting plans submitted for the programs' analysis.

Two of the four requested clerical positions are needed to increase the current permanent staff, of four, that is required to process the thousands of Section 5 submissions from receipt through analysis to necessary post-decisional operations (e.g., computer and microfiche entry, updating, etc.). This requested increase for processing Section 5 submissions is based on demonstrated needs that are projected to continue. We expect that the extraordinary record number of submissions received by the program for review under Section 5 in 1988 will be nearly met in 1991 and far exceeded in 1992, and that submissions will continue to be received at increased levels thereafter. It is essential that the program have an adequate permanent staff to receive, record, route and retain this continuing flood of submitted voting changes. (At present, part-time stay-in-school personnel are performing many of the tasks for which full-time, mature personnel are needed--stay-in-school employees would continue to be utilized, but in their appropriate role, in support of the permanent staff.)

The remaining two clerical positions will be utilized to: (1) operate the newly acquired map plotter, identical to those used by the Bureau of the Census and set to the same specifications as those used by Census, that will allow the program to produce Census maps needed in analyzing districting and redistricting plans of states, counties, cities and other jurisdictions; in determining whether at-large and other methods of election used by jurisdictions dilute minorities' voting strength; and, (2) in investigating whether other voting-connected practices, such as the location of polling places and of voter registration and/or satellite balloting sites, result in the denial or abridgment of minorities' right to vote. (There will be between 10 and 200 1990 Census maps for each of the 909 counties that are specially covered under the Voting Rights Act--compared to three to five Census maps for most counties in the 1980 Census--which the plotters will allow the program to produce as they are needed, thereby eliminating the more expensive alternative of purchasing and warehousing at the onset the 40,000 to 50,000 paper maps that Census estimates will be needed by the program throughout the decade, and then continuing to store "clean" copies of the Census maps, as has been done with the less voluminous 1970 and 1980 Census maps.)

Beginning in 1991 the program expects that over 5,000 redistricting plans adopted by states, counties, cities, school boards and other jurisdictions to comply with Constitutional one person, one vote requirements, will be submitted to the Attorney General for preclearance under Section 5 of the Voting Rights Act. Based upon the number of redistricting plans submitted after the 1980 Census, the increases that have occurred since then in the number of cities, school districts and other jurisdictions that have adopted districting plans, the fact that most jurisdictions will need to have their redistricting plans in place to use in elections in 1991 and 1992, and the increases in Section 5 submissions that have resulted from jurisdictions' increased awareness of the preclearance requirement of federal law, the program expects that 1,200 redistricting plans will be submitted for review in the last half of 1991, and that 1,600 redistricting plans will be submitted in 1992. Thereafter, the program anticipates the submission of 800 redistricting plans in 1993, 500 redistricting plans in 1994, and approximately 200 redistricting plans in each of the following four years. The extraordinary temporary workload increase that will result from the need for processing and analyzing of redistricting plans in 1991 and 1992 can be met by contract employees. Therefore, an additional program increase of $800,000 is requested to provide resources for the hiring of contract employees. These employees will be provided an intense three month training program during the first quarter of 1991. While the records and production staff necessary to this effort can be hired in the manner usual for such positions, the contract analyst staff will need to be specially recruited from, for example, among populations such as graduate students in political science, in order to assure that they are competent to perform the tasks required of them under such unusual circumstances.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Employment litigation........................	63	59	$4,341	63	59	$4,526	63	59	$4,526	...	...	...

Long-Range Goal: To reduce discrimination in employment by state and local governmental units and federal contractors.

Major Objectives:
To develop the legal principles necessary to create a nationwide climate where voluntary compliance with laws against discriminatory employment practices can be achieved.

To secure compliance with Title VII through litigation and enforcement of consent decrees in the public sector, and based on referrals from the Equal Employment Opportunity Commission (EEOC) and the Office of Federal Contract Compliance programs in the public and private sector, respectively; participate in private suits when the government's position is important to the development of case law; and, ensure compliance with existing court orders.

To issue right-to-sue notices to persons who have filed public sector charges with the EEOC.

Base Program Description: This program addresses the problems of discriminatory employment practices of state and local governments and private federal contractors. It enforces federal laws and orders which prohibit discriminatory employment practices which result in the denial of equal employment opportunities because of race, color, religion, sex, national origin or [illegible]p. Approximately 10 million jobs involved in the public sector are subject to Title VII and upwards of 30 million jobs in the private sector are subject to Executive Order

11246. Program staff investigate and, when necessary, initiate litigation with respect to problems peculiar to employment discrimination. Litigation is used only when negotiation does not result in voluntary compliance through the entry of court approved consent decrees. All suits, whether in the public or private sector, seek to remedy all forms of purposeful discrimination and practices having a discriminatory impact such as those that result from the use of non job-related tests and other selection and promotional practices and standards which have unlawful adverse impact upon racial, ethnic, and religious minorities or upon females; abuses of managerial discretion; and, discriminatory training systems and programs. Major elements of relief sought include: relief for individual victims of unlawful discriminatory practices in the forms of reinstatement, promotion and/or back pay; affirmative recruitment efforts directed towards minorities and females or other victims of the employer's discrimination; validation of tests and other selection and promotional practices; and, elimination or change of other employment practices having unnecessary discriminatory effects. The Division is currently seeking new and innovative methods to remedy the problem of employment discrimination. Litigation that is initiated is concluded by consent or litigated decrees which must be monitored on a continuing basis for several years to ensure that defendants comply with all requirements imposed by the courts.

Accomplishments and Workload: Accomplishments of the Employment Litigation program are presented in the following table:

			Estimates	
Item	1988	1989	1990	1991
Agency Referrals	79	97	85	60
Investigative Matters Received	41	18	20	40
Cases Commenced	10	10	15	18
Cases Terminated	63	12	10	30
Right-to-Sue Notice Requests Received	1,465	1,485	1,500	1,600
Right-to-Sue Notices Issued	1,480	1,474	1,500	1,500
Decrees Enforced	152	140	160	160
Decrees Obtained	11	11	15	20

Prior to 1989, EEOC referred to the program a significant number of individual charges of discrimination that procedurally had not received careful scrutiny by that agency. The result was a large number of referrals but very few that were acted upon substantively by this program. Most of these referrals were routinely handled by the issuance of a right to sue letter and returning the file to EEOC.

Beginning in approximately 1989, EEOC referrals began to decline in quantity but improve in merit. The result has been that the program now receives, on average, four to five referrals a month, of which three to four are meritorious. These referrals have placed increased and significant demands on the program's attorney staff. All new attorneys assigned to the program now receive at least three of these referrals to pursue to a conclusion. With many of them now resulting in suit recommendations, we are finding that each requires approximately nine months to resolve. While one referral is not a full time undertaking, three referrals will occupy a substantial portion of an attorney's time over the course of a year. In addition, a number of these referrals result in pattern or practice suits as well as suits seeking relief on behalf of the individual who filed the charge.

Since the program is now coming out of the tremendous resource commitment required by Stage II proceedings in six major settlements negotiated over the last four years, we are projecting that resources that have been devoted to Stage II matters will now be freed up to pursue pattern or practice investigations. Accordingly, we are projecting an increase in investigations over the next several years.

During the period, the program continued its effort to identify individual victims of discrimination in the post-liability phase of eight pattern and practice law suits. The program filed ten law suits, resolved or partially resolved nine law suits through the entry of consent decrees, obtained two judgments after litigation and filed three motions to enforce consent decrees. Significant highlights of these cases include: a consent decree with the City of Chicago Police Department providing back pay relief of nine million dollars to 666 black and female victims of promotion discrimination; a consent decree with the Mississippi Department of Public Welfare providing three million dollars in back pay for approximately 850 victims of hiring discrimination in three job classifications; a consent decree with the Hawaii Department of Labor Industrial Relations, our first employment discrimination suit brought on behalf of a Filipino, providing $25,000 in back pay and a job offer; a consent decree with the City of West Haven resolving hiring discrimination claims on the basis of sex and providing $120,000 in back pay for victims of discrimination; and, a suit against the State of New Jersey which seeks to end the use of an alleged unlawful examination used to select law enforcement officers for municipal police departments throughout the State.

Title VII referrals from EEOC constitute an important part of the program. These referrals result from charges filed by individuals alleging employment discrimination by state or local government employers on which the EEOC has found cause and has been unable to obtain an acceptable conciliation agreement. The program received 97 referrals from the EEOC in 1989. Of the 51 investigative matters pending at the end of 1989, 19 involved EEOC referrals. Six of the ten cases filed by the program in 1989 were based on EEOC referrals. One of these, filed against Masontown Borough, Pennsylvania, resulted in a consent decree providing nearly $105,000 in back pay to three female victims of alleged sex discrimination in employment.

In the area of test validation, the program continues to work in conjunction with test development experts in the preparation of a valid entry level examination for law enforcement positions. In addition, important entry level and promotional test development projects for fire departments continue in San Francisco, Buffalo and New Jersey.

The program's responsibility to monitor decrees has increased significantly in the past few years. Approximately 150 decrees for which the program has enforcement responsibilities will be pending at the beginning of 1990. Until 1988, the number of cases with new decrees increased each year at a rate which far exceeded the number of cases in which decrees were dissolved.

Recognizing the increasing size of the program's compliance obligations and the fact that many compliance problems can be addressed and resolved more effectively when they are discovered in a timely manner, the program refined and improved its compliance monitoring efforts. It is believed that these improvements will be advantageous to all parties involved by ensuring that: (a) defendants file reports regularly and on time; (b) reports are analyzed promptly; (c) the program maintains a continuity of presence with the defendants that enhance the defendant(s)' overall commitment to the requirements of decrees; and, (d) reports are compiled into a uniform format that allows comparison with the performance of comparable defendant employers and prompt responses to inquiries from program managers, other responsible officials in the Division and Congressional inquiries.

Where the program has been unable to secure voluntary compliance with outstanding decrees, appropriate enforcement proceedings have been initiated. As a result, the program has ongoing litigation with a number of jurisdictions including, Birmingham, Alabama; Jackson, Mississippi; the State of New Jersey; Nassau County, New York; Buffalo, New York; and, San Francisco, California. Substantial resources are devoted to these cases as they involve complicated and important legal and factual issues.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Coordination and review........................	39	37	$2,776	39	37	$2,904	38	36	$2,904	-1	-1	...

Long-Range Goal: To achieve consistent and effective enforcement of various laws and regulations prohibiting discriminatory practices in federal programs and programs receiving federal financial assistance; maximize use of existing federal, state and local civil rights enforcement resources; and, minimize the costs associated with federal civil rights programs while maintaining the level of responsiveness to citizens who feel that their civil rights have been violated.

Major Objectives:
To maintain continuing oversight and control of all Executive agencies covered by Executive Order 12250 and liaison with other Department organizations and other federal agencies involved in civil rights litigation.

To review, evaluate and monitor, on an annual basis, implementation plans submitted by Executive agencies; review proposed or final agency regulations or substantive amendments to existing regulations promulgated under statutes subject to the Executive Order; and, provide guidance in the form of prototype regulations for implementation of Section 504 of the Rehabilitation Act of 1973, as amended, as it concerns federally conducted programs.

To provide staff support to the Assistant Attorney General for Civil Rights as Chairman of the Interagency Coordinating Council and as a member of the Architectural and Transportation Barriers Compliance Board.

To provide assistance to Departmental organizations as well as other federal agencies to enable them to implement the requirements of Section 504 regulations covering their programs and activities.
To provide support to the Office of the Solicitor General, the Civil Division, and other federal agencies in various lawsuits which includes providing advice on the strategy of a case or on particular motions or briefs, writing pleadings and affidavits, preparing court requested status reports, answering interrogatories, and furnishing testimony.

Base Program Description: This program ensures that all federal Executive agencies effectively and consistently implement the nondiscrimination provisions of federal grant statutes prohibiting discrimination on the basis of race, color, national origin, handicap, religion or sex. Under Executive Order 12250, the program undertakes a diverse array of regulatory and administrative initiatives. The program reviews all new civil rights regulations for consistency, adequacy, and clarity; assists agencies on new civil rights plans; offers agencies training and technical assistance to improve their civil rights enforcement procedures and programs; and, promotes interagency information sharing and cooperation. In addition, support is provided to the Office of the Solicitor General, the Civil Division, and other federal agencies in various lawsuits. This assistance includes providing advice on the strategy of a case or on particular motions or briefs, writing pleadings and affidavits, preparing court requested status reports, answering interrogatories, and furnishing testimony.

Accomplishments and Workload: Accomplishments of the Coordination and Review program are presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Non-Regulatory Documents Generated	269	294	323	355
Responses to Citizens and Public Officials	215	224	246	271
Documents Reviewed as Part of Special Projects	354	211	232	255
Reviews Conducted of Agency programs	25	24	28	34
Delegation Agreements Developed or Implemented	10	2	4	4
Litigation Documents Prepared or Reviewed (Pleadings, Briefs, Interrogatories)	114	52	57	63
Technical Assistance Provided	775	797	877	965
Regulations Reviewed	72	73	82	70

The workload statistics are based upon the program's accomplishments for 1989. The data for 1990 are projected based on historical experience. The workload factors for this program have been revised to more accurately reflect its activities. "Non-Regulatory Documents Generated" was refined. Special projects (e.g., handling Office of Revenue Sharing (ORS) complaints, documents reviewed and generated as part of the program's efforts to assist other federal agencies implement Section 504 regulations effecting their programs and activities) are listed under "Documents Reviewed as Part of Special Projects." In addition, items requiring only cursory attention by the program are no longer counted. In some categories, 1988 workload was unusually heavy; projections for 1989-1991 have been adjusted to reflect more realistic workload demands

In 1989, the program oversaw the publication of a joint publication of notice of proposed rulemaking to amend Section 504 for federally-conducted programs and activities in 15 federal agencies federally-assisted programs to reference the Uniform Federal Accessibility Standards in place of the American National Standards Institute standards as the design standard to be followed in new construction or alteration; and, the civil rights implementation plans of 24 agencies as well as the civil rights statistical reports of 18 agencies. In addition, 42 regulations were received. Comments were made on 61 regulations, 24 were published as proposed rules and nine were published as final rules. A project to process complaints and compliance reviews that remained unresolved, when the ORS ceased operations, was continued; 31 were processed in 1989. Finally, 797 technical assistance contacts, including training seminars, were made in 1989.

Program Changes:	1991 Base Perm. Pos.	1991 Base WY	1991 Base Amount	1991 Estimate Perm. Pos.	1991 Estimate WY	1991 Estimate Amount	Increase/Decrease Perm. Pos.	Increase/Decrease WY	Increase/Decrease Amount

The reduction of one position and one workyear is associated with mandatory A-76 reductions.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Housing and civil enforcement.................	33	31	$2,342	33	31	$2,450	80	55	$4,950	47	24	$2,500

Long-Range Goal: To eliminate a significant portion of the illegal discrimination in housing opportunities and credit transactions related thereto; to eliminate a significant portion of the illegal discrimination in places of public accommodation; secure general compliance with the Equal Credit Opportunity Act (ECOA) and its implementing regulations; and, secure general compliance with federal statutes requiring nondiscrimination in the provision of municipal services.

Major Objectives:
To investigate compliance with and initiate litigation to enforce the Fair Housing Act and the ECOA, monitor final court orders resulting from such suits, and move for contempt of court or other relief where the facts warrant.

To initiate litigation, upon referral from the Department of Housing and Urban Development (HUD), to remedy local government bodies' noncompliance with their housing-related obligations under the 1974 Housing and Community Development Act.

To communicate equal housing and equal credit opportunity information to the public by liaison with federal, state and local enforcement agencies.

To investigate compliance with and initiate litigation to enforce the provisions of Title II of the Civil Rights Act of 1964 relating to public accommodations.

Base Program Description: This program is responsible for carrying out the Division's enforcement efforts related to the areas of fair housing, equal credit opportunity, provision of municipal services under federally funded programs and public accommodations. It is ranked as a major priority of the Division. In recent years the Division has placed increased emphasis on fair housing and equal credit opportunity enforcement activities and on working with the Department of Housing and Urban Development (HUD) to identify and bring to court persons and businesses operating in violation of the Fair Housing Act of 1968 and the Equal Credit Opportunity Act. With the passage of the Fair Housing Amendments Act of 1988, which became effective on March 12, 1989, the Division has substantially enhanced enforcement authority in the fair housing area and the emphasis on fair housing and equal credit opportunity enforcement activities has developed into one of the highest priorities of the Division. Considerable coordination with other federal agencies which have enforcement responsibilities in the housing and credit area is required, especially HUD. While in the past we have worked to coordinate enforcement activities with HUD, the importance of such activities has increased substantially under the Fair Housing Amendments Act of 1988. In addition to investigation and conciliation of housing complaints that HUD has had authority to undertake in the past pursuant to the 1968 Act, the new law creates a new administrative enforcement mechanism at HUD, part of which permits: (1) HUD to authorize the Department of Justice to seek prompt judicial relief when it is necessary to maintain the status quo while HUD completes its investigation and disposition of the complaint; and (2) parties to a HUD enforcement proceeding to elect to have the case tried in federal court by the Department of Justice. Thus, the need for very close coordination and cooperation between the two enforcement agencies has increased under the new law. Staff members also work closely with local U.S. Attorney's offices and the Federal Bureau of Investigation with respect to both housing and credit cases and public accommodations cases.

Accomplishments and Workload: Accomplishments of the Housing and Civil Enforcement program are presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Matters Received	286	305	650	650
Investigations Conducted	117	101	350	350
Matters Closed	152	42	200	200
Cases Filed	20	35	250	250
Cases Closed	20	15	50	50
Judgments/Decrees Obtained	14	17	100	100

The number of cases filed in 1989 increased significantly because of the new enforcement responsibilities assumed by the program as a result of the Fair Housing Amendments Act of 1988, which became effective on March 12, 1989. As noted above this new law significantly increases the authority of the program to combat unlawful housing discrimination. It requires the program to initiate new cases which come to it as a result of HUD authorizations to seek prompt judicial action as well as the federal court election option in the HUD enforcement scheme. The Division has no prosecutorial discretion with respect to these cases. The new law also significantly expands the enforcement authority of the program by (1) prohibiting for the first time discrimination against families with children and against handicapped persons, and (2) authorizing the program to seek monetary damages for victims of discrimination and civil penalties in pattern and practice fair housing lawsuits, a remedial authority that was not available under the 1968 Act.

For the period of October 1, 1988, until March 12, 1989, when the program's jurisdiction continued to be limited in the fair housing area to pattern and practice cases involving discrimination on the basis of race, color, national origin, sex and religion, six new fair housing cases were filed. The program also initiated a major public accommodations and equal credit opportunity suit against a large health club chain located on the east coast. For the period from March 12, 1989 until the end of the year, the program filed an additional 21 fair housing lawsuits, a substantial increase reflecting the start of the expected workload increase as a result of the 1988 Amendments to the Act. Twelve of these lawsuits were initiated pursuant to the program's pattern or practice authority; seven were prompt judicial action lawsuits filed at the request of HUD; and the remaining two cases were election lawsuits under the amended Act. In addition, the program is defending HUD in two suits which attack the constitutionality of the Amended Act and filed an amicus curiae brief in another case addressing one of the provisions of the Amended Act. Finally, from March 12, 1989 until the end of 1989, the program also filed a Title VI lawsuit upon referral from the Department of Health and Human Services, two additional Title II public accommodations lawsuits, and is defending the Department of Justice in a suit challenging the constitutionality of an important statute designed to compensate Japanese persons who were interned during World War II which is being implemented by the Civil Rights Division.

In 1990, when implementation of the new law will be operative throughout the year, projections based on the number of cases that HUD expects to process under its new enforcement authority indicate that the program will receive 225 new cases from HUD. It is important to note that these new cases are in addition to those brought under the program's traditional pattern and practice jurisdiction. Our additional substantive and remedial authority in these kinds of cases also will result in an increase in the overall workload of the program and the workload statistics reflect the expected increase in this aspect of the program's responsibility as well as that resulting from cases coming to us as a result of the HUD enforcement process.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Housing and civil enforcement..	33	31	$2,450	80	55	$4,950	47	24	$2,500

Under the Fair Housing Act of 1968, the Federal Government's ability to enforce the provisions of the law has always had two serious limitations in that the Department cannot: initiate cases where there is only evidence of a single incident of discrimination or discrimination involving one person, or to seek money damages in its "pattern and practice" cases. Not long after enforcement of the 1968 Act began, several courts interpreted the Act as not authorizing such a remedy in cases brought by the Attorney General. Consequently, the Department has been limited to seeking only injunctive relief in these cases. The practical effect of this limitation has been that a very high proportion of these cases settle by consent decree, many filed simultaneously with the complaint in the case, primarily because it has made very little sense for defendants to subject themselves to the adverse publicity and expense of litigation when the severity and burden of the relief sought is relatively moderate. Despite the limited enforcement authority provided by the 1968 Act, vigorous enforcement of the Division's responsibilities has been a high priority over the last several years.

The Fair Housing Amendments Act of 1988 addresses both of the limitations described above in that it provides the Department with new authority to litigate individual cases of housing discrimination upon referral by the Department of Housing and Urban Development (HUD) and to recover civil penalties and damages for victims of discrimination. A brief discussion of the new requirements of the Act follows:

1. For the first time HUD has enforcement authority over instances of individual complaints of discrimination. The Act created an Administrative Law Judge (ALJ) apparatus at HUD which gives the ALJs authority to impose damages and civil penalties against defendants found to have discriminated against individuals.

2. The new enforcement authority over individual complaints of discrimination impacts this Department in a major way. Before a case goes to an ALJ at HUD, either the complaining party (or an aggrieved party) or the defendant may elect to have the case heard in federal court rather than before an ALJ. When such an election is made, this Department must initiate the case within thirty days of the election. There is no prosecutorial discretion on the Department's part in such circumstances.

3. This Department is authorized to recover monetary damages for aggrieved persons and civil penalties in both its pattern or practice suits, as well as any suits on behalf of individuals which come to it as a result of the election discussed above. This authority will most certainly result in a major increase in the litigative activity involved in fair housing suits. With potentially large sums of money involved, fewer defendants will settle and the number of cases that go to trial or require major discovery before settlement will increase substantially. Moreover, defendants will have a right to trials by jury in such suits and for the first time this Division will be litigating before juries in these types of cases.

4. The Amendments expand the existing categories of discrimination prohibited by the Act to include those of handicap and familial status. Consequently, both HUD and the Department will experience a major increase in complaints alleging discrimination on these new bases. In addition, both agencies will experience a significant increase in housing discrimination complaints in categories already covered by the law because for the first time the Federal Government will have the ability to obtain damages for individuals through enforcement of the law. Publicity surrounding this new Act is also likely to cause an increase in the number of complaints submitted.

5. Other provisions of the Amendments pertaining to actions that will be initiated at HUD will also result in an increase in this Division's workload. First, if HUD desires to seek preliminary relief during the administrative process in order to preserve the status quo, such actions shall be sought in federal court and will be assigned to this Division for prosecution upon HUD's request (again, apparently, without any discretion on the Division's part). Second, the Amendments require HUD to transmit information to this Department whenever there is reason to believe that an administrative complaint reveals a potential pattern and practice violation, and upon referral from HUD authorize this Department to initiate civil actions to enforce conciliation agreements. While this is not a departure from previous procedures and responsibilities, explicit requirement and authorization of such activities in the amended law is likely to result in increased referrals of this kind from HUD. Third, the Amendments require HUD to refer any matter involving the legality of any state or local zoning or other land use law or ordinance to this Division for appropriate action. Such matters are among the most complex that Division faces and require a significant resource allocation.

To meet the new litigation responsibilities resulting from the Amendments, a program increase of $2,500,000 and 47 positions (26 attorneys, 10 paralegals, 11 clericals) for 1991. This represents a major increase in the resources devoted to enforcing laws prohibiting housing discrimination, however, the scope of the added responsibility resulting from the Amendments more than justifies this request. Even before the added responsibility of this new Act was estimated, Division management believed existing program needs required additional resources. The new Act will substantially increase that workload. First, with respect to the pattern and practice cases that the Division already had authority to initiate, the Division expects (1) a significant increase in the number of active trials and litigation as a result of its ability to obtain actual damages and civil penalties, and (2) a substantial increase in the number of complaints received both in the newly covered areas of handicap and familial status as well as in categories already covered by the law as a result of the potential of damages for persons who file such complaints. Second, and of equal importance in projecting program needs, there will be a major increase in the number of cases that the Division will be required to file pursuant to elections made for federal court, as opposed to ALJs, in cases involving instances of individual discrimination.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Educational opportunities....................	31	28	$2,202	31	28	$2,298	30	27	$2,298	-1	-1	...

Long-Range Goal: To eliminate segregation in districts formerly operating dual school systems and reduce, in substantial measure, the need for court supervision of public elementary and secondary school desegregation in these districts; make substantial progress in eliminating unlawful segregation and discrimination in public schools in districts where there is no history of a statutorily required dual system;

eliminate continuing denials of equal educational opportunities in public school systems; eliminate discrimination in and/or denial of educational opportunities to Native Americans; eliminate the vestiges of unlawful, racially dual systems of higher education; and, assist the Department of Education (ED) in enforcing assurance of compliance with civil rights laws.

Major Objectives:
To initiate and/or participate in litigation designed to bring about the orderly desegregation of schools pursuant to federal laws; eliminate denial of equal protection of the law in educational institutions on account of sex; and, secure equal educational opportunities for students in public school systems and educational institutions receiving federal financial assistance.

To seek supplemental relief designed to eliminate the vestiges of racially dual school systems and to achieve compliance with constitutional requirements. Such relief in southern school districts will lead to the elimination of the need for judicial supervision of many of these school districts.

To file lawsuits, upon referral from ED, to enforce nondiscrimination assurances made by educational institutions receiving federal funds and defend ED against court challenges to its authority to enforce civil rights assurances by federal recipients through the administrative process.

To coordinate activities with ED to ensure that cases referred are worthy of litigation; investigative efforts are not duplicated; litigation reports are secured from client agencies; and, litigation is jointly planned (strategy, preparation of court documents, utilization of personnel).

Base Program Description: Program resources are expended primarily to litigate existing cases and to move for supplemental relief in cases previously decided, when necessary; institute cases to eliminate denials of equal educational opportunities; and, handle cases brought against ED. Initiatives in the area of school desegregation require continual coordination with the Office of Civil Rights (OCR), ED. Advance planning is undertaken to ensure that cases referred are worthy of litigation. Direct and ongoing coordination with OCR is also necessary to ensure that investigative efforts are not duplicated as complaints are frequently filed with the Division and OCR simultaneously. In defensive cases, coordination includes securing litigation reports from the client agency, joint planning of litigation strategy, mutual review of pleadings and other papers, and supervision of agency personnel with respect to the preparation of such cases for trial. In addition, significant resources are devoted to reviewing longstanding school cases to determine those school districts which have fully complied with court orders issued against them and therefore should be released from further court supervision. Finally, the program operates a compliance monitoring unit which is responsible for monitoring defendants' compliance with outstanding court orders.

Accomplishments and Workload: Accomplishments of the Educational Opportunities program are presented in the following table:

Item	1988	1989	Estimates	
			1990	1991
Cases/Matters Received	400	425	525	525
Investigations Conducted	325	330	450	450
Matters Closed	325	350	425	425
Cases Filed	15	15	30	30
Cases Closed	145	150	150	150
Defensive Cases in Progress	6	3	9	12
Judgments/Decrees Obtained	90	125	225	225

In May 1989 the program's appeal of an adverse liability ruling in the Mississippi higher education case was argued and, if the government prevails and the case is remanded, an early trial is expected. Recently a new judge was assigned to the Alabama higher education case and the parties have begun the discovery process. To date, the parties have been required to review the extensive record to attempt to agree on stipulations of fact. This process has been partially completed and, to date, has consumed an inordinate amount of resources. The program anticipates the case to be tried in the Spring of 1990. The program prevailed in the Louisiana higher education case and the court recently ordered a remedial plan. The State has appealed the order and therefore either further litigation or implementation of a final remedial plan may occur in early 1990. A fourth higher education case is being further investigated and a suit recommendation is expected soon. Finally, two investigations have been conducted of universities which have a policy of not admitting females. The results of one investigation is being reviewed to determine whether suit should be initiated and a suit recommendation is under review in the other case.

The program conducted a substantial number of hearings and trials in elementary and secondary cases and 35 cases advanced to hearings and trials. Court orders and consent decrees have been obtained in 53 cases and 105 investigations and reviews are in progress. An extensive post-trial brief was filed and oral argument held in the Charleston school case; a liability ruling is expected soon. The program has also successfully prosecuted several cases in which remedial plans will be implemented by school districts and, therefore, the program will have to devote resources to monitor the implementation of these plans. Finally, to enhance cooperation with civil rights groups and local community members, extensive outreach efforts have been undertaken, e.g., meetings and attendance at conference.

As reflected in the workload estimates, the Compliance Monitoring Unit has been extremely productive in monitoring and taking appropriate enforcement action with respect to districts operating under court orders. Unit personnel handled 240 reports to the court from school districts, received a voluminous amount of written and telephonic complaints, continued to follow up on 239 information requests to school districts which have failed to file required reports, and handled 30 investigations. The information request letters have generated a tremendous amount of increased activity as guidance and assistance have been sought by many of the districts on the proper methods for providing the required data. The material which is ultimately provided by about 200 districts is being analyzed to determine each district's compliance status. Additionally, the staff conducted on-site reviews, provided assistance to districts developing and implementing plans, and actively coordinated its activities with ED. The unit has been very successful in urging districts to initiate and adopt magnet school plans to remedy illegal student segregation. Many districts have had virtually no experience in this area, therefore, the unit has made its staff readily available to provide technical support and direction to facilitate the establishment and adoption of appropriate magnet schools.

The program continued a case closing initiative, which was implemented in 1988, involving the review of at least 300 old school cases which have had desegregation orders in place for approximately 20 years. The purpose is to determine whether the school systems involved have fully complied with their orders to determine whether the court should be requested to dismiss these cases. The project includes the review of voluminous case files and meeting and/or discussing issues with school officials in each district. To date, 20 school districts have been contacted and dismissal proceedings will proceed as appropriate. Private parties have objected to some cases being dismissed and, therefore, litigation has ensued; nine districts in Georgia are currently in litigation. This project has resulted in a number of complaints from parents and students which are now under investigation. Moreover, a number of districts have failed to provide requested information, resulting in an increased workload for the program. For districts which simply refuse to provide information, orders will be sought from the court.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Educational opportunities.....	31	28	$2,298	30	27	$2,928	-1	-1	...

The reduction of one position and one workyear is associated with mandatory A-76 reductions.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Management and administration.................	119	104	$8,495	77	81	$9,931	74	78	$10,004	-3	-3	$73

This budget activity includes resources for executive and administrative direction and control of the Civil Rights Division as well as its responsibilities as a result of the Civil Liberties Act of 1988. For clarity of presentation, this program is broken out into two sections, Executive Direction and Control and Redress Administration.

Executive Direction and Control

Long-Range Goal: To reduce the incidence of illegal discrimination in the nation through provision of guidance and definition of the Civil Rights Division's mission and priorities and provide to the public such access to Division records as is permissible under controlling law; provide all necessary executive direction, administrative support, training, and operational support required to the enforcement and regulatory activities of the Division in order to enable the program to substantially reduce discrimination in all subject areas enforced; and, improve and maintain more cost-effective systems support and equipment to allow increased efficiency and work per employee.

Major Objectives:

To coordinate the Division's enforcement activities appropriately with related activities of other components of the Department and other enforcement agencies.

To participate effectively in Departmental, Executive Branch and governmentwide efforts to clarify or strengthen jurisdiction and authority and to establish or improve policies and procedures which govern litigation, administrative enforcement and program operation.

To evaluate policies, procedures and systems; anticipate the workload, as well as resource and time expenditures of the programs; and, to develop and implement plans for changes which would render them more efficient, effective and responsive to constituent concerns.

To establish and maintain relationships with public interest groups, members of Congress and other constituent representatives which permit constituent concerns to be communicated to the Division and Division activities to be explained to constituents' representatives.

To answer Freedom of Information Act (FOIA) requests within 10 days and Privacy Act (PA) requests within 20 days; minimize the number of appeals from denials of records requests by adhering to a standard of maximum disclosure permissible under controlling law; and, assist the Civil Division and U.S. Attorneys defending the Department in litigation arising from the denials of FOIA requests and out of cases and matters of historic interest on which the Department file is closed.

To provide cost-effective and responsive management and automation systems capabilities to address management, administrative and litigative requirements.

To review, analyze and respond (on behalf of the Assistant Attorney General) to letters, memoranda and other communications directed to the Division by the White House, Congress, other federal agencies, private corporations and citizens; and issue Criminal Non-Prosecution Notices to government and private sector organizations and to citizens as appropriate.

To provide all of the general administrative support necessary to enable Division personnel to enforce federal civil rights laws, including the following administrative activities: budget formulation and execution; personnel services and training; outside contracts and procurement; mail distribution; space management; supply, equipment and reproduction services; and, other support services not specifically defined in other programs.

Base Program Description: The Assistant Attorney General personally approves case filings, interventions and amicus participations; major investigative undertakings, enforcement motions and consent decrees; novel legal positions; and, closings of investigations of death cases. He also represents the Attorney General on interagency councils concerned with civil rights issues. In that connection, he serves as chair of the Interagency Coordinating Council and as a member of the Architectural and Transportation Barriers Compliance Board both of which were established by the Rehabilitation Act of 1973, as amended. Supervisory responsibility over matters involving investigative and litigative strategy; relations with other components of the Department, other agencies, the Congress and some public interest groups; preclearance of changes in localities' voting practices and procedures; long-range program planning and evaluation; and, operation of the FOIA/PA unit is divided among the Deputy Assistant Attorneys General for action or oversight. Matters involving finance, personnel, and support services are assigned to the Executive Officer who conducts them through a centralized operation which is more efficient and cost effective yet provides greater management control.

The Division is committed to the effective use of Automated Data Processing to develop and implement systems to increase productivity. Management and other key personnel have completed specially designed computer courses and are playing integral roles in developing litigation systems within their programs. Through the use of a centralized shared information system--AMICUS--and decentralized personal computers for task specific requirements or where AMICUS is not yet available, programs are able to address their substantive and administrative requirements promptly and appropriately, saving time and money. Increased litigation support is obligatory to compete with private counsel using the most efficient technology available.

Accomplishments and Workload: Accomplishments relating to the Division's office automation initiative are presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Litigation Support Projects	95	115	125	125
Litigation Support Reports	1,150	1,400	1,500	1,600
AMICUS & Microcomputer Users	432	442	442	474
Requests for Assistance	956	1,050	1,100	1,200
Sub-program Units	300	340	350	400

The data set out above reflects the program's continuing effort to refine and fully implement AMICUS as well as databases and other specialized software on personal computers.

The management activities of this program are by nature non-quantifiable and are best measured by the performance of the other programs which it manages. However, the Division is developing a Work Measurement System within AMICUS which will assist Division managers in measuring, in a more efficient statistical fashion, the inputs, outputs and performance of the other programs, as well as the resources required by each program. The system will be in direct support of the Department's case management system.

A major goal of the Administrative Management Unit of the program continues to be increasing productivity within the Division through the development and use of information technology. The focus of this initiative is the expansion of network office automation combined with the phasing out of less efficient systems and dedicated word processors. These two initiatives converge in a common developmental theme. The Division has continued its implementation of AMICUS, the network office automation system developed by the Civil Division and adopted by other divisions in the Department. At the conclusion of 1989, the Division had over 410 users on the system in the Main and HOLC Buildings. Productivity gains as a result of AMICUS surpass original estimates. At the beginning of 1987 (first year of AMICUS implementation), the Division's attorney/clerical ratio was 2:1; the Division's current attorney/clerical ratio is 3:1. In September, 1986, the Division's on-board clerical staffing level was 85; during 1989, the number of on-board clerical staff had dropped to 57, approximately 33 percent fewer clerical support staff. Because of very stringent fiscal constraints resulting in the Division's inability to back-fill vacant clerical positions, productivity gains realized from the implementation of AMICUS have proven invaluable to the day-to-day operations of the Civil Rights Division. Scarce available resources have been used to hire attorneys and other types of professionals in support of the litigative effort. Desktop access to legal databases such as JURIS, LEXIS, and WESTLAW via AMICUS has enabled lawyers and others to rededicate their time to more productive activities. The use of databases and other specialized software on personal computers for docketing, scheduling, record-keeping and direct litigation support has made the Division more efficient and is bringing essential information to the fingertips of its personnel. The Administration Management Unit has begun writing necessary application programs for its Amicus-base case management system and will begin implementation in early 1990, for its AMICUS-based case management system and will begin implementation in early 1990.

Automation has resulted in increased momentum in reducing the Freedom of Information/Privacy Act (FOI/PA) Unit's backlog of pending requests. During 1989, the backlog decreased from 335 to 268 pending FOI/PA requests. FOI/PA requesters continue to litigate; however, the reduced backlog and improved service to the public has reduced the overall number of requests in litigation. This reduction in litigation and the increased efficiency from automation is enabling the Unit to focus its resources upon the more complex and voluminous requests involving 10,000 pages or more of documents. Though, in the long term, the unit will continue to reduce the numbers of pending requests in the backlog; in the short term, the Unit will focus its resources and efforts upon these more complex requests and will maintain the backlog at a 250-260 level until the requests involving voluminous numbers of documents have been completed.

Redress Administration

Long-Range Goal: To provide payment to all eligible individuals: those of Japanese ancestry who were evacuated, relocated or interned in the United States during World War II, as set forth in the Civil Liberties Act of 1988.

Major Objectives:
To identify and locate eligible individuals as defined by the Act without requiring applications.

To implement and refine the process for verification of eligibility.

To notify all applicable individuals of eligibility.

To initiate payment to eligibles from the Civil Liberties Public Education Fund.

Base Program Description: The Civil Liberties Act of 1988 (P.L. 100-383) was signed by President Reagan on August 10, 1988. Under the Act, the Attorney General was assigned responsibility for Section 105, which provided that payments of $20,000 each be made to eligible individuals of Japanese ancestry who were evacuated, relocated, or interned by the United States Government during World War II. To carry out these responsibilities, the Office of Redress Administration (ORA) was created within the Civil Rights Division.

Accomplishments and Workload: The Office of Redress Administration was established on September 7, 1988. The accomplishments of the program include: establishment of a toll-free number, a post-office box, an information number in Tokyo, and printed materials in English and Japanese. Over 250,000 pieces of literature about the program, including 150,000 Voluntary Information Forms, have been distributed. A ninety day San Francisco office was established in October 1988 to assist with public outreach, and successfully completed its mission.

Over 50 outreach meetings have been conducted in major metropolitan areas of 15 states; half-page advertisements have been submitted to ten U.S. Japanese vernacular newspapers reaching a circulation of 69,800; a statement to the Japanese American Citizens League affiliated vernacular has been circulated to 25,000 in all 50 states; press releases have been sent to 14 Japanese vernaculars newspapers reaching a circulation of 137,300; media interviews have been conducted, including radio, television, and a full press conference for native Japanese press; and 400 letters have been mailed to community leaders in key organizations in 16 states.

It is estimated that 75,000 or more individual contacts have been made through the receipt of correspondence and utilization of the toll-free numbers. A special file system and archive for this correspondence and for documentation of all telephone contacts has been developed, offices and staffing secured, and the system put into full operation. This documentation is now quickly and easily accessible when needed in the verification process.

From various historical sources, ORA has compiled a master list of potentially eligible individuals. This list has been computerized, refined to eliminate duplications and errors, and through extensive research, expanded to include all but a very small number of those individuals defined as eligible by the implementing regulations. This master list is ORA's main tool in the verification of eligibility. ORA has constructed verification procedures, and devised and implemented computerized information management and case tracking systems to support them. These manual and computerized systems have been tested for comprehensiveness, efficiency, and security.

ORA has confirmed the estimated number of eligible survivors, and with the assistance of an independent actuarial consulting firm, has projected the number of expected deaths in the eligible population over the ten year span allotted by the Act. This exercise has provided a basis for important projections regarding the expected future cost of administering the program.

Death records have been obtained from four states with major populations of Japanese Americans, Oregon, California, Hawaii, and Illinois, in order to account for those deceased prior to the signing of the law. Preliminary matching of these records with the master list has been completed.

Proposed regulations governing eligibility and implementation of the Act were developed by ORA, approved by the Department, and published for a thirty day period for public comment. Shortly following their publication, ORA staff conducted public forums in nine major cities to explain the regulations and to answer questions about them. After considering the comments received, ORA revised the regulations and once again received Departmental approval. Final Regulations were signed by the Attorney General on August 10, 1989, just one year after the enactment of the Civil Liberties Act.

With the Final Regulations in place, official verification of eligibility has begun, in preparation for the availability of full funding for payments in October 1990. Form letters, which vary to fit the person's present circumstances eligibility for payment, and the facts of their individual case have been sent to over 2,000 individuals. ORA has published over 10 different letter types.

In further preparation for redress payment funding, ORA has developed and tested a system for payment processing. Components of this system include Division level approval of each payment, the transmission of necessary information to the Treasury, the safe distribution of redress checks, and accurate recording of important payment information.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Management and administration..	77	81	$9,931	74	78	$10,004	-3	-3	$73

In support of the post-1990 Census responsibilities of the Voting program, $73,000 is requested to purchase a mapping plotter, data files and related storage devices. The actual resources required for the acquisition of this equipment has been adjusted to reflect mandatory A-76 reductions of three positions, three workyears and $27,000. The Voting program cannot accomplish its review of Section 5 submissions without access to maps of covered jurisdictions. Pursuant to the Voting Rights Act of 1965, 17 states and 911 counties, as well as the cities, school jurisdictions and other political units that are located within those jurisdictions, are subject to the preclearance requirement of Section 5, 42 U.S.C. 1973c. Beginning in April 1991, redistricting plans based on the 1990 Census will be submitted to the Attorney General by these jurisdictions. Some jurisdictions will submit more than one redistricting plan for preclearance, e.g., states will need preclearance for their congressional, state senate and state house redistricting plans.

Initial projections regarding the volume of redistricting plans that will be submitted to the Attorney General are: 1,200 redistricting plans in 1991, 1,600 plans in 1992, 800 plans in 1993, 500 in 1994, and 200 to 300 redistricting plans annually after that. These projections represent a significant increase over the number received following the release of the 1980 Census. The increases are due, in part to: (a) hundreds of jurisdictions are now using single member districts as a result of court orders entered in lawsuits under Section 2 of the Voting Rights Act; (b) redistricting timing is compressed from three year periods in 1980 to at the maximum, one and one-half years in 1990; and, (3) the knowledge of jurisdictions that are covered is much more widespread.

More specifically, the voting program's review of redistricting plans requires the use of census maps to: (1) enable the program to use the census units (blocks, block groups, etc.) to recompute and thus verify the population and the racial make-up of the voting districts outlined by the jurisdiction, and (2) determine other available alternative districting configurations in order to measure whether a submitted redistricting plan causes retrogression in minority voting strength (as measured against the most recent districting), or whether the suggestion of a racial purpose lies behind the submitted redistricting as shown by the manner in which the proposed district lines fragment or pack areas of minority population concentrations.

In order to meet the statutorily imposed 60-day deadline for the review of submissions under Section 5, immediate access to multiple copies of the appropriate maps is required. Lacking the capability to produce census maps as needed, it will be necessary to purchase, in advance, and store all 30,000 maps. Storage alone, of the oversized maps, is impractical. Moreover, cataloging and maintaining control over the location of each map would be an enormous task requiring additional personnel.

In addition, if maps are unretrievable (i.e., lost, "in use", damaged, destroyed, etc.) the Voting program will be unable to get new copies as quickly as they will be needed because Census maps are not available from one central source (there are several different regional centers from which Census maps must be ordered). On such a short fuse, the specter of continually ordering and keeping track of the orders for map groups and subsections of map groups from various Census map centers for dozens of pending submissions is daunting, at best.

Long Range Goal: To stem the growth of international crime by providing efficient communications, exchange of information, and coordination of investigations among the member countries of INTERPOL, the INTERPOL General Secretariat (headquarters), and law enforcement agencies within the United States.

Major Objectives:

To represent the United States in the International Criminal Police Organization (INTERPOL).

To respond to and assist domestic and international law enforcement agencies in exchanging criminal information in accordance with the INTERPOL constitution and Department of Justice regulations and to coordinate investigations in their behalf.

To analyze patterns and trends of international criminal activities and to coordinate programs addressing particular areas of international crime, such as drug trafficking, terrorism, organized crime, financial crime, and international fugitive movement, with other Federal law enforcement agencies .

To assist the states and U. S. territories in coordinating communications between the USNCB, state and local jurisdictions and their foreign counterparts, including the maintenance of a strong state liaison program and regional subbureaus, so that impact of U.S. law enforcement resources can be maximized and duplication of effort at the state and local level reduced.

To support the Administration's programs to combat drug trafficking both domestically and internationally through a dedicated investigative unit for drug-related initiatives and through maximum utilization of the INTERPOL International Wanted Notice Program.

Accomplishments and Workload: Over the past year, the USNCB has made substantial progress on initiatives that hold great potential for international and domestic law enforcement.

The Caribbean/Central American Telecommunications Network, jointly funded by INTERPOL and the United Nations Fund for Drug Abuse Control, has been implemented. Terminals now tie together 28 countries in that region on an information exchange that allows direct access to the INTERPOL channel, direct communications among the nations in the region, and exchange of "real-time" police information from major drug trafficking routes between South and North America.

A significant accomplishment connected with this project is the USNCB's development of message formats. By using a standard format for messages, information from the 300 messages that are expected to be exchanged daily through an automated message switch at the San Juan regional station can be used to build a data base relating to drug trafficking. The standard formats that feed this data base were adopted for worldwide use by INTERPOL member-countries at the 57th INTERPOL General Assembly. INTERPOL is planning similar initiatives in the South Pacific, Eastern Mediterranean, and African Regions.

With the creation of a subbureau in Puerto Rico and the Caribbean/Central America Telecommunications Network, INTERPOL recognized the need for ongoing dialog among the network users of the area. As a result, the Technical Committee on the Caribbean and Central America was formed to address common law enforcement problems and policing issues. Various resolutions concerning policy, such as establishing the position of Narcotics Liaison Officer for the region, and issues of coordination concerning implementation and oversight of the telecommunications network are addressed by the committee of 11 countries.

In addition to the U.S. subbureau in San Juan, U. S. subbureaus were opened in the U. S. Virgin Islands and American Samoa in Fall 1988. Plans are being developed for a second INTERPOL automated regional station that will service the South Pacific basin, with Australia and American Samoa being considered as sites. Since it is relatively isolated, the South Pacific basin is thought to be a likely candidate for the influx of criminal elements, and established communications with a link to the INTERPOL network will go far towards preempting growth of illegal activity.

An initiative that will play a major role in curbing movement of criminals on both sides of the U.S.-Canadian border is the INTERPOL US/Canadian interface. This project allows the 50 states and their Canadian counterparts, through the National Law Enforcement Telecommunications System (NLETS), to exchange police information using the USNCB and INTERPOL Ottawa as the necessary interface. The USNCB has completed all transactional testing, and is operational with South Carolina and Washington State on line. Kentucky is scheduled as the third state to come on-line, with full implementation of the system shortly thereafter.

This project is significant because of its potential for apprehending wanted persons and recovering stolen vehicles, limiting the easy access now enjoyed by criminals on both sides of the border, and addressing the drug trafficking patterns up and down the I-95 corridor, as well as routes through the Ohio Valley and westward. It is anticipated that more than 5,000 messages per day may come through this channel.

In addressing the Administration's increased efforts in the war on drugs, the USNCB identified some voids in the area of narcotics investigations. DEA was asked by the USNCB to analyse incoming narcotic-related cases to reassess its level of participation at the USNCB, with a view towards better utilization of the INTERPOL network. After detailling two additional agents to the USNCB to immediately address increasing drug-related investigative demands and to conduct a study of current USNCB/DEA operations, the DEA supported establishment of a separate drug unit at the USNCB with an expanded DEA presence.

As part of increased worldwide efforts against drug trafficking, the USNCB has expanded its International Wanted Notice program. In the past year, issuance of U.S. notices and distribution of foreign notices have increased. As a result of resources approved in 1990 for a paralegal, greater utilization of the program is expected to significantly impede the movement of drug traffickers.

To meet the challenges created by the increased internationalization of crime, especially as it impacts state and local jurisdictions, and to facilitate use of the INTERPOL network by domestic agencies, the USNCB is working with states to establish liaison offices through which inquiries to the USNCB can be channelled. Liaison offices make it easier for local law enforcement to access the USNCB, INTERPOL, and foreign police sources and eliminates many querying errors at the source. Through these offices, the USNCB can dramatically increase and improve assistance to state and local law enforcement with virtually no additional investment of resources. Offices have been established in each of the 50 states.

The INTERPOL network represents an efficient and cost-effective way for domestic and international law enforcement to pursue investigations with a minimum expenditure of manpower. In FY 1989, the USNCB handled a case load of 46,173 investigative matters, with 25,870 pending at the close of the fiscal year. Yet to be realized is the dramatic increase the USNCB will experience when the Caribbean/Central America Telecommunications Network (estimated at 300 messages each day) and the INTERPOL/US/Canadian interface become fully operational.

Activity: Legal Activities Office Automation	1990 Appropriation Anticipated	1991 Base	1991 Estimate	Increase/Decrease
Office Automation............	$12,014	$16,946	$23,171	$6,225

Long-Range Goal: The mission of the Legal Activities Office Automation fund is to improve the productivity of administering the Department's legal activities programs through modernization and enhancement of office automation systems in the litigating components.

Major Objectives:

Develop system designs which meet the central requirements of the litigating organizations and the needs of the Department's management officials for information, and which allow reliable interfaces with Department-wide data collection and reporting systems.

Implement cost effective methods for electronic exchange of documents and messages among Departmental organizations. Institutionalize the planning and acquisition processes for office automation resources to:

- Build on the installed base of office automation systems in the litigating organizations;
- Build cooperative processing systems wherever possible;
- Ensure installation of compatible hardware and software in all future acquisitions.

Base Program Description: In 1986, the Deputy Attorney General directed that the Department develop a comprehensive policy and strategy for the design and acquisition of automated systems for the six legal divisions, the offices of the U.S. Attorneys and offices of senior departmental management. The objective was to achieve management efficiencies and productivity gains in office automation systems and to move the Department toward a more coordinated and unified approach to these systems.

During 1986, the Department developed and integrated project plans for all the litigating components and senior management offices. It was recommended that the Department proceed immediately to implement coordinated office automation systems throughout the litigating organizations. The Department is pursuing this recommendation through two major approaches -- the AMICUS and EAGLE office automation systems.

AMICUS - Beginning in 1982, the Civil Division developed the Automated Management Civil Users System (AMICUS) office automation system to provide attorneys, clerical staff and managers with access to an array of services supporting the operations of a modern law office. In addition to word processing, electronic mail and other office services, AMICUS provides on-line access to legal research data bases such as JURIS, Lexis/Nexis, Westlaw and other special data bases. With the funding appropriated for 1987 - 1989, the Department installed the AMICUS system in the Land and Natural Resources and Civil Rights Divisions. By 1991, these Divisions are scheduled to have completed the buy-out of their AMICUS installations.

EAGLE - EAGLE (Enhanced Automation for the Government Legal Environment) is the name used to describe a strategic Department of Justice procurement of integrated office automation hardware, software and support for Department litigating organizations. The Tax, Criminal, and Justice Management Divisions and offices of the U.S. Attorneys are currently participating in this joint office automation acquisition. The EAGLE contract was awarded in June, 1989.

Both AMICUS and EAGLE provide Departmental employees with desktop access to the tools necessary to increase productivity:

Legal word processing - the document production, spell-checking and printing tools necessary for preparing lengthy legal materials with multiple footnotes, indices, tables of authorities, etc.

Electronic mail - a cost-effective electronic alternative to telephones, the postal system, and overnight delivery services for short and informal communications, especially for organizations with a nationwide field office network.

Calendar management - tools for personal and group scheduling of court dates, meetings, conferences and events.

Communications and file-transfer - tools for access to online legal research services (JURIS, Lexis, Westlaw, etc.), for linkage to the Department of Justice Data Centers for centralized data management activities, and for transferring documents and computer files from one location to another.

Database management - tools for automated organization, analysis and retrieval of various types of records, including both evidentiary and administrative data.

Not only are the AMICUS and EAGLE systems compatible with each other, but they are also compatible with future directions (e.g., the Department's planned nationwide X.25 packet-switching telecommunications network via the FTS 2000 contract).

Although EAGLE was developed primarily to meet the needs of the litigating organizations without integrated office systems (Tax Division, Criminal Division, and U.S. Attorney offices), the functional requirements are generic enough to meet the needs of other Department of Justice organizations, including the Office of the Inspector General and the Justice Management Division.

It is expected that by the end of 1990, substantially all EAGLE systems in the Criminal and Tax Divisions will be operational. The United States Attorneys will install EAGLE in 53 districts nationwide, primarily in small and medium-sized offices. This will provide automated support for approximately 40% of all current United States Attorneys personnel. The Justice Management Division will install a limited number of EAGLE systems.

To move toward EAGLE compatibility, other DOJ organizations, not funded through LAOA, also are acquiring office automation equipment through the EAGLE contract. These organizations include the Office of Inspector General, the Bureau of Prisons, the Immigration and Naturalization Service, and the United States Marshals Service.

Accomplishments: The joint litigating organizations planning initiative has yielded impressive dividends thus far. The AMICUS system has been expanded to meet the needs of the Civil Division, the Lands and Natural Resources Division, the Civil Rights Division, the senior management offices, and the General Counsel's Office of the Immigration and Naturalization Service.

In August 1989, the Attorney General established a Project EAGLE Steering Committee to guide the implementation of the EAGLE contract throughout the Department. This Committee, consisting initially of senior management representatives from the Criminal, Tax, and Justice Management Divisions, and the United States Attorneys, provides policy guidance and reaches agreements on cross-cutting issues among EAGLE participants.

By the end of the first quarter 1990, the Criminal and Tax Divisions conducted facilities preparation, including power, cabling and telecommunications. An initial EAGLE system is operational in the Criminal Division and installation is under way in the Executive Office for United States Attorneys and the Philadelphia U.S. Attorney's Office (Eastern District of Pennsylvania). A second installation in San Antonio, Texas (Western District of Texas) is scheduled in the near future. 250 EAGLE workstations were installed in Organized Crime Strike Force offices nationwide. In addition, an EAGLE training center was established in Washington, DC, to train system managers and end users.

During 1990, a gateway will be installed to allow EAGLE and AMICUS to communicate electronically and to transmit documents instantaneously.

Program Changes:	1991 Base	1991 Estimate	Increase/Decrease
Office Automation	$16,946	$23,171	$6,225

An increase of $6,225,000 in budget authority is requested for 1991 for Legal Activities Office Automation. The requested funding in 1991 will be committed to the implementation of the EAGLE office automation system. Now that EAGLE installation has begun, the benefits of coordinated automation systems in the litigating organizations can be fully realized only if sufficient funding is provided.

During 1991, the United States Attorneys will complete the installation phase for EAGLE systems in all districts. The 39 districts scheduled to be brought online in 1991 include the largest United States Attorney offices, including the Eastern and Southern Districts of New York, and all of California and Florida. Also during 1991, the Criminal Division and Tax Division will finish the installation phase by implementing a limited number of remaining offices, as will the Justice Management Division. EAGLE, fully funded, and in combination with AMICUS, will for the first time enable our litigating organizations to match their counterparts with state-of-the-art technology. The lack of advanced automated resources has placed the attorneys at a disadvantage in pursuing and successfully prosecuting cases because their counterparts are defending clients with the aid of more advanced automated resources. Although installation will be complete in 1991, equipment lease payments will continue under the three year lease to ownership plan chosen by the Department.

Without full funding for EAGLE, attorneys will not have adequate modern tools available to successfully prosecute high level criminals associated with drugs, white collar crime, and fraud, and to defend the Federal Government against civil claims. The features of EAGLE would be rendered ineffective. Specifically, the ability to send mail to all users, to schedule meetings, to create and share databases for litigation support, and establish local brief banks would be limited only to those users on installed EAGLE systems.

As installation is completed and systems are in place, EAGLE organizations have identified plans in 1991 to pursue application development with tools available under the EAGLE contract, such as the ORACLE database management software. For example, the United States Attorneys plan to create and share litigation support databases and establish local brief banks.

Implementation of this coordinated office automation program will end the proliferation of incompatible systems which now preclude the rapid and efficient transfer of information, documents, and work products among the litigating components. Also, this initiative will markedly expand the availability and use of automated legal research and litigation support.

In 1991, the AMICUS-EAGLE system will provide the critical technological links between Washington-based Divisions and all U.S. Attorney offices, thereby eliminating many of the delays in case prosecution and expenses associated with overnight mail, employee travel and other expensive concomitants of nationwide litigation and law enforcement. Also, additional savings are anticipated through the development and maintenance of common core software and, as appropriate, integrated systems support contracts.

Activity: Office of Special Counsel......	36	29	$3,596	36	34	$3,858	36	34	$3,858	...	..	...

Long-Range Goal: To reduce and deter national origin and citizenship status discrimination.

Major Objectives:
To remedy discrimination based on national origin or citizenship status under the Immigration Reform and Control Act of 1986.

To investigate charges of discrimination and to initiate and file complaints with administrative law judges in appropriate cases.

To undertake public education initiatives intended to inform employers, victims, and public interest groups of the protections provided under Section 102.

Base Program Description: Section 102 of the Immigration Reform and Control Reform Act of 1986 (IRCA) makes it an "unfair immigration-related practice" to discriminate in hiring, recruiting, discharging, or referring an individual for a fee, because of such individual's national origin, or in the case of a citizen or intending citizen, because of that individual's citizenship status. The Act exempts from these prohibitions: (a) employers of three or fewer employees, (b) claims which are enforceable under Title VII of the 1964 Civil Rights Act, 42 U.S.C. 2000e, and (c) employment actions based on citizenship status where the employer must discriminate based on citizenship in order to comply with requirements imposed by statutes, regulations, executive orders, government contracts, or where the Attorney General determines citizenship status is essential for an employer to do business with a federal, state or local government agency or department. In order to enforce the prohibitions in the Act, the position of "Special Counsel for Immigration-Related Unfair Employment Practices," was created in the Department.

The Special Counsel receives and investigates nationwide charges of employment discrimination filed by private individuals or those filing on their behalf, or Immigration and Naturalization Service Officers, and determines whether the charges warrant filing an administrative complaint. The Special Counsel may also, on his/her own initiative, conduct independent investigations of Section 102 violations, including possible pattern and practice violations. When the Special Counsel determines that such action is justified, he/she may file a complaint with an administrative law judge seeking injunctive relief and, where appropriate, back pay or civil monetary penalties or both. Once the administrative law judge finds a violation and issues relief, the Special Counsel may file an action in federal court to enforce such relief. Where the Special Counsel does not file an administrative action, the Act provides the individual the right to file his/her own action before an administrative law judge.

The program coordinates with officials of the Equal Employment Opportunity Commission, the Immigration and Naturalization Service, the Department of Labor, and other federal agencies to ensure uniform and effective enforcement of the nation's immigration law. The program provides legislative counsel to other programs within the Department and to other federal agencies. In addition, the program promotes awareness of the antidiscrimination provisions of the Act through public outreach efforts, including public service announcements, training, mass mailings, and participation in conferences involving public and private groups.

Congress has reinforced its intention that the Office of Special Counsel conduct public outreach activities by increasing the budget of the Office one million dollars for the specific purpose of educating employers and potential victims about Section 102. In addition, Congress has charged the Special Counsel with responsibility for consultation with the states on distribution of State Legalization Impact Assistance Grants to promote public awareness.

Accomplishments and Workload: During 1989, the program received 385 charges of discrimination, compared with 276 charges during the previous year; 62 independent investigations were initiated. Through December 31 this year, the program received 87 charges, opened 30 independent investigations, filed three complaints, and negotiated three formal settlements of charges. Many other investigations were resolved through voluntary changes in personnel policies and practices or the demonstration of legitimate justification for a U.S. citizen only policy. The program maintained liaison with nearly a dozen federal agencies and has continued extensive mailings to inform public interest and community groups, as well as INS offices and legal aid centers, of the antidiscrimination requirements under Section 102. Furthermore, the program has participated in numerous seminars and conferences before public interest immigration rights and employer groups across the country.

Some of our cases have affected entire industries engendering widespread reforms. This is particularly true of the airline and defense industries. Through far-reaching settlements with the OSC, four major airlines have abandoned citizenship status restrictive hiring practices. Similarly, defense contractors have agreed to drop company-wide citizens-only policies due to the Office of Special Counsel's intervention. As a result of these cases, tens of thousands of jobs in the defense and airlines industries are now open to aliens who intend to become citizens.

In addition to a memorandum of understanding with the Equal Employment Opportunity Commission, the Office of Special Counsel has invited 114 state and local civil rights enforcement agencies to enter into similar agreements, whereby they would serve as agents of the government for purposes of receiving charges of immigration-related unfair employment practices. So far, we have signed agreements with 23 such agencies, and are currently negotiating with 18 others. These agreements will serve a dual purpose: they will ensure that discrimination claims are efficiently investigated by the right agency, and they will alert state and local civil rights agencies to be watchful for IRCA discrimination cases.

In connection with its public education activities, the program has given hundreds of presentations on the antidiscrimination provision at seminars, conferences, and meetings throughout the country. The groups have included employer associations, unions, bar associations, personnel officers, public interest groups, federal agencies, INS offices, Assistant U.S. Attorneys, legalization groups, and Hispanic organizations. We also systematically targeted groups and individuals for mass mailings of information about the antidiscrimination provision and the Office, including approximately 900 qualified designated entities (groups designated under IRCA to assist aliens in legalization), INS district offices, Department of Labor (DOL) Wage and Hour Division offices, and finally, numerous other agencies and organizations likely to have contact with aliens seeking advice on employment matters. In conjunction with the INS, the Office drafted a brochure entitled Immigration Reform and Control Act of 1986 (IRCA): Your Job and Your Rights. Available in English and in Spanish, over two million brochures have been printed and distributed. Television and radio public service announcements have been aired nationwide, newspaper advertisements placed, and a task force of federal agencies has been established to develop a coordinated strategy for educating the public about IRCA's antidiscrimination provision. The task force is made up of representatives from the Office of Special Counsel, the INS, the EEOC, the DOL, and the Small Business Administration.

Item	1988	1989	1990 Estimate	1991 Estimate
Total Investigations	696	447	580	650
Charges Received	276	385	500	570
Independent Investigations	420	62	80	80
Complaints Filed	12	8	15	15
Formal Settlements	33	48	100	110

In July, the Office received a favorable judgment from an administrative law judge in the first case it has fully tried. The decision, adopting our arguments, found that an airline discriminated against a pilot applicant on the basis of citizenship status, and furthermore engaged in a pattern and practice of discrimination. That decision has been appealed.

Mr. SMITH. The Committee is pleased to welcome for his first appearance Deputy Attorney General Donald Ayer. We will insert your biography into the record at this point.

[The biography of Mr. Ayer follows:]

BIOGRAPHY—DONALD B. AYER

Donald B. Ayer was sworn in as the Deputy Attorney General of the United States on November 8, 1989. Prior to his appointment, Mr. Ayer was a partner in the Washington office of Jones, Day, Reavis & Pogue. His previous public offices include service as an Assistant United States Attorney for the Northern District of California, United States Attorney for the Eastern District of California, and as principal Deputy and Counselor to Solicitor General Charles Fried.

Mr. Ayer was born in San Mateo, California on April 30, 1949 and spent most of his early years in that area. He graduated from Woodside High School, received a B.A. from Stanford University in 1971, an M.A. from Harvard University in 1973, and his J.D. from Harvard Law School in 1975. After law school, he clerked for the Honorable Malcolm R. Wilkey, U.S. Court of Appeals, District of Columbia Circuit, and for then-Associate Supreme Court Justice William H. Rehnquist at the U.S. Supreme Court.

Mr. Ayer was a member of the Attorney General's Advisory Committee of U.S. Attorneys from 1985 to 1986; of the Executive Committee of the Ninth Circuit Judicial Conference from 1983 to 1985; and of the Federal Court's Committee of the California State Bar from 1983 to 1986. He is currently on the Board of Directors for the National Association of Former United States Attorneys and is a member of the American Bar Association, including its Litigation Section and Appellate Practice Committee.

Donald Ayer has been admitted to the bars of the District of Columbia, California, various federal district courts and courts of appeals, and the United States Supreme Court. He is married to the former Anne Norton and has two children.

Mr. SMITH. Do you have a statement?

Mr. AYER. Yes, I do, Mr. Chairman. I have submitted a complete statement, and I would like to give just a brief overview of that, and then take care of any questions you may have.

Mr. SMITH. All right. Go ahead.

OPENING STATEMENT OF DEPUTY ATTORNEY GENERAL

Mr. AYER. I am pleased to appear before you today in support of the 1991 budget request for the General Legal Activities appropriation. That appropriation includes ten budget activities within the Department, which are principally responsible for overseeing the litigation activities of the Department. In addition to that, some of the budget activities are responsible for, in the case of the Office of Legal Counsel, giving critical legal advice to both the President and the Attorney General. The appropriation also includes the Special Counsel for Immigration Related Unfair Employment Practices and Interpol, which each have their own special areas of activity.

Before I begin to go into the particular aspects of our proposal, I would like to express the Department's appreciation for this subcommittee's support of the program funding increases which were enacted in this year's appropriation. For 1990, the GLA appropriation received pre-sequester funding which amounted to 98 percent of the President's request. This included program increases of $29.5 million, which was approximately 84 percent of the requested program increases amount. Full funding of the Financial Institution Fraud and Violent Crime amendments, which the Congress provided, was critical in our efforts to combat criminal activity in those areas. Given the fact that the GLA appropriation components received none of their program increases requested in regular appropriations requests for the prior two years, those funding increases for 1990 were especially critical.

In 1991, we intend to continue to meet our responsibilities for the prosecution of criminal offenses, the protection of the Treasury from the thousands of unwarranted monetary claims filed each year, the recovery of the money due to the United States and the enforcement of key Federal programs.

TRANSFER OF ORGANIZED CRIME STRIKE FORCES

After the transfer out of the criminal division of 186 positions and $13.6 million, which positions and money went to the United States attorneys to handle the work of the Organized Crime Strike Forces, we are now requesting a total of $338,546,000, funding a total of 3,538 positions within the General Legal Activities appropriation.

This request represents a net increase of 14.8 percent over the current 1990 appropriation availability. Without considering mandatory or uncontrollable adjustments, program increases total 9.6 percent.

I would like to just briefly go through, in overview form, the budget activities within the General Legal Activities appropriation. I will do this very quickly. Four of those budget activities involve no program increase for this year, so essentially our increases in those areas are all in the uncontrollable parts that adjust the base figure.

Those activities are the Solicitor General's Office, the Office of Legal Counsel, Interpol and the Office of Special Counsel for Immigration Related Unfair Employment Practices. With regard to the other six, there are program changes that I will try to just touch on very briefly, and then be happy to take questions you may have.

TAX DIVISION

In the Tax Division, we are requesting a net program increase of $5.684 million, and those increases will go primarily into automated litigation support, to support the litigation activities in complex cases, developing the document base and the ability to locate the materials in the case that we need in order to handle those cases effectively; that is $3.9 million in program increases requested.

In addition, $1.4 million is being requested to fund positions within the Tax Division which are already there, but the funding has not been provided. It has had to be diverted into other activities, and those positions will go principally into the areas of bankruptcy and debt collection.

And finally, two other areas of request; one relates to supporting our financial institution fraud litigation, $79,000 for travel. And with regard to recruitment and training and that sort of thing within the Tax Division, which has had, I think, a special problem of retention in the last few years, we are requesting a little over $300,000. That is the program increase for the Tax Division, and it constitutes a 12.5 percent program increase over the base for this year.

CRIMINAL DIVISION

For the Criminal Division, once you take out the transfer of 186 attorneys and $13.6 million for the Organized Crimes Strike Force to the United States Attorney account, we are actually asking only for an increase over the base of less than half of one percent. And the primary focus of that is in the public integrity section, where we are asking for a total of four positions to deal with cases concerning conflicts of interest, the independent counsel statute, and election crimes.

The very small amount of the increase, $236,000, is masked, I think, by the fact that within the base there is a substantial increase of approximately $11.5 million. Much of that is related to annualization of a very large number of positions which were provided this year but not funded for the whole year. In annualizing these positions, we are looking at an increase alone of about $8 million. So that increase is also requested for the Criminal Division, and the net result is that we are requesting a budget that is within, I guess, just under $2 million of our current budget, even though we are transferring out $13.6 million to the United States Attorneys. So you can see, in looking at the overall criminal enforcement activity, there actually is an appreciable increase, even though it appears the Criminal Division budget is not being increased appreciably.

ORGANIZED CRIME STRIKE FORCES TRANSFER

Mr. SMITH. How do you cover that? Could you go over that again?

Mr. AYER. Yes. We are transferring out during 1990 positions that were previously part of the Organized Crime Strike Force, which were within the Criminal Division; and along with those 186 positions which are being sent to the United States Attorneys and are now under the United States Attorney's budget appropriation, goes the $13.6 million which is necessary to fund those positions in that activity—so you have initially an adjustment to the base for the Criminal Division of $13.6 million and 186 positions being taken away.

Nonetheless, as a result of annualizing the increases in positions otherwise given last year, the Criminal Division is getting an additional $8 million for that, and then another $3 million or so, $3.5 million, for uncontrollable——

Mr. SMITH. So program-wise, where does that leave you, net?

Mr. AYER. The U.S. Attorneys are getting an extra $13.6 million of money that used to be part of the Criminal Division. If you add that into Criminal, Criminal would then be getting an increase. The request is for $61.8 million. If you add $13.6 million to that, which is the former activity now in the U.S. Attorneys, you end up with—$75.4 million—up from $63.6 million for this year.

Mr. SMITH. And after you figure annualization of that, where is that going to leave you?

Mr. AYER. That is where it leaves you. It leaves you there after the annualization; yes.

Mr. SMITH. Okay, go ahead.

Mr. AYER. But apart from all of that explanation, the other increase, other than annualization, is directed to the public integrity section, and I mentioned the positions, the kinds of positions, that we are dealing with. For public integrity four positions are added. And then there are A-76 reductions as well, so that the net, the bottom line net is to lose 187 positions, counting those A-76 reductions.

CIVIL DIVISION

For Civil Division, we are asking for a total budget figure of $102.6 million, up from $93 million; that is an absolute increase of 10.3 percent. But again, after looking at the uncontrollables, it is actually an increase over base of $5.37 million. That increase is going first and foremost into the bank and financial institutions fraud effort, which is receiving $3,419,000. Secondarily it is going to litigation relating to Medicare over payments, payments to insurers that we believe in many instances should not have been made. That is a total of $924,000, counting $447,000 for automated litigation support.

Additionally, we are requesting $485,000 to deal with Veteran's appeals, and another $539,000 to deal with a range of other kinds of problems, adding 13 positions for those purposes.

LAND AND NATURAL RESOURCES DIVISION

For the Land and Natural Resources Division, we are requesting an increase of $9 million which includes a program increase of $6.6 million. The total request is $43,724,000. The program increases there are principally in the areas of litigation support, primarily to support litigation in the Exxon case. That is $3.9 million of litigation support money for the Exxon case out of a total of litigation support money of $4.3 million. So all but $400,000 is for Exxon.

In addition, we are requesting money for additional positions, a total of 47 additional positions to deal with environmental enforcement matters, both criminal and civil. I guess actually that is 46 positions; 34 of them to deal with civil environmental enforcement matters and 12 to deal with criminal environmental enforcement matters, totaling $2,268,000.

The program increase for Lands and Natural Resources requested is 17.8 percent over the base.

CIVIL RIGHTS DIVISION

For the Civil Rights Division, we are also requesting $39,324,000. That is a total increase of 21 percent over the 1990 funding. The net program increase is 12.3 percent over base, or $4,317,000. Principally, those increases go into two areas; one is new responsibilities under the Fair Housing Act, responsibilities to enforce cases referred to us by the Department of Housing and Urban Development. We are requesting 47 new positions and $2.5 million for that purpose. We are also requesting 16 positions and $1,744,000 to deal with an additional burden under voting rights enforcement, in the voting rights enforcement area, principally related to issues arising as a result of the census. One other expense there that we are requesting funding for is for a map plotter to deal with redistricting cases. There is $100,000 for that.

Lastly, in the area of proposed increases is the Legal Activities Office Automation budget activity, where we are requesting a significant increase over this year in order to speed us ahead on the task of trying to finish out the office automation for the Department, as speedily as we are able to do so. The program increase requested is a little over $6 million, over a base of just about $17 million. That is a fairly significant increase over this year's budget. We are trying to get the Eagle equipment installed in as many of the Department's components as we are able to, as fast as we are able to.

What this will let us do is to move ahead with the installation of equipment in the Tax Division, the Criminal Division, the Justice Management Division and in the United States Attorneys offices. And to the extent that the order in which we are going forward with this is such that the United States Attorneys are probably at the last stage of this process, and we are very eager to get the country linked up utilizing this common equipment. We will then be able to communicate effectively with the field. So that is, principally, the reason that we are eager to move ahead and get this done as quickly as we can.

That completes the overview of the request that we are making, and I am happy to answer any questions you may have.

[The statement of Deputy Attorney General Ayer follows:]

DEPARTMENT OF JUSTICE
GENERAL LEGAL ACTIVITIES
STATEMENT OF THE DEPUTY ATTORNEY GENERAL
DONALD B. AYER
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE, THE JUDICIARY, AND RELATED AGENCIES

MR. CHAIRMAN AND MEMBERS OF THE SUBCOMMITTEE:

I AM PLEASED TO APPEAR BEFORE YOU IN SUPPORT OF THE 1991 BUDGET REQUEST FOR THE GENERAL LEGAL ACTIVITIES APPROPRIATION. I WOULD LIKE TO EXPRESS MY APPRECIATION FOR THE SUPPORT THAT THIS SUBCOMMITTEE HAS CONSISTENTLY GIVEN THE DEPARTMENT. YOUR EFFORTS ON OUR BEHALF ARE CRITICAL TO THE SUCCESS OF OUR LAW ENFORCEMENT AND LITIGATION MISSION.

THE COMPONENTS OF THE GENERAL LEGAL ACTIVITIES APPROPRIATION, TOGETHER WITH THE UNITED STATES ATTORNEYS, AND THE ANTITRUST DIVISION, FROM WHOM YOU WILL RECEIVE TESTIMONY LATER, REPRESENT THE CORE OF THE LITIGATIVE AND PROSECUTORIAL FUNCTIONS OF THE DEPARTMENT OF JUSTICE. EVERY DAY, ATTORNEYS FROM THESE DEPARTMENTAL ORGANIZATIONS APPEAR IN COURTROOMS AROUND THE NATION STRIVING TO BRING CRIMINALS TO JUSTICE AND DEFENDING THE PUBLIC'S INTERESTS IN LITIGATION INVOLVING THE FEDERAL GOVERNMENT. I BELIEVE THAT THE DEPARTMENT HAS DONE AN IMPRESSIVE JOB IN THIS ROLE.

IN THE FISCAL YEAR ENDING SEPTEMBER 30, 1989, THE DEPARTMENT PROSECUTED 33,599 CRIMINAL CASES, AND LITIGATED 129,004 CIVIL CASES. IN FISCAL YEAR 1991, WE EXPECT TO PROSECUTE NEARLY 41,000 CRIMINAL CASES, AND LITIGATE OVER 131,000 CIVIL CASES. THIS REPRESENTS A 22 PERCENT INCREASE IN CRIMINAL CASES ALONE. THESE FIGURES, OF COURSE, INCLUDE THE WORKLOAD OF THE UNITED STATES ATTORNEYS, OUR PRINCIPAL LITIGATION COMPONENT. HOWEVER, THE LITIGATION CONTRIBUTIONS OF THE COMPONENTS IN THIS APPROPRIATION, ALONG WITH THEIR SUBSTANTIAL EFFORT IN SUPPORTING THE WORK OF FEDERAL ATTORNEYS IN 94 JUDICIAL DISTRICTS ACROSS THE NATION, CANNOT BE OVERLOOKED.

MR. CHAIRMAN, BEFORE I DISCUSS THE HIGHLIGHTS OF OUR 1991 GENERAL LEGAL ACTIVITIES (GLA) BUDGET REQUEST, I WOULD LIKE TO EXPRESS THE DEPARTMENT'S APPRECIATION FOR THIS SUBCOMMITTEE'S SUPPORT OF THE PROGRAM FUNDING INCREASES WHICH WERE ENACTED IN THIS YEAR'S APPROPRIATION. FOR 1990, THE GLA APPROPRIATION RECEIVED PRE-SEQUESTER FUNDING AMOUNTING TO 98 PERCENT OF THE PRESIDENT'S REQUEST; THIS INCLUDED PROGRAM INCREASES OF $29,485,000, SOME 84 PERCENT OF THE REQUESTED AMOUNT. FULL FUNDING OF THE FINANCIAL INSTITUTION FRAUD AND VIOLENT CRIME AMENDMENTS, WHICH THE CONGRESS PROVIDED, WAS CRITICAL TO OUR EFFORTS TO COMBAT CRIMINAL ACTIVITY IN THOSE AREAS. GIVEN THE FACT THAT THE GLA APPROPRIATION COMPONENTS RECEIVED NONE OF THE PROGRAM ENHANCEMENTS REQUESTED IN REGULAR APPROPRIATIONS REQUESTS FOR THE

TWO PREVIOUS YEARS, THE FUNDING INCREASES ENACTED IN 1990 WERE ESSENTIAL.

IN 1991, WE INTEND TO CONTINUE TO MEET OUR RESPONSIBILITIES FOR THE PROSECUTION OF CRIMINAL OFFENSES, THE PROTECTION OF THE TREASURY FROM THE THOUSANDS OF UNWARRANTED MONETARY CLAIMS FILED EACH YEAR, THE RECOVERY OF MONEY DUE TO THE UNITED STATES, AND THE ENFORCEMENT OF KEY FEDERAL PROGRAMS. AFTER THE TRANSFER OUT OF 186 POSITIONS AND $13,600,000 FROM THE CRIMINAL DIVISION TO THE U. S. ATTORNEYS FOR THE ORGANIZED CRIME STRIKE FORCES, WE ARE REQUESTING A TOTAL OF $338,546,000, TO FUND 3,538 POSITIONS IN THE GENERAL LEGAL ACTIVITIES APPROPRIATION. THIS REQUEST REPRESENTS A NET INCREASE OF $43,657,000 OR 14.8 PERCENT OVER THE CURRENT 1990 APPROPRIATION.

CIVIL LITIGATION

THE PRESIDENT'S BUDGET SEEKS CRITICAL RESOURCE ENHANCEMENTS TO SUPPORT THE DEPARTMENT'S INCREASING CIVIL LITIGATION WORKLOAD. PROGRAM INCREASES TOTALING $5,367,000 AND 96 POSITIONS (INCLUDING 59 ATTORNEYS) ARE REQUESTED FOR THE CIVIL DIVISION. THIS REPRESENTS A 10.3 PERCENT INCREASE IN BUDGET AUTHORITY OVER OUR 1990 APPROPRIATION. WE ARE PROPOSING THAT $3,419,000, AND 60 POSITIONS (INCLUDING 36 ATTORNEYS) BE DEVOTED TO BANK FRAUD CASES PURSUANT TO PASSAGE OF THE FINANCIAL INSTITUTION REFORM, RECOVERY AND ENFORCEMENT ACT OF 1989. WE ALSO BELIEVE THAT THE BADLY

OVERWORKED CIVIL DIVISION NEEDS MORE RESOURCES TO DEFEND VETERAN'S AFFAIRS REGULATIONS, RECOVER MEDICARE OVERPAYMENTS, AND LITIGATE CASES OF NATIONAL IMPORTANCE IN SUCH AREAS AS OLD AGE CARE, THE POPULATION CENSUS AND DRUG TESTING.

MR. CHAIRMAN, WE MUST ALSO PROTECT OUR ENVIRONMENT FOR FUTURE GENERATIONS AND WE CAN ONLY DO THAT IF WE PURSUE AN AGGRESSIVE AGENDA. AS SUCH, WE REQUEST AN ADDITIONAL $5,926,000 AND 34 POSITIONS (INCLUDING 18 ATTORNEYS) FOR THE LAND AND NATURAL RESOURCES DIVISION'S CIVIL LITIGATION EFFORTS. THE WORKLOAD TO BE ADDRESSED WITH THIS ENHANCEMENT RANGES FROM CASES INVOLVING NATURAL RESOURCE DAMAGES FROM THE EXXON-VALDEZ OIL SPILL, TO CASES INVOLVING THE MISHANDLING OF HAZARDOUS WASTE, TO THE IMPLEMENTATION OF NEW LEGISLATIVE INITIATIVES INCLUDING THE OCEAN DUMPING BAN ACT, AND MEDICAL WASTE TRACKING LEGISLATION. WE HAVE INCLUDED $4,300,000 FOR AUTOMATED LITIGATION SUPPORT (ALS), OF WHICH $3,900,000 IS NEEDED SPECIFICALLY FOR THE EXXON-VALDEZ CASE.

AS AN EXAMPLE OF THE EFFECT OF OUR ENVIRONMENTAL WORK, I'D LIKE TO POINT OUT THAT IN 1989, THE LANDS DIVISION RECOVERED OVER $117 MILLION IN COSTS EXPENDED BY SUPERFUND AND FORCED DEFENDANTS TO UNDERTAKE VARIOUS TOXIC WASTE CLEANUP ACTIVITIES VALUED AT OVER $645 MILLION.

OUR TOTAL REQUEST FOR THE LANDS DIVISION REPRESENTS A 26 PERCENT INCREASE IN BUDGET AUTHORITY OVER OUR 1990 APPROPRIATION AND TRULY REFLECTS OUR GROWING COMMITMENT TO ENVIRONMENTAL ENFORCEMENT.

THE WORK OF THE TAX DIVISION, MR. CHAIRMAN, WILL ALSO EXPAND AND WE REQUEST ENHANCEMENTS TOTALING $5,102,000 FOR THE CIVIL TAX CASELOAD. INCLUDED ARE RESOURCES TO FUND THE DIVISION'S AUTHORIZED WORKYEAR LEVEL, ALLOWING THE DIVISION TO HANDLE INCREASING BANKRUPTCY AND DEBT COLLECTION CASELOADS, AS WELL AS ADDITIONAL RESOURCES FOR ALS. RESOURCES FOR ALS WILL ALLOW THE DIVISION TO CATCH UP WITH THE PRIVATE SECTOR WHO HAVE FAR GREATER ACCESS TO SUCH LEGAL RESEARCH TOOLS. ALL IN ALL, THE TAX DIVISION'S 1991 REQUEST REPRESENTS A 19.5 PERCENT INCREASE OVER OUR 1990 APPROPRIATION.

THE WORK OF THE CIVIL RIGHTS DIVISION IS ALSO EXPANDING. LAST YEAR WE FOCUSED ON ESTABLISHING AN OFFICE OF REDRESS ADMINISTRATION SO THAT THE DEPARTMENT COULD MAKE PAYMENTS TO 60,000 OR MORE PERSONS OF JAPANESE ANCESTRY INTERNED DURING WORLD WAR II. THIS YEAR WE SHIFT OUR ATTENTION TO VOTING SECTION WORKLOAD INCREASES AND ENFORCEMENT OF THE FAIR HOUSING AMENDMENTS ACT OF 1988. OUR 1991 REQUEST, WHICH INCLUDES NET PROGRAM INCREASES TOTALING 58 POSITIONS AND $4,317,000, WILL REPRESENT A 21 PERCENT INCREASE OVER THE DIVISION'S 1990 APPROPRIATION.

CASH COLLECTIONS ARE ONE MEASURE OF ACHIEVEMENT BY WHICH THE EFFECTIVENESS OF OUR LITIGATIVE EFFORT CAN BE JUDGED. COLLECTIONS BY THE U.S. ATTORNEYS AND LEGAL DIVISIONS INCREASED FROM $479 MILLION IN 1988 TO $627 MILLION IN 1989, A 31 PERCENT INCREASE. THE GENERAL LEGAL ACTIVITIES ORGANIZATIONS ACCOUNTED FOR COLLECTIONS AMOUNTING TO $301 MILLION IN 1989, NEARLY ONE-HALF OF THE OVERALL TOTAL AND A 62 PERCENT INCREASE OVER 1988 GLA COLLECTIONS. THE U.S. ATTORNEYS AND LEGAL DIVISIONS CASH COLLECTION ACTIVITY IN 1989 REPRESENTS $0.85 IN CASH COLLECTED FOR EACH $1.00 OF BUDGET AUTHORITY, A VERY HIGH RETURN ON EACH DOLLAR INVESTED.

CRIMINAL PROSECUTION

AS I MENTIONED EARLIER, MR. CHAIRMAN, THIS BUDGET REFLECTS THE TRANSFER OF 186 POSITIONS AND $13,600,000 FROM THE CRIMINAL DIVISION TO THE U. S. ATTORNEYS FOR THE ORGANIZED CRIME STRIKE FORCE UNITS. WE BELIEVE THIS WILL STRENGTHEN OUR EFFORTS IN ORGANIZED CRIME AND PROVIDE OUR FRONT-LINE PROSECUTORS THE FLEXIBILITY THEY NEED TO GET THE JOB DONE.

AS YOU KNOW, WE RECEIVED SUBSTANTIAL INCREASES LAST YEAR FOR THE VIOLENT CRIME INITIATIVE AND OUR REQUEST THIS YEAR INCLUDES OVER $8 MILLION IN ANNUALIZATION COSTS FOR THIS EFFORT. HOWEVER, WE ARE ALSO REQUESTING SMALL INCREASES TO FUND THE GROWING NUMBERS OF CRIMINAL PROSECUTIONS. FOR THE CRIMINAL DIVISION WE REQUEST A

PROGRAM INCREASE OF $262,000 AND 4 POSITIONS (INCLUDING 3 ATTORNEYS) FOR WORKLOAD ASSOCIATED WITH CONFLICT OF INTEREST ISSUES, INDEPENDENT COUNSEL MATTERS AND ELECTION CRIMES. WE ARE ALSO REQUESTING AN INCREASE OF $279,000 FOR THE TAX DIVISION'S WORK WITH FINANCIAL INSTITUTION FRAUD CASES. FINALLY, AN INCREASE OF $642,000 AND 12 POSITIONS (INCLUDING 5 ATTORNEYS) IS REQUESTED FOR THE LANDS DIVISION TO PROSECUTE ALLEGED CRIMINAL VIOLATIONS OF ENVIRONMENTAL STATUTES.

MANAGEMENT IMPROVEMENTS

IN THE AREA OF MANAGEMENT IMPROVEMENTS, WE ARE REQUESTING A PROGRAM INCREASE OF $6,225,000 FOR LEGAL ACTIVITIES OFFICE AUTOMATION IN 1991. THIS FUNDING WILL ENABLE THE LITIGATING COMPONENTS TO INCREASE EFFICIENCY, STRENGTHEN MANAGEMENT AND IMPROVE PRODUCTIVITY IN THEIR LITIGATING EFFORTS. DURING 1991, THE U.S. ATTORNEYS WILL COMPLETE THE INSTALLATION PHASE FOR EAGLE SYSTEMS IN ALL DISTRICTS. THE 39 DISTRICTS SCHEDULED TO BE BROUGHT ONLINE IN 1991 WILL INVOLVE THE LARGEST U.S. ATTORNEY OFFICES, INCLUDING THE EASTERN AND SOUTHERN DISTRICTS OF NEW YORK AND ALL OF CALIFORNIA AND FLORIDA. ALSO IN 1991, THE CRIMINAL AND TAX DIVISIONS WILL FINISH THE INSTALLATION PHASE FOR THEIR OFFICES.

FURTHERMORE, WE ARE REQUESTING AN INCREASE OF $325,000 TO ADDRESS THE TAX DIVISION'S PROBLEM OF RECRUITING AND RETAINING QUALIFIED

ATTORNEYS. THIS FUNDING WILL BE USED TO ESTABLISH A PROFESSIONAL DEVELOPMENT PROGRAM FOR THE DIVISION'S ATTORNEYS, TO INITIATE AN AGGRESSIVE RECRUITMENT PROGRAM, AND TO PROVIDE AWARDS FOR OUTSTANDING EXPERIENCED PROFESSIONALS.

FINALLY, PROGRAM REDUCTIONS TOTALING $75,000 AND 14 POSITIONS WILL BE REALIZED FROM A-76 MANAGEMENT SAVINGS FOR THE TAX, CRIMINAL AND CIVIL RIGHTS DIVISIONS.

MR. CHAIRMAN, THIS CONCLUDES MY PREPARED STATEMENT. I WILL BE PLEASED TO RESPOND TO ANY QUESTIONS THAT YOU OR THE OTHER MEMBERS OF THE SUBCOMMITTEE MAY WISH TO ASK.

JAPANESE-AMERICAN REDRESS PAYMENTS

Mr. SMITH. How are you coming with processing of the Japanese-American redress payments?

Mr. AYER. Well, I think we are doing well.

Mr. SMITH. How many payments will you be able to handle in FY 1991, and how many dollars?

Mr. AYER. Well, my understanding is that we will be able to pay out, I think, the $500 million that is requested for 1991.

Mr. SMITH. But will you have enough processed so you could pay more—add more money—or not?

Mr. AYER. I am not certain. What I know is that we are able to meet that objective, and I think the people from that office are here, so maybe——

Mr. BRATT. I am Bob Bratt, the Administrator—and we could if we knew it early enough on. We believe that the 25,000 we need to have verified will be done by about the middle of the Summer, and if there is more money available, we could continue to verify individuals through the rest of the Summer.

Mr. SMITH. How much more?

Mr. BRATT. Probably an extra 10,000, possibly as many as 10,000 more people.

Mr. SMITH. And how many dollars would that be?

Mr. BRATT. $200 million more.

Mr. SMITH. I see. Is there any intention for submitting another request for an adjustment in this or not?

Mr. BRATT. Well, the law states that there is a limitation on how much money can be spent the first year and that is $500,000,000.

Mr. SMITH. That was in the law?

Mr. BRATT. Yes.

Mr. SMITH. So what age does that get down to?

Mr. BRATT. We will not know exactly until we finish verifying the first 25,000. But my best guess right now is we believe it will be somewhere around the middle of the 69 year-old individuals.

INTERPOL

Mr. SMITH. You mentioned Interpol. I thought you had a decrease for Interpol. You indicated you have level funding? Did I hear you right?

Mr. AYER. No, actually there is a decrease. But it is not a decrease below the base. The base is adjusted by virtue of the fact that there are uncontrollable increases, and there are also decreases that result from one-time expenditures on new equipment, which are being made during 1990. Those expenditures do not need to be repeated next year, and therefore, we have a base reduction of $347,000 offset by $304,000 in uncontrollable increases.

So you are quite correct; there is a net reduction of $43,000. When you net those out, you end up with a reduction of $43,000 below the 1990 appropriation. But it is not a program decrease at all. It is simply a matter of not having to buy new equipment, netted out against the uncontrollable increases.

Mr. SMITH. With all the attention we have got on intelligence gathering, I thought this was one place where there would probably be an increase, is that not right?

Mr. AYER. Well Interpol is an important communication link. It is not, however, an investigative activity.

Mr. SMITH. Are they involved in this increased activity in intelligence gathering?

Mr. AYER. They are involved in the function of communicating internationally, and the assessment that has been made is that the funding level that we are proposing is adequate—given the increases they have had, at least to allow them to perform the functions that are necessary. They are not a criminal investigative agency, nor are they a significant intelligence analyzing agency.

What they are is an important international communications network.

Mr. SMITH. Won't those international communications facilities and that network be used in this intelligence gathering?

Mr. AYER. Well, I think they are, to some extent. I think we have to be careful not to duplicate the main line investigative work and analytical work that is being done by the Drug Enforcement Administration and the Federal Bureau of Investigation. And I think it would be a mistake to channel larger amounts of money to Interpol on the theory that they are going to take over functions that, in fact, are being well-performed by DEA and FBI with expanded funding that is available for them in those areas.

Mr. SMITH. Are you saying they will play a very minor role in this?

Mr. AYER. Well, I think in the area where they operate, they play an important role. But I think you have to appreciate the nature of the niche that they fill. It is an international organization that has channels of communication that are utilized—official channels of communication that do play an important role. But they are not a general intelligence gathering organization. They do not run a large data bank that is being widely expanded beyond the official international channels that exist.

I am informed that there is presently a review under way of Interpol relating to precisely the nature of the role that it plays. But in the past, the role that it has played is the one that I have described.

VACCINE INJURY CASES

Mr. SMITH. What about vaccine injury cases?

Mr. AYER. Well, we are in the process of staffing up within the Civil Division in order to deal with those. And my understanding is that we are on track in terms of doing that. There is a system, of course, that is being put in place involving the Claims Court and involving the Department of Justice attorneys.

In fact, I spoke this morning with the head of the Civil Division about this very issue, and he assures me that it is moving ahead, at least on schedule in terms of getting the job done and in terms of spending the designated monies.

My understanding is that the funding for this ultimately will come out of the Vaccine Injury Trust Compensation Fund.

Mr. SMITH. What would that amount to, if we had to do that annually? Would it require that it come out of the fund? What would it amount to?

Mr. **Ayer**. I think so. My understanding is that for this year, the amount is $1 million, and for next year, the amount is $1.5 million. And with that, the amount that we are proposing is $1.5 million, and the nature of our request—the increase is due in large part to fund 12 additional work years—I am sorry—12 additional work years in 1990 are being added, and 18 additional work years in 1991. So as best we can assess the needs now, the funding for this year and requested for next year will be adequate.

Mr. **Smith**. The reason I asked the question to start with; I understood you had a supplemental request for FY 1990 for more money for this purpose.

Mr. **Ayer**. For 1990? You are right; we have sought an additional $500,000 for 1990.

Mr. **Smith**. Mr. Early.

EAGLE PROJECT

Mr. **Early**. Mr. Ayer, on project Eagle, you suggest that the last step we are getting to on that is the U.S. Attorney's office. We don't have anything until we have them all set, do we?

Mr. **Ayer**. Oh, I think we have something, yes.

Mr. **Early**. Yes, but when you've got the tax office, the criminal justice management division and the Office of the U.S. Attorney, until we get automated there, that's what the idea of it is, I would assume.

Mr. **Ayer**. Well, I may have misled you. The U.S. Attorney's are being progressively installed now.

Mr. **Early**. Yes?

Mr. **Ayer**. It's being done as quickly as we are able to do it, given the funding. And I agree that it is very important that we move ahead quickly to finish the job.

Mr. **Early**. Would this $6 million, complete that? Is that the final step, or is that a three- or five-year plan and that's the first phase of it?

Mr. **Ayer**. My understanding is that this will complete it in 1991. The funding we requested will complete the installation. The payments will continue in the future, but it's a lease-to-own program. But the installation will be completed in 1991. The anticipated need for 1992 is $58,617,055, for 1993, $55,466,000. That is not to install; that is to pay the lease payments. And ultimately we will end up owning the equipment.

ALS FUNDING FOR EXXON VALDEZ

Mr. **Early**. Okay. But it doesn't seem like we're moving.

But I will take that up with the U.S. Attorney.

In your statement on page 4, would you explain a little more about that automated litigation support? You have included $4,300,000 for all of it.

Mr. **Ayer**. Yes.

Mr. **Early**. Of which $3,900,000 is needed specifically for the Exxon Valdez case.

Mr. **Ayer**. Right.

Mr. **Early**. Do we get this automation, and then after the case it's gone, or what?

Mr. **Ayer**. Well, the $3.9 million is the total expected price tag for all the litigation support services in connection with that case. And to be honest with you, I don't know the answer to that. I think it is all gone, because we are buying services. So to that extent it is gone.

Mr. **Early**. Has Justice put a price tag on what it thinks the Exxon-Valdez case will cost?

Mr. **Ayer**. I don't know if they have or not.

Mr. **Early**. Would you supply that for the record?

Mr. **Ayer**. Yes, I will. I would be happy to.

[The information follows:]

JUSTICE RESOURCES DEVOTED TO EXXON-VALDEZ LITIGATION

For 1990, we currently anticipate that the total costs to the Department will be in the neighborhood of $8.1 million for both the criminal and civil cases. This does not include an estimated $3.5 million for scientific and economic studies which we understand will be borne by the trustee agencies (Interior, Commerce and Agriculture). This estimate also does not include personnel costs for Department staff assigned to this case.

EXXON VALDEZ CASE

Mr. **Early**. If it's going to be astronomical, I would think it would be in everyone's best interest to settle it.

Mr. **Ayer**. Well, there have been some discussions. There had been discussions about that possibility.

Mr. **Early**. I think it would be a more common-sense approach. I mean I am sure there may be some criminal involvement and this and that, but to spend that type of money for all the consultants attorneys and everything else.

FINANCIAL INSTITUTIONS FRAUD

On page 7, on the S&L's, you say there is an increase of $279,000 for the Tax Division's work with financial institutions fraud cases, that is the worst of the S&Ls. Did we give you $50 million for just S&L?

Mr. **Ayer**. Yes. That's right.

Mr. **Early**. Okay. So that $279,000 isn't connected with the S&L part?

Mr. **Ayer**. The $50 million went into the FBI, the U.S. Attorneys and the Criminal Division, and a limited amount went into the Tax Division.

Mr. **Early**. Oh, so this is just in your division?

Mr. **Ayer**. $279,000 here is just for the Tax Division. This is a request, an additional request for 1991.

ORGANIZED CRIME

Mr. **Early**. Okay. On page 6, with regard to the Organized Crime, Organized Crime is in drugs now; right?

Mr. **Ayer**. The Organized Crime Drug Enforcement Task Force?

Mr. **Early**. No, I mean Organized Crime.

Mr. **Ayer**. They certainly do have some activities.

Mr. **Early**. So when we identify money for Organized Crime, they might be interconnected?

Mr. AYER. Well, that depends[illegible] think you have to look at the particular budget activity to which the appropriation goes. There is—and it's confusing because there is an Organized Crime Drug Enforcement Task Force appropriation, I should say, which we have a hearing on next week, which is separate from the Criminal Division, which has within it a narcotics section and an organized crime section. So I don't know how to answer your question except to say—

Mr. EARLY. I'm have difficulty; I can't trace where anything is, I mean if it's organized crime or it's organized crime drugs.

Mr. AYER. Well, I would agree that there are a lot of labels and they are not altogether easy to understand.

But I think we do have, in fact, in operation a structure which is fairly sensible, and one of its objectives is to assure that resources are channeled into the activities that the Congress and the Administration want to direct them into.

There is something that needs to be watched, I think, and that is not to allow resources, where a priority has been set, to drift into dedication to other activities.

We have tried very hard, for example, through the organized crime strike force program to assure—it was true prior to the transfer to U.S. Attorneys, and it's no less true after—that we are very careful to police the dedication of those resources to organized crime enforcement. And we spend time focusing on what we mean by organized crime and making sure that we are single-mindedly moving in that direction with that body of resources.

The same thing is true with regard to the OCDETF program, which is a different program, aimed at utilizing multiple agencies both with the Justice Department and Treasury and other branches of the Government to pursue major drug cases.

I am involved personally in overseeing both of those activities and in trying to make sure that we really are doing the best job we can, both just in terms of investigative expertise being brought to bear and prosecutorial ability, and also in terms of making sure that we really are channeling these dedicated resources into these activities. So that is why we——

Mr. EARLY. We could follow it much more easily when you implement Eagle.

Mr. AYER. I think that's true.

Mr. EARLY. Thank you, Mr. Chairman.

EXXON VALDEZ LITIGATION

Mr. SMITH. Mr. Dwyer.

Mr. DWYER. Thank you, Mr. Chairman.

Let's go back to the Valdez happening just for a second; In your suit against Exxon, you state you would be pursuing damages. But would you also be pursuing expenses in connection with the case?

Mr. AYER. Yes, certainly.

Mr. DWYER. You would. You would.

Mr. AYER. Certainly. Attorneys fees and so forth.

Mr. DWYER. Attorneys fees, et cetera.

Is it common belief that if the award, and if you were successful, you would have a judgment in both areas?

Mr. AYER. Well, if we are successful, we will probably get some judgment in both areas. As to what we will actually get, it is hard to know. Of course, it's hard to know what the nature of the outcome will be for sure.

ARTHUR KILL AND KILL VAN KULL

Mr. DWYER. Yes.

There have been some oil spills in the Arthur Kill and the Kill van Kull, the body of water between New Jersey and New York. Are you presently pursuing criminal investigations there?

Mr. AYER. I am not aware if we are or not, but I can certainly find out.

Mr. DWYER. Well, I wonder what would be different about the spill in Alaska and the spill in the Arthur Kill and the Kill van Kull? For my own betterment.

Mr. AYER. I can't tell you. And I can't tell you there is anything different. I just don't know the answer to your question.

Mr. DWYER. Would you find out and provide it for the record?

Mr. AYER. Yes.

[The information follows:]

ARTHUR KILL OIL SPILL

As with the Exxon-Valdez oil spill, a criminal investigation into the Arthur Kill oil spill has been initiated by both the U.S. Attorney offices in the District of New Jersey and the Eastern District of New York as well as the EPA and the FBI.

Mr. DWYER. And if you are not proceeding in that area——

Mr. AYER. I am informed that the criminal section of Lands is indeed looking at that, at that spill.

THE LANDS DIVISION REQUEST

Mr. DWYER. Fine. Thank you.

You are asking for more attorneys in this area, and $2.3 million. Will all these positions be after an accident or before an accident or some before and some after?

Mr. AYER. Before what?

Mr. DWYER. Before you have a happening or after? The new positions that you are asking for in the environmental area, will they just be thrown into play when there is an accident?

Mr. AYER. Well, no—it is not solely a matter of accidents. In fact, I think it is mostly not a matter of accidents, it's a matter of dealing with various kinds of noncompliance with environmental laws, which are not solely with Superfund-type situations, with pollution, noncompliance with the Clean Air Act, the Clean Water Act.

Mr. DWYER. So you would actually depend upon an outside agency to initiate your activities? Am I correct in that?

Mr. AYER. You mean EPA?

Mr. DWYER. EPA or whatever.

Mr. AYER. Well, EPA——

Mr. DWYER. Maybe a Governor, maybe a Congressman, maybe a Senator.

Mr. AYER. Sometimes we would.

Mr. DWYER. Maybe the public?

Mr. AYER. Sometimes. I am not sure that that is always true. I am not sure that there aren't some that we may end up initiating.

Mr. DWYER. I was just trying to get defined in my own mind exactly what these people will be doing.

Mr. AYER. Well, 34 of the 47 new positions that we are asking for, one of them will be a staffer related to the automated litigation support effort, 34 will be involved in civil litigation, and of those 34, 18 will be lawyers, 12 will be involved in criminal enforcement activities in the environmental area, and I am not sure the number of lawyers. I think it's probably about seven or eight.

So the ratio of civil to criminal is about three to one, roughly, between those new personnel.

Mr. DWYER. I take it you intend more activity on the part of the Justice Department in the environmental area, or do you anticipate more happenings in the environmental area, or a combination of both?

Mr. AYER. Well, certainly more activity. And my guess is that—I don't know if you mean by happenings, accidents?

Mr. DWYER. Accidents.

Mr. AYER. Well, I don't know. I don't know if there is any reason to anticipate that.

Mr. DWYER. Of course, there are some dumpings that occur that are not very accidental.

Mr. AYER. Well, right. Accidents or other events. I can't speak to whether that is likely to be increased or decreased. But I think it's fair to say that our enforcement activity will be significantly increased.

Mr. DWYER. Well, I think that it is a fair assumption that if you have vigorous enforcement, illegal dumpings and such activities will decrease.

Mr. AYER. Hopefully.

Mr. DWYER. Sure.

Mr. AYER. Yes.

Mr. DWYER. Thank you, Mr. Chairman.

INCREASED WORKLOAD IN THE CIVIL RIGHTS DIVISION

Mr. SMITH. You have a request in the Civil Rights Division for a $2.5 million increase for what you call increased workload. What is the nature of that workload?

Mr. AYER. We are requesting $2.5 million related to increased workload under the Fair Housing Act, and that is a result of the amendment of the Fair Housing Act in, I believe, 1988, which essentially created a process whereby the Department of Housing and Urban Development, after reviewing cases of alleged discrimination in housing, refers them to the Department of Justice to be pursued in court. And under the statute, those referrals must be pursued in court by the Department of Justice.

They have already resulted in—I think that went into effect March 12 of 1989, and since that time they have resulted in, I think, 40 cases being filed in court by the Department of Justice, and the numbers are increasing all the time. The referrals began slowly, and they are now picking up speed, and we expect the numbers of cases to grow. I don't think we have any way of knowing for sure, but I think we have every reason to think that within a year or two we are going to be in the hundreds, certainly, per year being filed. It may well be in the 200–300–400 range.

So we look for a significant increase in activity in the fair housing area.

Mr. SMITH. Was there no mechanism previously to get those to court?

Mr. AYER. Well, there was a mechanism and there is a continuing mechanism under the Act, as it existed previously, to bring certain kinds of cases. I know pattern and practice cases were brought by the Department, and my understanding is the Department did intervene in other private actions. And there may be additional ways that we were involved.

But this new activity of a relatively routine pattern of referrals from HUD to the Department where when the matter is referred, after investigation by HUD, it must go to court, must be taken there by the Justice Department. That is a new channel.

Mr. SMITH. Were they being dropped before, or why weren't these cases acted on?

Mr. AYER. Well, these are principally cases, I believe, involving individual discrimination, individual acts of discrimination, and I think previously—I can't tell you for sure whether we did not have authority; but in any event it was not, probably for that reason, something that we were actively involved in pursuing—individual cases.

Mr. SMITH. Well, was someone else doing it then?

Mr. AYER. Well, I think the individuals were able to do it themselves. This is a new enforcement mechanism which puts the burden on the Government to pursue these unfair actions.

Mr. SMITH. All right. Who did it for the individuals? How did they do it?

Mr. AYER. Well, I assume principally through their own lawyers, through private lawyers, as is the case under Title VII, for example, or under other discrimination statutes.

Mr. SMITH. I understand you have a prepared statement concerning the Japanese-American Redress Program. Would you please provide it for the record?

[The statement of Mr. Turner regarding the Japanese-American Redress Program follows:]

DEPARTMENT OF JUSTICE
OFFICE OF REDRESS ADMINISTRATION
STATEMENT OF THE ACTING ASSISTANT ATTORNEY GENERAL FOR THE CIVIL RIGHTS DIVISION
JAMES P. TURNER
SUBMITTED TO THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE, THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and members of the Subcommittee:

I appreciate both your continuing interest in the Redress Program, and the opportunity to bring you up to date on our activities. Since I met with you about a year ago, we have made significant progress. But, with $500 million available to begin payments in Fiscal Year 1991, we still have an ambitious agenda ahead for the next several months. Thus, I will be discussing both our accomplishments and our goals for the future.

Since I had the opportunity to speak with you last, several significant events have occurred. First, implementing regulations were signed by the Attorney General on June 14, 1989, and published in the Federal Register for public comment. ORA received 157 comments. Of those, 130 were based on two form letters supporting eligibility for three groups that were initially excluded: Japanese American minors who were relocated to Japan during World War II, Latin American Japanese brought to the United States for internment during the war, and children born to parents who had voluntarily evacuated the excluded zones. The first two groups are clearly excluded by statutory language.

Furthermore, we have determined that children born to voluntary evacuees are similar to children born after their parents had departed from internment camps who are also not eligible. Therefore, no changes were made to include any of these three groups.

Thirteen other comments pertained primarily to our requests for documentation verifying the identity of potentially eligible persons. In response to these comments, ORA significantly lessened the burden of required documentation without adversely affecting the integrity of the program. This was achieved by eliminating the requirement for original documentation and by assuming a greater portion of the responsibility through use of existing sources of official vital statistics information, primarily the records of the Social Security Administration. On August 10, 1989, exactly one year after the Civil Liberties Act of 1988 became law, the Attorney General signed the final regulations.

Second, as you are well aware, the Civil Liberties Act was amended on November 21, 1989, and is now an entitlement program. In accordance with this amendment, payments to the first 25,000 Japanese Americans who are eligible under the Act will begin in Fiscal Year 1991. Although this constitutes a formidable workload, we are absolutely committed to being ready to begin issuing checks immediately after funds for that purpose are released. To meet this workload, ORA is now well into in the second phase of the redress program.

You may recall that soon after its establishment, ORA initiated a three-phase implementation plan. Phase one, "Identification and Location" is now largely complete. To identify potential eligibles from the historical records of the U.S. Government, ORA has established a master list which specifically identifies over 119,300 Japanese Americans known to have been interned or evacuated. We believe this master list is now more than 99 percent complete. The last remaining individuals who need to be identified will be more difficult, and this task could take years to complete. These are largely those whose names are not recorded in historical records, including some voluntary evacuees and a very small number of persons held at obscure locations.

Through an intensive public outreach campaign, we believe we have located most potential eligibles. Voluntary contacts to ORA from potential eligibles as well as others wishing to volunteer information to assist the program now exceed 78,000. We are not able to state precisely what portion of living eligibles this number represents. However, based on actuarial estimates and our own experience to date, we believe we have now located nearly all living eligibles. For example, for those former internees with years of birth through 1914, we have located 8,503 living eligibles, 6 percent more than predicted by our recent actuarial study.

Phase two, "Verification and Notification" is now in progress. To ensure that ORA is ready to make payments, the staff size has been increased. I believe these increases, however, are very moderate considering the task at hand. At this time last year, we had a staff of just 8 federal employees and a small number of contract employees. Today we have a staff of 12 federal employees and 31 contract personnel. Not wishing to rely solely on increased staff, we have placed great emphasis on efficiency in case processing. Through automated improved methods, we have doubled the productivity of our case analysts. Last fall, a single analyst was able to process an average of 15 cases in a workday. Today, our analysts are processing upwards of 30 cases daily.

Our staff began verification of eligibility immediately after implementing regulations were signed on August 10. In the fall, our progress was somewhat slow. To improve our performance, we thoroughly analyzed our procedures and implemented changes, including an automated verification procedure. Our productivity took a sharp swing upward from December through February. This was the result of the application of our new methods as well as overtime used to clear our backlog. We are now proceeding at a normal rate of approximately 2,000 cases a month.

In preparation for payments, ORA is currently reviewing cases in order of age and sending out letters of potential eligibility. Persons receiving these letters are asked to submit documentation to ensure that ORA has indeed correctly identified and located the potential eligible. As I have mentioned, required documentation is kept to a minimum. All potential eligibles must complete a Declaration of Eligibility. In some instances, eligibles are required to submit additional documentation such as proof of birth, name change, and current address, but these documents are only required where ORA is unable to obtain the information from a government source.

Once ORA has reviewed this documentation, the case is ready for payment. The first letters were sent in August, 1989, and ORA has now sent out over 12,500 letters.

These first letters have, of course, gone to very elderly people. In fact, almost 1,600 letters have been sent to Japanese Americans born before the turn of the century. As I have stated, ORA has made every effort to simplify requirements and to place as little burden on potential recipients as possible. We have two new publications to explain the verification process that I am submitting for the record. One is a flyer entitled "Verifying your Eligibility" that outlines the process in detail, and the other is a booklet entitled "Redress Regulations, Questions and Answers" that answers the most commonly asked questions. Further, public outreach efforts are continuing through extensive public speaking engagements, workshops, and a series of press releases to ensure that information is receiving the largest possible distribution.

At this point, ORA is experiencing only two serious problems. First, we are concerned that recipients are slow to respond. Of the first 9,536 who were sent letters of potential eligibility, only 5,739 have returned documentation. Second, about half of the responses require follow-up letters because the documentation submitted is incomplete. To ensure that delayed or incomplete responses do not seriously impact ORA's ability to begin payments in October, 1990, we are taking several steps. Toll-free help lines have just been established to assist those who are having difficulty understanding instructions or locating required documentation. Further, we have evaluated our original notification letters and have re-written them to state requirements more clearly. As a last step, we are planning to begin a series of follow-up letters to potential eligibles who have not responded within 60 days of the original letter. I feel confident that as a result of these steps, responses will become more timely and that the necessity for additional requests for documentation will significantly decrease.

I take pride in the great strides ORA has taken in the redress program since its beginning only eighteen months ago. I believe that we have established excellent rapport within the Japanese American community, and we are gratified by their wholehearted support of our efforts. We are successfully managing a large workload, and I am confident that we will be fully prepared to begin payments in October, 1990.

I'll close by summarizing my statement, in terms of our three-phase implementation plan. Phase I is "Identification and Location." We estimate that both aspects of these phase are nearly complete, at 99 and 95 percent, respectively. Phase II is "Verification and Notification." We have established production goals of 2000 verifications per month, and we are now slightly exceeding that rate. As I have stated, we have now sent out more than 12,500 letters, 50 percent of those necessary to make payments in Fiscal Year 1991.

The final phase of the Redress Program is, of course, "Payment." As you know, the entitlement legislation calls for a three-year funding schedule, beginning in Fiscal Year 1991, and with the final phase to begin in Fiscal Year 1993 and continuing through Fiscal Year 1998. I am looking forward with great anticipation to that day in the very near future when our government begins the final step by issuing the first payment.

Thank you for the continuing interest of this Subcommittee.

JAPANESE AMERICAN REDRESS PROGRAM

THREE PHASES

PHASE I

- IDENTIFICATION -- 99% COMPLETE
- LOCATION -- 95% COMPLETE

PHASE II

- VERIFICATION -- 2,000+ PER MONTH
  - -- OVER 12,500 LETTERS MAILED
  - -- BALANCE BY END OF SUMMER

PHASE III

- FY 1991 25,000 PAYMENTS
- FY 1992 25,000 PAYMENTS
- FY 1993 -- FY 1998 BALANCE OF PAYMENTS

Verifying Your Eligibility

Computer systems are designed to handle information on those potentially eligible for redress.

Since the Office of Redress Administration (ORA) was established in September 1988, the office has been collecting historical and current data from individuals, and state and federal agencies. This information is stored in ORA's computer.

During the eligibility review, ORA compares unofficial and official sources of historical and current data for agreement. For instance, if a potential recipient has volunteered historical information, such as where he or she was interned, ORA can verify this unofficial data against an official source such as the War Relocation Authority (WRA) records. Likewise, ORA can compare current information from unofficial sources to that from official sources. By this process, ORA can determine if a person is preliminarily eligible for redress.

If you are determined to be preliminarily eligible, you can expect to receive three types of mail from ORA as follows:

1. **Verification Letter** This letter says that ORA believes you to be potentially eligible for redress and requests documentation so that ORA can verify your identity as the correct person. The letter will include the telephone number of a help-line you can call in case you have questions on documentation. It will be accompanied by a Declaration form for your signature. This form asks you to attest to your identity, current residence, social security number, date of birth and, if applicable, heir information. Also enclosed will be instructions on what types of documentation should be sent to support your identity, and a preaddressed, postage-paid envelope for mailing your Declaration and documents back to ORA. Do not send documentation unless ORA requests you to do so.

2. **Notification that Identity is Established or Letter Requesting Additional Information** Once your indentity is confirmed, ORA will inform you by letter. Along with that letter, ORA will send you a change of address form. Thereafter, you need do nothing more unless your address or other personal circumstances change. In that event, you should notify ORA of the change by writing. If ORA encounters any difficulty establishing your identity, or if the documents received are incomplete, ORA will send you a letter requesting additional information. A check list, specifically identifying the problem will accompany the letter.

3. **Official Notification of Eligibility** This letter is the official notification that you are eligible for redress. This is also the point when ORA authorizes the U.S. Treasury Department to issue your check. The Civil Liberties Act of 1988 says that the official notification of your eligibility cannot be sent until funds for pay-

ment are available. For that reason, there will be a delay between the time you receive a letter confirming your identity and the time you receive this last letter. Under a new law, payments will begin in October 1990 and be completed within three years.

Because the documentation requested by ORA is straightforward, it is not necessary for you to hire legal counsel. The majority of you will already have these documents in your possession. You need only photocopy them and have them notarized or include a signed statement under penalty of perjury at the bottom of your copy. Wording for signed statements will be provided by ORA in the package requesting documentation. Notarized photocopies or signed statements are recommended by ORA since documentation will not be returned. Again, please do not send ORA any documents unless you are notified to do so.

The printed chart summarizes documentation requirements. It will give you an overview of the types of documents that ORA will request, but the examples listed are not all-inclusive. You may have other documents on hand that will work just as well. In addition, you may find that a single document may fulfill more than one document requirement, in which case you need only send the one piece of information. If you are ever unsure about any document you wish to submit, you can always call the help-line. But remember, do not send any documentation unless you receive a letter from ORA requesting that you do so.

A Message from Robert K. Bratt

Administrator of Redress

We were pleased to mark the first anniversary of the Civil Liberties Act with the Attorney General's approval of final regulations implementing the Redress Program. This milestone satisfied legal requirements, and cleared the way for us formally to begin verification. The regulations define in detail who is eligible for payment, and outline our verification procedures, including the types of documentation we will need to establish the identity of recipients.

We knew that the regulatory process would be long and involved, but also recognized the need to move as quickly as possible in implementing the program. Even as the regulations were being drafted, reviewed, and finalized, we were working behind the scenes. Months ago, as soon as solid progress had been made in finding those potentially eligible, we began developing our internal verification process. A computer system was set up, administrative procedures were put in place, and arrangements were made for authorizing U.S. Treasury checks. These advance steps allowed us to contact about 1,300 people, all age 90 and older, within days after the regulations had become final.

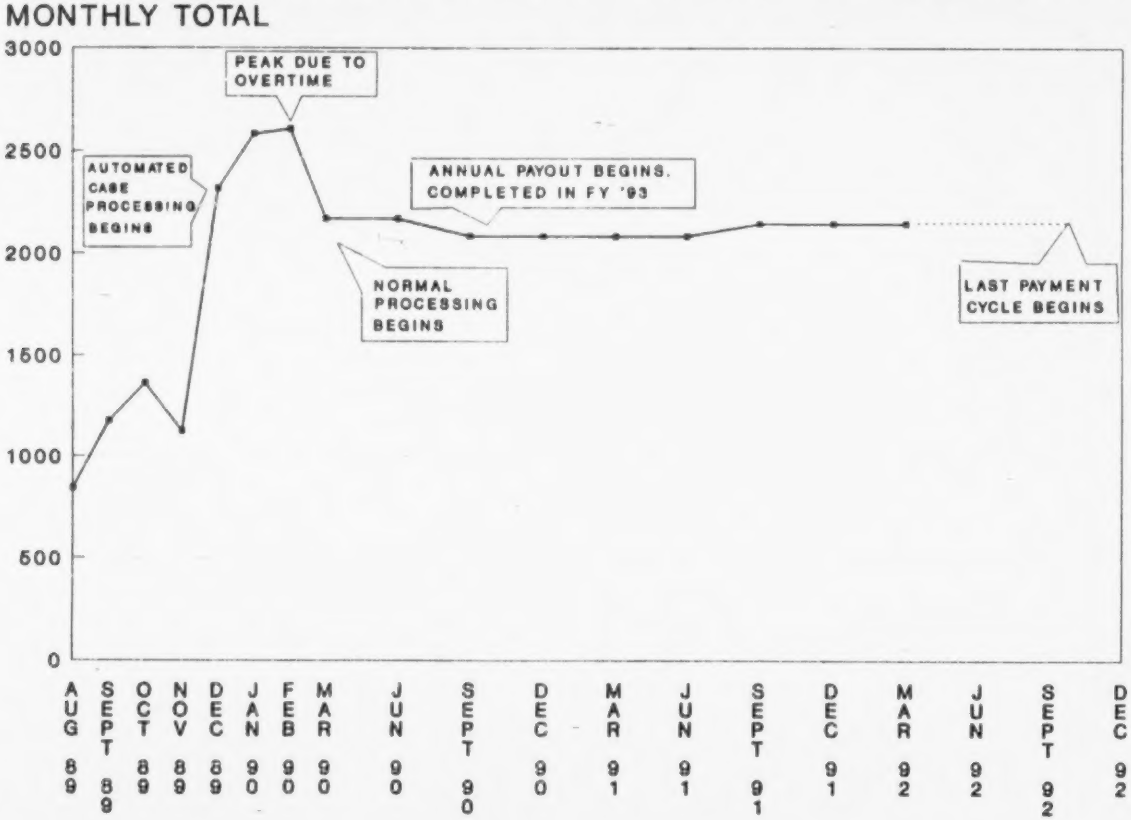
The Redress Program is the first of its kind, and everything we do is new and untried. We're learning in these early stages of the program, and are continually working to refine our verification procedures. Our goal is to ensure that the Redress Program benefits those for whom it was intended, with as much speed and as little burden as is possible.

This leaflet provides an overview of the verification process. It explains the types of correspondence that you can expect to receive from us, and the documentation we will be requesting from you. The documents you submit will establish your identity, so that we know payments will be sent to the right people. Remember that any photocopies you send to us must be either notarized or contain a signed statement on the copy's authenticity. We will provide wording for the statement in our notification package which will be sent to everyone determined preliminarily eligible for redress.

ORA is more than a year old now. In the beginning, I made a commitment to keep the public fully informed of our progress in implementing the Redress Program. This leaflet continues that tradition, and I hope it helps you understand the next steps.

If you move before you hear from us, you can provide your new address by writing: Office of Redress Administration, P.O. 66260, Washington, D.C. 20035-6260.

INITIAL VERIFICATION OF ELIGIBILITY



DOCUMENTATION REQUIREMENTS

The two charts below outline the types of documentation required for the various categories of recipients defined by the Civil Liberties Act of 1988. SECTION A contains information affecting all recipients in general. SECTION B gives specific information to the heirs of deceased eligibles. A single document may fulfill more than one requirement. (For example, a marriage license can both show a name change, and verify the marriage of a spouse to a deceased eligible.) Do not submit any documents unless you are notified to do so by ORA. ***ALL photocopied documents and statements must either be notarized or contain the authenticity clause, signed under penalty of perjury.*** Wording for the authenticity clause will be provided by ORA at the time documentation is requested. Original documents which do not need to be returned may also be submitted.

SECTION A -- GENERAL DOCUMENTATION REQUIREMENTS

COLUMN I: ALL RECIPIENTS	**COLUMN II: LIVING ELIGIBLES**	**COLUMN III: ALL SURVIVORS (Specified in Section B below)**
You are required to submit: ● A signed Declaration (ORA will supply this form) ● One source of identification containing your name and current address *Examples include:* ➤ Bank or financial statement ➤ Monthly utility bill ***AND*** If applicable, you must also submit: ● A source showing date of birth (Disregard if your letter notifying you of your potential eligibility does not request a document establishing your date of birth) *Examples include:* ➤ Birth Certificate ➤ Religious or other family record ➤ Two or more statements ● One source as evidence of guardianship (This applies to a legal or informal guardian who ***signs*** the Declaration form for the eligible person while helping them submit their documentation) *Examples include:* ➤ Court Appointment (legal guardian) ➤ Statement describing your relationship (informal guardian)	You are required to submit: ● Evidence as instructed in Column I of this section ***AND*** If applicable, you must also submit: ● Evidence of name change(s) (E.g., your present name is different than that used at the time of evacuation and internment) *Examples include:* ➤ Marriage License ➤ Divorce Decree ➤ Court Order ➤ Two or more statements ***DO NOT SUBMIT ANY DOCUMENTS UNLESS YOU ARE NOTIFIED TO DO SO BY ORA.***	You are required to submit: ● One source as evidence of the eligible person's death *Examples include:* ➤ Certificate of Death ➤ Statement from the attending physician ➤ U.S. Consul's report for a death occurring outside the United States ➤ Two or more statements ***AND*** If applicable, you must also submit: ● Evidence of name change(s) (E.g., your current name is different than that of the deceased eligible. Exceptions are step-children who retain a previous family name. For instance, the step-daughter of an eligible man retains her mother's prior married name. The exception doesn't apply if the daughter marries and takes a new name. She must then show a name change to link her with her mother.) *Examples include:* ➤ Marriage License ➤ Divorce Decree ➤ Court Order ➤ Two or more statements

SECTION B – SPECIFIC DOCUMENTATION REQUIREMENTS FOR HEIRS

COLUMN I: SPOUSE	**COLUMN II: CHILDREN**	**COLUMN III: PARENT(S)**
You are required to submit: ● Evidence as instructed in Section A, Columns I and III ***AND*** ● One source as evidence of your marriage to the deceased eligible *Examples include:* ➤ Marriage License ➤ Any public or religious record of the marriage issued by the proper record officer ➤ Statement from the clergyman or magistrate who officiated ***DO NOT SUBMIT ANY DOCUMENTS UNLESS YOU ARE NOTIFIED TO DO SO BY ORA.***	You are required to submit: ● Evidence as instructed in Section A, Columns I and III ***AND*** if a **NATURAL CHILD** of the deceased ● One source as evidence of the natural child relationship *Examples include:* ➤ Birth Certificate containing your parents' names ➤ Any public, agency, or religious record showing the deceased as parent ➤ Two or more statements if an **ADOPTED CHILD** of the deceased ● One of the following two sources as evidence of the adopted child relationship ➤ Adoption Decree ➤ Revised Birth Certificate for jurisdictions where release of adoption documents is prohibited if a **STEP-CHILD** of the deceased ● ***Both*** types of evidence of the step-child relationship must be provided ➤ Evidence of marriage between your parent and the deceased eligible (see Section B, Column I on marriage) ➤ Evidence that you resided with the deceased eligible or that you maintained a parent-child relationship (E.g., will, insurance policy, joint bank statement)	You are required to submit: ● Evidence as instructed in Section A, Columns I and III ***AND*** if the deceased was a **NATURAL** child ● One source as evidence that you are the parent of the natural child *Examples include:* ➤ Birth Certificate naming you as parent ➤ Any public, agency, or religious record showing you as the deceased eligible's parent ➤ Two or more statements if the deceased was an **ADOPTED** child ● One of the following two sources as evidence that you are the adoptive parent of the child ➤ Adoption Decree ➤ Revised Birth Certificate for jurisdictions where release of adoption documents is prohibited

What kind of documents will ORA request and why? 6

What if I have questions or need help? 7

How will I know that ORA has reviewed my documents? ... 8

What if circumstances change after I have sent my documentation in to ORA, if I move, or if an eligible individual dies, for instance? 8

When can I expect payment? 9

Do I have any recourse if ORA finds that I am ineligible? ... 10

If I mail documents now, will this help ORA to verify my eligibility? 10

I have never contacted ORA to provide my current address and information about myself. Is it too late? 10

Introduction

The Civil Liberties Act of 1988 authorizes compensation of $20,000 to eligible persons of Japanese ancestry who were evacuated, relocated or interned during World War II. The Act became law on August 10, 1988, and was assigned to the Department of Justice for implementation. The Office of Redress Administration (ORA) was created as a new organization within the Civil Rights Division of the Department, specifically to carry out the redress provisions of the Act.

The federal regulations were established by the Department to fulfill its responsibilities under the Act. They describe the Department's interpretation of the law's original language, and provide details about how the program will operate. The regulations were signed by Attorney General Dick Thornburgh on August 10, 1989, and published in the Federal Register on August 18, 1989. This pamphlet summarizes these regulations.

- Those who were ordered to leave Bainbridge Island or Terminal Island.
- Those who were in the U.S. Military during the internment period and never spent time in camps, but lost property as a result of government action because their homes were in prohibited zones.
- Those who were in the U.S. Military and were prohibited by government regulations from visiting their interned families or were subject to undue restrictions prior to visits.
- Those who were born in Assembly Centers, Relocation Centers, or Internment Camps, including those born to parents from Latin America who were interned in the United States.
- Those who were forcibly brought to the United States from Latin America for internment, and later acquired a change in immigration status to permanent resident, retroactive to the internment period.
- Those who spent the internment in institutions, such as sanitariums, under the administrative authority of the War Relocation Authority.

Special Cases

ORA knows that some eligible people do not fit any of these categories, and that historic records may be

Q. **Who is eligible for redress?**

A. All eligibles must be of Japanese ancestry, must have been U.S. citizens or permanent resident aliens during the internment period, from December 7, 1941 to June 30, 1946, and must have been living on August 10, 1988.

Beyond that most, but not all, eligible individuals will fall into one or more categories.

General Categories

- ➢ Those who were interned in Relocation Centers.
- ➢ Those who were held in Assembly Centers, whether or not they later went to Relocation Centers.
- ➢ Those who were interned by the Army in Hawaii.
- ➢ Those who were interned by the Department of Justice in any of the Immigration and Naturalization Service (INS) Camps.
- ➢ Those who filed Change of Residence Cards.
- ➢ Those who moved from prohibited zones on or after March 29, 1942.

missing even for some of those who do fit the categories described above. The regulations permit "case-by-case" determinations under either set of circumstances. ORA may ask persons who fit into this special case category to submit affidavits or other documentation to help ORA make a decision.

If you believe that you or someone you know would possibly be a special case, please provide a description of your circumstances during the internment period to ORA, at the address given on page 11 of this booklet. Along with the description, please include the information listed just above the address.

Q. **Who is not eligible for redress?**

A. The Act excludes some people affected during the internment period from redress, and therefore ORA does not need them to supply any additional information. In general, these persons will fall into the following categories:

- ➢ Those who are not of Japanese ancestry, including spouses, who were evacuated, relocated, or interned.
- ➢ Those who were not U.S. citizens or permanent resident aliens, and did not have their status adjusted retroactively to the internment period, including those brought from Latin America.

- Those who relocated to an enemy country between December 7, 1941 and September 2, 1945. This includes children who relocated with their parents.

- Those who moved from the West Coast prior to March 29, 1942, for their own personal reasons, not in response to government action, and did not file Change of Residence Cards.

- Those who were born after their parents were no longer interned.

- Those who were born after their parents had moved from a prohibited zone.

- Those who remained in the U.S. Military, but lost no property as a result of government action, or were allowed to visit their interned families without undue restrictions.

- Those who were outside the boundaries of the United States, and did not or were unable to return during the internment period, even if their families were evacuated, interned, or relocated.

Q. **How will my eligibility be verified?**

A. ORA has established an information system that contains all the data that has been collected since the Office was established. The ORA computers contain:

- Historic Information: ORA has obtained historic records made during the internment period from several sources, primarily the National Archives. From these records, we know who was interned, who filed a Change of Residence Card, and other information that is critical in establishing eligibility.
- Current Information: ORA has also been collecting current information from federal and state government agencies (such as the Social Security Administration and state vital statistics bureaus), and from potential recipients, their friends, or families.

During the verification process, ORA will compare current and historic information. If it is the same, then the preliminary phase of verification for that person will be complete.

Q. **How will I know if my eligibility has been verified?**

A. Once ORA has preliminarily verified your eligibility in the process described above, you will be contacted by letter. The law states that payment must be made in the order of birth, beginning with the oldest eligibles. Therefore, ORA will be contacting eligibles beginning with the oldest living on the date of the enactment of the law on August 10, 1988 (or his or her statutory heirs: spouse, children or parents) who have been located by the Administrator at that time.

This letter will request that you complete a declaration of eligibility and also submit certain documents to establish your identity. ORA will attach to the letter an instruction page that lists specific examples of the kinds of records that are acceptable.

Q. **What kind of documents will ORA request and why?**

A. It is ORA's responsibility to determine eligibility, but after that, we have to be sure that the check goes to the right person at the right address. Additionally, some people have changed their names, or have a guardian who takes care of their personal business for them. In these cases, we have to know what name to put on the check so that it can be cashed.

In general, ORA will require everyone to send:

- A completed Declaration. (ORA will supply a form)
- An original or a photocopy of a document with both your current legal name and address.

In addition, some will be requested to send:

- Proof of date of birth.
- Proof of guardianship.

And every heir must also send:

- Proof of death of the eligible person.
- Proof of his/her relationship to the deceased person.

ALL PHOTOCOPIED DOCUMENTS must either be notarized or contain an authenticity clause signed under penalty of perjury. Wording for this authenticity clause will be provided by ORA in the letter requesting the documentation.

ORA will not return any documents, so do not send anything that you will need to have back.

Q. **What if I have questions or need help?**

A. The letter that ORA sends to request documentation will include instructions. These instructions are specific to your case, which means that you may be asked to supply slightly different information than someone else. Return your information in the preaddressed envelope that ORA supplies with your letter. This envelope does not need any stamps.

If you have questions, ORA has a help line that you can call. This is not a toll-free number.

ORA Help Line
(202) 653-8360
(202) 786-5986 (TDD)*

* Telephone Device for the Deaf

Q. **How will I know that ORA has reviewed my documents?**

A. After reviewing your information, ORA will again contact you. If your information is incomplete, a letter from ORA will explain what is needed, and again request that you return the information in the postage-paid, pre-addressed envelope provided. If your information is complete and ORA has confirmed your identity, you will receive a letter informing you of this fact. With this letter you will also receive a change of address form to use if you move before your payment is mailed to you.

Q. **What if circumstances change after I have sent my documentation in to ORA, if I move, or if an eligible individual dies, for instance?**

A. ORA needs to know this type of information as soon as possible. Please write to us at the address given below if you have new information, or use the change of address form supplied by ORA to provide us with your new address if you move. This address is to be used by those who have already supplied documentation to ORA at ORA's request, and who want to update that information.

OFFICE OF REDRESS ADMINISTRATION
VERIFICATION UNIT
P.O. BOX 66740
WASHINGTON, D.C. 20035-6740

To expedite handling of information, your correspondence should include your full name and date of birth, and the "FN" that appears on the mailing label above your name on correspondence addressed to you from ORA.

Q. **When can I expect payment?**

A. Payments will begin in October, 1990. Although the Civil Liberties Act became law on August 10, 1988, ORA cannot make payments until Congress and the President have made funds available. A new law signed by the President on November 21, 1989, makes Redress an entitlement, and establishes a three-year schedule for payments.

Under the new law, enough money will be set aside to make 25,000 redress payments in the first year, 25,000 payments in the second year, and the rest in the third year. Payments will be made in descending order, beginning with eligible people in the oldest age group (or their heirs) whom ORA has located at that time.

When ORA is ready to pay your age group, you will receive a letter notifying you that you are eligible. Shortly thereafter, you will receive a United States Treasury check for $20,000 or for your share as an heir. Checks will be sent by an express delivery mail service, and you will have to sign a receipt.

Q. **Do I have any recourse if ORA finds that I am ineligible?**

A. Yes. If you are found to be ineligible, ORA will notify you by letter, and explain the reason for this decision. The letter will include instructions on what to do if you disagree with the decision. You will have the right to request reconsideration of your case within 60 days of receiving the notification. Your request must be to the Assistant Attorney General for Civil Rights, and you may submit any documents in support of your eligibility. After your appeal has been reviewed, the Department of Justice will notify you of its final decision.

Q. **If I mail documents now, will this help ORA to verify my eligibility?**

A. No. ORA must first determine that you are eligible using official historical sources. Therefore, do not send us any proof of identification until you have received a letter from ORA specifically asking for documentation of your identity. Remember, any information that you send in will not be returned to you.

Q. **I have never contacted ORA to provide my current address and information about myself. Is it too late?**

A. No. ORA is still collecting voluntary information. If you have not yet provided any information to ORA and would like to do so, please write to ORA at the address given below. You may submit any information you feel may be helpful. The most useful information is name, including maiden or other names used if any, current address, date of birth, social security number, and where you were interned.

OFFICE OF REDRESS ADMINISTRATION
P.O. BOX 66260
WASHINGTON, D.C. 20035-6260

Mr. SMITH. Thank you for your testimony today. We will have additional questions to be answered for the record.

[The following questions were submitted to be answered for the record:]

QUESTIONS SUBMITTED BY CONGRESSMAN SMITH

General Legal Activities

Immigration-Related Discrimination

QUESTION: In 1990, the Congress directed that no less than $1 million of the amounts appropriated for GLA be available to the Office of Special Counsel for their efforts against immigration-related discrimination. Have those funds been made available?

ANSWER: The Office of Special Counsel has $1,000,000 available in 1990 for publicizing both the obligations of employees and the rights of job applicants under Section 102 of the Immigration Reform and Control Act of 1986.

QUESTION: What publicizing activities is the Office of Special Counsel undertaking?

ANSWER: The Office of Special Counsel (OSC) is using this funding to implement a three-part outreach program. Part I consists of the combined efforts of the Immigration and Naturalization Service, Department of Labor - Equal Employment Opportunity Commission, and the Small Business Administration. The primary goal is to educate potential victims of discrimination and the general public about the antidiscrimination provision of the Immigration Reform and Control Act. Accomplishment of this task involves informing the media, employer groups, unions, and state and local law enforcement practices agencies.

Part II involves consultation with States concerning expenditures of State Legalization Impact Assistance Grant monies for antidiscrimination outreach.

Part III concerns the development of a program via grant, contract or cooperative agreement to allow OSC utilization of community-based organizations and other networks in order to reach protected alien populations.

QUESTION: How much have you requested for this purpose in 1991?

ANSWER: No increases have been requested for 1991; however, $1,000,000 has been requested by the Administration to continue this effort.

Vaccine Injury Cases

QUESTION: How many cases have you begun processing?

ANSWER: The Civil Division has received 236 cases since the filing period began on October 1, 1988. These cases are being handled by the Torts Branch. The Division has begun processing 117 cases. Twenty-four of these cases have been closed.

QUESTION: Is there a backlog in cases that would be solved with additional resources?

ANSWER: The Civil Division projects that 500 vaccine cases will be received this year. The litigation for these cases would occur mainly in 1991. The Department has requested an increase in the 1991 authorization for use of Vaccine Trust Fund resources which would make available an additional $500,000.

Japanese-American Redress Payments

QUESTION: We have heard rumors that the number of potential payments may exceed the original estimate of 60,000 -- is that true?

ANSWER: Yes. Based on a recent actuarial study and progress to date by the Office of Redress Administration (ORA), we believe that somewhere between 64,000 and 65,000 persons eligible for redress were living on August 10, 1988. As verification progresses we will have a more accurate estimate of the number of eligible individuals.

QUESTION: If those revised estimates are correct, do you plan to submit legislation to increase the amount currently authorized?

ANSWER: ORA's current estimate of the actual number of surviving eligibles is based on very preliminary data. At this time, the possible need for additional funding is two and one-half years away. When we approach 1993 and the picture becomes clearer, we will begin to evaluate the need for such legislation.

Office Automation

QUESTION: Will Project EAGLE become the standard for office automation projects throughout the Department, and if so, how will this standard be implemented throughout the Department?

ANSWER: The Attorney General has made it clear that a uniform approach to office automation is a high priority. In his August 23, 1989 memorandum regarding the management of Project EAGLE, the Attorney General stated: "One of my objectives is to achieve uniformity of systems throughout the Department. EAGLE provides the means to achieve this objective." We view EAGLE as the acquisition method which allows Departmental components to achieve this uniformity without delay. Because the EAGLE system uses the same word processing and electronic mail software as the AMICUS II system, it is this underlying technology that constitutes the de facto standard. As office automation systems now installed in various Departmental components reach the end of their useful life-cycles, the components will be using the EAGLE contract to meet their requirements. Because the office automation software used in EAGLE and AMICUS is already widely used within the Department, we expect ready acceptance.

QUESTION: Will Project EAGLE establish standards that will allow for the electronic transfer of documents between the various Justice Department components, and if so, when will these standards be developed and implemented?

ANSWER: Allowing transfer of documents is less a matter of standards than of security and telecommunications technology. As stated previously, almost all Departmental components now use the same word processing software, so the electronic format of these documents is compatible. This is a major change from only a few years ago. As the various organizations implement EAGLE systems with security appropriate to the level of information maintained, we will be paying special attention to ways to transfer documents electronically, allowing us to avoid the costs of overnight mail services now often required to meet court-imposed deadlines. In addition, implementation of the FTS 2000 data network will allow the Department to take advantage of the low cost of this shared, nationwide network to connect our organizations and all their offices in ways which were simply unimaginable a decade ago.

In addition, the Department intends to establish a standard profile for office systems, ensuring not only compatibility with EAGLE and AMICUS, but compliance with GOSIP, POSIX, and telecommunications standards.

QUESTION: In September 1989, the GAO criticized the Department for not completing risk analyses for Project EAGLE prior to installing the systems. What progress have you made in performing this system risk analysis?

ANSWER: After analyzing several software packages from a list provided by the National Institute of Standards and Technology, the Department has chosen one to be used as a standardized way of analyzing risks in organizations planning on implementing EAGLE systems. The EAGLE Office and the Department's Security and Emergency Planning Staff have worked closely with the litigating organizations to help them tailor the package to make it appropriate in a legal environment. Completed in privacy by a user on a personal computer and then "locked" to ensure data integrity, the EAGLE survey results provide a comparison of security risks and system/organizational security features (countermeasures). Each organization implementing EAGLE systems (even different parts of the same organization) have different types of risks and would therefore be subject to different countermeasures. Fortunately, the EAGLE contract provides many different security options which Departmental organizations may choose to acquire and use.

QUESTION: When will security plans based on this risk analysis be implemented?

ANSWER: Each Departmental organization implementing EAGLE systems already has a security plan, as required by Departmental policy order. These security plans reflect the security requirements associated with the office automation system in use in that organization. As risk analyses for EAGLE systems are completed, these security plans will be updated to reflect any special requirements associated with EAGLE.

QUESTION: Who in the Department is managing implementation of Project EAGLE security?

ANSWER: Under Departmental policy orders, each organization is required to have a Security Program Officer who is responsible for all aspects of security, including those appropriate to automated systems such as EAGLE. The Attorney General has established an EAGLE Steering Committee to coordinate policy among Departmental organizations implementing EAGLE systems. As part of its duties, this committee will be coordinating EAGLE security policy, in consultation with the Department's Security and Emergency Preparedness Staff.

Tax Division

QUESTION: The Tax Division requests an increase of $3,900,000 for automated litigation support (ALS). Is this support required for specific cases or just a general litigation tool?

ANSWER: While we hope to utilize the capabilities of automated litigation support to enhance our chances of prevailing in a wide range of cases, we intend to focus our early efforts on certain complex and large, document-intensive cases. The Tax Division has received no funding targeted for this support in previous years, and as a result, has had to scrape together funds to provide its attorneys with even a modicum of computer support. Without solid funding, the Tax Division is clearly handicapped in its efforts to combat private counsel, who, in most instances, have unlimited access to state-of-the-art computer technology.

Of the $3.9 million requested by the Tax Division for automated litigation support, $200,000 will be applied to criminal tax litigation and prosecution and $3.7 million will be used to support civil tax cases. This funding will allow the Division to implement a program to deal with the 25 to 35 large, document-intensive cases litigated by our attorneys each year. Examples of cases targeted for ALS include:

-- The **Barrister** tax shelter case which involves $25 million in tax penalties. The transactions at issue were conducted by 95 partnerships with 30 to 40 investors each for two tax periods. Tax Division attorneys have been called upon to review 100,000 documents, valuation appraisals of 300 books done by 4 separate appraisers, and the testimony of 85 deponents.

-- The **Noske** tax shelter case, a $5.6 million suit in which discovery yielded 500,000 pages of documents relating to 186 different trusts, as well as 65 depositions.

The Tax Division has already experienced some success in using ALS. On January 11, 1990, the Tax Division received a favorable decision in In re ContiCommodities Services, Inc. Litigation, in which four tax refund suits were joined with multi-district litigation brought by investors in a Government securities trading program. In these suits, the investors were rebuffed in their attempt to recover a refund of approximately $1.0 million. Tax Division attorneys successfully employed personal computers to organize the 140 depositions that had been taken on the tax-related portion of the case.

The ContiCommodities case, however, is merely representative of the many civil tax cases in which the Tax Division desperately needs automated litigation support. In recent years, the Internal Revenue Service (IRS) has shifted its resources to large cases, generally involving large dollar amounts and numerous documents. These cases have progressed through the administrative pipeline and are now moving to the courts. For example, in just the last two years, so-called "jumbo" cases docketed at the Tax Court involving over $10 million in taxes have increased 23 percent (from 195 to 239). The Tax Division has no ALS funding in its base level budget. If future revenue shortfalls are to be avoided, automated litigation support must now be made available to our attorney personnel.

The $200,000 requested to provide ALS support to criminal tax cases is critical, particularly in light of the crisis that rocked the country's financial institutions. There are approximately 100 tax investigations pending in the Dallas Bank Fraud Task Force, 40 of which have progressed either to the trial or grand jury level. The Chief of the Criminal Investigations Division in Dallas has advised us that he anticipates that the other 60 tax investigations will reach the grand jury level during the remainder of 1990 and 1991. New tax investigations are also anticipated.

These complex financial fraud investigations have in several instances involved over 40,000 documents. The requested enhancements in ALS funding will enable the Division's Criminal Enforcement Sections to provide needed support and assistance to the U.S. Attorneys, the Criminal Division, and the IRS in their joint efforts to address aggressively the Nation's savings and loan crisis.

QUESTION: Will this ALS be contracted out or performed in-house?

ANSWER: The Tax Division intends to contract out for ALS using a program similar to that successfully employed by the Land and Natural Resources Division and the Civil Division. A contractor would provide the automated litigation support once they have discussed the relevant issues of the case and received the pertinent documents from the attorney in charge of the case.

The Land and Natural Resources Division and the Civil Division experiences clearly demonstrate that it would be most cost effective to use private industry contractor support rather than create an in-house staff to perform these functions. Both of these other Divisions have used contract support successfully for the past five years, and we anticipate similar success in the Tax Division.

QUESTION: Will your Project EAGLE automation system provide you ALS capability?

ANSWER: The Tax Division's Project EAGLE office automation system does not, in itself, provide automated litigation support capability. The Project EAGLE office automation system provides essential word processing capabilities to facilitate document production, retrieval, and exchange among Division personnel, and most importantly, document transmittal to the various offices of the U.S. Attorneys and the Internal Revenue Service. In addition, the Project EAGLE office automation system provides considerably faster access to legal research databases such as JURIS, LEXIS, and Westlaw. The electronic mail and calendaring features of the Project EAGLE office automation system are sophisticated enhancements to what is currently available to Division personnel. We believe that the Project EAGLE office automation system, in conjunction with a contractor supported automated litigation support program, will contribute substantially to the ability of our attorneys to maintain effective and successful litigation operations.

QUESTION: You request $325,000 to permit the Tax Division to initiate a more aggressive recruitment program in an effort to reduce the Division's high attrition rate. Please explain how improved recruiting can reduce attrition?

ANSWER: The $325,000 request is a personnel management initiative designed to enhance recruitment, career development, and retention.

We feel strongly that if the Tax Division is to succeed in its mission of enforcing the tax laws, we must recruit and hire the cream of the attorney crop, provide these attorneys with the training essential to permit them to prevail over the seasoned veterans against who they generally appear, and must provide for monetary rewards to those attorneys who exceed our high expectations. Only by addressing all three areas of personnel management will the Division succeed in hiring and retaining the most qualified legal talent given the current federal salary structure. Therefore, we have requested $50,000 for enhanced recruitment efforts, $75,000 for enhanced training, and $200,000 for compensation for excellence. All three programs will enable the Tax Division to recruit and retain attorneys to protect the Federal fisc.

The $50,000 being requested for our recruitment program will fund travel costs associated with recruitment trips to law schools. In this way, the Division will be able to inform graduating law students of the valuable employment opportunities available in the Tax Division, particularly the courtroom experience provided by the Tax Division within six months of employment. These funds will also enable the Tax Division to improve and enhance its legal intern program and to heighten efforts to attract experienced attorneys to work for the Tax Division.

The $75,000 in funding requested for our attorney professional career development program will permit us to enhance our in-house training program which provides specific tax litigation training for our employees and to pay for outside tax-specific training courses which cannot be duplicated in-house. In addition, with the additional funds requested, the Tax Division will be able to purchase legal tapes, training videos, and other training tools in order to provide as much in-house training as possible on current tax issues. With these funds, the Division will also be able to devote additional resources for sending new attorneys on travel to second chair at trials with a more experienced litigator. We intend to send new attorneys on at least one such learning experience before they have to litigate in court on their own.

Finally, $200,000 is being sought to increase the current employee award and bonus programs. We believe strongly that this "compensation for excellence" initiative will provide a strong incentive for qualified employees to remain with the Tax Division. Our efforts thus far with regard to employee retention have been less than fully successful, as attested to by our high attrition levels. Increasing the amount available for employee awards should go a long way toward rectifying this serious management problem.

QUESTION: What recent legislative changes have led to the need for an increase of $1.4 million for civil tax lawyers?

ANSWER: For 1991, the Tax Division is requesting $1.4 million to restore the Division to its authorized workyear strength. The Tax Division at present does not have the funding required to support the staff levels authorized by the budget. Many of its attorneys are currently laboring with dockets in excess of 100 cases. The staff increases received in 1990 reduced these caseloads only marginally because of increased workload in areas such as bankruptcy.

There is no prospect that the Division's recurring normal caseloads will diminish, and there is every indication that recent changes in the tax law and in the Internal Revenue Service's administrative priorities will generate a substantial increase in the Tax Division's workload in 1991.

Likely new sources of litigation include cases involving:

-- International Tax Enforcement. The Tax Division will receive considerable litigation involving Section 482 of the Code, under which the IRS may allocate income and deductions among related corporations (including parents with foreign subsidiaries). The Treasury Department recently issued a "White Paper" which suggests that the Tax Division will not only receive substantive Section 482 cases involving millions of dollars of revenue and perhaps roomfuls of documents, but also will be called upon to enforce summonses seeking documents from foreign subsidiaries.

-- The Taxpayer Bill of Rights. The Taxpayer Bill of Rights was enacted on November 10, 1988. It added new provisions involving attorney's fees and civil damages that have already generated litigation for the Tax Division and are anticipated to generate substantial workload in the future. Specifically, attorney's fees can now be awarded based upon administrative actions of IRS personnel. Tax Division attorneys are now required to conduct this litigation to determine whether or not the position of the IRS was substantially justified or whether the amount claimed by the taxpayer was reasonable.

-- The Taxpayer Bill of Rights also entitles taxpayers to sue in Federal District Court for damages when an IRS official inadvertently or intentionally disregards the Internal Revenue Code while in the process of collecting Federal taxes. Also, taxpayers are now able to sue for damages when an IRS official or employee fails promptly to remove a lien on a taxpayer's property. Tax Division attorneys are responsible for litigating all cases stemming from these new provisions.

-- Interest Abatement. The Tax Reform Act of 1986 included a provision that authorized the Secretary of the Treasury to abate interest attributable in whole or in part to any error or delay by an IRS officer or employee in performing a ministerial act. The Tax Division is already litigating cases in which the Secretary has refused to abate interest -- further cases will likely originate from the 10,000 applications for abatement of interest that are either pending or have been denied.

The Tax Division's critical shortfall in staff must be rectified if these new cases are to be litigated effectively. The Division serves as a major revenue-generating agency for the Federal Government. The litigating efforts of Tax Division attorneys ensure that debts legally owed to the Federal Government are, in fact, collected.

Civil Division

QUESTION: The Civil Division requests total increases of $3,419,000 for financial institution fraud litigation. What is in the base for this S&L litigation?

ANSWER: The Civil Division handles a number of cases involving challenges to regulatory actions of agencies as well as tort claims seeking damages for actions taken by the regulatory agencies. An explosion of new cases is expected as a result of the Financial Institution's Reform, Recovery and Enforcement Act of 1989. As a result of the Act, we expect increased regulatory enforcement involving financial institutions in order to enforce administrative orders and to collect civil penalties. The new legislation authorizes the Attorney General to bring actions to recover civil penalties for violations of numerous criminal statutes. This authority will enhance enforcement by providing a civil remedy in those cases involving serious violations that might not be suitable for criminal prosecution. The legislation also gives the Attorney General administrative summons authority for such cases, and authorizes the disclosure of grand jury information to Civil Division attorneys for the new civil penalty cases.

The Division will also be involved in litigation surrounding the liquidation of a bank. Collection activities will have to be undertaken for the assumed loans and other financial obligations purchased by the regulatory agencies as part of the restructuring of the financial institutions. This is already an extensive area of litigation and, as more financial institutions are restructured, will become even more prominent. Painstaking investigation, requiring the expertise of financial analysts and counsel in foreign countries, will have to be undertaken to pursue assets of wrongdoers at or borrowers from financial institutions. A significant percentage of these collection activities will require personal involvement by Civil Division attorneys to resolve major policy and financial questions that will have an impact on the U.S. Treasury.

Suits for damages will also arise out of the role of the Federal Deposit Insurance Corporation (FDIC), the Federal Savings and Loan Insurance Corporation (FSLIC) and other regulatory agencies in carrying out their corporate and regulatory duties. These suits will raise novel questions in both commercial and torts law and, invariably, they will have to be handled by Division attorneys because of their complexity and policy overtones. Civil litigation can also be expected to increase as more banks are closed. Frequently, shareholders and depositors challenge the legality of the action and sue the agency and the officials involved in the closing. Every liquidation brings a hornet's nest of litigation against the financial institutions by creditors of all types. The Division will personally handle only the most complex, policy-sensitive cases.

QUESTION: What will be the impact on this litigation if the additional funds are not provided?

ANSWER: Without additional resources, the Civil Division will be unable to centralize control of the litigation and ensure a consistent approach to the critical interpretation of this law by the courts. To the extent that it is able to exercise its traditional role as the representative of Federal agencies and corporations (like the FDIC and other banking agencies), the broad interests of the United States are protected and the Civil Division can offer its expertise and perspective on governmental (and particularly regulatory) issues. This is more effective and efficient than a decentralized supervision of thousands of cases by FDIC and as many by privately-retained counsel.

QUESTION: You request an additional $924,000 for litigation involving Medicare overpayments. Have you not been investigating and prosecuting such cases for years? How much is in your base for these cases and what changes are driving the need for additional funds?

ANSWER: The Civil Division has requested 11 positions and $477,000 in Automated Litigation Support funding to prosecute major Medicare overpayment cases and recover a potential $10 billion in overpayments. These cases allege a new category of abuse of Government funds by major insurance companies who failed to comply with amendments to the Medicare statutes. Prior to 1980, employers of working Medicare beneficiaries could provide only secondary health insurance coverage, leaving it to Medicare to act as the primary health insurer. Thereafter, in an effort to reduce Federal spending, Congress enacted several laws -- referred to as the "Medicare Secondary Payer Provisions" (MSP) -- requiring employers who provide health insurance to their employees to provide primary coverage for their Medicare-eligible employees. The Government contends that, when Medicare overpayments occur because the employer's plan does not assume primary responsibility for payment, the MSP laws permit the Government to recover not only from the employer, but also from any entity responsible for payment under the employer plans, i.e., insurance companies that underwrite the plans.

We have filed three suits to date. Two of them, one in Michigan against Blue Cross-Blue Shield of Michigan and one in Connecticut against Travelers Insurance Company, were referred to us by the Department of Health and Human Services (HHS) for affirmative litigation. The third resulted from a qui tam action filed against Provident Life and Health Insurance. Because we did not believe we could establish fraudulent conduct, we decided not to intervene in the qui tam suit but did file a separate action to recover overpayments. Four subsequent qui tam actions have been filed, but we have not yet received information from HHS sufficient to ascertain whether recovery actions are appropriate against those companies.

On December 12, 1989, the United States District Court for the Eastern District of Michigan entered an order on the parties' cross-motion for summary judgment rejecting almost all of the company's defenses. The court concluded that Blue Cross is primarily liable even where it expressly repudiates primary coverage in its insurance contracts. In addition, the court refused to limit Blue Cross' liability to payments made after a 1984 amendment to the Medicare laws granting an express right to recover overpayments from those primarily liable. The court further ruled that the six-year Federal statute of limitations applied and not the two-year limitation period contained in the Blue Cross insurance contracts. The district court sustained Blue Cross' defense to avoid liability when it acted only as an administrator of self-insured plans. The court's rulings will be a useful precedent for the remaining and future suits. We are now working with auditors from HHS's Office of Inspector General to ascertain the amount of Blue Cross's liability.

HHS attorneys continue to advise us that referrals of ten to twelve additional cases are imminent. In addition, HHS personnel advise there may be one hundred or more insurance companies that are liable for Medicare overpayments because they failed to comply with the MSP laws. The Division has no resources in its base funding to handle this influx of cases. The additional positions and ALS funding are essential.

Lands Division

QUESTION: The Lands Division requests $6,608,000 and 47 positions to increase environmental law enforcement. At what areas will you direct these additional resources?

ANSWER: For 1991, 46 of the 47 requested new positions are for our Environmental Protection program which includes four sections: Environmental Crimes; Environmental Defense; Environmental Enforcement; and Wildlife and Marine Resources. The remaining position is to supplement the Division's staff handling its growing Automated Litigation Support (ALS) activities.

All of these sections are currently devoting considerable resources to the Exxon-Valdez case -- not only to the pending criminal indictment, but to work underway to protect U.S. interests in the natural resource damage assessments undertaken by the trustees (the National Oceanic and Atmospheric Administration of the Department of Commerce, the Department of Interior and the Department of Agriculture). Not only is this a monumental case, but it is certain to set precedent and will involve many cutting-edge evidentiary and economic valuation issues. For that reason, we anticipate a considerable drain on our resources both now and well beyond 1991. The Admiralty section of Civil Division's Tort Branch is also involved. We currently anticipate that $3.9 million in 1991 ALS funding will be devoted to Exxon-related work.

But quite apart from Exxon, the needs of the Land and Natural Resources Division are growing exponentially as a result of:

- New legislation and regulations involving environmental laws (e.g., Asbestos Hazard Emergency Response Act, Medical Waste Tracking and Ocean Dumping Acts; not included in this budget are resources associated with any new Clean Air Act);

- Burgeoning workload involving Federal facility litigation (e.g., cleanup of Department of Energy nuclear weapons plants and Department of Defense installations);

- Counterclaims pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA) involving Federal agencies (e.g., Defense, Energy) when the agency has identified private parties who may have contributed to pollution at the site;

- Natural resource damage claims arising from the recent spate of oil spills, and other referrals from Federal agencies;

- The Administration's initiatives involving "no net loss" of the Nation's valuable yet diminishing wetlands.

QUESTION: This additional $6.6 million amounts to an increase of over 37 percent. Do you believe you can effectively utilize these additional resources?

ANSWER: Yes. The additional resources will be applied to our environmental protection program and be used to do two things -- hire 47 new people, and devote an additional $4.8 million to the provision of Automated Legal Support (ALS) services to manage the unit's programs. As to the whether we can use these resources effectively, we would have you note that:

1) In recent years, we have received a surfeit of applications from highly-qualified candidates seeking jobs with the Division. As reported in TIME magazine just last week (March 12, 1990), ". . .attorneys who specialize in environmental law have become some of the most sought after professionals in the U.S." The article went on to characterize the recent explosion in environmental law as

"unbelievable". This same explosion of interest in environmental law has resulted in a bonanza of applications for the Land and Natural Resources Division. For example, over 500 highly qualified law school seniors and judicial law clerks applied for 19 vacancies in our honors program last year. Similarly, we are receiving, on average, 75 resumes each week whenever we advertise a vacancy for an experienced attorney. Thus, we are in the enviable position of being able to choose among the best and brightest -- and most effective -- lawyers available. As a result, we do not expect any difficulty filling 47 new positions in 1991.

2) Adequate litigation support vastly increases the effectiveness of our case handling in that it allows us to staff up for major cases in a cost-efficient manner. The balance of our request, $4.8 million, will be used for litigation support services. Of this amount, $3.9 million is earmarked for Exxon-related civil case development alone. For this work, we have already identified the tasks to be performed, engaged a qualified contractor and commenced preliminary assignments; we lack only the funds to go forward pro-actively in 1991. Failure to provide these funds would cause us to lose valuable momentum in this critical, multi-million dollar case, and fundamentally impair our effectiveness because it would force us to delay or abandon critical case preparation.

QUESTION: On the surface, the Exxon-Valdez case appears to be relatively straightforward. Why do you believe you will require $3.9 million for automated litigation support?

ANSWER: The Exxon-Valdez case will actually be at least two cases brought by the United States against Exxon Corporation and possibly other responsible parties. One case is a criminal action arising from the recent investigation and resulting indictment of Exxon and a subsidiary company on criminal charges. We believe we have a strong case against Exxon and its subsidiary, but we will need to devote considerable resources to ensuring that the prosecution is successful. The automated litigation support is necessary because the investigation generated a large volume of documents, testimony, and other evidence that must be organized in an easily retrievable form. Whether we prevail will depend, in large part, on our ability to manage and present this evidence effectively. This capability will be particularly crucial in sentencing, since the size of the fine we obtain will depend on analysis and presentation of a large volume of data relating to economic and natural resource damages caused by the spill.

The second case involves a host of potential civil claims which can be grouped into four discrete areas:

1) Liability: For example, was Exxon solely responsible for the spill? What, if any, responsibility did ALEYESKA

and Exxon Shipping Company have? Are there viable defenses to that liability?

2) Civil Penalty Claims: A number of Federal statutes provide for assessment of penalties, e.g., the Clean Water Act, the Endangered Species Act, and the Marine Sanctuaries Protection Act provide for the assessment of penalties when resources protected under these acts are damaged.

3) Cost Recovery: This aspect of the civil case concerns the total amount of money the Federal Government has already spent as well as what we will need to spend in order to limit/contain the spill, including the recovery of all legal and investigative costs incurred;

4) Natural Resource Damages: What is the extent of injury to the natural resources resulting directly and indirectly from the spill, both immediate and residual, and how can we best restore or, if necessary, replace the injured resources? How does one best place a value on the thousands of birds, fish and mammals lost, and the effect on the tourism industry, recreational system, commercial fishing industry, etc.? As one might suppose, this latter area is expected to be particularly contentious and has already generated both a battle for expert witnesses with esoteric specialties as well as an unprecedented volume of documents given the ongoing extensive Natural Resource Damage Assessment Process.

Automated litigation support services will be required for both the criminal and civil cases.

To put the scope of our request in perspective, it is perhaps helpful to know that the State of Alaska has appropriated a war chest of $40 million to fund its case against Exxon and that Exxon has expended nearly $2 billion so far in cleanup costs and has retained three law firms to handle the case on its behalf.

This litigation is expected to be unprecedented in terms of: 1) the size of the spill (11 million gallons); 2) the ecological vulnerability of the unique, pristine and fragile environment affected; 3) the legal issues of first impression and the number of likely legal charges to be brought; and, 4) the corresponding vigorous defenses raised thereto by one of the largest legal defense teams ever assembled for an environmental case. Among the many necessary tasks that must be undertaken for the successful prosecution of the civil case against Exxon are the following:

- Processing an estimated 1 million documents for the civil case with an average document length of 5 pages, including microfilming and coding all pages, and subsequently loading them into the Department's mainframe computer.

- Providing contract paralegal teams, including a supervisor and three paralegals for each of three teams covering cost recovery, liability and natural resource damages.

- Establishing a full-text database.

- Tracking the progress of an estimated 150 private civil claims also pending against Exxon and the Federal Government. These private suits may raise legal or factual issues which bear directly on the affirmative Federal case, and therefore require close monitoring on our part.

- Assembling and monitoring the host of Freedom of Information Act (FOIA) requests made of the Department, the Federal trustee agencies (Interior, Commerce and Agriculture) and a host of other Federal agencies involved in the spill cleanup such as the Navy, Coast Guard, Department of Transportation, Federal Emergency Management Agency, and associated support such as the Environmental Protection Agency's involvement in restoration of the injured natural resources. Coordination of the FOIA requests is essential in order to prevent duplication of effort and to insure that privileged information is not inadvertently released.

UNITED STATES ATTORNEYS

WITNESSES

JAMES G. RICHMOND, UNITED STATES ATTORNEY FOR THE NORTHERN DISTRICT OF INDIANA

STANLEY A. TWARDY, JR., UNITED STATES ATTORNEY FOR THE DISTRICT OF CONNECTICUT

LAURENCE S. McWHORTER, DIRECTOR, EXECUTIVE OFFICE FOR UNITED STATES ATTORNEYS

HARRY H. FLICKINGER, ASSISTANT ATTORNEY GENERAL FOR ADMINISTRATION

MICHAEL J. ROPER, DEPUTY ASSISTANT ATTORNEY GENERAL, CONTROLLER

ADRIAN A. CURTIS, DIRECTOR, BUDGET STAFF

Mr. SMITH. Next we hear testimony on the U.S. Attorneys.

Testifying on behalf of the U.S. Attorneys are James Richmond, U.S. Attorney for the Northern District of Indiana, Stanley Twardy, U.S. Attorney for Connecticut, and Laurence McWhorter, from the Executive Office of U.S. Attorneys.

The U.S. Attorneys request $628,095,000 for fiscal year 1991. We will insert in the record at this point your FY 1991 budget justification.

Summary Statement

Fiscal Year 1991

The United States Attorneys are requesting for 1991, a total direct appropriation of $628,095,000, 8,147 permanent positions and 7,854 workyears. This request represents an increase of $109,231,000 over the 1990 appropriation enacted. It provides for the annualization of the President's Violent Crime initiative, transfer of the Organized Crime Strike Forces from the Criminal Division, and mandatory increases and decreases. In addition, the United States Attorneys are budgeted to receive additional reimbursable funding from the Organized Crime Drug Enforcement (OCDE) appropriation. Resources from the OCDE appropriation in 1991 would then total $66,182,000, 956 positions and 800 workyears.

The primary mission of the U.S. Attorneys is to execute the function of being the principal litigators of the U.S. Government. It is their task to prosecute those who mock our nation's criminal laws, to protect the public from those who would further their private interests at the expense of the general welfare, to protect the legitimate powers of the Federal Government from those who would usurp such powers, and to assert affirmatively, through the courts, those national policies established by Congress and the Administration. This mission is accomplished by 94 district offices in the United States, Puerto Rico, the Virgin Islands, Guam and the Northern Marianas. The U.S. Attorneys' appropriation consists of four decision units. The decision units, excluding OCDE, are: Criminal Litigation, Civil Litigation, Legal Education, and Management and Administration. The major initiatives in these decision units are summarized below.

Criminal Litigation

This activity is responsible for identifying, investigating, prosecuting and convicting those persons and legal entities who have committed offenses against the laws of the United States including controlled substances violators and those individuals involved in violent crime, organized crime, money laundering, official corruption, various types of fraud, and tax evasion. The United States Attorneys are also at the center of the efforts to develop more effective alliances with state and local law enforcement personnel and programs. This year as a result of the President's Violent Crime initiative, major program resources have been devoted to prosecution of those involved in violent crime and controlled substance violations. Additionally, Organized Crime Strike Force Units have been transferred and established in twenty-two district offices. The United States Attorneys seek 800 workyears and $71,800,000 for annualization to continue the intensified level of prosecution.

Civil Litigation

The Civil Litigation activity is responsible for protection and advancement of the interests of the United States through the conduct of civil litigation including both defensive and affirmative activities. Thus, the United States is represented against possible monetary losses and in support of Federal programs. All debt collection accomplishments of the 94 United States Attorneys offices are included in the civil litigation decision unit.

Legal Education

The purpose of this activity is to improve the level of Government legal representation by providing quality continuing legal education to an increasing percentage of the Federal attorneys and other legal personnel. Major training initiatives include asset forfeiture, basic and advanced criminal, and bank fraud courses. The LEI has added a modified Federal Practices course to meet the needs of newly hired attorneys who are experienced litigators in the private sector but who need exposure to federal legal practices.

Management and Administration

The Management and Administration activity is charged with supporting the United States Attorneys' litigation activities with administrative services. This includes: personnel coordination and assistance; formulation and execution of an operating budget; securing and maintaining adequate space and equipment; the conduct of field reviews; design and implementation of a caseload management system; and financial litigation direction to result in optimal efficiency of debt collection. Major initiatives this year are the implementation of Project Eagle and establishment of the Debt Collection activity.

United States Attorneys

Salaries and expenses

Justification of Proposed Changes in Appropriation Language

The 1991 budget estimates include proposed changes in the appropriation language. New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses

For necessary expenses of the Office of the United States Attorneys, [$444,862,000], $628,095,000 of which not to exceed $5,000,000 shall be available until September 30, [1991], 1992 for the purposes of (1) providing training of personnel of the Department of Justice in debt collection, (2) providing services related to locating debtors and their property, such as title searches, debtor skiptracing, asset searches, credit reports, and other investigations, and (3) paying the costs of sales of property not covered by the sale proceeds, such as auctioneers' fees and expenses, maintenance and protection of property and businesses, advertising and title search and surveying costs [:Provided, That of the total amount appropriated, not to exceed $8,000 shall be available for official reception and representation expenses]. (28 U.S.C. 519, 541-550, 48 U.S.C. 1424, 1617, 1694; Department of Justice Appropriations Act, 1990; additional authorizing legislation to be proposed.)

[To continue efforts begun in fiscal year 1989 to improve the ability of the United States Attorneys to prosecute drug and other crime related offenses, $80,699,000, for new assistant United States Attorneys, for annualization of new attorney positions funded in fiscal year 1989, and for automation enhancements necessary to provide productivity and case management in the various United States Attorneys offices.] (Department of transportation and Related Agencies Appropriation Act, 1990.)

Explanation of Changes

The proposed deletion removes language that is not needed because the reception and representation allowance is proposed for consolidation in the Department's general provisions.

1990 Sequestration. Sequestration amounts are distributed to each program category in accordance with the Omnibus Budget Reconciliation Act of 1989, as defined in House Report 101-73 and Senate Report 101-144. However, if the U.S. Attorneys are to meet basic costs without harming our litigative efforts, it is anticipated that a reprogramming will be necessary.

This budget activity includes resources for the primary mission of the United States Attorneys. Funds requested for this activity support personnel involved both at headquarters and in the field in the prosecution of individuals charged with violations of Federal law in several areas.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount

Long-Range Goals: To identify, investigate, prosecute, and convict those persons and legal entities who have committed offenses against the laws of the United States.

Major Objectives:

To identify, investigate, prosecute and convict those controlled substances violators whose organizations and conspirators do not meet Organized Crime Drug Enforcement criteria but whose activities have a major adverse impact on the quality of life in local communities -- especially those communities whose law enforcement resources are not adequate to address the problems presented.

To ensure the investigation and prosecution of major organized criminal groups and activities.

To increase and intensify Federal law enforcement efforts in major fraud, money laundering, and insider abuse cases affecting financial institutions; similarly to increase enforcement efforts involved in protecting the integrity of the nation's financial markets against fraud, inside trading and other related abuses.

To increase and intensify federal law enforcement efforts against white collar crime with particular emphasis on the following areas:

a. criminal violations of the environmental laws
b. bankruptcy fraud
c. consumer fraud
d. criminal violations of the export laws affecting critical technology
e. tax evasion

To identify, investigate, prosecute and convict those who are criminally involved in fraud against the United States, especially with regard to defense programs, waste of the United States' assets and resources, and abuse of the responsibilities related to contracts with the United States.

Base Program Description: The 1991 criminal litigation base includes 256 positions for financial institution fraud and 1,600 positions for the Administration's Violent Crime initiative that were funded in the 1990 Department of Transportation Appropriations Act, Emergency Drug Funding. Half of the workyears associated with the positions for the Violent Crime initiative are annualized in 1991. However, 225 workyears unfunded in 1990 as a result of the Budget Reconciliation Act will remain unfunded in 1991. The financial institution fraud positions will be used to concentrate on prosecuting officers of institutions that have perpetrated schemes to divert investors' deposits to personal use or to high risk ventures that were improperly secured and thereby contributed to the bankruptcy of numerous thrifts, savings and loans associations and banks. The violent crime positions will be used to prosecute narcotics dealers, money launderers, white collar criminals and offenders who use firearms during the commission of crimes.

The 1991 criminal litigation base also includes the transfer of 186 Organized Crime Strike Force positions from the Criminal Division. The incorporation of these positions into U.S. Attorneys' offices should improve the planning and execution of investigations and prosecutions of organized crime cases. These resources will constitute the nucleus of Organized Crime Units in the U.S. Attorneys' offices dedicated exclusively to organized crime matters.

Most alleged violators of Federal criminal laws are reported to the U.S. Attorneys by one of the several Federal investigative agencies. A few violations are reported to U.S. Attorneys by citizens, and others come to the attention of U.S. Attorneys in the course of prosecuting related criminal conduct. After considering various factors, a decision is reached on the appropriateness of Federal prosecution. The U.S. Attorneys then become responsible for engaging in the established legal procedures for the purposes of obtaining a conviction of alleged violators of Federal criminal laws.

Except for misdemeanor offenses and instances in which the defendant waives his/her right to a grand jury indictment, the evidence against an alleged offender is presented to a grand jury, and the jurors make the official decision for prosecution by voting on an indictment proposed by the U.S. Attorney. Following the delivery of an indictment, the U.S. Attorney is responsible for presenting the charges at the arraignments of the defendant and for participating in preliminary hearings concerning such issues as the defendant's bail status, the propriety of the indictment, the forfeiture of the defendants property, the competency of the defendant, and the admissibility of evidence. Although barely 10 percent of all criminal prosecutions are concluded by a trial, the U.S. Attorneys must always be prepared to go to trial to avoid the risk of dismissal for noncompliance with Speedy Trial Act time limits and to negotiate effectively with defense counsel for a guilty plea by the defendant. Whenever the defendant is unwilling to admit guilt and a trial becomes necessary, the U.S. Attorney then is responsible for presenting factual evidence which will convince the jury of the defendant's guilt and then sustaining the conviction at post-trial hearings and appeals. Most criminal appeals at the Court of Appeals level are handled by the U.S. Attorneys' offices. After filing a brief, U.S. Attorneys may be required to participate in oral arguments before the Appellate court. If further proceedings are required, the U.S. Attorneys may be called upon to assist the Department's legal divisions and the Solicitor General in preparing the case for review by the U.S. Supreme Court.

Accomplishments and Workload: Accomplishments of the Criminal Litigation program are presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Matters pending, start-of-year	57,971	56,942	62,150	64,380
Matters received	91,444	103,204	117,000	129,500
Matters terminated	92,473	97,996	114,770	129,370
Matters pending, end-of-year	56,942	62,150	64,380	64,510
Cases pending, start-of-year	28,402	32,509	39,525	47,405
Cases filed	37,192	40,000	44,870	48,550
Cases terminated	33,085	32,984	36,990	40,030
Cases pending, end-of-year	32,509	39,525	47,405	55,925
Grand jury proceedings	20,184	23,120	28,000	31,600
Cases tried	3,473	3,694	4,150	4,500
Defendants charged	48,213	52,697	58,650	63,450
Gross value of assets forfeited*	...	$686,848,000	$500,000,000	$525,000,000

*Includes administrative forfeitures, which are processed by the investigative agencies, judicial forfeitures, which are handled by the U.S. Attorneys' offices, Customs Service forfeitures and agencys' bidbacks of property. The 1989 value reflects a one-time deposit of $225,000,000 stemming from the Drexal, Burnham, Lambert case.

The Criminal Litigation program objectives are accomplished through the work of 94 U.S. Attorneys' offices, each of which has responsibility for the investigation and prosecution of a wide range of proscribed criminal behavior. Actual and estimated accomplishments are reflected above in the Accomplishments and Workload summary. This includes 5,236 criminal appeals filed. The greatest volume of filings in 1989 were in controlled substance 10,457, fraud against Government 1,921, immigration 1,680, weapons control 2,365, and mail and wire fraud 1,880. Cases terminated totaled 32,984 in 1989. Of the 43,721 individuals prosecuted in these cases, 31,774 defendants made pleas of guilty; 3,256 were found guilty after trial; and 994 were found not guilty. The number of defendants tried increased by 9.6 percent over 1988.

As a result of the additional resources provided in 1990, the Criminal Litigation program will reflect substantial workload growth in both 1990 and 1991. Case filings in the drug law enforcement area will rise in direct proportion to the resources added. Concomitant with the drug law filings, there will be increases in asset forfeiture cases. It is anticipated that the increase in agents provided to the Drug Enforcement Administration and the Federal Bureau of Investigation in the Anti-Drug Abuse Act in 1989 will lead to a further rise in overall matters referred. The U.S. Attorneys should be able to address these matters and reduce the current backlog since the attorney population will be growing in larger increments than the agent population. Additional case filings will result in 1990 and 1991 as a result of the integration of the Organized Crime Strike Forces. Cases tried should increase due to two reasons: (1) the increase in case filings; and (2) the recognition by opposing counsel of stiffer mandatory penalties provided in the recently enacted Sentencing Guidelines.

Program Changes:

	1991 Base			1991 Estimate			Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Criminal Litigation..	5,973	5,683	$459,439	5,973	5,683	$453,283	...	...	-$6,156

A decrease of $6,156,000 is reflected for the criminal litigation area in 1991 to meet the Gramm, Rudman, Hollings Deficit Reduction Act Targets.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Civil Litigation......................	1,982	1,952	$133,149	1,982	1,952	$142,905	1,982	1,952	$142,905	...	...	...

Long-Range Goal: To protect and to advance the interests of the United States through the conduct of civil litigation.

Major Objectives:

To respond promptly and professionally to all law suits brought against the United States, its officers and employees.

To protect the Federal fisc through the conduct of aggressive affirmative litigation to recover for the United States all possible monetary losses and compensation for damages including recovery for damages and collecting losses as a result of fraud against the Government.

To support Federal programs, as necessary, by litigation and negotiation.

To collect monies owed the States.

To defend the United States against loss in bankruptcy and other proceedings in which the United States has a financial interest.

To represent the interests of the United States in affirmative and defensive environmental litigation.

To aggressively use new property forfeiture statutes to seize assets of drug and other offenders.

To articulate completely and forcefully the positions of the United States on issues presented by the Courts of Appeals.

Base Program Description: Civil matters and cases consume a significant portion of the U.S. Attorneys' resources especially in the areas of recovery of money, defense of monetary claims and debt collection. The ligitation brought against the Government covers a range of causes of action including torts (damage suffered as a result of Government action--e.g., collision with a postal service vehicle, malpractice by a Government physician, invasion of privacy by a Government agent), the determination of social security benefits, tax refunds, contract violations, racial/sexual/age discrimination, and habeas corpus. The Government, on the other hand, initiates civil litigation against private parties for a wide range of purposes of its own. These purposes include the recovery of money from the Government by fraud, the acquisition of interests in land by eminent domain proceedings, the enforcement of administrative summonses, the enforcement of environmental, admiralty, civil rights and other laws for which there are civil law penalties, and the recovery of debts owed to the Government.

Accomplishments and Workload: The civil litigation workload of the United States Attorneys follows:

Item	1988	1989	Estimates 1990	 1991
Matters Received	95,610	101,786	103,000	105,000
Matters Terminated	101,168	101,343	102,550	102,550
Matters Pending End of Year	23,677	24,120	24,570	25,998
Cases Filed	89,838	92,760	93,850	95,630
Cases Terminated	99,434	98,150	99,250	99,250
Cases Pending End of Year	144,870	139,480	134,080	154,214
Appeals Filed	3,343	4,004	4,050	4,130
Appeals Terminated	3,383	3,395	3,450	3,520
Trials*	1,095	2,430	2,460	2,500

*Increase in trials in 1989 is a reflection primarily of increased reporting accuracy.

Explanation

Affirmative Civil Litigation: Affirmative civil litigation maintains the integrity of many of the Government programs. Affirmative litigation can act as a deterrent to those persons or entities seeking to defraud the Government. In 1989, 36,350 of the 97,805 matters received were matters in which the Government acted as the plaintiff. The amount in controversy of these referrals was $2,063,550,419. The number of referrals in which fraud was alleged in 1989 was 1.3 percent of the total number of referrals, yet the dollar amount in controversy in claims where fraud was alleged was $175.9 million (8.5 percent). The amount in controversy in fraud claims is thus higher than the average affirmative civil litigation matter displayed in the U.S. Attorneys' Annual Statistical Report for 1989.

Many large fraud cases result in parallel criminal and civil investigations. Early involvement of civil attorneys can increase the probability of successful recovery for the Government. Some criminal investigations do not result in prosecution, yet these cases can result in significant civil recoveries. Several recent examples illustrate this fact:

In the Northern District of Illinois, the U.S. Attorney's office reached a settlement with Sunstrand. This settlement included resolution of both a criminal case and civil claim for procurement fraud. Sunstrand agreed to pay $115,000,000 for criminal fines, civil penalties and restitution for overcharging the Government on defense contracts. The case was based upon cost overruns improperly charged to overhead accounts.

In the Northern District of Ohio, TRW Inc. entered a plea of guilty to three counts of conspiracy to defraud the Government. As part of this settlement, criminal fines and penalties of $3 million were paid. TRW also agreed to pay $3 million as an advance payment towards restitution. Previously, TRW had paid $8.8 million in connection with the civil case.

In June 1988, the U.S. Attorney's office for the Southern District of New York filed a racketeer influenced and corrupt organization (RICO) case against the Teamsters Union. Prior to trial, this case was substantially resolved by civil settlement. It was agreed that the court would appoint an administrator to serve until 1992. Also, investigative officers and an elections officer were appointed to serve until 1996. The elections officer will ensure fair and impartial elections. The parties agreed that the rank-and-file members would participate in direct election of officers by secret ballot. Five officers were removed. In addition, by agreement, 22 injunctions were entered against alleged members of La Costa Nostra. The cases against the three remaining defendants are pending for trial. U.S. Attorneys, in such cases as the Teamsters Union case, have attempted to ensure that union affairs are not run by La Costa Nostra, but by individual members of the union.

Two environmental cases with significant recoveries are: 1) In the Northern District of Oklahoma, the U.S. Attorney's office collected over $2 million for polychlorinated biphenyl (PCB) contamination in a postal service facility. In 1982, an electric transformer fire occurred in the Federal courthouse in Tulsa, Oklahoma. Certain areas in the building were contaminated with PCB. The United States recovered the above monies from the electric utility company. 2) In the Western District of New York, the U.S. Attorney's office and the Department of Justice's Lands Division, entered into a consent decree obligating Atlantic Richfield Company to spend nearly $9 million for cleanup of a hazardous waste site in the town of Wellsfield, New York.

	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Legal Education............	24	23	$5,297	24	23	$7,236	24	23	$7,236	...	...	...

Long-Range Goal: To improve the quality of Government legal representation.

Major Objectives:

To provide effective, quality continuing legal education to an increasing percentage of the Federal attorneys and other legal personnel.

To provide special training to meet policy priorities and special problems such as asset forfeitures, victim and witness protection, and the Organized Crime Drug Enforcement Task Forces, which cross department and agency lines.

To offer video and audio tapes and other materials as a means of reaching a greater percentage of the Federal attorneys in district and regional offices of the Government, and to reduce the travel costs associated with Washington-based continuing legal education.

Base Program Description:

The Office of Legal Education (OLE) administers two institutes and one unit: The Attorney General's Advocacy Institute (AGAI), the Legal Education Institute (LEI); and the Legal Support Training Unit (LSTU). All training courses and seminars have been certified for continuing legal education credits and are accredited in all states with mandatory continuing legal education requirements. The potential audience for continuing legal education includes more than 27,000 attorneys. The AGAI utilizes experienced Federal trial attorneys as instructors. The instructors deliver advocacy lectures, lead discussion groups and conduct exercise sessions. Federal judges also participate at the AGAI, presiding over mock trials and mock appellate arguments. The caliber of AGAI faculty and the use of sophisticated videotaping facilities provide students with unique advocacy training. Specialized seminars are also offered in conjunction with the litigating divisions of the department and other executive agencies.

The LEI directs its program to all attorneys in the Executive Branch. LEI offers skills training in trial advocacy, basic and advanced negotiation techniques, administrative advocacy and a wide variety of substantive subjects. Administrative and courtroom advocacy skills are taught through workshops during which exercises are videotaped for critical analysis by experienced practitioners. Federal attorneys and other legal personnel are not only participants but are also advisors, curriculum developers, and teachers of the LEI program. The LEI has added a modified Federal Practices course to meet the needs of newly hired attorneys who are experienced litigators in the private sector but who need exposure to federal legal practices. The programs are held primarily in Washington, D.C.

The LSTU was formed to administer training programs for legal support personnel. LSTU offers skills training and substantive course training for paralegals, legal technicians, and other legal support staff. The LSTU utilizes experienced Federal attorneys, law school professors, and legal support personnel as instructors in its programs. The programs are held primarily in Washington, D.C.

Accomplishments and Workload: The Legal Education workload of the United States Attorneys follows:

Explanation

In 1989, the new positions granted by the Anti Drug Abuse Act required two more advanced criminal courses and one more appellate session. Twelve other courses were added, six to meet demands resulting from increased Freedom of Information Act (FOIA) requests received nationwide, and six courses were added as a result of the new Sentencing Guidelines. The amount of attorneys receiving private sector training increased from 1988 to 1989. This apparent increase is the result of an artificially low enrollment in Fiscal Year 1988 due to funding constraints which were lifted in Fiscal Year 1989. The increase in LEI and LSTU courses in 1989 were also based on the fact that courses were cancelled in 1988 due to budgetary problems; and the additional positions earmarked for Asset Forfeiture provided in the Anti Drug Abuse Act of 1988, created a need for courses in Asset Forfeiture training.

In 1990, a full program is projected due to the fact that the additional positions granted in 1989 would be on board for the entire year of 1990. The enactment of the Violent Crime initiative will require basic criminal and civil courses for attorneys. LEI will offer courses in Advanced Negotiation, International Trade Law, Medical Malpractice and Bankruptcy. LSTU will offer courses in Asset Forfeiture, Procurement, Equal Opportunity Employment and Law Enforcement Coordinating Committee training.

In 1991, the remainder of those attorneys hired in 1990 who did not get trained in basic Criminal and Civil courses will be trained if annualized costs are realized in 1991.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Management and Administration................	168	184	$18,050	168	196	$19,671	168	196	$19,671	...	...	...

Long-Range Goal: To provide consistent direction and appropriate distribution of resources to the U.S. Attorneys and to respond promptly and efficiently to the administrative and management needs of the 94 U.S. Attorneys' offices.

Major Objectives:

To provide management, leadership and direction to the Executive Office for U.S. Attorneys and the U.S. Attorneys' offices.

To coordinate the successful implementation of all 94 district Law Enforcement Coordinating Committee plans.

To represent the interests of all U.S. Attorneys in the development of Department of Justice policy and to support system-wide consistency in the conduct of federal litigation.

To conduct field review, management audit and performance evaluations of each U.S. Attorney's offices.

To formulate and execute an operating budget to satisfy the operational needs of U.S. Attorneys' offices.

To formulate and implement Equal Employment Opportunity plans.

To formulate and exercise personnel management policy and authority in order to obtain the most qualified individuals for positions in the U.S. Attorneys' offices.

To provide all administrative support necessary to obtain adequate space and equipment.

To complete the design and implementation of a caseload management system and to make available optimum office technology for the U.S. Attorneys.

To provide policy direction that will result in optimal efficiency in the collection of debts owed the Government.

Base Program Description: The Management and Administration program encompasses all of the Executive Office for U.S. Attorneys (EOUSA) with the exception of the Office of Legal Education. The EOUSA provides general assistance and supervision to the 94 U.S. Attorneys' offices, and coordinates and directs the relationship of other organizational units of the Department with these offices. Through the Office of Information Management, the EOUSA provides U.S. Attorneys offices with the information and automated information systems necessary to achieve Department objectives and to ensure efficient use of resources. The Evaluation and Review Staff of the EOUSA assists U.S. Attorneys in recognizing improvements that can be made in the use of professional personnel while reducing the cost of operating a U.S. Attorney's office. The EOUSA, through its Legal Counsel unit, provides legal interpretations and advice to U.S. Attorneys on concerns such as legislation, regulations and departmental guidelines. In addition, the EOUSA has responsibility for implementing affirmative action programs within the U.S. Attorneys' offices while managing a discrimination complaint program through its Equal Employment Opportunity unit. The Financial Litigation staff of the EOUSA provides direction and oversight to U.S. Attorneys in the conduct of their debt collection activities. One of the more critical responsibilities of the EOUSA is the oversight of each U.S. Attorney's office Law Enforcement Coordinating Committee (LECC) program. Each office is responsible for the formulation and implementation of the LECC plan. These plans are the backbone of the Administration's efforts to join with State and local authorities in conducting law enforcement functions. Another important responsibility of the EOUSA is the exercise of personnel management authority within the EOUSA and the U.S. Attorneys' offices. The personnel authority includes all phases of personnel operations such as recruiting, classification, training, adverse action and employee relations. The acquisition and renovation of space as well as procurement of all equipment, furniture, supplies and material are program functions of the EOUSA. Finally, through its Financial Management Staff, the EOUSA formulates and executes a budget for all 94 U.S. Attorneys' offices and itself. The formulation process includes any need for amendments, supplementals, reimbursements and transfers.

Accomplishments Workload: The Management and Administration workload of the United States Attorneys follows:

c. Case Management Implementations (Eagle equipment)	...	...	...	43

*Responsibility for collecting criminal fines shifted to the Administrative office of the U.S. Courts during 1989 causing U.S. Attorneys collections to decrease in 1990.

Explanation

The Financial Litigation Staff (FLS) is responsible for providing technical, legal, and administrative support and debt collection training to the Financial Litigation units within the 94 U.S. Attorneys' offices. FLS has also assumed responsibility for implementation of the asset forfeiture contract which permits contractual hiring of litigation support personnel. The cash collections include collections through U.S. Attorneys' offices, collections through the IRS Tax Return Offset Program, and collections through the Private Counsel Pilot Program in which five additional districts began participating this fiscal year. As of May 1, 1989, Clerks of the Court became responsible for processing payments of criminal fines. U.S. Attorneys' offices remain responsible for enforcing collection of these debts but ordinarily do not accept payments.

The Information Management office completed the final portion of the new case management systems in 91 U.S. Attorneys' offices. The information contained in these systems will be used to respond to requests for information and will be provided to the Justice Management Division (JMD) for inclusion in the Department case management system.

The accomplishments table contains a new workload statistic under Information Management for the requested Project Eagle Office Automation System. The U.S. Attorneys are engaged in acquiring multiple-function office automation equipment. This equipment will replace existing word processing equipment in all the U.S. Attorneys' offices and will be capable of performing case tracking and other functions. This acquisition, undertaken in conjunction with two other Department components, has been named Project Eagle.

A contract was awarded in June 1989, and it is planned that Eagle equipment will be installed in 53 United States Attorneys' offices and the Executive Office for United States Attorneys by the end of Fiscal Year 1990. Installation of equipment will continue in 1991. In addition, the second generation of computer based case management software will be developed programmed to operate on the equipment selected through Project Eagle. Installation of the new case management system will commence in 1991 and continue in 1992 along with installation of optional additional equipment.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease

Debt Collection.........................	...	...	$5,000	...	...	$5,000	...	...	$5,000	...	...	...

Long Range Goal: To improve the collection of monies from individuals who owe the Federal Government billions of dollars in unpaid civil, criminal and tax debts.

Major Objectives:

To establish a special Debt Collection activity to pay for specialized services needed to improve the effectiveness and efficiency of debt collection personnel.

To provide debt collection training to Department of Justice personnel.

To develop a more aggressive and effective Debt Collection Program throughout the Department of Justice nationwide.

Base Program Description: The monetary recovery program of the Department of Justice has been declared a priority initiative in order to return significantly more money to the U.S. Treasury. Through the administration of a Debt Collection activity, the U.S. Attorneys will devote monies to promote and improve the performance of all Department of Justice personnel involved in debt collection functions.

Accomplishments and Workload: All debt collection accomplishment workload of 94 U.S. Attorneys' offices is included in the civil litigation decision unit.

[1] The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will incude deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.

United States Attorneys
Salaries and expenses
Justification of Adjustments to Base
(Dollars in thousands)

	Perm. Pos.	Work-years	Amount
Transfers to and from other accounts:			
Transfer from Criminal Divison, General Legal Activities. This transfer represents the reassignment of all personnel who were assigned to the Criminal Division's Organized Crime Strike Forces and have been integrated into the U.S. Attorneys' offices.	186	170	$13,600
Mandatory Increases:			
1. Annualization of new positions. This provides for the annualization of 1,600 positions approved in the 1990 Violent Crime amendment	...	800	71,800

	Approved 1990 Increases	Annualization Required
Annual salary rate of 1,600 approved positions	$60,094	...
Less lapse	-40,485	$40,485

Equipment	10,041	6,351
Total costs subject to annualization	49,600	71,800

	Perm. Pos.	Work-years	Amount
2. Annualization of 25 new positions	...	12	$426

This provides for the annualization of 25 positions approved in the 1990 budget for Project EAGLE.

	Approved 1990 Increases	Annualization Required
Annual salary rate of 25 approved positions	$722	
Less lapse (50 percent)	-361	$361
Net compensation	361	361
Associated employee benefits	83	65
Total costs subject to annualization	444	426

	Perm. Pos.	Work-years	Amount
3. One additional compensable day	...	...	1,307

The annual salary rate for Federal employee is based on 260 paid days. During 1991 there is one more compensable day (261) than 1990 (260). Appropriate personnel benefits are included in this figure.

	Perm. Pos.	Work-years	Amount
4. 1990 Full-year pay increase impact on 1991	...	...	13,195

This request provides for the full-year pay increase of 3.6 percent as contained in the general provisions of the U.S. Treasury, Postal Services and General Government Appropriations Bill, 1990, for civilian and military personnel to be effective in January of 1990. The Department will be required to absorb the total pay raise in 1990. The requested increase of $13,195,000 is the amount required for full year funding in 1991. NOTE: The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.

	Perm. Pos.	Work-years	Amount
5. 1991 Pay Increase	...	...	4,807

For the first time, the Administration is proposing to include the costs of the pay increase effective in the budget year with the initial budget request. This request provides for 50 percent of the proposed 4.0 percent pay increase effective in January of 1991. The Department will be required to absorb half of the costs of this pay raise. The amount requested, $4,807,000, is the cost of the pay increase for approximately three-quarters of the year assuming a 50-percent absorption.

	Perm. Pos.	Work-years	Amount
6. Senior Executive Service pay increase	...	...	3,053

This request represents the 1991 costs of the pay increase for senior executive service employees. This pay raise is to be effective in January of 1990, but will be absorbed completely [illegible] the first year. In 1991, an increase of $3,053,000 is necessary for this requirement. Funding for the executive level employees pay raise is completely absorbed in both years.

	Perm. Pos.	Work-years	Amount
7. Special Salary Rates	...	...	$595

This request provides increases as authorized by law in 5 U.S.C. 5303. The Office of Personnel Management has approved these rates for positions where retention and recruitment of qualified applicants is a problem. The Department's request represents coverage of 31 authorized special rates.

	Perm. Pos.	Work-years	Amount
8. Health Benefits	...	...	1,623

The Federal Employees Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1989, the actual contribution to health insurance increased 28 percent. The requested increase of $1,623,000 provides funds for actual increased costs from pay period 1 to pay period 2, projected for a full year.

	Perm. Pos.	Work-years	Amount
9. Federal Employees Retirement System (FERS)	...	...	4,185

This request provides for the additional costs in 1991 necessary to continue the implementation of the Federal Employees Retirement System Act of 1986, P.L. 99-335. The Act established a retirement program for Federal civilian employees hired after December 31, 1983, who are covered by social security and for employees under the Civil Service Retirement System who chose to transfer to the new system. The increased requirement for 1991 is based on actual agency payments for the basic FERS annuity, Social Security and thrift savings.

	Perm. Pos.	Work-years	Amount
10. Federal Employees' Compensation Act (FECA) - Unemployment compensation	...	...	50

This increase reflects the billing provided by the Department of Labor for the actual costs in 1989 of employees' unemployment compensation. The 1991 amount will be $150,000 or $50,000 over the 1990 base.

	Perm. Pos.	Work-years	Amount
11. GSA Rent	...	...	1,982

GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. A mandatory increase of $1,982,000 is required to meet our commitment to GSA.

	Perm. Pos.	Work-years	Amount
12. Government Printing Office (GPO) printing costs	...	...	177

The GPO is currently projecting a seven-percent increase over the 1990 printing costs of $2,[illegible],000. An additional $177,000 will be required in 1991.

Mr. Smith. Do you have a statement?

Mr. Richmond. My name is Jim Richmond. I have a statement which I would ask be made part of the record.

Mr. Smith. All right.

Mr. Richmond. To my right is Mr. Twardy, and to my left is Mr. McWhorter.

Mr. Smith. We welcome each of you.

Mr. Richmond. Let me make a few brief remarks, then I would be happy to take your questions.

Mr. Smith. All right.

Mr. Richmond. First of all, on behalf of all 93 U.S. Attorneys, I would like to thank you and each member of this committee and express our gratitude for the support you have shown us in the hearings this year and in last year's budget, and for the additional positions you provided. These positions from 1988 and 1989 brought with them added responsibilities on our part to effectively manage these positions.

ANNUALIZATION OF 1990 INCREASE

Much of what we see by way of increase in budget, in effect, $71,800,000, represents an annualization of those increased positions.

We face continuing challenges in the areas of drug prosecutions, financial institutions fraud, the implementation quickly of Project EAGLE, the intensification of our efforts against organized crime, both traditional and emerging groups, and the continued aggressive collection of debts owed to the United States.

With that, I would simply open it up for questions.

[The statement of Mr. Richmond follows:]

DEPARTMENT OF JUSTICE

STATEMENT OF JAMES G. RICHMOND
UNITED STATES ATTORNEY NORTHERN DISTRICT OF INDIANA BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE, THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the Subcommittee:

I am pleased to have the opportunity to appear before you in support of the United States Attorneys. Accompanying me are: Stanley Twardy, United States Attorney for the District of Connecticut, and; Laurence McWhorter, Director, Executive Office for United States Attorneys.

The United States Attorneys, who are the principal litigators on behalf of the United States Government, are requesting a total of $628,095,000, 8,147 permanent positions (including 3,753 Assistant United States Attorneys) and 7,854 workyears for 1991. This will: (1) Permit drug prosecutions to increase in accordance with the staffing levels provided by the Violent Crime Initiative of 1989; (2) Continue resources devoted exclusively to prosecution of financial institution fraud; (3) Allow transfer of funding for intensified prosecution of organized crime; (4) Facilitate rapid movement towards an integrated office automation approach (Project EAGLE) and; (5) Further enable an aggressive debt collection activity in the Department of Justice. In addition, the United States Attorneys will be reimbursed $66,182,000 for 956 positions (522 Assistant United States Attorneys) and 800 workyears associated with the Organized Crime Drug Enforcement Task Forces.

The $628,095,000 request represents an increase of $109,231,000 over the 1990 enacted level, (which was reduced by $6,697,000 for sequestration). The majority of the increase, or $71,800,000, is for annualization (full year costs) of the 1,600 positions permitted by the Violent Crime Initiative this year. While this increase may seem high, the cost of a new Assistant United States Attorney and support "pairing" has increased by 20 percent. This is primarily a reflection of increased salary and benefits costs, as well as prorated costs for renovation and construction associated with housing the new employees and the costs of changing technology.

In 1989 and 1990, the United States Attorneys have been extremely fortunate in the allocation of additional prosecutorial resources. Thus, we were fairly able to absorb rising costs for personnel and benefits and certain unanticipated space related and litigation costs by offsetting the increase. However, 1991 will see the United States Attorneys at a level of almost 9,000 employees (including the Organized Crime Drug Enforcement Task Forces), representing a dramatic increase of almost 50 percent in staff during a two year period, and that increase has caught up with us. The 1991 request thus seeks to sustain the attained level of staffing.

Of the 1,600 violent crime positions approved in 1990, 1,375 can be annualized in accordance with our 1991 request. The remaining 225 positions are vacant in both 1990 and 1991 to absorb the sequestration reduction and other cost increases.

Role of the United States Attorneys

Within each of the 94 Federal districts in the 50 States, Guam, the Northern Mariana Islands, Puerto Rico and the Virgin Islands, the United States Attorney is the chief law enforcement representative of the Attorney General, enforcing Federal criminal law and handling most of the civil litigation in which the United States is involved. It is our mission to prosecute those who mock our nation's criminal laws, to protect the public from those who would further their private interests at the expense of the general welfare, to protect the legitimate powers of the Federal Government from those who would usurp such powers, and to assert affirmatively, through the courts, those national policies established by Congress, the Administration and the Attorney General.

We function as an integral part of the Federal justice system, which must be viewed in total. Our efforts are in concert with those of the investigative agencies, the courts and the rest of the executive branch of government. Any particular emphasis or increased resources in any one area creates a ripple effect, affecting all areas, in the Federal justice system.

Drug Prosecutions

In 1989 and 1990, the United States Attorneys have received major increases, and thus have been able to devote extensive resources to identify, investigate and prosecute controlled substance violators. While all districts received additional resources, in 1990 - those designated high intensity areas received larger increases with specifically targeted positions. Increased resources in 1989 have already led to greater criminal filings. Overall, while new Assistant United States Attorneys weren't even aboard for the full year, criminal case filings for the U.S. Attorneys still increased by 2,808 in 1989, an eight percent gain. Drug related filings accounted for 66 percent of that increase. It is anticipated in 1991 that overall case filings will again increase dramatically, by 12 percent or more, because of the resources added in 1990.

Financial Institution Fraud

Thirty-six districts were allocated additional resources resulting from the Financial Institutions Reform, Recovery and Enforcement Act of 1989 (FIRREA). As of February 15, 1990, 53 of 118 FIRREA Assistant United States Attorneys were on-board, and thirty more are scheduled to enter-on-duty through April. The United States Attorneys are intensifying efforts in major fraud, money laundering and insider abuse cases affecting financial institutions. Based on General Accounting Office estimates, fraud played a key role in the collapse of 80 percent of failed savings and loans.

Again, it is clear that over a two to three year period case filings will increase dramatically consonant with the intensified efforts, and result in greater integrity of the nation's financial markets.

Organized Crime Strike Forces

In December 1989, the Organized Crime Strike Forces were integrated into twenty-two United States Attorneys districts. This transition has moved quickly and smoothly. The integrity of the Strike Force operation has been ensured through the creation of distinct Strike Force units in the United States Attorneys' offices. Further, the United States Attorneys have staffed these organized crime positions at 100 percent.

Ultimately, the streamlined procedures with which the Strike Force units will investigate and prosecute cases under the direction of the United States Attorneys will improve the efficiency and effectiveness of the operations. These Strike Forces will expand investigations beyond the notion of "traditional organized crime families" to more recently formed entities, such as motorcycle gangs, Asian crime operations, and

		Perm. Pos.	Work-years	Amount
13.	Employee data and payroll services	...	...	$94
	Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems, maintenance and payroll accounting, are based on the number of employee records maintained. The rate of $188.23 per record in 1990 will be raised to $199.52 per record for 1991. The change is based on anticipated mandatory cost increases of 6 percent for the operation of the Justice Employee Data Service. An increase of $94,000 will be required in 1991.			
14.	Project EAGLE Maintenance	...	...	400
	As part of Project EAGLE the Tax and Criminal Divisions and the U.S. Attorneys will be required to provide maintenance costs from their operating budgets after the government assumes ownership of the workstations and other equipment. Based on the 1989 procurement of this equipment, the U.S. Attorneys will require $400,000.			
	Total mandatory increases	...	**812**	**103,694**
Decreases:				
1.	Federal Employees' Compensation Act (FECA) - Workers' Compensation	...	...	-66
	This decrease reflects the billing provided by the Department of Labor for the actual costs in 1989 of employees' accident compensation. The 1991 amount will be $797,000 or $66,000 less than the 1990 base.			
2.	Federal Telecommunications System (FTS)	...	...	-1,841
	In 1991, the General Services Administration (GSA) is to have the FTS 2000 system fully implemented. At present GSA projections indicate costs for current FTS minute usage charges will decrease from 34 cents per minute to 18 cents per minute. The requested reduction of $1,841,000 reflects this decrease.			
	Total decreases	...	...	-1,907

the violent Jamaican posses. In 1990, the Criminal Division will reimburse the United States Attorneys $9.6 million for the Strike Force efforts. It is proposed that 186 positions and $13.6 million be transferred for the full year in 1991.

Project EAGLE

The United States Attorneys have begun to acquire and use multiple function office automation equipment under Project EAGLE. This acquisition is undertaken in conjunction with the Tax and Criminal Divisions of the Department. Project EAGLE has been installed in the Eastern District of Pennsylvania and a good part of the Executive Office for United States Attorneys. However, the schedule calls for implementation in a total of 53 districts by the end of 1990. All of the remaining districts are scheduled for implementation in 1991. Existing word processing equipment will be replaced, and Project EAGLE equipment will be used for word processing, electronic mail, automated legal research, electronic phone messaging and calendar, and data base management. Eventually, each employee shall have a personal computer in the EAGLE network. The 1991 request includes annualization costs for the 25 EAGLE positions provided in 1990.

Debt Collection Activity

A $5,000,000 debt collection fund was provided this year for enhancement of debt collection activity in the Department. During 1989, the efforts of the United States Attorneys resulted in the recovery of $768,000,000 in cash and property, excluding forfeitures. This represents a 26.5 percent increase from the 1988 figure of approximately $607,000,000. The debt collection fund will further the Department's goal to increase revenues to the Treasury and the Victims of Crime fund by intensifying efforts to extract monies owed from non-paying debtors. The money will be used for training, locating debtors and their property, and paying costs to sell property not covered by sale proceeds. The Financial Litigation Staff in the Executive Office for United States Attorneys has contacted eligible Department components, advising them of the funds availability and instructing them regarding formulation of requests and guidelines for use of the funds. It is anticipated, that a panel representing all eligible components will participate in the allocation process, and that will occur in late March.

SUMMARY

That summarizes the major efforts addressed by our 1991 request. The United States Attorneys are committed to prosecuting those individuals and entities who mock our nation's laws, protect the public and return a feeling of safety to our streets. Ensured by virtue of substantial prosecutorial resource increases in 1989 and 1990, we are now better staffed to meet this challenge. For 1991, we ask only that our request to maintain that staffing level is approved.

I appreciate this opportunity to present the United States Attorneys' budget request to the Subcommittee, and we are happy to answer any questions.

1990 AND 1991 SEQUESTERS

Mr. SMITH. Now, you had a sequester.

Mr. RICHMOND. That's correct.

Mr. SMITH. It's $6.9 million, is that right?

Mr. RICHMOND. $6.7 million.

Mr. SMITH. $6.7 million. It appears that this resulted in a reduction both in your 1990 and your 1991 budgets. How does that happen?

Mr. MCWHORTER. I believe the sequester for this year, fiscal year 1990, is going to be continued in fiscal year 1991 as a $6.1 million sequester, or a $6.1 million decrease in the budget request.

Mr. SMITH. In other words, because you had to take the reduction this year, your base for 1991 is reduced. Is that it?

Mr. MCWHORTER. The reduction is going to be continued, yes, sir.

Mr. SMITH. That means you have a double sequester, is that correct?

Mr. MCWHORTER. It seems that way.

Mr. SMITH. Well, with a sequester quite often what happens is an adjustments taken for that year out of travel or another category to meet the sequester. But in this case they're saying it's a permanent adjustment from your base. That's the way it came out.

Mr. MCWHORTER. I think that's how it came out, yes, sir.

Mr. SMITH. Well, I noticed there are some items that were increased. When we were working on the FY 1989 budget, we got $30 million more for U.S. Attorneys. Then of course we did get more because you needed it in 1990.

Now, generally speaking, what is proposed is level funding for 1991, and it seems to me that it doesn't quite come out as level funding, it really comes out on the net as a kind of a reduction, doesn't it, in your program activities?

Mr. MCWHORTER. I think it basically means that the 225 workyears that we are not able to staff this year, we are not going to be able to staff the next year either.

IMPACT OF SEQUESTER

Mr. SMITH. Well, to handle a sequester this year, what did you reduce?

Mr. TWARDY. Two things primarily: We didn't fill the 225 positions, and we delayed the active duty days of some of the new positions that were allocated under the act.

Mr. SMITH. So that means that then you carried over a reduction of 225 positions.

Mr. TWARDY. That's correct.

POSITION LAPSE

Mr. SMITH. And how do you delay the active duty dates to successive years?

Mr. TWARDY. The active duty date won't be affected by next year's sequester. In other words, the people who are hired this year will be on board next year as of October 1, 1990.

Mr. SMITH. Well, then how do you handle a delay in the dates for somebody that is already hired for this year, even if it's for one week?

Mr. McWhorter. They will not be hired this year.

Mr. Smith. In addition to the 225 workyears, there are other slots that are not being filled?

Mr. McWhorter. That is correct.

Mr. Smith. All right. How many more slots are not being filled?

Mr. Richmond. Well, the 225 represents 160 Assistant U.S. Attorney positions, and the balance will be support. So out of the roughly 800 workyears we got last year, we are going to fill 640 of them, if my mathematics are correct.

Mr. Smith. So that is——

Mr. Richmond. Delaying the entry on duty of these people this year until at least July 1, which is not really that big a delay because of the background investigations required.

Mr. Smith. Well, I know when you put somebody on, you can't delay them again next year, you have to have reductions in filling slots.

Mr. Twardy. But with the budget that is proposed, Mr. Chairman, that won't have to happen. When they get on board, it would be effective for the last quarter of the fiscal year, which starts July 1. They will still be on board on October 1 of 1990, which is the beginning of the fiscal year 1991. So that what we have had to do this year will carry over to next year, the decrease of 225 workyears, which means 225 of the 1,600 violent crime initiative positions will remain vacant for all of 1991.

Mr. Richmond. What we are asking for in the increase, $71,800,000 of it represents annualization of the cost of those people that we are going to bring on this year. So in the 1991 budget, that matter will be——

STAFFING LEVEL REDUCTION

Mr. Smith. Are you saying that on the net, your reduction below the staffing level we had planned for 1990 is 225 in 1991, or is it some additional?

Mr. Richmond. No, it's 225. Of that, 160 are Assistant U.S. Attorneys and the balance is support positions.

SPACE NEEDS

Mr. Smith. Then the additional money comes out of space, furniture, and equipment. But when you have an increase that we thought you had justified last year for 1990. I mean if you have more people, you're going to have to have more space, equipment, and so on and so forth.

Mr. Richmond. Space is one of the biggest problems we are going to face, but we are going to face the space and equipment problem continually down the road for 1991 and 1992 and probably in 1993.

Mr. Smith. Did we give you too much space and equipment for 1990?

Mr. McWhorter. No, sir, we are trying to buy as much equipment, do as much renovation to existing space, and acquire new space this year, so that we will be able to pay for all of the employees that we have on duty to start next fiscal year.

Mr. SMITH. So the net effect of it is that in 1991, you are going to have 225 less people plus less space and equipment than we had planned for 1990?

Mr. RICHMOND. That is correct.

Mr. TWARDY. With the acquisition of these positions, the lead time we're talking about with space, from the time we start to talk to GSA, is about 18 months until we have the space. Now, if you add the incremental increases that we had in positions in 1988, together with the 1989 positions, we have been fortunate enough to have almost a 50 percent increase in the last two years.

Now, that means that we are going to spend—almost every office in the country is going to have to be enlarged. Not only do you have the 18-month lead time, you've got the buildout time, you've got the new phone systems. So in other words, we're going to be addressing——

1990 SPACE AND EQUIPMENT NEEDS

Mr. SMITH. Well, didn't they ask us for more space and equipment for 1990 than they could use?

Mr. MCWHORTER. No, sir. No, you see, in 1990 we will be taking on a number of the people in 1990. So the money that is spent for space and equipment in 1990——

Mr. SMITH. They knew that when they asked for the space and equipment in 1990, didn't they? Well, then did they ask for more than they could use?

Mr. TWARDY. I don't believe so, because we're going to need it for those who we are able to get on board.

Mr. MCWHORTER. The 225 positions that we are not able to fill this year is because we don't have the money to pay their salaries, and we don't have the money because we are absorbing $11.1 million in the pay increase that went into effect in January and the $6.7 million sequester.

Mr. SMITH. Well, it seems to me that in the net you're going to end up in 1991 with less than we had programmed for you in 1990.

Mr. MCWHORTER. That's correct.

Mr. SMITH. So you are losing a whole year plus 225 positions.

Mr. MCWHORTER. That's correct.

FILLING NEW POSITIONS

Mr. SMITH. Have you had any difficulty in filling these slots?

Mr. RICHMOND. Not at all. This is still a buyer's market for Assistant U.S. Attorneys.

Mr. SMITH. And supporting personnel too?

Mr. RICHMOND. Well, support personnel, it varies, you know, you're faced with the metropolitan problems that you are always faced with in the major metropolitan districts. The grade structure, et cetera, is not really competitive with the private enterprise side of the business. So you constantly have that problem in the major metropolitan areas.

But as far as hiring attorneys, we are going to continue to hire the same high-quality people we have always hired.

LENGTH OF HIRING PROCESS

Mr. Smith. How long does it take from the time you know you have a slot until you really get somebody sitting at the desk?

Mr. Richmond. It is a function of how fast you can run through the interview process coupled with the background investigation done by the FBI.

Mr. Smith. That is my question.

Mr. Richmond. I would say an average of four, three to five months, in that range, from start to finish. Granted there are specific cases where you can elect to waive the background, but we aren't doing that in these situations.

Mr. Smith. Well, you had an increase or two?

Mr. Richmond. Yes, sir.

Mr. Smith. From your experience, is there a way to speed it up and still not lose somebody you want?

Mr. Richmond. In terms of the way we deal with the problem, meaning the U.S. Attorney's office and the executive office, no, I don't think so. It's a function really of how long it takes to do the background, and those vary from case to case and individual to individual.

Mr. Smith. So the FBI does that, and you just have to wait until they get it done?

Mr. Richmond. If you elect to hire people, for example, who have spent substantial periods of time outside the United States, that is going to increase the period of time that it takes.

Mr. McWhorter. Mr. Chairman, we can waive the background investigation and put people on board before that is completed, and we often do and assign them other work. So the background investigation is not necessarily the cause for delaying employment.

Each U.S. Attorney is given a certain budget, and to the extent that he has salary money to pay the lawyers, they can basically fill them right away. This year———

Mr. Smith. There is plenty of work that doesn't require a background investigation isn't there?

Mr. McWhorter. There is plenty of work. This year we have the additional problem of acquiring new space or renovating the old space, finding a place to put these people. And that is the cause of some of the delay. Some U.S. Attorneys don't want to hire an Assistant U.S. Attorney and stick them in the closet or the library, although a lot of them do because there is a lot of work out there.

HIRING DELAYS

Mr. Smith. Did you have something you wanted to add?

Mr. Twardy. I just wanted to say with regard to the delay, often for an attorney leaving private practice—and I think most U.S. Attorneys hire people with at least some legal experience, if not experience as prosecutors, from private practice. The delay is the time period that they need to give notice to their employers or to take a vacation before they start.

I have had situations where we have known we could get somebody on quickly and they would want two to three months anyway.

With regard to the new positions that Congress gave us for this year, this fiscal year, I think most U.S. Attorneys were ready as soon as the allocations came out. We were notified of them a few weeks ago. We made offers then and there, and when I got my allocation, by that afternoon I had filled five of the six new positions we had gotten in Connecticut. Frankly, I am just holding back on the sixth myself to see if there is a Supreme Court law clerk or someone like that who might come down the road in the next few months.

BACKGROUND TURN DOWNS

Mr. SMITH. Are there very many getting turned down?

Mr. TWARDY. Oh, yes.

Mr. SMITH. No, I mean that you want.

Mr. TWARDY. Oh. Oh, I'm sorry.

Mr. SMITH. That have gone through the investigations and so forth?

Mr. TWARDY. Oh, no. Not after the investigations. I think in my office, and I think most U.S. Attorneys offices are like this, the screening process is relatively severe, that there are interviews with supervisory assistants, with line assistants, and you make phone calls to references and the like. You can find out pretty quickly those who——

Mr. SMITH. So what you're saying is if you had waived, you would end up with essentially the same number of people.

Mr. TWARDY. That's correct.

But as Mr. McWhorter says, you're a little bit reluctant, without that final imprimatur, to put somebody in the middle of an intensive drug type of case.

Mr. SMITH. Yes.

Mr. Early.

LEVEL BUDGET REQUEST

Mr. EARLY. Thank you, Mr. Chairman.

I have listened to the testimony. You know, we have had these big increases because of all the horror stories that were coming out of the U.S. Attorney's office about attorneys being underpaid, which I think they still are; about how you weren't prosecuting some drug cases because you were understaffed; about how you weren't prosecuting some embezzlements, sometimes you weren't going in until the amount involved was over $100,000. Those were the worst stories.

But I've listened, Mr. Smith, and I want to pursue that because I've concluded that there really isn't enough money in this budget to fund the positions and the work-years that you show.

Let me ask you a specific question. The 1991 budget request does not propose any new positions or additional work-years over the 1991 base. Is that accurate?

Mr. RICHMOND. Yes, sir.

Mr. EARLY. The increase for the U.S. Attorneys covers just the mandatories, the annualization for the 1990 increases and reflects the transfer of the strike forces to the U.S. Attorney's office, doesn't it?

Mr. RICHMOND. That's correct.

Mr. MCWHORTER. That's correct.

ORGANIZED CRIME DRUG ENFORCEMENT POSITION INCREASE

Mr. **Early**. I mean, we have a rhetorical attack on crime. We are talking about it, but we're not doing anything about it.

Mr. **Richmond**. Well, to assimilate, train, and activate a 50-percent increase in resources takes a substantial period of time to do it and maintain the quality of the people. In addition to that, there is a request in 1991 for an increase of——

Mr. **McWhorter**. 297 positions.

Mr. **Richmond** [continuing]. 297 positions for the Organized Crime Drug Enforcement Task Force program.

Mr. **Early**. Well, you take them away from somewhere else to get——

Mr. **Richmond**. These are new positions. Those are new positions.

1990 PAY ABSORPTION

Mr. **Early**. But the money to fund them, we don't have a dime over the 1991 base.

How much did the 1990 pay raise cost the U.S. Attorney's office?

Mr. **McWhorter**. $11.1 million.

Mr. **Early**. And how much of that had to be absorbed?

Mr. **McWhorter**. $11.1 million in 1990. In 1991, this pay raise is in the request.

[Laughter.]

[The information follows:]

Pay Raise Costs

In 1990, the U.S. Attorneys absortion costs totalled $11.1 million for the 1990 pay raise for 75 percent of the year. This amount reflects the cost of the 3.6 percent pay increase for general schedule employees, the Senior Executive Service and Executive Level pay raises for the U.S. Attorneys and Assistant U.S. Attorneys. The 1991 request includes $13.2 million to cover the full-year cost of the 1990 general schedule pay raise only.

In addition, the 1991 request includes $4.8 million for the 3.5 percent general schedule pay raise proposed by the Administration for 1991. This amount represents a 50-percent absorption for 75 percent of the year.

1990 SEQUESTER

Mr. **Early**. Of the $6.69 million sequestered in 1990, how much had to be absorbed?

Mr. **McWhorter**. All of it.

Mr. **Early**. All of it? And, that was money we didn't give you.

Mr. Richmond, I am really impressed with your background. I read your bio; it says that you were an IRS agent.

Mr. **Richmond**. That's correct.

Mr. **Early**. And an FBI agent. And now you are an——

Mr. **Richmond**. An Assistant U.S. Attorney and now the U.S. Attorney.

Mr. **Early**. Personally I think you catch more criminals, especially in the drug field, with a pencil than with a Texas Ranger.

[Laughter.]

FINANCIAL INVESTIGATORS

Mr. **Early**. It's crazy what we're not doing. I think the U.S. Attorney's office could generate more money from drug cases in Miami if you had the war declared with accountants and people with that type of background.

Mr. **Richmond**. Well, there is no question that the IRS and their agents are an integral part of this program. They certainly have special investigative skills that they bring to the war on drugs that are valuable, particularly in the area of historical investigations. We are going to take help from wherever we can get it.

Mr. **Early**. Well, we are going to get back to that. But, you are not here to defend a budget, which I think is sort of a little fib. For the record, I want you to tell me how many positions were not filled in 1990. I also want you to tell us what the acquisition of equipment and space was that was deferred. And I want to know if there were any costs associated with the transfer of the organized crime task force from the Criminal Division to the U.S. Attorney's office that had to be absorbed? You say they were all absorbed; right?

Mr. **Richmond**. Correct.

Mr. **McWhorter**. No, we did not absorb the costs of the organized crime merger, however, we added about 46 positions to that.

[The information follows:]

1990 Unfilled Positions

Of the 7,961 positions authorized in 1990, 160 Assistant United States Attorney positions and 65 support will not be filled, a total of 225 positions.

FINANCIAL INVESTIGATIONS

Mr. **Early**. There was a four-day series in a Miami paper about the money-laundering going on and how much money the drug traffickers had. It actually estimated it from billions to maybe a trillion dollars. You know, it's so seldom that reporters are right. I mean when they're right we should put it on the record and say it.

[Laughter.]

Mr. **Early**. Wouldn't you do a lot with more accountants and similar kinds of personnel?

Mr. **Richmond**. Well, there are numerous tools that we have to attack the problem. Historically, when you get into financial investigations, with financial investigators, if that's what you want to call the accountants, it is very valuable to you. In tracing the laundering of funds, the financial investigator is of extreme importance.

That is opposed to the proactive approach of dealing with ongoing, day-to-day criminal enterprise operations which lend themselves more readily to the traditional investigative techniques of the Drug Enforcement Administration and the Federal Bureau of Investigation.

But there is no question, I think, and it's not just in the area of the war on drugs, in the area of white-collar crime and public corruption, there is a shortage of accountants. We see it day to day as U.S. Attorneys, we hear about it. Those are precious resources to us.

FINANCIAL INSTITUTION FRAUD

Mr. Early. We had the Attorney General testify this morning, Mr. Richmond, and the question was raised by the committee that the Savings and Loans' are going to cost us $350 billion to $500 billion. If we had given you double this budget and put it all into that two years ago, you would have saved enormous sums of money because you would have detected the problems early and you would have prevented an awful lot of the fraud. That is what he acknowledged.

Mr. Richmond. Well, he is correct. We talked last year, when I was up here, about the S&L situation and what we thought we could recover from that program. It is clear that these crimes are of such magnitude and of such a nature and the funds have been so dissipated that I don't know that you are ever going to be able to quantify the actual recovery in dollars.

Mr. Early. No. But the taxpayers, everyone, wants to say "less Government, less Government." And in law enforcement, there should be a lot more Government because from the economic side it would save us money.

Your offices are underfunded, and you come in and defend a budget that doesn't give you the tools to do the job, never mind getting into the issue of what the U.S. Attorneys could leave and make in the private sector.

Mr. Richmond. Speaking as an individual who has been employed by the Department of Justice three different times in his life, it's kind of hard to leave.

[Laughter.]

Mr. Early. Some of us get on that and talk about leaving.

[Laughter.]

PROJECT EAGLE

Mr. Early. How about project EAGLE? Now, if we approve the $6 million requested, and the chairman usually approves the money for automation, will every attorney and assistant attorney in your office have a computer?

Mr. Twardy. It's projected in fiscal year 1990, the year that we are currently in, 53 of the 93 U.S. Attorney offices will be outfitted with the EAGLE.

Mr. Early. So the answer is "No"?

Mr. Twardy. Well, the money for 1991, which is the budget we are talking about, would hopefully cover that.

Mr. Early. Now, wait a minute. Wait a minute, Mr. Twardy. It covers 53 of the 93 offices. That means 40 don't have it; right?

Mr. Twardy. Forty won't have it in 1991.

Mr. Early. Okay.

Mr. Twardy. Okay, at the end of this year there are 40 offices who will not have EAGLE computers. There is more money in the fiscal year 1991 budget—I think $23 million is what the Department asks for—that hopefully will cover the remaining 40 offices.

Mr. Early. In this budget?

Mr. Twardy. In this budget. Yes.

Mr. McWhorter. For 1991. During 1991.

Mr. Twardy. That's right. So it's our hope—the big problem we are having is getting the space. Offices are expanding. We are looking, for example, in New Haven, to move into different office space. For us to go ahead and get EAGLE with all the computer line hookups and the like put in, cables and the like, would not be cost efficient because when we moved in the next year or so, it would all have to be moved again. That is one of the largest expenses with EAGLE, the cabling of it.

SPACE AND FACILITIES

Mr. Early. Again, if I could refer to one of your responses to the chairman, you say move from space to space. You don't even have space in the U.S. Attorney's office for all your people now, basically.

Mr. Twardy. That's correct.

Mr. Early. So we're not moving from space, we are finally going to give some people space.

Mr. Twardy. That's correct.

PROJECT EAGLE EFFECTIVENESS

Mr. Early. What is your personal impression of the EAGLE system?

Mr. Twardy. Well, I think it's wonderful. For example, in Connecticut we have three different offices. Our main office is in New Haven and we have offices in Hartford and Bridgeport. EAGLE will enable us to communicate among the various offices, which will save us a lot of time for the attorneys traveling back and forth, filing the documents, and the ability to hook up with the JURIS, LEXUS and WESLAW legal research systems. To enable attorneys to do research at their desks, I think, will be of invaluable assistance.

I think one of the ways you can look at it, the whole concept of the personal computers and EAGLE is reflected in the 3,100 new positions that the U.S. Attorneys offices have gotten over the last two years, 1,700 of those have gone to fill Assistant U.S. Attorneys, positions, which is about 55 percent, if my math is correct, of the new positions. In the past, we had only 2,700 out of 6,000 positions that were attorney positions, or 45 percent.

So you can see by the advent of the computer world and getting us up to the 20th century, we are able to be attorney-intensive.

Mr. Early. Oh, I would take one computer to ten lawyers any day.

[Laughter.]

Mr. Smith. Don't go that far now.

[Laughter.]

Mr. Early. Mr. Twardy, you have an interesting resume, too. Mr. Richmond, you were with the IRS. And you spent some time with Senator Weicker. I mean that is extra——

[Laughter.]

Mr. Richmond. Extra-hazardous duty.

[Laughter.]

STRIKE FORCE—ATTORNEY PAY ADJUSTMENTS

Mr. **Early**. I understand some of the strike force attorneys were allowed favorable pay adjustments upon transfers to the U.S. Attorney's office. How much did those adjustments cost in 1990, and who covered it?

Mr. **McWhorter**. They came out of the U.S. Attorney's budget, and I am not sure. It was an average of about $8,000 per year pay increase for the strike force lawyers.

Mr. **Early**. And was that compensation offered to the regular U.S. Attorneys that were there before they transferred back?

Mr. **McWhorter**. It made them comparable to the assistants who were already there, and it cost the U.S. Attorney's appropriation.

Mr. **Early**. And did any of that cost have to be absorbed?

Mr. **McWhorter**. Yes, sir.

Mr. **Early**. How much?

Mr. **McWhorter**. All of it.

Mr. **Early**. For the record, give us the annualization costs for those adjustments in 1991 and the total annualization costs in the 1991 request.

[The information follows:]

STRIKE FORCE PAY ABSORPTIONS

The total cost in 1990 of the Organized Crime and Racketeering Strike Force attorney pay adjustments is approximately $825,000, of which $660,000 is for salaries and $165,000 is for benefits. In 1991, the annualized costs of the 1990 pay adjustments will total $1,063,000, of which $850,000 will go toward direct salaries and $213,000 for benefits. The U.S. Attorneys will absorb the entire cost of this adjustment in both 1990 and 1991. In the 1991 request the proposed 3.5 percent pay raise for Strike Force personnel is included in the regular budget request.

FINANCIAL INVESTIGATORS

Mr. **Early**. Mr. Chairman, I would like to come back for additional questions.

Mr. **Smith**. Yes. Go ahead, Mr. Early.

Mr. **Early**. Thank you, Mr. Chairman.

On recruitment have you got many accountant-lawyer types? Is there any problem in recruiting? I forget what you call them. I call them accountants.

Mr. **Richmond**. Financial investigators.

Mr. **Early**. Yes.

Mr. **Richmond**. That is really not what we are looking for. What we are looking for are people who can understand what the investigators do. I mean the real financial investigation is going to be done by the IRS or by special agents with the FBI who have an accounting background. I think most assistants today that you hire, that have had any kind of private practice experience, have a facility to understand what is needed in terms of the financial and accounting background to deal with these kind of financial fraud cases.

Mr. **McWhorter**. One thing that we did in the financial fraud bill that you passed last year, we did ask for 20 financial investigators for U.S. Attorneys, and they are being hired now. The U.S. Attorneys do depend on the regular investigative agencies primarily, but we did seek and are hiring 20 of these in the major U.S. Attorneys offices.

Mr. **Early**. When you say they're being hired now, Mr. McWhorter, why aren't they hired?

Mr. **McWhorter**. Well, some of them are on-board.

Mr. **Early**. Why don't you provide for the record how many you have hired, and why they aren't all on board now?

Mr. **McWhorter**. Okay.

[The information follows:]

Financial Investigators On-Board

At the present time, we have managed to bring on-board two financial accountants and have recruitment actions under way to hire the majority of the remaining positions. Since these kinds of positions are new to the U.S. Attorneys organization, it has taken more time than previously anticipated. Once the vacancies have been announced, it often takes a couple of months to compile a list of qualified applicants, to interview these applicants, and to conduct security clearances.

MODULAR COST—NEW ASSISTANT U.S. ATTORNEYS

Mr. **Early**. What is the present average annual cost of bringing on a new Assistant U.S. Attorney?

Mr. **McWhorter**. The modular cost is about $152,000 on an annual basis for an Assistant U.S. Attorney with secretarial or paralegal support. It's about $152,000 a year.

Mr. **Early**. And how does that compare to previous years?

Mr. **McWhorter**. It has gone up recently.

Mr. **Early**. For the record, would you, tell us what the average cost will be in 1991?

[The information follows:]

CASE DECLINATIONS

Mr. **Early**. What can you tell us, Mr. Richmond, about the situations where you weren't prosecuting cocaine cases in some States unless certain amounts were involved?

Mr. **Richmond**. Well, I think, overall, we're doing better. We had, bearing in mind the lead time to get assistants from the drug bill of 1988 on-board, an 8-percent increase in criminal filings this past year. Of that, roughly two-thirds are in the area of narcotics.

We have on-board 53 of the financial fraud task force lawyers, and we anticipate we will have another 30 on board by the end of April.

PRISONER DETENTION

Mr. **Early**. I have also noticed, as has the chairman and he always brings it out, it's not just U.S. Attorneys, it's all the support personnel. The Marshals Office is underfunded.

I saw something in the paper the other day which I will bring up when the Marshals Office testifies, one marshal for ten prisoners.

In Massachusetts we have no facility, so we have to have a marshal all the way down to Danbury, where we're holding the inmate. That is a tremendous expense that really isn't productive, and we should be making changes in that.

Mr. **Twardy**. The same thing is true in Rhode Island. Rhode Island is sending their people down to Hartford and Danbury.

Mr.**Dwyer**. I was afraid you were going to say in Connecticut—— [Laughter.]

Mr. **Early**. Where does Rhode Island send them?

Mr. **Twardy**. Down to Hartford and Danbury.

Mr. **Early**. Danbury.

Mr. **Twardy**. Yes.

Mr. **Early**. All right.

Mr. Richmond, I have concerns about your statement on the first page, number 3, "Allow transfer of funding for intensified prosecution of organized crime." I think that is the suggestion for autonomy for a 2 percent transfer from Department to Department?

Mr. **Richmond**. Well, I think what we refer to is the transfer of the strike force funds to the U.S. Attorneys account.

ATTORNEY GENERAL TRANSFER AUTHORITY

Mr. **Early**. But isn't the U.S. Attorney's office filing or proposing legislation for a 2 percent transfer authority that excludes all oversight that presently exists? What are we doing?

Mr. **Roper**. My name is Mike Roper.

Yes, the Administration has requested on behalf of the Attorney General a general transfer authority of 2 percent from any appropriation. Similarly gaining appropriation could gain no more than 2 percent. But I believe there would be notification through the normal reprogramming process of the committees.

Mr. **Early**. Just notification, not approval, though?

Mr. **Roper**. Correct. It would be notification.

Mr. **Early**. Well, you know, it hasn't passed in the past, and we're not going to pass it now.

So what is the difference in your statement, then, Mr. Richmond, since you were not referring to that? What are you speaking about, a transfer of funding for intensified prosecution of organized crime?

STRIKE FORCE MERGER

Mr. RICHMOND. The increase in resources that we have as a result of the merger of the strike forces.

Mr. EARLY. That is just——

Mr. RICHMOND. This budget will now formalize that because we will now pay for those 186 positions out of our budget as Assistant U.S. Attorneys and related support people.

ATTORNEY EXIT SALARIES

Mr EARLY. Okay. Would you, Mr. McWhorter, supply for the record the last three or four people who have left your office, and what type of salaries they moved on to?

Mr. McWHORTER. Yes, sir. I would be happy to.

[The information follows:]

ATTORNEY EXIT SALARIES

Three out of the last four attorneys who left employment were able to substantially improve their annual incomes. One attorney went from an annual salary of $63,000 to become a senior associate in a private law firm with a starting salary of $85,000 and a promise that after one year he would make partner and enjoy an annual income of over $100,000. A second attorney's salary rose from $67,000 to $75,000 with the promise that after one year his salary would exeed $95,000. A third attorney's salary went from $75,000 to $85,000 with the promise that his income would exceed $100,000 after a year. The fourth attorney went into solo practice and made approximately the same income during the first year of his practice as he was making when he left the U.S. Attorneys employment.

Mr. EARLY. Thank you very much, Mr. Chairman.

STRIKE FORCE MERGER

Of the strike forces, what percentage did not transfer to the U.S. Attorneys?

Mr. RICHMOND. All but two, I think.

Mr. EARLY. Virtually all?

Mr. RICHMOND. Transferred, yes. Those were ones that had residency problems, and since they did not reside within the district to which they would be appointed as an assistant, they remained as special attorneys with the Department of Justice, assigned in the organized crime section but in fact still working in that strike force under the control of the U.S. Attorney.

Mr. EARLY. What is the long-term impact of having permitted this?

Mr. RICHMOND. The merger?

Mr. EARLY. Yes.

Mr. RICHMOND. There are several long-term effects of this, the first of which will be better, I think, supervision, more aggressive prosecution because the Criminal Division has never been able to fund those positions 100 percent. They never had the authorized complement on board. That is now the case. In fact, there are now more lawyers because of the augmentation of the organized crime section by the Attorney General last year. There are actually more lawyers involved in the organized crime fight.

The second benefit I think, we will be more responsive to the areas of emerging organized crime: the Asians, motorcycle gangs, the street gangs which——

STRIKE FORCE EFFECTIVENESS

Mr. EARLY. Why? Explain that.

Mr. RICHMOND. Because it will be more localized in terms of recognizing the regional problem in a specific area of the country, and allowing that organization, meaning the organized crime strike force, to react more quickly to it.

In addition to that, I think we are faced with a situation where because you have, on site, day-to-day management of that unit by the United States Attorney, it will be far more aggressive and far more responsive.

Mr. EARLY. Well, are you saying that as a part of this that we will be able to move more rapidly from emphasis on one kind of crime to another kind of crime?

Mr. RICHMOND. Oh, I think there will be more flexibility, but I also think that the investigations will move at a more rapid pace than they had when they were part of the Criminal Division.

RESIGNATIONS—STRIKE FORCE CHIEFS

Mr. EARLY. On the transfer, though, that was very controversial, moving the strike force to the U.S. Attorneys. Didn't about eight or ten of the chiefs of the strike forces leave?

Mr. RICHMOND. I don't believe that many. I am only familiar with one chief who left.

Mr. EARLY. Do you want to expand on that for the record? I thought I was told that a lot more had left—more than you have indicated today.

[The information follows:]

STRIKE FORCE CHIEF RESIGNATIONS

During the period January 1, 1989, through December 31, 1989, the Strike Force Chief in Detroit, Michigan, retired on disability; the chief in Boston, Massachusetts retired and is now associated with a private law firm; and the chief in Brooklyn, New York resigned and is also now associated with a private law firm.

Mr. EARLY. Thank you, Mr. Chairman.

Mr. SMITH. Okay. Thank you.

[The following questions were submitted to be answered for the record:]

QUESTIONS SUBMITTED BY CONGRESSMAN SMITH

United States Attorneys

Debt Collection

QUESTION: What is the status of your debt collection initiative?

ANSWER: We are currently soliciting requests from the United States Attorneys and the litigating divisions on the types and amounts of expenses they will seek to charge to the Debt Collection Fund. The Fund has generated a great deal of interest and we have received several requests for assistance in individual debt recovery cases. We have also solicited proposals from contractors for asset and skip-tracing services. We intend to allocate sums from the Fund to the components later this month.

QUESTION: Do you have any estimates of the amounts collected under this program above what would have been collected without the program?

ANSWER: We will not have any estimates on the increase in recoveries that the Debt Collection Fund will generate until the United States Attorneys and litigating divisions have had more time to use the Fund to support their individual programs for recovering Federal debts.

QUESTIONS SUBMITTED BY CONGRESSMAN EARLY

Organized Crime Strike Force

QUESTION: Were there any costs associated with the transfer of the Organized Crime Strike Force, from the Criminal Division to the U.S. Attorneys Office, that had to be absorbed? Or did the transfer of the $9.6 million cover the entire cost? If there were any uncovered costs, what were they and how much were they?

ANSWER: We adjusted salaries for the transferred attorneys to a level comparable to salaries earned by other attorneys in the district. In addition we have allocated an additional 26 attorneys and 18 support staff to the Strike Force effort to meet the Attorney General's commitment to staff these units at the authorized level. The funds for those positions were not transferred from the Criminal Division. We also will be paying for certain costly library publications that need to be replaced this year because West Publishing has come out with an updated edition. The total costs absorbed in 1990 will be approximately $4,000,000.

Pay Adjustments for Attorneys

QUESTION: Were any of the non-Strike Force Assistant U.S. Attorneys given a similar pay adjustment in 1990? If so,

what was the cost? What will the annualization cost be in 1991?

ANSWER: Several U.S. Attorneys offices, including some that were recipients of attorneys transferred from the Strike Forces, received one-time pay adjustments for Assistant U.S. Attorneys. For offices which received Strike Force resources, the cost to adjust other attorneys' pay on an across-the-board basis will total about $1,630,000, including pay and benefits, in 1990. In 1991, the annualization cost will be another $920,000. A significant portion of these transactions were completed prior to the transfer of the Strike Forces and were based on existing pay adjustment policy.

QUESTION: **Are you receiving, or do you anticipate receiving, more requests from the District offices for pay adjustments for the Assistant U.S. Attorneys (AUSAs)? Give us an estimate of what this additional cost could be in 1991? What would it be beyond 1991?**

ANSWER: Our policy towards attorney pay provides districts remedies to adjust pay for AUSAs that are suffering pay inequities relative to salaries earned by other AUSAs in that district. The policy applies to those AUSAs that receive outstanding or excellent ratings on their performance evaluations, if it is determined that newly-hired attorneys with similar years of experience could be paid higher salaries. Until recently, we permitted such adjustments to be effective on the same date for all eligible attorneys. Now, the policy allows for AUSAs to receive adjustments on their anniversary date only. For all districts, including Strike Force districts, the cost of across-the-board pay adjustments implemented on the same date will total $3,000,000, including pay and benefits, in 1990, with an annualization of $1,200,000 in 1991. We have no firm figure of the cost on implementing pay adjustments for highly-rated AUSAs that have received or will receive raises on their anniversary dates.

1990 Reprogramming Request

QUESTION: **What is the status of the reprogramming request, mentioned in your justification?**

ANSWER: A reprogramming request was transmitted recently to the Assistant Attorney General for Administration, Department of Justice (DOJ). Approved requests are then forwarded to the Office of Management and Budget for review and comment prior to submission to Congress.

Cost of New Assistant U.S. Attorneys

QUESTION: **What will the average annual cost of bringing a new Assistant U.S. Attorney on board be in 1991? How does that compare to previous years? What factors are contributing to the increased costs?**

ANSWER: The average annual cost of a new Assistant U.S. Attorney brought on board in 1991 will be about $106,000. This is about $19,000 more than in recent years. Of this total, $5,000 will be for increased starting salaries that are more competitive with private law firms. Another $5,000 is attributed to increased government contributions for retirement benefits, since most new hires are brought in under the Federal Employee Retirement System. About $2,600 per attorney is attributed to the new requirement that the Federal Bureau of Investigation (FBI) be reimbursed for performing background investigations. An increase of $3,500 is needed to purchase personal computers, related supplies, peripheral equipment, and software so that new Assistants can have access to the EAGLE network. EAGLE related expenses will be absorbed by the Legal Activities Office Automation Fund. The remaining increase is attributable to inflation for space, travel and transportation, communications, utilities and other miscellaneous costs.

Personnel Costs

QUESTION: What portion of your budget is personnel costs as compared to equipment, materials and space costs?

ANSWER: In 1991 the personnel costs (salary and benefits) are estimated to represent 70 percent of the United States Attorneys' appropriation, amounting to $439 million.

Litigation services, and other costs including travel, rental of equipment, printing, utilities and miscellaneous services represent 20 percent of the United States Attorneys' appropriation for 1991 amounting to $126 million. Litigation costs such as court and grand jury reporting and transcripts, depositions, compensation for experts and consultants, medical examination fees, discovery expenses, filing fees etc. represent a majority of these funds.

Space costs represent 7 percent of the United States Attorneys' appropriation amounting to $44 million. Equipment costs represent 2 percent or $13 million, and supplies and materials are 1 percent, a total of $6 million.

Vacant Authorized Positions

QUESTION: How many authorized positions will be vacant in 1991 under your 1991 request?

ANSWER: Of the 8,147 positions authorized in 1991, 160 Assistant United States Attorney positions and 65 support positions will remain vacant throughout the year.

Personnel On-Board

QUESTION: Bring us up to date on the total number of authorized positions versus the total number of personnel on board. For the record provide a detailed explanation of the number of new positions authorized by the various pieces of new legislation -- the Violent Crime Act, the Financial Institutions Reform Act and others. Then provide a breakdown of the number of personnel brought on board by the 1990 appropriation, the 1990 drug supplemental and the 1991 request.

ANSWER: The total number of authorized positions by the 1990 appropriation is 3,738 attorneys and 4,223 support. As of February 23, 1990, there were 3,125 attorneys and 3,530 support on board.

As a result of the 1990 Financial Institutions Reform Initiative 118 new attorney positions and 138 new support positions were authorized. Thirty six districts were allocated 120 new attorney positions and 140 new support positions for financial institution fraud. Funding of these Financial Institutions Fraud Act positions was limited to nine months per position and as of February 15, 1990, 53 attorneys have entered on duty. Since we do not track support positions by program category, we are unable to quantify the number of financial institution fraud support who have entered on duty.

The 1990 Violent Crime Initiative provided 800 new attorney positions and 800 non-attorney positions. As a result of sequestration, absorption of the 1990 pay increase, transfers of positions from the Organized Crime Strike Forces, and miscellaneous program needs, only 614 attorney positions and 652 non-attorney positions were available for allocation. Funding of the Violent Crime Initiative positions was limited to three months per position.

A display of the allocation of these new positions follows.

1990 Drug Resources

QUESTION: Tell us briefly, but provide more detail for the record, how the 1990 drug supplemental was utilized.

ANSWER: The United States Attorneys were able to devote extensive resources to identify, investigate and prosecute controlled substance violators. While all districts received additional resources in 1990, those designated high intensity areas received larger increases with specifically targeted positions. We have provided for the record, a chart which details the allocation of new resources for each district.

Program Decrease

QUESTION: How was tha figure of $6.156 million arrived at as the amount of program reduction to be taken in 1991? (This is the difference between the 1991 base and the 1991 request.) What impact will this reduction to the base estimate for 1991 have on the operations of the 94 U.S. Attorneys Offices.

ANSWER: The reduction was identified by the Office of Management and Budget as the amount necessary to meet identified deficit reduction targets. Therefore, the U.S. Attorneys will leave vacant in 1991, the 225 positions that were not filled in 1990 to meet the 1990 sequester and to absorb unfunded pay needs.

Debt Collection

QUESTION: What steps are the district offices taking to "prioritize" the collection of restitution payments. How is the collection of fines and restitution now tracked and monitored? What type of automated tracking and collection system does each office have? How does the United States Attorney's office coordinate these collections with the courts and the probation offices?

ANSWER: Under the Sentencing Guidelines and the criminal code, the collection of restitution takes priority over the collection of criminal fines. The United States Attorneys enforce the collection of restitution before enforcing the collection of a fine when a debtor is unable to pay both debts in full after sentencing. The United States Attorneys also participate in the Bureau of Prison's Inmate Financial Responsibility Program and arrange for inmate restitution payments to be forwarded to the victims of crime.

Many districts track restitution on the automated case and collection tracking systems in their offices. Some districts prefer to track restitution manually.

All but one United States Attorney's office has an automated case and collection tracking system. Automated equipment will be installed in the remaining district shortly. The case and collection tracking systems in the United States Attorneys' offices have been designed to track debits and credits and to compute interest on debts owed to the United States. These systems have been partially adapted to track restitution to victims other than the United States.

The courts are in the process of developing a National Finance Payment Center which they are planning to implement on a pilot basis this summer. They have advised us that the new automated system will be capable of tracking restitution. The proposed National Fine Payment Center will allow us to coordinate much more closely with the courts on the collection of restitution.

Many probation offices no longer participate in the collection of restitution as they perceive this to be the responsibility of the United States Attorneys. We continue to work with the courts and probation at both the local and national levels to achieve a better coordinated enforcement effort.

A Department of Justice/Federal Judiciary Task Force has been established to address enforcement issues. United States Attorneys, probation, the Judiciary, the Executive Office for United States Attorneys and the Administrative Office of the United States Courts are represented on this task force. In addition, the first joint training conference for United States Attorney personnel and probation officers will be held in May 1989 in the Eastern District of Pennsylvania. We plan to conduct additional training of this type in the future.

QUESTIONS SUBMITTED BY CONGRESSMAN DWYER

United States Attorneys

Sequestration Impact

QUESTION: **Given the $6.697 million sequestration and the added costs of the 1990 pay raise, what increases did the district offices actually receive in 1990?**

ANSWER: In 1990, 800 attorney and 800 support positions were requested and provided by the Congress for the Violent Crime initiative. Additionally, 118 attorney, 118 support, and 20 auditor positions were authorized for the Financial Institution Fraud Initiative. As a result of sequestration and the absorption of the 1990 pay raise, attorney and support position levels were reduced by 160 attorney positions and 65 support positions. Furthermore, an additional 26 attorney positions and 18 support positions were not allocated to account for staffing variances due to the merger of the Organized Crime Strike Forces into the U.S. Attorneys' Offices. As of March 13, 1990, offices have been allocated 120 Financial Institution Fraud attorney positions and 140 support positions (which were funded for three quarters of the fiscal year) and 552 Violent Crime attorney positions and 479 support positions (which were funded for one quarter of the fiscal year).

New Position Allocations

QUESTION: How are the new position allocations being used? Are they primarily for drug-related cases, or are they also being used for civil related matters?

ANSWER: Approximately 50 percent of the positions under the Violent Crime Initiative are to be used for drug prosecution and the rest will be devoted to violent crime, white collar crime, money laundering, fraud and other areas. Of these positions, 122 attorney positions were allocated to address the high intensity drug trafficking areas identified in the new Federal drug strategy prepared by William J. Bennett.

Asset Forfeiture

QUESTION: You have estimated the gross value of assets forfeited to be $500 million in 1990 and $525 million in 1991. Of these amounts, how much is turned back to State and local law enforcement through equitable sharing? How much is used to cover administrative costs? How much is returned to the Federal Government?

ANSWER: The figures you cite from the budget submission for the U.S. Attorneys reflect the estimated value of all forfeited property for the DOJ, whether forfeited administratively or judicially. The figures include the value of property not yet liquidated through sale, and property forfeited in customs and other cases that do not result in deposits into the DOJ Assets Forfeiture Fund. For example, through the first five months of 1990, over $20 million was deposited into the Customs Forfeiture Fund following judicial forfeiture. Information on the amounts realized and deposited into the Assets Forfeiture Fund and any distribution of those funds is presented under the budget submission for the Customs Forfeiture Fund.

In the Assets Forfeiture Fund budget submission, you will note that we anticipate deposits into the Fund of $470 million in 1990 and of $500 million in 1991. Based on the estimated deposits into the Fund in 1990 and 1991, we estimate equitable sharing payments will be $190.5 million and $200 million, respectively. Also, another $18 to $20 million worth of forfeited tangible property (primarily motor vehicles) is expected to be transferred to State and local law enforcement agencies each year.

The Department does not assess any fees for administration of the program. We do not use these funds to reimburse ourselves for the costs of our employees associated with the asset forfeiture program. However, the business expenses of the forfeiture program (asset management expenses, case related expenses, and payment of innocent third party interests) are expected to be $67.4 million in 1990 and $72 million in 1991. The majority of these costs are for payments to innocent third parties.

All surplus funds are available to the Federal Government as provided by statute. In 1990 and 1991, we plan to use $98.9 million and $100 million, respectively, to expand and improve the asset forfeiture program and to finance certain law enforcement uses. Beyond that, any remaining surplus funds (up to $150 million annually) are available for transfer to the Drug Czar's Office of National Drug Control Policy's Special Forfeiture Fund. We estimate transfers of $109 million at the end of 1990 and $128 million at the end of 1991.

Equitable Sharing

QUESTION: What restrictions are placed on the expenditure of equitable sharing funds? What types of expenditures can State and local authorities make?

ANSWER: There are few restrictions on the use of equitable sharing funds. The only statutory restriction is that the payment be made to a State or local law enforcement agency. In addition, the Attorney General has limited the use of these funds to law enforcement purposes and required that they be used to augment the normal budget of the involved State or local law enforcement agency. Therefore, the range of possible uses is vast and may include payment of salaries, benefits and overtime for law enforcement officers, the acquisition of capital equipment such as vehicles and firearms, or the funding of contracts for law enforcement research and development.

Training of New Assistant U.S. Attorneys

QUESTION: What formal training are the newly hired Assistant U.S. Attorneys given?

ANSWER: The Attorney General's Advocacy Institute, a branch of the Office of Legal Education, trains Department Attorneys. They offer six Criminal Trial Advocacy courses, six Civil Trial Advocacy courses and four Appellate Advocacy courses annually.

The Criminal Trial Advocacy courses consist of two weeks of extensive "learn by doing" exercises that concentrate on courtroom skills. Exercises during the first week encompass opening statement, direct and cross-examination, and court performance with experts from the FBI, the Drug Enforcement Administration (DEA), and other enforcement agencies. There is extensive use of the video replay and critique of student performance. Student-attorney participation intensifies during the second week and culminates with two days of mock trial experience during which visiting Federal judges preside over the students' performances before a jury. This course is followed by an advanced training course approximately six months later, in which the same student-attorneys attend lectures and workshops concentrating on such topics as grand jury, ethics, and persuasion.

The Civil Trial Advocacy courses consist of two weeks of the discovery phase of a civil case, testimony depositions, opening statements, direct and cross-examination to closing arguments. There is an expert witness phase where attorneys work with experts from the National Weather Service, the Nuclear Regulatory Commission, and the Corps of Engineers. Physicians and nurses also participate in the course to allow the attorneys the experience of direct and cross-examination of medical experts. Experienced Assistant U.S. Attorneys and Department Attorneys serve as instructors, conduct classroom exercises and critique via video playback. The last two days of the course are spent in mock trials held at the U.S. District Courthouse in Washington, D.C. before Federal district judges.

The Appellate Advocacy course is a one week program that focuses on lectures, panels, and practical exercises designed to improve the ability of the Attorneys to analyze facts, to write appellate briefs, and to make oral arguments. Each attorney must submit a brief prior to the course. During the course, each attorney argues three times. Performances are videotaped and critiqued by experienced Appellate Counsel. The program culminates in full-scale oral arguments before panels which include judges of the U.S. Courts of Appeals.

QUESTION: Specifically, what training is being offered in the sentencing guidelines, asset forfeiture and victims rights?

ANSWER: The Sentencing Guidelines are covered in the Basic Criminal Advocacy course, the Federal Practice course and the Advanced Criminal course. A considerable amount of time is devoted with presentations by officials of the DOJ and the Sentencing Commission. They interpret the guidelines and offer practical applications as well as teach DOJ policy.

There are approximately ten asset forfeiture courses planned for 1990. So far, courses have been held for AUSAs, Asset Forfeiture support personnel and the asset forfeiture components including FBI, DEA and the Marshals Service. The Line Attorney Training course for AUSA's was a five day course. Some of the major topics covered were: Overview of Asset Forfeiture; Commencing the Forfeiture; Initiating and Completing Discovery of the Civil Forfeiture; Obtaining the Civil Judgement; Post Civil Judgment Responsibilities; New Developments in Forfeiture Legislation; Administration of an Asset Forfeiture Unit and Agency Relations. The Asset Forfeiture Support Conference covered much of the same topics as the AUSA conference but with emphasis on the role of the non-attorney paralegal in Asset Forfeiture.

The Asset Forfeiture Component Seminar brings together representatives from DEA, FBI, Marshals Services, United States Attorney Offices, and DOJ to discuss topics of mutual interest in asset forfeiture and to develop the spirit of cooperation needed for successful programs.

In regards to victims rights, the director of the Office for Victims of Crime gives a presentation during the Basic Criminal Advocacy course advising AUSAs of the proper procedures to secure the funds available for assisting victims of crime. There are five courses planned for 1990 under the guidance of the Law Enforcement Coordinating Committee Office (LECC) of the Executive Office for U.S. Attorneys. Three courses have already taken place. The Child Sexual Abuse Conference, the Indian Crime Victims Conference and the National Organization for Victim Assistance Conference. These conferences were attended by LECC/Victim Witness coordinators, AUSAs, representatives from component agencies, and local law enforcement officials. The topics ranged from interviewing child witnesses, legislation concerning crime victims, law enforcement treatment of victims, dealing with media regarding victims of crime, compensation for victims of crime and jurisdiction on Indian lands.

The LECC/Victim Witness coordinators in the U.S. Attorney Offices schedule training and regular meetings on an ongoing basis with the AUSAs, component agencies and local law enforcement officials. The topics covered range from the rights of the victim, funding available for the victims, and general case information that the victim is required to know.

QUESTION: In light of the number of new Assistant United States Attorneys (AUSAs) that are being hired, are there any hiring guidelines in terms of trial experience?

ANSWER: Our experience last year has resulted in the formulation of a modified Federal Practices course to meet the needs of newly hired attorneys who are experienced litigators in the private sector but who need exposure to Federal legal practices. These new programs are held primarily in Washington, D.C. The subjects that are addressed in this course include: Overview of the Department of Justice and the Executive Office for United States Attorneys; Grand Jury Practice; AUSA - Agent Relations; Case Flow and Case Organization; Federal Rules of Evidence; Informants; Substantive Law Overview on Title 21; Environmental Crimes, Tax Offenses; White Collar Fraud, and Public Corruption; Drafting of Indictments; Immunity and Witness Security Program; Pre-Trial Motion Practice; Prosecutorial Ethics; Bail and Detention; Sentencing Guidelines; Asset Forfeiture; Victim-Witness Act and the Appellate Process.

Salaries for New Assistant U.S. Attorneys

QUESTION: What is the current starting salary for a new Assistant U.S. Attorney?

ANSWER: Since the 3.6 percent pay increase went into effect in January, the average salary for new assistants is approximately $57,400. This is in comparison to last fiscal year, when the average new hire was paid approximately $50,200 per year. Apart from the effect of the January pay raise, new assistants are experiencing a real increase of almost $5,000. This reflects new starting salary guidelines that are more reflective of salaries granted in private law firms.

Debt Collection

QUESTION: Since May of 1989, I understand that the Clerks of the Court have been responsible for processing of criminal fines, but the United States Attorney's office is responsible for enforcing them. How is this arrangement working out?

ANSWER: The Clerks of Court currently do not have adequate automated data processing equipment to maintain the records and compute interest on criminal fines. The Clerks of Court process the payments and notify the United States Attorneys of the payments they have received. The United States Attorneys are voluntarily continuing to maintain the records for new criminal fine impositions, payments, balances and interest. As a result, very little has changed since the return of the receipting function to the Clerks of Court in May 1989.

The courts are developing a National Fine Payment Center and they will assume responsibility for recordkeeping on criminal fines when the Center opens. The courts have advised us that they plan to implement the Center on a pilot basis in a limited number of districts this summer.

QUESTION: What formal arrangements do the two branches have to ensure the timely collection of fines?

ANSWER: As the National Fine Payment Center is in the planning stage, arrangements between the two branches are currently informal and subject to further negotiation. The United States Attorneys continue to monitor the timeliness of all payments on criminal fines using automated systems in their offices.

QUESTION: How does the United States Attorney's office "enforce" these fines?

ANSWER: Under title 18, United States Code, fines are enforced in the same manner as civil judgments. Pursuant to the Federal Rules of Civil Procedure, civil and criminal judgments are enforced in accordance with the procedures and practice of the State where the district court is located. The available enforcement remedies vary widely from State to State.

Where the remedies are available, liens are filed, garnishments of income and property are sought and writs of execution against real and personal property are issued. The United States Attorneys have drafted legislation to create a uniform enforcement law that will create a fairer and more easily administered scheme for enforcement. S.84, the Federal Debt Collection Procedures Act, passed the Senate on November 3, 1989, and is currently pending in the House Judiciary Committee.

QUESTION: Is there an established late period beyond which action is taken?

ANSWER: The Criminal Fine Enforcement Act, the Sentencing Reform Act and the Criminal Fine Improvements Act all state that the payment of a fine is due immediately unless the court orders otherwise. These statutes also specify when a fine is deemed to be delinquent or in default. Although the language in each statute varies, a fine that is 30 days past due is generally deemed delinquent and a fine that has been delinquent for 90 days is generally deemed to be in default. Various late payment penalties may be imposed under these statutes when a fine is delinquent or in default.

QUESTION: How will the $5 million provided in 1990 for debt collection be utilized?

ANSWER: The $5 million appropriation to fund debt collection activities will be utilized for the following:

A. Locating Debtors and Assets

The Debt Collection Fund will be used to supplement existing resources for obtaining debt collection services that have long been available to private sector creditors. The United States Attorneys often must track down debtors who relocate in order to collect money owed to the Federal Government. The Debt Collection Fund will allow the United States Attorneys to retain professional skip-tracing services for this purpose. The Debt Collection Fund will also allow the United States Attorneys to purchase credit reports to determine what assets may be available to the debtor to pay his Federal debt. The United States Attorneys will now also be able to obtain asset searches through real estate locator services, State and local registrations and filings and other public record inquiries.

In the past, budgetary restrictions have limited the use of these services. The Debt Collection Fund will allow the United States Attorneys to use these services on an on-going basis for larger numbers of debts.

B. Training

Training of United States Attorney debt collection personnel is currently done on a nationwide basis. While this type of training is necessary to communicate uniform policies and procedures, current law limits the scope of the training. Each United States Attorney must enforce the collection of Federal debts pursuant to the law of the State where his district is located. Nationwide training cannot address the vagaries of the laws of the fifty States. The Debt collection Fund can be used by United States Attorneys to pay for local training programs that focus on State law issues. The United States Attorneys are also piloting joint training of probation officers and United States Attorney's personnel.

C. Sales of Property

The United States Attorneys generally sell property pursuant to a writ of execution or a judgment of foreclosure and sale. Frequently, the proceeds of these sales are insufficient to pay both the underlying debt to the Federal agency and the costs of sale. When this occurs, the United States Attorneys must absorb the loss as a litigation expense. The Debt Collection Fund will provide relief to the United States Attorneys by meeting some of these expenses. For example, if a United States Attorney seizes a student loan debtor's automobile, storage and maintenance costs can be paid from the Fund. The Debt Collection Fund will thus remove any financial disincentive the United States Attorneys may have felt for pursuing some of these enforcement remedies.

QUESTION: Do you have any estimates on the amount of debts to be collected in 1990?

ANSWER: We have projected $208,650 million in cash collections and other recoveries on criminal debts in 1990. This includes amounts estimated to be paid to the Crime Victims Fund collected through the Clerks of the U.S. Courts. Currently, $1.1 billion is due and owed on criminal debts arising from criminal fines, assessments, bail bond forfeitures and other criminal debts.

THURSDAY, MARCH 8, 1990.

WITNESSES

JAMES F. RILL, ASSISTANT ATTORNEY GENERAL

JUDY L. WHALLEY, DEPUTY ASSISTANT ATTORNEY GENERAL

HARRY H. FLICKINGER, ASSISTANT ATTORNEY GENERAL FOR ADMINISTRATION

MICHAEL J. ROPER, DEPUTY ASSISTANT ATTORNEY GENERAL, CONTROLLER

Mr. SMITH. We will now hear testimony on the Antitrust Division. This Division requests $33,730,000 in fiscal year 1991. In addition, the request assumes that an additional $20 million from filing fees will be available to the Division. We will insert in the record at this point the Antitrust Division's fiscal year 1991 budget justification.

Summary Statement

Fiscal Year 1991

For 1991, the Antitrust Division is requesting 387 positions, 372 workyears, and $33,730,000 in direct appropriation authority. This represents no increase from the 1991 base, and reflects the Division's commitment to reducing the Federal budget, while preserving key law enforcement programs carried out by the Division. The position, workyear, and funding amounts reflect the continued conversion of a large portion of program funding from direct appropriation authority to indirect funding from user fees collected pursuant to Public Law 101-162.

The mission of the Antitrust Division is to promote and protect the operation of the free market system in the United States, thereby protecting consumers and ensuring the optimal operation of the American economy. The free enterprise system has led to growth and prosperity in this country, and competition is its keystone. Competition ensures that the prices consumers, including the Federal Government, pay for goods and services are determined by free market forces rather than by collusion, and it fosters efficiency and innovation, strengthening America's industrial base and maximizing the return from America's resources.

The Antitrust Division increasingly has focused its enforcement efforts on: (1) prosecution of the white collar crimes of price fixing, bid rigging and customer and territorial allocation—crimes of fraud and deceit that directly harm consumers through increased prices and restricted output of goods and services; and (2) review of proposed mergers and joint ventures to ensure that they do not give rise to market conditions in which competition would be reduced significantly and prices to consumers would be increased.

Criminal antitrust enforcement against bid rigging and price fixing is the Antitrust Division's highest priority. Working with the FBI, the Defense investigative agencies and various Inspectors General throughout the government, the Antitrust Division vigorously investigates and prosecutes collusion. The Division's goal is both to punish those who have committed "crime in the suites" and to deter such criminal conduct from occurring in the future.

To further the detection and prosecution of collusion, the Division has provided briefings and training materials to Federal investigative agents, U.S. Attorneys' Offices, procurement agents, and the FBI. Last year the Division published "The Prosecutor's Guide to Antitrust Enforcement," which was distributed to U.S. Attorneys' Offices and to the FBI to assist them in identifying and referring potential antitrust violations. The Division also has expanded and improved its own investigative efforts. These efforts have paid off in increased detection of antitrust crimes and greatly expanded caseload.

The Division continues to pursue an active, vigorous and fair-minded merger enforcement policy that distinguishes procompetitive mergers from those that threaten competition and American consumers. The Division's merger analysis is based on economic and business realities. It recognizes that the vast majority of mergers are procompetitive, creating substantial improvements and efficiencies in management, production, or marketing for the merged entity. The Division's merger analysis recognizes that frequently the markets in which U.S. companies compete are world markets, and foreign companies are significant competitors that U.S. companies face. The Division's merger analysis is based upon a thorough understanding of the markets in which the merging companies operate and the full nature of competition in those markets. While for most mergers a quick review makes clear there is no significant competitive impact from the merger, for other mergers a detailed, fact-intensive investigation must be conducted to determine whether the effect of the merger will be to reduce competition and facilitate collusive or monopolistic behavior. Workload in this area continues to escalate, with an estimated 2,900 premerger notifications to be reviewed in 1990, a figure that is more than triple the number reviewed in 1981, more than double the number reviewed in 1984, and growing each year. The Division intends to use the potential additional flexibility afforded by filing fees to meet this and other escalating workload.

It is essential to consumer and business welfare that antitrust vigilance be maintained at the Federal level. The effectiveness of the Division's enforcement effort is partially demonstrated by its fine, penalty and damage collections, totalling over $34 million returned to the General Fund of the Treasury in 1989. These amounts, while significant, do not reflect the value of deterrence of other price-fixing and bid-rigging crimes against Federal, state and local procurement agencies and against consumers, perhaps the biggest benefits to consumers of the Antitrust Division's efforts. Based upon information available in 1989, the Division estimates direct savings to the U.S. Treasury alone, in the hundreds of millions of dollars from deterred price fixing and bid rigging.

Antitrust Division

Salaries and expenses

Justification of Proposed Changes in Appropriation Language

The 1991 budget estimates include proposed changes in appropriation language listed below. New language is underscored, and deleted matter is enclosed in brackets.

Salaries and Expenses, Antitrust Division

For expenses necessary for the enforcement of antitrust and kindred laws: [$32,222,000] ______ $33,730,000

: Provided, that fees made available to this appropriation in fiscal year 1991, pursuant to section 605 of Public Law 101-162, shall remain available until expended. (Department of Justice Appropriations Act, 1990; additional authorizing legislation to be proposed.)

Explanation of Change:

Section 605 of Public Law 101-162, the Departments of Commerce, Justice, and State, the Judiciary, and Related Agencies Appropriations Act, 1990, established a filing fee for Hart-Scott-Rodino premerger reviews. Under this provision, not to exceed $40,000,000 in receipts may be shared equally between the Federal Trade Commission and the Antitrust Division. To offset these receipts, the Division's account was reduced $15,000,000 below the President's 1990 request with the expectation that the difference would be made up by receipts from the new fee. The no-year language would make the fees available until expended. This is necessary to enable the Division to maintain a more stable, predictable level of financing.

Congressional Appropriation Actions. During the course of Congressional review of the 1990 Commerce-Justice-State Appropriations bill, substantive legislation was added in the Senate that replaced $15,000,000 of direct appropriation funding with indirect funding anticipated from the implementation of a new filing fee associated with premerger notifications. This legislation was subsequently enacted as Section 605 of the Title VI General Provisions.

1990 Sequestration. Pursuant to the Omnibus Budget Reconciliation Act of 1989, direct funding in the amount of $405,000 was sequestered in 1990.

Explanation:

The Administration is proposing legislation to terminate the Interstate Commerce Commission and to complete deregulation of the motor carrier, freight forwarder, and water carrier industries. Remaining rail-related activities would be transferred to the Departments of Justice and Transportation. The Justice Department will assume responsibility for reviewing applications for rail-related mergers, consolidations, and acquisitions. Funds in the amount of $1,394,000, 18 authorized positions and 18 workyears are proposed for transfer to the Antitrust Division in the event this legislation passes.

Section 605 of Public Law 101-162, the Departments of Commerce, Justice, and State, the Judiciary, and Related Agencies Appropriations Act, 1990, established a filing fee for Hart-Scott-Rodino premerger reviews. Under this provision, not to exceed $40,000,000 in receipts may be shared equally between the Federal Trade Commission and the Antitrust Division. To offset these receipts, the Division's account was reduced $15,000,000 below the President's 1990 request with the expectation that the difference would be made up by receipts from the new fee. The additional $5,000,000 anticipated for 1991 as the net result of replacing $15,000,000 of appropriated funding with up to $20,000,000 of funding from filing fees provides for an increase of 79 authorized positions and 74 workyears above the base positions and workyears converted from direct funding to indirect funding. These additional resources will be applied to the Division's Termination of Private Cartel Behavior Program, and the Preservation of Competitive Market Structure Program, the Division's two highest priority programs.

The resources identified above are exclusive of filing fees collected pursuant to Public Law 101-162 used in support of the Termination and Prevention of Private Cartel Behavior Program and the Competitive Market Structure Program. Resources of the Antitrust Division are used for the mission of protecting and promoting competition.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Federal appellate activity........	16	16	$1,247	16	16	$1,318	16	16	$1,318	...	...	...

Long-Range Goal: To provide effective representation before Courts of Appeals and the U.S. Supreme Court for antitrust cases and also representation in proceedings to review orders of certain regulatory agencies.

Major Objectives:

To support the sound and consistent development and enforcement of antitrust laws through the expert prosecution and defense of appeals in cases brought by the United States.

To protect the interests of the United States in the development of antitrust law through participation as *amicus curiae* in private antitrust appeals.

To advocate competition in appeals taken from regulatory proceedings.

Base Program Description: To provide effective representation, the Division acts on antitrust cases before the Supreme Court as authorized by the Solicitor General; represents the interests of the United States in the Courts of Appeals in all civil and criminal cases brought by the United States under the Federal antitrust laws; reviews certain decisions of the Interstate Commerce Commission, the Federal Communications Commission, the Federal Maritime Commission and the Nuclear Regulatory Commission, and prepares an appeal position for the United States; and prepares and files *amicus* briefs in the district courts, the Courts of Appeals and the Supreme Court in selected private antitrust cases. The Division's responsibility for appeals from decisions by district courts in antitrust cases and for participation as *amicus curiae* is defined by 28 C.F.R. §0.20 and 28 C.F.R. §0.40(a). Authority to represent the United States in proceedings to review orders of the Interstate Commerce Commission, Federal Communications Commission, Federal Maritime Commission and the Nuclear Regulatory Commission is contained in 28 U.S.C. §§2341-2350.

Accomplishments and Workload: Accomplishments of the Federal Appellate Activity are presented in the following table:

			Estimates	
Item	1988	1989	1990	1991
Administrative Law Cases				
Pending	82	115	159	159
Filed	129	124	125	125
Terminated	96	80	125	125
Antitrust *Amicus* Cases				
Filed	7	3	3	3
Terminated	6	2	3	3
Antitrust Division Cases In Courts of Appeals				
Won	17	18	20	20
Lost	2	...	...	...
Dismissed	2	1	...	...
Antitrust Division Cases In Supreme Court				
Won	2	2	3	4
Lost	...	...	...	...
Dismissed	...	...	...	...

NOTE: Pending administrative law cases were reviewed during 1989 and adjusted to reflect accurate totals. Upon review, the 1989 pending case total was adjusted from 239 reported in the 1990 Congressional Budget Submission to the current total of 115 pending administrative law cases, as shown above.

Significant recent achievements in the Federal Appellate Activity include: Supreme Court opinions in three cases in which the Court agreed with the Division's position, including one in which the Division successfully petitioned for a writ of *certiorari*, and winning all recent Courts of Appeals cases involving bid rigging and price fixing, our major criminal enforcement priority. Two of the Supreme Court decisions, relating to waiver of double jeopardy and interlocutory appeal from grand jury proceedings, are important to all criminal enforcement work in the Department of Justice.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Termination and prevention of private cartel behavior.....	210	190	$16,986	210	190	$17,994	210	190	$17,994	...	...	...

The resources identified above exclude filing fees collected pursuant to Public Law 101-162 that are used in part to support the Termination and Prevention of Private Cartel Behavior Program.

Long-Range Goal: To promote and maintain competition in the American economy by reducing private cartel behavior that restrains trade or commerce.

Major Objectives:

To promote and maintain competition, economic efficiency, and the enhancement of consumer welfare by using criminal and civil enforcement of Section 1 of the Sherman Act to terminate and prevent agreements that restrain competition.

To limit cartel behavior in industries subject to state or Federal regulation to conduct that has been authorized by statute; to prevent the continuation of cartel behavior once statutes authorizing the approval of such behavior have been repealed.

To educate the public, business, legal professions, and other government agencies with respect to the principles of antitrust laws and enforcement policies.

Base Program Description: The purpose of this program is to deter private cartel behavior by investigating and litigating violations of Section 1 of the Sherman Act. A wide range of investigatory techniques is used, including staff and FBI investigations, civil investigative demands, and grand jury investigations to detect collusion and bid rigging. Professional economists assist in collecting and analyzing market and pricing data, providing expert testimony where appropriate. In some instances, once the government detects and successfully prosecutes collusion, it may obtain additional injunctive relief. The Division must then monitor the firms to ensure that they abide by the injunctive provisions of such relief.

The Division's vigorous prosecution of private horizontal restraints is essential. Cartel behavior has no redeeming economic virtues. Agreements among competitors entered into for the purpose of artificially restricting output and raising prices do not yield organizational efficiencies or economies of scale; they simply defraud consumers. State and local law enforcement efforts, while contributing to the prevention of locally-oriented cartel behavior, cannot cope with the complex interstate nature of the conspiracies investigated and prosecuted by the Division. Intense nationwide enforcement of the Federal antitrust laws serves to prevent the serious drain on the nation's economy that cartel behavior causes.

Accomplishments and Workload: Accomplishments of the Termination and Prevention of Private Cartel Behavior Program are presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Preliminary Inquiries				
Pending at start of year	147	114	111	111
Opened during the year	134	141	145	145
Closed during the year	167	144	145	145
Civil Investigative Demands				
Pending at start of year	39	30	30	30
Opened during the year	19	32	35	35
Closed during the year	28	32	35	35
Grand Juries				
Pending at start of year	145	156	156	156
Opened during the year	63	47	50	50
Closed during the year	52	47	50	50
Price Fixing Cases - Criminal				
Pending at start of year	90	135	92	92
Opened during the year	74	80	90	95
Closed during the year	29	123	90	95

NOTE: Since the exact nature of the violation is often unclear during the early stages of an investigation, Preliminary Inquiries and Civil Investigative Demands are identified as activity for both the Termination and Prevention of Private Cartel Behavior and the Preservation of Competitive Market Structure Programs. The large increase in the number of criminal price-fixing cases closed in 1989 *versus* 1988 reflects the Division's efforts to take administrative steps necessary to formally close cases, largely concluded in prior years but not closed because of a shortage of staff time to do so.

Accomplishments and Workload: Accomplishments of the Termination and Prevention of Private Cartel Behavior Program are continued in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Other Federal Crimes (False Statements, Perjury, Obstruction of Justice)				
Filed	13	6	7	8
Won	6	15	7	8
Lost	3	2	...	...

Vigorous prosecution of horizontal price fixing, bid rigging and market allocations among competitors, has been and will continue to be the Antitrust Division's primary enforcement activity. During 1989, the Division filed 86 criminal cases against 88 corporations and 76 individuals; fines were assessed in the amount of $28.5 million and sentences of 28,435 jail days (approximately 77.9 years) were imposed, of which 7,473 days (approximately 20.5 years) will be served by antitrust violators. In the first quarter of 1990, the Division filed 30 criminal cases against 34 corporations and 19 individuals. For this period, fines were assessed in the amount of $5,753,500 and sentences of 1,425 jail days (approximately four years) have been imposed, of which 512 days (approximately 1.5 years) will be served by antitrust violators.

Integral to the Division's criminal enforcement effort is an intensive probe of bid-rigging and price-fixing activities in connection with Federal procurement activities. The Division's highest priority in this area has been the investigation and prosecution of bid rigging and price fixing on contracts let by the United States Department of Defense, including the U.S. Army Corps of Engineers. These cases have involved the procurement of military uniforms, gloves, dredging, moving and storage services for military personnel, and various medical products. Division prosecutions have charged violations of Section 1 of the Sherman Act, mail fraud, false statements submitted to government agencies, perjury, conspiracy to defraud the U.S. Government, illegal gratuities, destruction of government records, and aiding and abetting. The Division intends to remain active in this area of criminal enforcement with 34 of its current 162 grand jury investigations focused on Federal procurement programs.

Recently, the Division's economic analysis staff conducted a review of available data and concluded that enforcement activities save the Federal Government, through restrained prices of goods and services purchased by the government, anywhere from $400 million to $1.85 billion per year. This depicts the order of magnitude of commerce involved in Federal procurement, as these estimated savings represent only one-tenth of one percent of the total dollar volume. Fines per capita attorney returned to the Treasury are only a small part of the return on investment in this program. Savings to consumers and taxpayers as a result of the deterrent effect of antitrust enforcement multiply the cost effectiveness of resources devoted to this program.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Preservation of competitive market structure	...	...	$ 2,132	...	...	$ 2,239	...	...	$ 2,239	...	...	...

The resources identified above exclude filing fees collected pursuant to Public Law 101-162 that are used in majority to support the Preservation of Competitive Market Structure Program. The remaining appropriated funding identfied above is non-personnel related, and is only the residual appropriated funding left after $15 million of direct funding for the Structure program was converted to non-appropriated funding during the 1990 Congressional process. More information about the non-appropriated funding for this program can be found in the back of the submission under "Reimbursable Resources".

Long-Range Goal: To enhance the ability of markets to function efficiently by preventing mergers and acquisitions that may lessen competition and by preventing and dissipating monopoly power acquired or maintained by purposeful conduct inconsistent with competition on the merits.

Major Objectives:

To implement a coherent merger enforcement program which prevents mergers that threaten to reduce competition in specific markets while minimizing governmental interference with transactions having no significant potential for harm.

To enforce effectively the premerger notification requirements of the Hart-Scott-Rodino Antitrust Improvements Act of 1976.

Base Program Description: The purpose of this program is to prevent or dissipate unlawfully acquired or maintained market power and to enjoin mergers that may lessen competition. Economists are in general agreement that the potential economic benefits of preventing monopolization of, and undue concentration in, particular markets are substantial. The Division promotes and maintains the competitive structure of the national economy through investigation and litigation of instances in which market power is sought, attained, or maintained through anticompetitive conduct and by seeking injunctive relief against mergers and acquisitions that may tend to eliminate competition. The principal statutes enforced under this program are section 2 of the Sherman Act and section 7 of the Clayton Act. The Division's responsibility for this enforcement program is found in 28 C.F.R. §0.40(a).

To realize maximum benefits from the Division's civil enforcement efforts, antitrust litigation resolved in favor of the government must be given full effect through appropriate injunctive relief, and firms subject to antitrust judgments must be monitored to assure that injunctive provisions are met. The Division also has established a program to review existing decrees and to seek the elimination of those that have become anticompetitive or that otherwise no longer serve the public interest.

Accomplishments and Workload: Accomplishments of the Preservation of Competitive Market Structure Program are presented in the following table:

Item	1988	1989	Estimates	
			1990	1991
Premerger Notifications	2,747	2,883	2,900	2,900
Preliminary Inquiries				
Pending at start of year	147	114	111	111
Opened during the year	134	141	145	145
Closed during the year	167	144	145	145
Civil Investigative Demands				
Pending at start of year	39	30	30	30
Opened during the year	19	32	35	35
Closed during the year	28	32	35	35
Merger Cases				
Pending at start of year	6	7	10	10
Opened during the year	6	5	7	7
Closed during the year	5	2	7	7

NOTE: Since the exact nature of the violation is often unclear during the early stages of an investigation, Preliminary Inquiries and Civil Investigative Demands are identified as activity for the Termination and Prevention of Private Cartel Behavior and Preservation of Competitive Market Structure Programs.

In 1989, the Division reviewed 2,883 reports of mergers and acquisitions filed under the Hart-Scott-Rodino Antitrust Improvements Act of 1976, and estimates indicate that this figure will exceed 2,900 in 1990 and 1991. This number compares to 2,747 and 2,533 reviews conducted for 1988 and 1987, respectively. In 1989, the Division challenged five proposed mergers and acquisitions in court because of lessening of competition in the affected markets. Two of these were resolved through consent decrees requiring divestiture in order to remedy competitive problems, and one decree is still pending entry by the court. One case went to trial, and the Division prevailed in that case. In the Division's fifth merger challenge, the parties abandoned the transaction prior to the commencement of trial, and a stipulated dismissal was agreed to. The Division advised the parties to four other transactions that it would challenge their proposals if they went forward; these transactions were restructured or abandoned. In addition, the Division filed one section 7A case pursuant to the Clayton Act, 15 U.S.C. § 18a, which requires notification to the Division of proposed mergers. A civil penalty totalling $3,000,000 was paid in this case. It is anticipated that 7A referrals from the Federal Trade Commission (FTC) will increase because the FTC has an increased number of investigations in progress. The Division currently has under review six referrals from the FTC for premerger notification violations.

A Division task force established in 1988 to augment the Division's litigation capabilities for enforcement of the AT&T consent decree has continued several major investigations of decree violations. In addition, substantial staff and supervisory time has been devoted to a large number of decree-related matters, including waivers, complaints, and other decree enforcement matters, and decree interpretation issues. The workload generated by the decree is illustrated by the fact that in 1989, the Division submitted to the district court 55 substantive filings concerning decree matters. It is anticipated that this workload will continue, as many difficult competitive, technical and legal issues must be addressed. The issues that arise under the decree often present complex legal, factual, and economic questions that are critically important to the telecommunications industry.

Merger analysis and enforcement is increasingly a sophisticated economic exercise. Depending on the transaction, attorneys and economists may be called upon to define and analyze likely competitive effects in many relevant markets. Review of Hart-Scott-Rodino premerger notification filings continues to require a substantial portion of the Division's resources. The notification workload continues to rise as acquisitions increase. The Division has statutory responsibilities to review certain transactions and to prepare specific reports. Merger investigations often require the issuance of compulsory process, review of tens of thousands of documents, and interviews with dozens of customers, competitors, suppliers and others familiar with the workings of the markets involved. These duties must be performed, and deadlines must be met. In recent years prior to 1988, virtually all of the Division's merger challenges were resolved without trial. Since then, however, the Division litigated several cases through trial. To the extent that this foreshadows an increased willingness of the private bar to test the Division's conclusions in court rather than settle, increased resources are needed for this program area.

The new Sentencing Guidelines will absorb some economists' time formerly dedicated to merger impact review. It will be necessary at early stages of investigations to develop evidence relating to appropriate fines and incarceration terms so that such information can be used in negotiating plea agreements. The Sentencing Guidelines also will necessitate evidentiary hearings relating to amounts of commerce affected, gains to offenders and losses to victims resulting from the crime, and other matters affecting sentencing.

Between 1990 and 1991, the Division anticipates an evolving marketplace that will require investigations of practices arising from industry deregulation or partial deregulation. In many such industries, firms have never competed with one another. Industry restructuring may occur. A good example of this is the recent wave of airline mergers which were, in large part, a response to market forces unleashed by deregulation of the airline industry. Such mergers may be procompetitive attempts to make firms more able to compete efficiently in newly competitive markets, or they may be attempts to reduce or eliminate competition in such markets. To distinguish the two types of mergers requires careful competitive analysis. The Division assumed primary oversight responsibility for airline merger review in January 1989, when the Department of Transportation's authority lapsed. No resources were transferred to the Division with the transfer of responsibility. As other markets are deregulated, further increases in Division caseload are expected in the form of structural analysis and business reviews.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Policy analysis, legislation and training.................	60	59	$ 4,787	60	59	$ 5,053	60	59	$ 5,053	...	...	...

Long-Range Goal: To enhance the quality of enforcement activities through economic and statistical analysis, to ensure that the objective of increased market competition is vigorously promoted in new legislation and regulation, and to improve training for Division employees.

Major Objectives:

To develop sound economic bases for investigations and litigation to ensure that the enforcement program is beneficial to the economy.

To encourage the submission and passage of legislation promoting a competitive economy and discourage legislation granting unjustified exemptions from the antitrust laws or hampering their enforcement.

To enhance the litigation skills of Division attorneys and train support staff in the use of the increasingly sophisticated tools available to the legal community.

Base Program Description: Enforcement of the antitrust laws is unique in that precisely what conduct and particularly which mergers are prohibited by those laws can often be determined only after careful economic analysis. Errors in antitrust enforcement can have profound consequences for the affected industries and for the public. Thus, economists are a key adjunct to the Division's legal staff. Equally important is careful economic attention to relief issues, as evidenced by the intricacies of the recent restructuring of the Bell system. Finally, hundreds of legislative proposals must be considered by the Department each year, many having serious economic and competitive implications. The Division is the Department's sole resource for dealing with such issues and significantly contributes to Administration policy. General authority for these programs is found in 28 C.F.R. §0.40.

Accomplishments and Workload: The workload of the Policy Analysis, Legislation and Training Program is summarized in the following table:

Item	1988	1989	Estimates 1990	 1991
Congressional Appearances	5	9	15	15
White House Correspondence Referrals	93	223	250	250
Congressional Correspondence	305	318	325	325
Congressional and OMB Requests for Comments	159	368	400	400
Statutory Reports	66	53	55	55

The Division's legal and economic policy analysis staff reviews antitrust litigation proposals that present novel, complex legal issues, and provides assistance on policy, procedural and other difficult general issues that arise during consideration of criminal prosecutions, the recovery of civil damages under the antitrust laws, the False Claims Act, and business reviews. The Division is working on an effort to use the equity jurisdiction provisions contained in Section 4 of the Sherman Act to remedy organized crime-related antitrust violations. The remedies that are being developed attempt to remove organized crime permanently from the industries where Sherman Act violations have been committed and prevent it from returning.

Among the most significant policy problems is the implementation of the new Sentencing Guidelines. The method by which persons convicted of Federal crimes are sentenced has been completely changed following implementation of the U.S. Sentencing Commission's Sentencing Guidelines, applicable to crimes continuing or committed on or after November 1, 1987. The Division is just beginning to prosecute criminal antitrust conspiracies that fall under the Guidelines. Since the major goal of criminal antitrust enforcement is to impose sentences on convicted offenders that will deter the commission of future violations, the sentences that the Guidelines provide for antitrust crimes and how these Guidelines are implemented have a major impact on the success of the Division's criminal program. In cooperation with other Departmental organizations, the Division has been active recently in commenting on the Sentencing Commission's latest proposed amendments to the Guidelines and in helping to draft as yet unissued guidelines for sentencing organizational offenders, an area of central importance to the Division. Internally, the Division has prepared explanatory materials for its litigating sections that will set out policy for implementing the Guidelines; has coordinated Guidelines training programs for Division attorneys; and continues to provide advice with respect to sentencing in particular cases.

The Division's legislative program entails drafting and supporting legislative proposals to amend antitrust laws or other statutes affecting competition; analyzing proposed legislation, draft reports, and testimony prepared by other agencies; and submitting comments on hundreds of such items to other divisions, the Office of Management and Budget, and Congress. It also includes preparing testimony to be given on behalf of the Department and the Administration, and coordinating responses to correspondence or other inquiries received from Congress or forwarded from the White House. Among the most important ongoing legislative efforts of the Division is support of antitrust reform proposals. A key proposal under consideration would provide increased incentives for procompetitive joint research, development, and production by American firms to keep pace with foreign competition. Other proposals also would significantly improve and modernize the nation's antitrust laws. These include increasing maximum fines for price fixing and bid rigging by corporations; providing treble damages to the United States when it is injured by price fixing or bid rigging; modernizing the prohibitions in Section 8 of the Clayton Act concerning interlocking corporate directorates; and closing a possible anticompetitive loophole in the antitrust laws governing mergers. The Division has had primary responsibility for drafting the proposals and supporting documentation on the areas cited, coordinating with other Executive Branch agencies in formulating the Administration's position, preparing testimony for Congress on the bills, and, in conjunction with the Office of Legislative Affairs, explaining the proposals to Congressional staff members.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Competition advocacy program....	34	34	$ 2,521	34	34	$ 2,671	34	34	$ 2,671	...	...	...

Long-Range Goal: To eliminate unnecessary or counterproductive governmental interference with free market forces and seek adoption of the most competitive means of achieving overriding social purposes.

Major Objectives:

To achieve greater competition in regulated industries.

To protect and promote competition in industries which recently have been deregulated.

To stimulate competition in the delivery of professional services.

To reduce or eliminate antitrust immunities enjoyed by particular industries.

To encourage competition as new technologies are developed.

To prevent or minimize protectionist restrictions on free and fair international competition.

Base Program Description: As an advocate of competition, the Antitrust Division seeks the elimination of unnecessary regulation and adoption of the most competitive means of achieving a sound national economy through participation in proceedings before regulatory agencies and in Executive Branch deliberations relating to competition policy. Authority for these various activities is found in 28 C.F.R. §0.40; the Federal Coal Leasing Amendments Act of 1976; the Deepwater Port Act of 1974, 33 U.S.C. §1506(a); the Atomic Energy Act of 1954, 42 U.S.C. §2135; the Federal Aviation Act, 49 U.S.C. §§1378-84; the 1966 Bank Merger Act, 12 U.S.C. §1828; the Bank Holding Company Act, 12 U.S.C. §1842; the National Housing Act, 12 U.S.C. §1730a; the Outer Continental Shelf Lands Act, 43 U.S.C. §1331, et seq.

Accomplishments and Workload: The workload of the Competition Advocacy Program is summarized in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Participation in bank merger proceedings				
Total Screenings 1/..............................	1,815	1,505	1,600	1,600
Savings and Loan Letters..........................	77	126	135	135
Bank Holding Letters..............................	4	1	5	5
Merger Letters....................................	882	648	750	750

Accomplishments and Workload: The workload of the Competition Advocacy Program is continued in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Participation in regulatory agency proceedings				
Department of Transportation (DOT)...............	4	...	....	...
Federal Communications Commission (FCC)..........	1	1	....	...
Federal Energy Regulatory Commission (FERC)......	12	13	....	...
Federal Maritime Commission (FMC)................	3	2	....	...
Interstate Commerce Commission (ICC).............	13	...	....	...
Other	4	4	...	...
Total..	37	20	30 2/	30 2/

1/ Total screenings include review of bank holding company activities in addition to savings and loan letters, bank holding letters, and merger letters.

2/ At this time, the Division cannot estimate by particular agency where participation will occur.

NOTE: Workload statistics in the Competition Advocacy Program have declined since 1986 because of a steady loss of resources.

In its report on the 1989 appropriation request, the Senate Appropriations Committee requested that the Division study the competitiveness of anhydrous ammonia, natural gas liquids, and propane gas pipelines and report its findings. The Division submitted the report to the Senate Appropriations Committee on April 1, 1989.

Congress is now considering legislation that would affect the regulation of banking and related financial service markets, and the McCarran-Ferguson Act exemption from the antitrust laws for the business of insurance.

The Division endeavors to support its mission by appearing before Congress and the various Federal regulatory agencies to advocate procompetitive approaches to economic problems, and to develop proposals for restructuring legislative mandates or procedures to eliminate unnecessary or counterproductive governmental interference with free market forces. Competition is very often strongly preferable to regulation. Government regulation frequently has characteristics and effects that are as inimical to the economic well-being of Americans as private restraints of trade, particularly when such regulation has little purpose other than to shield activities by private parties that would be illegal under the antitrust laws. When market failures or overriding social goals clearly require regulation, the Division works with Congress and regulatory agencies to ensure that those failures are effectively eliminated, or other social goals successfully accomplishd, with minimum disruption to competitive processes.

The new emphasis that results when an industry is deregulated or partially deregulated typically leads to attempts to restrain that competition. The Division's goal is to be vigilant against such practices because the benefits expected from deregulation may be seriously eroded by such private restraints of competition. Several investigations of this kind of anticompetitive behavior are now pending.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Management and administration....	67	73	$ 4,144	67	73	$ 4,455	67	73	$ 4,455	...	...	...

Long-Range Goal: To provide effective and efficient management and policy direction of all Antitrust Division activities.

Major Objectives:

To serve as articulate and persuasive spokespersons for competition policy within the Administration, before regulatory agencies, the Congress, and the general public.

To allocate resources and control current and future workload and output of the Division to produce results beneficial to the public.

To provide effective and efficient administrative support for all Antitrust Division activities.

Base Program Description: Top management provides policy guidance, administers controls, and directs the full range of Division activities. In addition to specific case direction, Division management officials make significant contributions to overall administration and management, determining the allocation of a finite amount of resources among competing programs to meet the varied responsibilities of the Division as effectively as possible. These officials serve as the Federal Government's primary spokespersons on competition policy and its impact on legislative and governmental actions. The administrative aspect of this program encompasses a wide variety of tasks to provide the resources and tools needed by the attorneys and economists to do their jobs.

Accomplishments: In the area of litigation support, the Division has expanded both the number and the scope of investigations and cases receiving automated support through minicomputer-based systems and computer-generated graphics. During the past year, the Division continued its extensive use of statistical analysis methods in support of important program initiatives to detect and prosecute anticompetitive, conspiratorial behavior such as price fixing and bid rigging. In several instances, computer products such as graphic representations of complex pricing patterns have been introduced into evidence and have played a key part in the outcome of the case. The Division continues to expand the use of these products and enhance existing data analysis procedures to ensure accurate and timely information for its attorneys. The Division also has been successful in obtaining and processing machine-readable materials from businesses and from Federal and state bidding authorities to provide cost effective analysis of bidding, pricing and market shares. In order to provide a continued high level of support to its sections and field offices, the Division has moved aggressively in the use of its on-site minicomputer network for litigation support by implementing a software package called the Antitrust Information Retrieval System (AIRS). AIRS was designed, developed and implemented "in-house" to operate on existing Division equipment and to provide automated capabilities to the matters that comprise the bulk of the Division's workload. Additionally, the Division has made use of portable professional computers for remote trials to increase the quality of off-site support. The Division has continued to expand the availability of litigation support services to its professional staff through improvements in minicomputer-based systems as well as judicious use of mainframe software systems.

Beginning in 1989, the Division commenced purchase of Project EAGLE equipment in accordance with the Department's objective to achieve agency-wide automation compatibility. The Division has presented a plan for additional EAGLE purchases in 1990 and 1991. The proposed equipment, software, and services will provide Division users with capabilities that are complementary to the Division's system and will enable the Division to achieve compatibility with other Departmental components and the core requirements of the next generation of office automation systems as identified in the Uniform Office Automation Project.

1991 Estimate	387	372	33,730

1/ The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this request is reflected in the following detail as a mandatory increase and built into the 1991 base.

Antitrust Division
Salaries and expenses
Justification of Adjustments to Base
(Dollars in thousands)

Amount

Mandatory increases:

1. Additional compensable day.. $122

The annual salary rate for Federal employees is based on 260 paid days. During 1991, there is one more compensable day (261) than 1990 (260). Appropriate personnel benefits are included in this figure.

2. 1990 full-year pay increase impact on 1991.. 1,141

This request provides for the full-year pay increase of 3.6 percent as contained in Section 619 of the general provisions of the Treasury, Postal Service and General Government Appropriations Bill, 1990, for civilian and military personnel to be effective in January of 1990. The Department will be required to absorb the total pay raise in 1990. The requested increase of $1,141,000 is the amount required for full year funding in 1991. Note: The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however this request is reflected in the detail as a mandatory increase and built into the 1991 base.

3. 1991 pay increase.. 429

For the first time, the Administration is proposing to include the costs of the pay increase effective in the budget year with the initial budget request. This request provides for 50 percent of the proposed four percent pay increase proposed for January 1991. The Department will be required to absorb half of the costs of this pay raise. The amount requested, $429,000, is the cost of the pay increase for approximately three quarters of the year assuming a 50 percent absorption.

4. Senior Executive Service pay increase.. 228

This request represents the 1991 cost of the pay increase for Senior Executive Service employees. This pay increase is to be effective in January of 1990, but will be absorbed completely for the first year. In 1991, an increase of $228,000 is necessary for this requirement. Funding for the executive level employees' pay raise is completely absorbed in both years.

5. Special salary rates.. 22

This request provides increases as authorized by law in 5 U.S.C. 5303. The Office of Personnel Management (OPM) has approved these rates for positions where retention and recruitment of qualified applicants is a problem. The Department's request represents coverage of 27 authorized special rates and five special rate surveys in progress. This request also includes an estimate for all positions, GS-2 through GS-9 and certain job specific positions GS-10 through GS-14, in the counties of Suffolk and Nassau and New York City, New York.

6. Health benefits.. 147

The Federal Employees Health Benefits Act (P.L. 93-246) provided that the government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1989, the actual contribution to health insurance increased 28 percent. The requested increase of $147,000 provides funds for actual increased costs from pay period 1 to pay period 2, projected for a full year.

Amount

7. Federal Employees' Retirement System (FERS) ... $251

This request provides for the additional funds in 1991 necessary to continue the implementation of the Federal Employees Retirement System Act of 1986, P.L. 99-335. The Act established a retirement program for Federal civilian employees and Postal Workers hired after December 31, 1983, who are covered by social security and for employees under the Civil Service Retirement System who chose to transfer to the new system. The increased retirement for 1991 is based on actual agency payments for the basic FERS annuity, Social Security and thrift savings.

8. GPO printing costs ... 17

The Government Printing Office (GPO) is currently projecting a seven percent increase over the 1990 printing costs of $243,000. An additional $17,000 will be required in 1991.

9. Employee data and payroll service ... 5

Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems, maintenance and payroll accounting, are based on the number of employee records maintained. The rate of $188.23 per record in 1990 will be raised to $199.52 per record for 1991. The change is based on anticipated mandatory increases of six percent for the operation of the Justice Employee Data Service. An increase of $5,000 will be required in 1991.

10. General pricing level adjustments ... 155

This request applies OMB pricing guidance as of December 6, 1989, to selected expense categories. The increased costs identified result from applying a factor of 4.2 percent against those subobject classes where the prices that the government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, transportation costs and utilities. Excluded from the computation are categories of expense where inflation has already been built into the 1991 estimates.

Total mandatory increases ... 2,517

Decreases:

1. Federal Employees' Compensation Act (FECA) ... 9

This decrease reflects billing provided by the Department of Labor for the actual costs in 1989 of employees' unemployment compensation. The 1991 amount will be $9,000 less than the 1990 base.

2. Federal Telecommunications System (FTS) ... -145

In 1991, the General Services Administration (GSA) is to have the FTS 2000 system fully implemented. At present, GSA projections indicate costs for current FTS minute usage charges will decrease from 34 cents per minute to 18 cents per minute. The requested reduction of $145,000 from a 1990 base of $308,000 reflects this decrease.

	Amount
3. GSA Rent	-450
GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. A decrease of $450,000 reflects the adjustment necessary to meet GSA rent needs.	
Total decreases	-604
Total, adjustments to base	$1,913

OPENING REMARKS

Mr. SMITH. Assistant Attorney General James F. Rill will testify on behalf of the Division. Mr. Rill, since this is your first appearance before the Committee we will place your biography in the record. You came from the law firm Collier, Shannon, Rill & Scott, is that right?

Mr. RILL. That's right, Mr. Chairman.

Mr. SMITH. Where is that located?

Mr. RILL. That is in Washington, D.C.

Mr. SMITH. Were you on the side of the defendants or plaintiffs?

Mr. RILL. Both.

Mr. SMITH. Both.

[Laughter.]

Mr. SMITH. The same law firm?

Mr. RILL. In the same law firm. Different cases, though, Mr. Chairman.

[Laughter.]

Mr. SMITH. Well, what side were you usually on?

Mr. RILL. Most often on the defendants' side, but I was on the side of the plaintiffs in soft drink litigation and electrical contractor litigation, shopping cart litigation, just for example; and on the side of the defendants in other litigation.

[The biographies follow:]

JAMES F. RILL

James F. Rill became the 38th Assistant Attorney General for the Antitrust Division on June 22, 1989, following unanimous confirmation by the Senate.

Prior to becoming Assistant Attorney General, Mr. Rill was an antitrust litigator with the law firm of Collier, Shannon, Rill & Scott for 30 years. He was an associate with the firm from 1959 to 1963 and a partner from 1963 until his confirmation as Assistant Attorney General.

He has been an active member of the American Bar Association and has held many positions in the Section of Antitrust Law. Most recently, he was the Chairman of the Section of Antitrust Law (1987-1988). He also was founder and member of the ABA Section of Antitrust Law Special Committee to Study the Role of the Federal Trade Commission (1988-1989).

He was born in Evanston, Illinois on March 4, 1933. He received his A.B. degree from Dartmouth College in 1954 and his J.D. degree from Harvard Law School in 1959.

Mr. Rill and his wife, Betsy Laws Rill, have two sons. The Rills reside in Potomac, Maryland.

JUDY L. WHALLEY

Judy Whalley is the Deputy Assistant Attorney General for Litigation at the Antitrust Division, U.S. Department of Justice. She supervises all criminal and civil litigation conducted by the Division's seven field offices and its Washington litigation sections. She has spent twelve years with the Antitrust Division, previously serving as the Deputy Director of the Office of Operations, Chief of the Chicago Field Office and Assistant Chief of the Special Litigation Section. In 1981-82, she was associated with the New York firm of Donovan, Leisure, Newton & Irving. She is a graduate of King Hall School of Law at the University of California, Davis.

SUMMARY STATEMENT

Mr. SMITH. Okay. Do you have a statement?

Mr. RILL. I do have a prepared statement, Mr. Chairman, that I would like to submit.

Mr. SMITH. We will include it in the record.

Mr. Rill. Thank you. If I may summarize, I would appreciate it.

I am pleased to be here to support the 1991 budget request for the Antitrust Division. With me today is Judy Whalley, a 14-year veteran of the Antitrust Division, who is Deputy Assistant Attorney General.

I, first of all, want to express my appreciation for the support that this Committee and Congress generally have exhibited for a strong antitrust enforcement program. And I want to assure you and the Committee that the Division intends to make enforcement of the antitrust laws increasingly prominent now, in 1991 and thereafter.

After 30 years of practice in the antitrust field, it should come as no surprise that I have a deep conviction that antitrust enforcement is a cornerstone of a free market economy, and it is because of, not in spite of, the Nation's antitrust ethic that we are as competitive and innovative here and in global markets as we are.

1991 BUDGET REQUEST

For 1991 the Division is requesting a direct appropriation covering 387 positions, in the amount of $33,730,000.

There are no program increases involved in the direct appropriation, because the direct appropriation is designed to be augmented by up to $20 million in filing fees paid by parties who notify us with respect to mergers pursuant to the Hart-Scott-Rodino Act. The $20 million and $33,730,000 would provide for an augmentation of staffing to a total number of 623 positions.

However, I want to send up a red flag right now and indicate that the receipt of such fees in fiscal year 1990 indicates the strong possibility that there will be a substantial shortfall. I will get into that later. Now, if I might, I would like to highlight the enforcement program of the Division.

CRIMINAL ENFORCEMENT

Criminal enforcement continues to be a primary priority of the Antitrust Division, and we want to send out three very strong messages to those who would commit antitrust crimes—that they will be sought out, they will be vigorously prosecuted, and they will be severely punished.

Overall, in fiscal year 1989 we filed 86 criminal cases. As a result of these cases and those carrying over from prior fiscal years, the Division captured over $30 million in fines, penalties, and civil damages.

So far in fiscal year 1990 we have collected fines and entered into plea agreements, accounting already—and that is in the first five months—for $24 million. We estimate that the caseload, the convictions, and the penalties and recoveries will significantly exceed those for 1989.

Under the current budget request, Mr. Chairman, the Antitrust Division is a national profit center.

I would add that one major focus of our criminal program is an attack on bid-rigging and price-fixing in connection with Government procurement. Thirty-two of our 157 open grand jury investigations are in the Government procurement area, and a recent

Special Studies and Analyses	...	...	...
Total..	175	150	155

Consulting and related services are used in the Antitrust Division only for services which cannot be performed in-house.

The President's Commission on Privatization included in its March 1988 report to the President the recommendation, among others, that the U.S. Postal Service be reviewed for privatization potential. This recommendation is commensurate with the goal of the bipartisan Commission to review the activities of the Federal Government and identify which are more appropriately part of the private sector and which should remain governmental.

In cooperation with other government agencies, the Division is studying the options available for improving postal service through greater use of competition. At present, postal services are largely provided by the U.S. Postal Service on a monopoly basis. The types of questions to be addressed include whether the postal service, or portions of postal service (geographically or functionally defined) are what economists call "natural monopolies"; whether elements of postal service might be provided more efficiently through "contracting out" or through private competition; and how, if competitive reforms were introduced, other objectives (e.g., adequate and reliable nationwide service) could be assured. The Division was asked to serve as the focal point for the study because of the importance of competitive factors in the analysis and because of its experience with programs to foster competition in other areas of the economy.

In 1989, funds in the amount of $68,000 were obligated for outside professional services to augment the Division's expertise in the area of postal and economic reforms.

Funds identified above are dedicated to the Termination and Prevention of Private Cartel and Competition Advocacy Programs.

Total	...	...	152	35	17	2,644	35	35	2,678	...	18	34

Goods or Services Provided:

The Antitrust Division provided financial analysis services to the Civil and Lands Divisions in 1989. In 1990 and 1991, resources pursuant to P.L. 101-162 will be collected from premerger notification filing fees. A portion of these fees will provide additional workyears toward the Division's highest priority program. The deterrence of price fixing and bid rigging saves American consumers hundreds of millions of dollars annually.

Justification of Increase/Decrease:

The additional $34,000 identified as an increase in 1991 will be used to offset price increases anticipated in 1991 not otherwise provided for in the estimates.

Program: Preservation of competitive market structure

Source of Reimbursement:	1989 Actual Perm. Pos.	1989 Actual WY	1989 Actual Amount	1990 Estimate Perm. Pos.	1990 Estimate WY	1990 Estimate Amount	1991 Estimate Perm. Pos.	1991 Estimate WY	1991 Estimate Amount	Increase/Decrease Perm. Pos.	Increase/Decrease WY	Increase/Decrease Amount

Total	...	...	75	201	174	17,105	201	193	17,322	...	19	217

Goods or Services Provided:

The Antitrust Division provided legal advice to the Department of State regarding landing rights at Heathrow Airport in 1989. In 1990 and 1991, resources pursuant to P.L. 101-162 will be collected from premerger notification filing fees. Nearly the entire Structure Program is funded from filing fees in 1990 and 1991. Additional fees made available through earnings will be applied to meeting escalating workload in this program.

Justification of Increase/Decrease:

The additional $217,000 identified as an increase in 1991 will be used to offset price increases anticipated in 1991 not otherwise provided for in the estimates.

Goods or Services Provided:

In cooperation with other government agencies, the Division is studying the options available for improving postal service through greater use of competition. At present, postal services are largely provided by the U.S. Postal Service on a monopoly basis. The types of questions to be addressed include whether the postal service, or portions of postal service (geographically or functionally defined) are what economists call "natural monopolies"; whether elements of postal service might be provided more efficiently through "contracting out" or through private competition; and how, if competitive reforms were introduced, other objectives (e.g., adequate and reliable nationwide service) could be assured. The Division was asked to serve as the focal point for the study because of the importance of competitive factors in the analysis and because of its experience with programs to foster competition in other areas of the economy.

Justification of Increase/Decrease:

No additional funds were made available by other government agencies for this project in 1990. The study is expected to be completed before 1991.

review of data by our economic analysis group suggests that through deterrence and similar influences such enforcement saves the taxpayer hundreds of millions of dollars annually.

Congressional support of our criminal enforcement program is vitally important. We have legislation pending that would increase the corporate maximum criminal fine to $10 million per count. That legislation has passed the House of Representatives. It is strongly endorsed by the Attorney General, and we are very hopeful that it will pass Congress in this session.

MERGER ENFORCEMENT

Merger enforcement is the other primary goal of the Antitrust Division. It is vitally important to competition at home and competitiveness in international markets that mergers that may raise prices and reduce innovation be prevented.

At the same time, of course, mergers that enhance competition and efficiency should not be unreasonably, unnecessarily barred.

Our merger docket right now is very full, and I expect it will stay that way. We currently have open 27 full-scale investigations and are litigating seven transactions. Five merger challenges have been filed already in fiscal year 1990, which is the same number that was filed in all of fiscal year 1989.

Moreover, the number of challenges actually filed in the merger field substantially understates the effect of our merger enforcement efforts. In addition to challenges, quite often when the Antitrust Division undertakes a significant in-depth investigation, the staff indicates a level of concern that causes the parties to either abandon the merger or significantly restructure it so as to remove the anticompetitive characteristics that would otherwise cause a challenge. That has happened in four instances already in fiscal year 1990.

OTHER ENFORCEMENT PRIORITIES

In addition to criminal and merger enforcement activity, we are devoting increased attention to antitrust concerns in the regulated and newly deregulated industries. For example, in the transportation field we have asked the Interstate Commerce Commission to remove a major part of the antitrust immunity from the Rocky Mountain Motor Tariff Bureau because of cartel behavior which we don't think should come under the umbrella of an antitrust exemption.

We filed a similar petition with respect to proposed collusive activity on the part of the Household Furniture Freight Forwarders Bureau.

The airline industry is attracting increased attention from the Antitrust Division. In addition to ongoing investigations in 1990 the Division challenged the acquisition of Eastern Airlines' Philadelphia gates by USAir. The parties backed away. Those gates were transferred to Midway, a new entrant into Philadelphia with a new hub possibility and enhanced competition.

In addition, in 1990, the Division moved to prevent the joint venture acquisition of DATAs computer reservations system—that is the Delta computer reservations system—by Sabre, which is the American Airlines computer reservation system. The parties backed away from that one as well.

Public concern with competition in the airline industry is very marked, and our continuing attention is something of which you can be assured.

We are also focusing antitrust scrutiny on areas of the economy that, we say erroneously, have thought that they were not covered by antitrust enforcement. The health care area, a very significant part of the economy, is one which attracts considerable attention, one in which we have recently taken criminal enforcement action for the first time in 50 years.

PREMERGER NOTIFICATION FILING FEE REVENUE

Let me turn now, if I may, to the danger we see on the horizon with respect to the shortfall of Hart-Scott-Rodino premerger filings and the effect that has on our budget.

As I indicated, we anticipated that there would be a $20 million return from the Hart-Scott-Rodino premerger filing fees, an amount that would have augumented our budget by approximately $5 million. And that was, I believe, the intent of this Committee and of your Senate counterparts.

First, the fees did not go into effect until after two months had passed in fiscal year 1990. Second, and indicative of what may be a more chronic problem, the premerger notification filings are currently running at a pace which suggests that we will not have income of more than $14 million, or a $6 million shortfall, for fiscal year 1990, and we have reason to believe, based on projections, that the problem will continue to be severe for 1991.

We are, of course, continuing to track it and will keep the Committee advised. But the prospect for our already-strained antitrust enforcement resources is certainly not favorable.

That concludes the summary of my prepared remarks, Mr. Chairman. I would be pleased to answer any questions that you or Congressman Early may have.

[Mr. Rill's prepared statement follows:]

ANTITRUST DIVISION
STATEMENT OF THE ASSISTANT ATTORNEY GENERAL
JAMES F. RILL

BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE, THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the Subcommittee:

I am pleased to be here in support of the Antitrust Division's 1991 budget request. With me today is Judy Whalley, Deputy Assistant Attorney General in the Antitrust Division.

I want first to express the Division's appreciation of the strong support of this Subcommittee and the Congress generally for our antitrust enforcement programs. The Division intends to make enforcement of the antitrust laws increasingly prominent in 1991 and thereafter. Competition is the principal driving force of the American free-market economy, and protecting competition is the key to promoting American innovation and strength in domestic and international markets. Sound enforcement of the antitrust laws is the surest means of protecting competition, to the benefit of consumers and business alike. We are committed to such enforcement, and are confident that Congress will see to it that we have the resources we need.

FY 1991 BUDGET REQUEST

For fiscal year 1991, the Division is requesting 387 positions, 372 workyears and a direct appropriation of $33,730,000. These figures include $1.9 million for mandatory cost increases in 1991. No program increases are requested. The Division's direct appropriation would be augmented by up to $20 million in fees that must be paid by parties filing premerger notifications under the Hart-Scott-Rodino Act. Experience thus far with the receipt of such fees in FY 1990, however, indicates the possibility that they may be less than projected, resulting in a revenue shortfall in the current fiscal year and perhaps in 1991. I will return to our concerns here in a moment. First, however, let me briefly describe our antitrust enforcement activities, and their intended direction for FY 1991 and beyond.

CRIMINAL ENFORCEMENT

Criminal antitrust enforcement continues to be of primary importance to the Antitrust Division, and deterrence will be its predominant theme. We are taking every measure to alert potential violators to three basic facts: Criminal antitrust violators will be sought out, vigorously prosecuted and severely punished.

The foundation of deterrence is tough and successful criminal enforcement. Our emphasis on vigorous investigation and prosecution of price fixing, bid rigging, market division and other variants of cartel behavior is well known and well documented. Overall, during FY 1989, the Division filed 86 criminal cases involving 88 corporations and 76 individuals. As a result of these cases and others carrying over from previous fiscal years, in FY 1989, the Antitrust Division captured over $30 million in fines, penalties and civil damages.

Our criminal enforcement program is wide-ranging. One major focus, however, is an intensive probe of bid rigging and price fixing in connection with government procurement. Currently, 32 of the Division's 157 open grand jury investigations are in the government procurement area. A recent review of available data suggests that such antitrust enforcement saves the federal government hundreds of millions of dollars annually.

Congress' support of our efforts to deter criminal antitrust violations and its assistance in this regard are invaluable. Important legislation is pending to raise significantly the statutory maximum fine for antitrust crimes. The House has already passed a bill that raises the statutory maximum fine in the Sherman Act to $10 million for convicted corporations. The Attorney General has strongly endorsed this legislation and we hope it will be enacted as soon as possible in the current session.

MERGER ENFORCEMENT

Enforcement of the antitrust laws against anticompetitive mergers also continues to be one of the Division's major priorities. It is vitally important both to competition at home and competitiveness in international markets that mergers that may raise prices or reduce innovation and output be prevented. At the same time, mergers that enhance competition and efficiency should not needlessly be prevented.

The Antitrust Division devotes substantial resources to preliminary screening and evaluation of the many premerger notifications filed with the Department pursuant to the requirements of the Hart-Scott-Rodino Act. During an average month, the Division reviews approximately 220 such notifications, although that number can vary substantially and occasionally taxes our ability to keep up. Coordinating our efforts with those of the FTC, we seek additional information about and thoroughly investigate any reported transaction that may threaten competition. We also investigate mergers and acquisitions that are not reportable under Hart-Scott-Rodino on our own initiative or on the basis of third-party complaints.

Our merger docket is currently quite full, and I expect it to stay that way. We are conducting full-scale investigations of the likely competitive effects of some twenty-five proposed mergers, and are litigating our challenges to seven transactions. I should also note that the number of merger cases filed does not fully reflect the benefits of our enforcement efforts. In addition to the litigated cases, the Division's policy of conducting thorough premerger investigations of suspect transactions has resulted in many potentially anticompetitive mergers being abandoned or restructured by the parties so as to eliminate competitive problems after the Division's concerns are voiced.

OTHER ENFORCEMENT PRIORITIES

The Antitrust Division will continue to devote increased attention to promoting competition in recently deregulated industries. A proactive antitrust enforcement agenda here should not, of course, be confused with intrusive government regulation. Strong antitrust enforcement, on the other hand, will benefit consumers, encourage innovation and enhance quality and output at competitive prices. A good example of a recently deregulated industry in which competition and antitrust enforcement are crucial is air transportation. Since deregulation was effectively completed in 1989, we have successfully opposed the transfer of scarce airport facilities that could have increased air carrier dominance in a "hub" airport, the transfer of international route authorities that could have substantially increased concentration in international air transportation markets, and the anticompetitive merger of two major airline computer reservation systems. Public concern with the future of competition in air transportation remains strong, and we will pay due attention to the industry accordingly.

With respect to industries that remain under government regulation, the Division intends to continue its role as a competition advocate. Despite increasing recognition of the benefits of competition generally, some industries continue to engage in anticompetitive practices possibly sanctioned by obsolete or ineffective regulatory schemes. We intend to devote increased resources to identifying such practices and advocating corrective measures.

We are also increasing our attention to areas in which antitrust scrutiny historically has been somewhat limited. Health care is a case in point: We are focusing on protecting the emergence of competitive alternative systems for the delivery of health care services--health maintenance organizations, preferred provider organizations and the like.

PREMERGER NOTIFICATION FILING FEE REVENUE

Before closing, I would like to return to the central business of the Subcommittee today--the Division's proposed FY 1991 appropriation--and the significant role that premerger notification filing fee revenue has come to play in our budgetary planning. As a result of congressional action last year, $15 million of the Division's direct funding was replaced with up to $20 million to be derived from premerger filing fees. While this calculus was intended to result in a net increase of $5 million in funds available to the Antitrust Division in FY 1990, actual fee returns are lagging behind what is necessary to support the Division's base staffing, let alone fund the staffing increases that the additional $5 million was to provide. This possible revenue shortfall is of concern for the current fiscal year, and is of concern for FY 1991. Budget authority requested for 1991 from all sources will support 623 positions and 600 workyears. However, nearly 40 percent of these positions--236 positions and 228 workyears--are dependent on the collection of premerger notification filing fees.

Filing fee returns thus far in FY 1990 are well below levels projected when the Division's 1990 appropriation was being considered. A number of factors could be at work here, although I suspect the major cause of the drop-off in filings is simply periodic merger activity fluctuation. We remain hopeful that the filing fee revenue shortfall will be temporary, and we will keep the Committee advised if collections remain low.

Mr. Chairman, this concludes my prepared remarks. I express again our appreciation of the Subcommittee's support, and would be happy to address any questions that you or the other members may have.

COMPARISON OF 1990 ESTIMATE WITH PRIOR YEAR FUNDING

Mr. **SMITH**. Well, then, you expect to have the $33 million in FY 1990, plus $14 million up to $46 million in 1991. How does that compare as a base with, say, 1989 and 1987?

Mr. **RILL**. That is comparable to the prior year's base.

Mr. **SMITH**. So it would be practically level, program level? It would be substantially level then?

Mr. **RILL**. Not accounting for cost increases.

Mr. **SMITH**. Oh, well, that would be in the base, though. So it would be less than the base, then.

Mr. **RILL**. It would be actually slightly less than the base, yes, sir.

ANTITRUST SUPPORT OF PLAINTIFFS AND DEFENDANTS

Mr. **SMITH**. Is the Antitrust Division taking sides on behalf of the defendant in any civil actions at the present time?

Mr. **RILL**. We are about to file, I think, a very important brief in a matter which should become public in the very near future on behalf of the plaintiffs. I don't know offhand of any action in which we have—well, there are two Supreme Court cases, frankly both of which I am recused on, in which the Division has filed briefs on behalf of the defendants. One is the Hasbrook case, and the other is the USA Petroleum case.

Mr. **SMITH**. So there are two, then, that the Department is still engaged in?

Mr. **RILL**. These were filed before I got there. Well, one was before I got there and one was after I got there, but I couldn't have taken a position on it anyway.

Mr. **SMITH**. Well, as you know, 95 percent of antitrust is in the civil area, by private litigants. I was shocked a few years ago to learn that the Antitrust Division was going to start taking action on behalf of defendants in civil antitrust cases. That action took place under the last administration.

We have been through a period here in Congress where I think the feeling is justified that the Antitrust Division just wasn't doing its job. On top of that for the Antitrust Division to make the announcement that they are going to act on behalf of defendants in civil cases is just more than we could stomach.

Is that policy continuing?

Mr. **RILL**. Mr. Chairman, without looking backward and making an assessment as to whether or not, in fact, that was the policy, my policy will not be to take sides. My policy will be to enter into those cases where I think there is an important issue of law. And whether it's the plaintiff or defendant on whose side we come in, if we come in, it will be on a case where there is an issue of great significance and where I think we will have something to offer. It will not be a policy to take sides with either side of an antitrust case.

In fact, I think that one area where the division in the past has come in on the side of the plaintiffs has been particularly in the area of Government, the so-called state action doctrine, which would immunize defendant's action. And there, ordinarily the Government has taken a position, I can think of the *Patrick* v. *Burgett* case, on the side of the plaintiff.

DIVISION OF WORKLOAD WITH THE FEDERAL TRADE COMMISSION

Mr. SMITH. Now, you and the FTC have sort of an agreement with regard to mergers. You look at some types of cases and they look at others to determine whether to lodge an objection.

Have you had time to review that and do you think your division of responsibility is appropriate?

Mr. RILL. I think it's worked very well. We have over time—and, of course, I am learning more about this—developed a division based primarily on experience and involvement in various industry lines. I think the current division, which works out from a resource standpoint of their doing about half the work and our doing about half the work, is coming along very efficiently, and I think it is operating in our interest and in the public interest.

Mr. SMITH. In recent years, with all these acquisitions we have had, there doesn't appear to be a clean line of responsibility. By the time some corporations acquire two or three other companies, one of them falls in your bailiwick and one in FTC's. How do you work that out?

Mr. RILL. It depends on the market where the acquisition actually takes place. I mean a company may be in, say, half a dozen markets, and another company that it is acquiring may be in, say, four or five others.

Mr. SMITH. Well, suppose one of them is in automobiles and one of them is in farm machinery.

Mr. RILL. Well, then, perhaps we would have to talk about where the major impact would be, if, for example, we had farm machinery and they had automobiles.

Mr. SMITH. What if it may be the other way around? But go ahead.

Mr. RILL. No, they have automobiles.

Mr. SMITH. Oh, do they?

Mr. RILL. They have GM, Toyota.

Mr. SMITH. All right.

Mr. RILL. And we did farm machinery. But in a case like that I think we would have to do one of two things: either collaborate on the issue or, more likely, make a quick assessment to see where the principal impact on market structure and on the consumer would likely be, and let that agency have the benefit of the other's expertise.

Mr. SMITH. How do those who are in the acquisition process know who is going to do what?

Mr. RILL. They are well counseled, Mr. Chairman. They by-and-large find out which way it's going to go.

Mr. SMITH. They find out which one of you is going to take care of the case?

Mr. RILL. Pardon?

Mr. SMITH. Can they find out rather rapidly which one of you is going to handle it?

Mr. RILL. Right. Actually, we have published a jurisdictional breakdown. It's either published or certainly generally available by industry code.

Mr. SMITH. When they see the following categories, how soon can they find out which one they're in?

Mr. RILL. Almost instantly.

Mr. SMITH. Can they?

Mr. RILL. Sure.

PREMERGER NOTIFICATION FILINGS

Mr. SMITH. Now, with regard to the shortfall in Premerger Notification Filing fees, do you think that is a fairly permanent situation, or do you think next year they're going to go up again?

Mr. RILL. I don't have a crystal ball, but I am very concerned that it could be a chronic situation.

The magnitude of the situation I don't know. Let me elaborate on that for a moment, if I may.

What appears to have happened is that those types of mergers that involve hostile takeovers, takeovers financed by high-yield bonds and LBOs, have tended to decline very substantially. That is a very publicly well-known fact. And those are a source of filings and a source of filing fees. Whether those will come back or not I have no idea. What I read in the newspapers is that this may be a more steady decline.

What has not declined, as I understand it—I have some newspaper articles here that I would like to make available to you if you would like them—are strategic mergers. Those are the mergers where the company acquires another for either competitive reasons or because they are in the same industry and there are certain synergies. They are, if you will, the real mergers. It is those mergers, of course, with which we and the FTC have the most concern.

The fact is it may well be likely that with the decline in what is called the financial or high-yield mergers there could well be an increase in the number of strategic mergers. As companies laden with debt attempt to sell off certain assets, the most likely purchasers of those assets could well be competitors looking either to, frankly, buy market share, with which we would be very concerned, or buy synergies, at which we would still want to take a close look.

So I don't see at all that the decline in filings is going to produce any decline in our workload, and I have spoken with Mrs. Steiger, Chairman Steiger on this subject. She quite agrees with me.

Certainly, our experience at the end of 1989 and throughout the first five months of fiscal year 1990 indicates an increase in our merger analysis, our merger caseload, our merger litigation responsibilities, notwithstanding the falling-off in filing fees.

I have these articles here if you would like to have them, Mr. Chairman.

FILING FEE AMOUNT

Mr. SMITH. How much is the filing fee?

Mr. RILL. The filing fee is $20,000 per filing.

Mr. SMITH. Is that considered insignificant or not?

Mr. RILL. Now I have to refer to my private practice experience. I think for virtually every merger, $20,000 in a filing fee is not going to make a determination as to whether or not the merger will go forward. I think that would be most unlikely.

Mr. **Smith**. Well, in the case of bankruptcy fees, we know that they are combining, and it has made some difference as to how many filings there are. But that is not true in this area?

Mr. **Rill**. I certainly have no way, no empirical basis for knowing, but based on my own experience in looking at the magnitude of the mergers that we're involved with and what capital is involved with the companies, that the $20,000 is not a great amount.

If I could just give one quick anecdote. We had a cascade of filings immediately before the fee took effect, which I think lost us some fees. And I can imagine that the law firms went back and said, "Gee, I saved you guys all this money." I hate to wonder what the fees of the law firms were, to speed up their filing so that they could avoid paying the fee.

[Laughter.]

Mr. **Rill**. But again, I don't have any empirical evidence to support that either.

PRIORITY OF ANTITRUST ENFORCEMENT RESOURCES

Mr. **Early**. Mr. Rill, 12, 13, 14, 15 years ago, whenever this committee reported out a bill with a recommendation for antitrust, we couldn't put in enough money. No matter what we brought to the House floor, it was always increased.

Now, with regards to antitrust, no matter what we do, that's one of the first places people want to decrease. Why?

Mr. **Rill**. I don't know the answer to that, and I certainly don't think that it is justified, purely from a financial standpoint, as I have indicated. Given the filing fee offset against direct appropriation, the Antitrust Division is a profit center. Given the studies and analyses we see, for example, in the Government procurement area, the deterrent effect of our program saves hundreds of millions of dollars for the people.

From the standpoint of philosophy, there is a strong consensus in this country—there should be a stronger consensus in this country—in favor of antitrust as a cornerstone of our economic and competitive posture here and in the world.

We do have a vigorous antitrust enforcement program and it is strongly supported by the Attorney General. Mr. Early, I can't answer your question.

BOXING MONOPOLY

Mr. **Early**. It should be the backbone of this. One industry where I think you've failed terribly is boxing. I have never seen a bigger monopoly. I have never seen any major multimillion-dollar bout where both fighters haven't had to commit to one particular trainer to produce the next ten fights whoever wins. I think it's terrible.

Mr. **Rill**. We would be pleased, very pleased, to get any information you have in that respect. I have not taken a look at it myself.

Mr. **Early**. Well, I just get it from the newspapers.

[Laughter.]

Mr. **Early**. I mean I just read that the new heavyweight champion is committed for the next three fights to a guy that represented the other guy. That is a monopoly. That's crazy.

Mr. **Rill**. I know.

HEALTH CARE INDUSTRY

Mr. **Early.** It's a little industry, but I really think it's perceived as one of the areas where we have not done anything.

In your statement you say that you are going to get into health. If there is a place you should be, it's here. Take dialysis, that's a monopoly. I mean we don't do a very good job on that.

I would like to get opinions from the professionals, like you, in antitrust. Mr. Stark from California has a bill. How we can let doctors set up their own laboratories for tests. We're going to have every patient going to have that test.

To try to get control of health costs, there is an awful lot of things I think your division can be doing.

Mr. **Rill.** A very high priority, Mr. Early.

Mr. **Early.** I appreciate it. I really think you're on the right track because we have got to reduce some of the physician costs in health care delivery. And I don't want to say anything about lawyers.

[Laughter.]

Mr. **Rill.** They are not immune.

[Laughter.]

TAX ON SECURITIES EXCHANGES

Mr. **Early.** On the mergers, again, as a layman nonlawyer, there just seem to be too many mergers. I would think, and I would like your opinion if you can—but if you can't, fine—I would think the best way we could address mergers would be to put a tax on securities transactions.

Mr. **Rill.** Purely from an antitrust standpoint that is a neutral issue. From the standpoint of competition policy, I question, without a lot of knowledge, whether that is an appropriate course of action, whether the market is better to resolve those types of nonanticompetitive transactions.

Mr. **Early.** That would simply reduce the number of transactions. There are just acres of transactions. That article that I referred to, with the U.S. Attorneys on that drug thing, there is an office several blocks on Wall Street, where there were $3 billion in transfers every minute of the day.

With mergers and all this and that, I don't know how the antitrust——

Mr. **Rill.** I guess my response to you is that I don't have the expertise to know the economic impact of what you are proposing. I have to confess in all candor of being somewhat skeptical, but not with a lot of knowledge.

I think that what is critical is that we take a look at those mergers and acquisitions which under our merger guidelines threaten a probability of either increased prices above competitive levels or decrease in supply, and take a strong position as outlined in the guidelines that will prevent those types of mergers and acquisitions from taking place. And that is very resource-intensive. It's very human resource-intensive.

IMPACT OF REDUCED FILING FEE EARNINGS

Mr. **Early**. The Chairman has more legislation with regards to securities exchanges. So he will tap me tomorrow and say, "You're wrong on that."

But I think we should look at that.

For the record, Mr. Rill, with regard to that delay or that shortfall in the fees that were supposed to roll over, tell us what effect that will have and whether the chairman should do something to compensate for that?

Mr. **Rill**. We are working on that right now. We will certainly put into the record our projections, what that will mean in terms of workforce. And we are analyzing now what kind of assistance we may need.

Mr. **Early**. It's just a two-month delay. That would be one-sixth of it.

Mr. **Rill**. Yes, but it's not——

Mr. **Early**. That would be three.

Mr. **Rill**. It's not just that, Mr. Early. It's also that the pace of filings that have taken place in January and February is well below past trends. And if you continue those trends, we're going to come in well below the $20 million that Congress intended us and the FTC to have to enforce the antitrust laws.

[The information follows:]

Filing Fee Shortfall

Current trends and market conditions indicate that Antitrust Division revenues from Hart-Scott-Rodino ((HSR) premerger notification filing fees will be substantially below the 1990 and 1991 authorized levels of $20 million for each receiving agency. Since the fee became effective in late November 1989, HSR-reportable transactions have dropped to less than 65 percent of the historical rate. At this current rate, the Division expects to obtain only about $14 million in fees in 1990, and only $17 million in fees in 1991.

A number of factors are no doubt influencing the downward trend in merger transactions. Most prominent among them is the failure in the so-called "junk bond" market, which financed many merger transactions since 1984, and trends in financial markets and the economy generally. These factors have substantially reduced the number of takeovers, leveraged buy-outs (LBO's) or other "financial" mergers. Such mergers are bonafide merger transactions under the law, but they do not form the core of transactions which require labor-intensive review by the Division. "Strategic" mergers, generally horizontal mergers that combine competitors, and thus require intensive, time-consuming investigation by the Division, continue with no discernible abatement. Merger investigations by the Division have increased rather than decreased this year. In short, the Division's workload has not declined, but its financing has.

The Division will have funding available in 1990 of less than $46 million as compared to authorized funding of almost $52 million, a shortfall of $6 million. With such reduced resources, the Division will be unable to fund even base staffing, and certainly not the vital increase in staffing intended by the Congress from the net filing fee increase. The same holds for 1991 unless trends improve or other measures are taken.

Effective antitrust enforcement results in direct financial savings to the consumer and enhances the American economy in general. Costs of the Division's operations are insignificant in comparison to these benefits. If resource levels are inadequate, however, the result is a decline in deterrence and a downward spiral in economic returns.

PREMERGER CHALLENGES

Mr. **Early**. And one final thing, Mr. Chairman.

In your statement with regards to the 25 actions that you've got going now in which you are going to—

Mr. RILL. Actually 27 now, since this was prepared.

Mr. EARLY. Do you try to settle those out of court?

Mr. RILL. Yes. We like to see a transaction adjusted, the parties taking the offending assets out of the transaction so that there is a good reason for the transaction to go forward and it is not anticompetitive. We can have our concerns and the concerns of the public resolved, and the plaintiffs can go about their business.

Mr. EARLY. Well, as a bureaucrat, I really think you're susceptible to being criticized. But this member thinks that everyone wins if you can settle out of court. The more you can settle, the more criticism you get but probably the more good you do.

Mr. RILL. We have had some good, I think, procompetitive results through settlement without the need for litigation, just during my time, which is only, what, eight months. And I expect they will announce possibly tomorrow it will even be better.

Mr. EARLY. That's good.

Thank you, Mr. Chairman.

MERGER WORKLOAD

Mr. SMITH. Well, does this reduction of filings result in a reduction of the workload?

Mr. RILL. No, it really doesn't, Mr. Chairman.

Mr. SMITH. Why?

Mr. RILL. For the reasons I was trying to explain. The filings that are down, the mergers that are down, are the mergers that are not the horizontal mergers for the most part, the very most part, with which we would have the most concern from the standpoint of antitrust.

They are the LBOs, the high-yield bond mergers, the takeovers in different markets. We look at them, we get filings on them, but they're not what the economists would call the strategic mergers, which typically involve competitors. And those mergers are not down. And this is why I have the articles that will support that position. Those mergers are not down. Our workload in evaluating those mergers continues to be up, up at a recent high, high level for recent years, and our caseload is up.

Mr. SMITH. Do you think this directly involves junk bonds and their attractiveness then?

Mr. RILL. Yes, I do. I think that's exactly why it's down. I am not an economist. I am certainly not an investment banker. But from what I read and what I see, that is exactly the reason. That isn't going to do a bit to reduce our workload.

RENEWED ANTITRUST ENFORCEMENT

Mr. SMITH. Well, as Mr. Early said, there was a time when we had no trouble at all getting support for the Antitrust Division. Then for a few years we got the feeling we were just wasting our money, especially when we heard they might even be spending it against the interests of antitrust. When I say antitrust, I always think of small business.

Our ability to get the funds you need depends somewhat upon eliminating the impression that antitrust is not doing its job. I hope that we are seeing a different attitude so that we can help you get the funds you need. That depends on whether or not we are confident that you really intend to follow the law the way it was for 30 or 40 years, instead of using the agency to try to prevent antitrust actions.

Mr. **Rill**. Mr. Chairman, I am totally committed to the fact that there cannot be a strong Government antitrust enforcement program that is not backed up by a strong case enforcement effort.

Mr. **Smith**. Okay. Thank you.

ARTICLES ON CURRENT MERGER TRENDS

Mr. **Early**. Mr. Chairman?

Mr. **Smith**. Yes?

Mr. **Early**. Mr. Rill, would you just leave those articles with the staff, and I would like to have a copy for my own staff?

Takeover Drought Parches Dealmakers

By Randall Smith
And David B. Hilder
Staff Reporters of The Wall Street Journal

NEW YORK–The slowdown in takeovers is shaking up the ranks of Wall Street's top dealmakers.

In recent months, jitters in the junk-bond market have put the brakes on many corporate mergers and buy-outs, particularly those sparked by corporate raiders or other hostile bidders who depend on the high-risk, high-yield bonds for financing. The total of announced takeover deals in 1989 plunged 33% to $388.3 billion from $576.6 billion in 1988.

And that, in turn, is cutting most into business at major investment banks–especially **Goldman, Sachs & Co.**– that frequently defend targets of hostile bids and at the firm that specialized in advising attackers, **Drexel Burnham Lambert Inc.**

Goldman, which ranked as Wall Street's No. 1 merger adviser for the past three years, tumbled to No. 4 in 1989, according to Securities Data Co. Goldman advises a long list of blue-chip corporate clients on all strategic decisions including how to respond to a bid, but won't advise hostile bidders.

To be sure, Goldman still ranks first in dollar volume of announced deals that haven't closed and second in number of deals closed in 1989. Goldman acknowledges the drop-off in raids has reduced its defensive assignments, but says those account for between 10% and 20% of its merger work.

Mike Overlock, head of mergers at Goldman, notes that the firm advised on some of the year's most important strategic corporate acquisitions, including two giant pharmaceutical mergers and Ford Motor Co.'s acquisition of Jaguar PLC.

At the same time, investment banks **Morgan Stanley & Co.**, **First Boston Corp.** and **Wasserstein, Perella & Co.**–which can "create" deals by aggressively hawking takeover ideas to a wide range of corporate clients–are seeing their market share hold up best.

Wall Street's Biggest Dealmakers

Dollar volume of transactions completed in 1989

1989 RANK	FIRM	(In billions)	1988 RANK
1	Morgan Stanley*	$114.0	3
2	First Boston	82.3	2
3	Wasserstein Perella*	79.7	6
4	Goldman Sachs	66.5	1
5	Drexel Burnham Lambert*	61.4	8
6	Merrill Lynch*	56.4	9
7	Lazard Freres*	53.5	7
8	Shearson Lehman Hutton	52.7	4
9	Dillon Read*	52.2	11
10	Salomon Brothers	31.6	5

*Advised on RJR Nabisco buy-out, $30.6 billion

Source: Securities Data Corp., Newark, N.J.

Those three firms topped the rankings of Wall Street's most active merger advisers compiled by Securities Data, based on the dollar volume of transactions completed in 1989. The count includes recapitalizations and stock buy-backs. It doesn't include deals that are pending. For deals that have more than one adviser, each firm gets credit for the full amount)

Merger advice has been one of the most lucrative businesses left on Wall Street, which is in the midst of a financial slump, including a slowdown in stock and bond trading, the near-collapse of the junk-bond market and a dearth of new securities issues.

The near-collapse of the junk-bond market in 1989, plus a drastic falloff in leveraged buy-outs and other debt-financed acquisitions, spells particular long-term trouble for Drexel, whose mergers advisory practice in the mid-1980s depended largely on takeovers financed by junk bonds.

However, Drexel's 1989 standing held up thanks to several deals announced in 1988 but which closed in 1989, including the record buy-out of RJR Nabisco Inc. The RJR deal counts for $30.6 billion in the standings because $5 billion in existing RJR debt had to be refinanced.

The big winner of 1989 was Morgan Stanley, which captured the top ranking after three straight years of placing third behind Goldman Sachs and First Boston. Merger boutique Wasserstein Perella finished third, up from No. 6 in 1988, although 1989 was only the firm's first full year of operation.

First Boston did surprisingly well, despite its having lost superstar merger adviser Bruce Wasserstein and its not being involved in the mammoth RJR Nabisco deal.

Here is a snapshot of some of Wall Street's top merger makers:

MORGAN STANLEY. The firm hasn't been held back by having three strong-willed merger chieftains: mergers head Eric Gleacher, investment banking leader Joseph Fogg and buy-out boss Donald Brennan.

Rivals attribute this year's results to Mr. Gleacher, a Lehman Brothers alumnus and aggressive former Marine who built

Please Turn to Page C19, Column 1

Deal Drought Parches Merger Firms, Some More Than Others

Continued From Page C1

up the Morgan Stanley merger department. The firm scored one high-profile coup by gaining a big price for the sale of RJR Nabisco's European food businesses.

This year's other big deals for Morgan Stanley included advising Squibb Corp. in its $12 billion merger with Bristol-Meyers Co., **Grand Metropolitan** PLC on its hostile takeover of Pillsbury Co. and **Hospital Corp. of America** on a $4.9 billion buyout.

FIRST BOSTON. The merger department built by Bruce Wasserstein and Joseph Perella has thrived without them, in part by living off the robust book of business they accumulated. The question is how much can those who stayed, led by investment banking chief James Maher and mergers co-head Robert Cotter, expand on that franchise—or will it erode?

First Boston's strategy has been to deploy its vast legions to execute more deals of all shapes and sizes. The CS **First Boston Group** unit has also written big checks for bridge loans to make deals, but stubbed its toe when client **Ohio Mattress** Co. couldn't refinance its bridge by selling junk bonds. First Boston's big holding of the junk bonds of client **Campeau** Corp. also hurt the firm and may curb its appetite for taking financial risks to get business.

WASSERSTEIN PERELLA. Bruce Wasserstein is one of the few mergers advisers who can, it is said, make a deal happen with the force of his personality. His only peer in that ability: Felix Rohatyn of **Lazard Freres** & Co.

Greatest hits of 1989: Wasserstein Perella advised Beecham Group PLC in a merger giving Beecham control of SmithKline Beckman Corp., advised little-known Alfred Checchi in his takeover of Northwest Airlines parent **NWA** Inc. and advised Time Inc. on its merger with Warner Communications Inc., which was upheld in court despite a challenge by Paramount.

Criticism has arisen about the outcome of some Wasserstein deals, notably Campeau Corp.'s acquisition of Federated Department Stores Inc. that left Campeau mired in serious financial difficulty.

GOLDMAN SACHS. Even rivals say Goldman emphasizes the overall relationship with corporate clients over strong-arming them into specific deals.

Many investment bankers chalk up Goldman's 1989 drop-off to sheer chance; others say it reflects a less aggressive, less opportunistic orientation.

On the other hand, Goldman has a number of sizable defense assignments under way that could turn into big deals this year: **Chevron** Corp., **B.A.T Industries** PLC, **Campbell Soup** Co. and American Airlines parent **AMR** Corp.

MERRILL LYNCH. The firm was a pioneer in making bridge loans and selling junk bonds to win merger assignments. Those abilities got Merrill into both the RJR Nabisco deal and the Time-Warner merger. Although the importance of such merchant banking seems to be waning on Wall Street, Merrill still stands to benefit from Drexel's decline. Just last week, Merrill was picked by RJR Nabisco as lead manager of a big bond offering.

SHEARSON LEHMAN HUTTON. Its ranking was boosted by counting the $12.1 billion merger of Bristol-Myers and Squibb. Shearson played only a limited role in that deal; Shearson got the job mainly thanks to the presence on the Bristol-Myers board of James Robinson, chairman of Shearson parent **American Express** Co. Goldman received a $25 million fee for its work as Bristol-Myers adviser; Shearson got $3.5 million.

On the other hand, Shearson was handicapped by backing the losing bidder in the RJR Nabisco deal. And Shearson's biggest deal of 1989, the Time-Warner merger, won't close for a few days and thus isn't included in the standings. One clear coup for Shearson: its role in helping advise Ford, a longtime Goldman client, on buying the financial-services unit of Paramount Communications Inc.

Takeover Explosion of the Mid-1980s Is Being Overtaken by Junk-Bond Woes

By Randall Smith
Staff Reporter of The Wall Street Journal

For the first time since the mid-1980s heyday of mergers and acquisitions, the takeover business is experiencing a slowdown.

While that slowdown spells problems on Wall Street, which still has enough investment bankers to handle a merger boom, it also means corporate managements can breathe a little easier about the threat of hostile takeovers.

Through mid-November, the dollar volume of deals announced this year has declined 25% from 1988, according to Securities Data Corp. Although the 1989 volume of deals completed is actually up from 1988, that's because several big deals such as RJR Nabisco Inc. were negotiated in 1988 but closed this year.

Investment bankers attribute the slowdown, which many expect to continue, to weakness bordering on collapse in the market for high-risk, high-yield junk bonds. That has both undercut the threat of a takeover by corporate raiders, and removed a key source of financing for leveraged buy-outs.

Mike Overlock, head of mergers and acquisitions at Goldman, Sachs & Co., says that in the current climate, "There will be a handful of bigger deals, but I don't think the number of billion-dollar deals will keep pace with the past several years."

Mr. Overlock added: "A major portion of merger activity has been stimulated by the financial buyer. But the credibility of corporate raiders has been reduced because they can't do the takeovers if they can't raise the money. And if they can't, then the companies don't have to restructure."

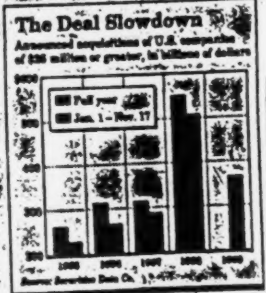
While 1989's volume of announced deals remains second only to 1988, investment bankers say this year's slowdown didn't really take hold until the second half, when financial woes emerged at such heavily indebted companies as Integrated Resources Inc. and Campeau Corp., and the proposed leveraged buy-out of United Airlines parent UAL Corp. collapsed.

In the past several weeks, some companies like Circle K Corp. and Cineplex Odeon Corp. that had put themselves on the auction block came up with no bids. On Tuesday alone, Phillips Industries Inc. accepted a reduced buy-out bid, Cyclops Industries Inc. scotched a sale of its specialty steel unit, and Crowthers McCall Pattern Inc. said a proposed buyer defaulted on the purchase.

Michael Goldberg, co-head of mergers at First Boston Corp., notes that the weakening economy and jittery conditions in the market for bank loans have also contributed to the slower pace of deals. Some say the bank syndication market is suffering some of the same ills as the junk-bond market.

To be sure, deals in which one company bids for or buys another have continued largely unchecked, partly because they don't usually need as much financing. Since the UAL collapse, Georgia-Pacific Corp. has bid for Great Northern Nekoosa Corp. to create the largest U.S. forest products company, and Ford Motor Corp. agreed to buy Jaguar PLC.

But leveraged buy-outs have fallen off sharply this year since the record $25 billion RJR Nabisco buy-out closed in April. LBOs have accounted for 25% or more of all deals in the past few years, by some estimates. And the absence of financial players has a much wider impact on the entire deal market, according to Jack Levy, co-head of mergers and acquisitions at Merrill Lynch & Co.



The Deal Slowdown

Announced acquisitions of U.S. companies of $35 million or greater, in billions of dollars

Source: Securities Data Co.

Mr. Levy estimates that financial entities—from raiders to buy-out funds—played a role in nearly half of all industrial-sector transactions in the recent past. Buy-out funds were particularly active in serving as buyers for divestitures, he says. Even with an expected increase in international merger activity, Mr. Levy estimates that the retreat of financial bidders may reduce the level of deal activity as much as 25%.

The silver lining in the deal slowdown is that some of the same conditions responsible are contributing to a surge in workouts and restructurings of ailing companies. "As the demand for mergers and securities work lessens, corporate restructurings will be a major target of opportunity for lawyers and bankers," says Lewis Kaden, a partner at the law firm of Davis Polk & Wardwell.

Some investment bankers believe conditions may not improve soon. Charles Nathan, co-head of mergers at Salomon Brothers Inc., says the junk-bond market "will never be the same." And if the economy continues to weaken, he warns, "you'll see the mergers and acquisitions market continue to contract."

Others are more hopeful.

J. Tomilson Hill, co-head of investment banking at Shearson Lehman Hutton Inc., believes the deal business can continue at the pace of the past two years on the strength of international mergers activity as well as companies' buying each other as specific industries consolidate. That's already happening, he notes, in consumer products, pharmaceuticals, chemicals, and forest products. Mr. Hill also believes that the junk-bond market could recover faster than some people think for more creditworthy companies.

First Boston's Mr. Goldberg says, "Every year that I've been in this business, I've thought that next year couldn't be as good, and every year I've managed to be surprised. I think that's still possible."

CLOSING REMARKS

Mr. **Early**. Thank you, Mr. Chairman.

Mr. **Smith**. Thank you.

[The following questions were submitted to be answered for the record:]

QUESTIONS SUBMITTED BY CONGRESSMAN SMITH

Antitrust Division

Total Available Resources for 1991

QUESTION: For the record, provide a chart, similar to the one on page 7 of your justification, based on total available resources including the $20 million in fees.

ANSWER: A chart of the Division's 1991 budget request, which includes total resources available to the Division, is provided on the following page.

Resources Required in 1991 to Maintain 1989 Base

QUESTION: What is the total of appropriations and fees required in 1991 to maintain the staffing levels and workload of the Division in 1989?

ANSWER: In 1989, the Antitrust Division was authorized 549 positions and 531 workyears. In order to staff to that level in 1991, the Division would require resources totalling $48,730,000.

WEDNESDAY, MARCH 14, 1990.

Summary Statement

Fiscal Year 1991

The Federal Bureau of Investigation is requesting a total $1,640,237,000, 21,643 permanent positions and 20,214 workyears. This is a change of $140,793,000 over the 1990 enacted level with a net program increase of $39,837,000 in funding and 545 positions above the 1991 base level and a program decrease of 383 workyears below the 1991 base level. This budget request includes a total of 9,714 special agent positions (9,108 workyears) and 11,929 support positions (11,106 workyears). Three major resource initiatives consisting of Fraud, National Drug Strategy (NDS) and Organized Criminal Activity are proposed. The distribution of the increases into these major initiatives underscores the direction, an emphasis, the FBI recognizes it must sustain to fulfill its mission and purpose.

As the Federal Government's only general purpose investigative arm, the FBI has a responsibility to the American citizenry. This responsibility is stated meaningfully by the FBI's Strategic Plan which outlines the FBI's overall mission as follows: "Uphold the Law - To investigate violations of Federal Criminal Law, to protect the United States from hostile intelligence efforts, to provide assistance to other Federal, state, and local law enforcement agencies, and to perform these responsibilities in a manner that is faithful to the Constitution and the laws of the United States." Without the appropriate levels of funding, the American public would be denied an FBI capable of addressing the increasing crisis of criminal activity. In turn, the inability of the FBI to confront aggressively violent criminal activity due to funding shortfalls would diminish the quality of life expected by the American public.

Fraud Initiative:

The ongoing defense procurement fraud, financial institution fraud, and the commodity trading fraud investigations have demonstrated massive problems of criminal misconduct in the defense contracting, savings and loan, and financial investment industries which threaten to destabilize our economy and undermine legitimate financial activities. To continue the inroads made by the FBI in these investigative areas, a total of 265 special agent and 200 support positions and $13,057,000 is requested for the Fraud Initiative.

Within the Governmental Fraud Program, the FBI initiates investigations aimed at uncovering systemic fraud. Penetrating the core elements of fraudulent schemes operating in government funded programs requires the use of sophisticated, personnel intensive investigative techniques such as undercover operations, electronic surveillance, and physical surveillance. The requested enhancement of 120 special agent and 78 general support permanent positions would enable the FBI to continue targeting investigative resources against criminal activities within the defense procurement process which are responsible for draining millions of dollars from the Federal Government and result in defective or substandard military hardware.

The incidence of bank failures continues to be a serious problem for the financial community and the nation. Presently, there is no indication that the upward trend in bank fraud and embezzlement matters will abate. At stake are not only billions of dollars of economic resources, but also the public's trust in America's banking system. Notwithstanding the current allocation of investigative resources to the bank fraud and embezzlement crime problem, the FBI is unable to fully address the existing workload. As part of the Fraud Initiative, the FBI is requesting 42 special agent and 26 general support permanent positions for the Bank Fraud and Embezzlement Program.

Complex fraudulent financial schemes involving advance fee schemes, boiler rooms, telemarketing, and ponzi schemes have become increasingly mobile and technically sophisticated, and the number of victims and amounts of loss have risen accordingly. Security fraud cases involving insider trading, stock manipulation, and commodities fraud have rocked the foundation of the security industry. The victims of these schemes and frauds have invested and lost life savings, retirement income, and daily sustenance. The FBI continues to address these criminal violations through traditional and more modern investigative techniques; however, the magnitude of these frauds continues to grow. The requested increase of 70 special agent and 46 general support permanent positions for financial fraud cases would address current case backlogs.

Recent amendments to the bankruptcy law have liberalized the bankruptcy process and increased substantially the caseload on the courts. This has severely strained the ability of the bankruptcy courts to monitor individual cases and enhanced the opportunity for fraud. As the only law enforcement agency responsible for bankruptcy fraud, the FBI concentrates primarily on major "bust-out" operations, leaving significant individual fraud cases unaddressed. The requested increase of 17 special agent and 11 general support positions would enable the FBI to investigate major individual bankruptcy fraud matters.

Other resources required for the implementation of the FBI's Fraud Initiative include 30 technicians who specialize in accounting and provide significant analysis of financial records to Special Agents and Assistant United States Attorneys. Nonpersonnel requirements include enhancements of $803,000 for cooperative witness payments, technical equipment, and supplies.

In order to recruit and hire new personnel for the Fraud Initiative, the FBI would require an increase of 16 special agent and 9 support positions for dedication to applicant matters.

National Drug Strategy (NDS) Initiative:

One of the most significant crime problems facing the nation for 1991 continues to be drugs. To address this national epidemic, the FBI will maintain its concentration on the identification and investigation of major, multinational drug trafficking organizations which control predominant shares of the United States drug market, and the seizure and forfeiture of their assets as articulated in the NDS. The request within the NDS Initiative includes increases of 114 Special Agent and 282 support positions, 134 workyears, and $27,290,000. Also within this initiative are reimbursable workyears to support the Organized Crime Drug Enforcement Task Forces. These increases are consistent with the policies and strategies as set forth by the Office of National Drug Coordination Policy.

The primary investigative component of this initiative is the Drugs Program which is requesting an additional 94 special agent and 239 support positions and $19,168,000 in funding. Presently, the FBI is addressing about 40 percent of the identified major drug trafficking groups operating in the United States. The additional resources within the Drugs Program would enable the FBI to enhance its intelligence base to identify still other Colombian/South American, Mexican, European/Italian, and Asian drug trafficking organizations and address fully those already identified. For 1989, the FBI has seized record numbers of assets through the employment of Forfeiture and Asset Seizure Teams (FASTs). The additional resources within the Drugs Program are required for personnel to continue the successes experienced with the use of the FASTs which are directed within the mandates of the NDS, towards the forfeiture and seizure of drug assets.

Several categories of support positions are included in the request for the Drugs Program to provide necessary investigative support. Of the 239 support permanent positions requested for the Drugs Program, 61 positions are for general clerical functions and the remaining 178 positions are for special support functions. These positions include: language specialists, Title III monitors, intelligence analysts, Forfeiture Specialists, Laboratory Technicians and electronics support. These special support positions review and interpret raw drug intelligence, identify and develop relevant correlations, and detect logical courses of action for drug investigators, relieving the Special Agent from assignments which do not require "investigator status" such as Title III monitoring, language translation, transcription review, and forfeiture tracking. Enhanced funding requested for the Drugs Program includes $9,447,000 for undercover operations and informant payments. Successful drug investigations are highly dependent upon information developed as a result of sensitive undercover operations and/or the participation of a suitable informant or cooperating witness. The nonpersonnel enhancements requested in the NDS Initiative would strengthen the ability of field Special Agents to commence undercover operations and enlist the participation of informants.

To allow for full implementation of the FBI's NDS Initiative, additional resources for related programs are required. In the Forensic Services - Federal Program, 18 special support personnel positions, and seven general support positions would be required. In the Technical Field Support and Equipment Program, five special support positions and $6,320,000 in nonpersonnel funding would be needed. Enhancements requested would augment physical and electronic surveillance capabilities of the FBI to more adequately support court-approved electronic surveillances. Drug investigations are increasingly dependent upon the collection of audio and video evidence to assist in the focusing of investigative resources, identifying participants in criminal activities, and aiding in the prosecution of subjects. Also, in order to bring sufficient personnel into FBI employment to support the NDS Initiative and replace attrition the NDS Initiative would require an augmentation to the Applicant Program of 20 special agents and 13 support personnel.

Organized Criminal Activity Initiative:

For the Organized Criminal Activity Initiative, resources totaling 122 special agent and 302 support positions and $41,405,000 are required. The resources for the Organized Criminal Activity Initiative would enable the FBI to continue recent investigative successes in eliminating the criminal influence and reducing the threat to American society of emerging organized crime groups. Without the requested resources in the Organized Criminal Activity Initiative, the FBI would not be able to attain investigative objectives and accomplish its mission by removing the control and influence the La Cosa Nostra (LCN) exerts over the labor community, eliminating the growing Asian Organized Crime problem, and preventing random violent street gang activities in this country.

To effectively address the problems relating to emerging Asian Organized Crime and violent street gang problems, the FBI requires 78 special agent and 94 support positions. Once considered solely as street gangs operating in a limited geographical vicinity, Asian gangs have become an interstate menace involved in murder, gambling, loansharking, prostitution, extortion, smuggling, public corruption, and labor racketeering. Recent investigations have identified criminal associations between the LCN and Asian Organized Crime groups. Based on the size of the Asian Organized Crime groups and alliances established with the LCN, the FBI cannot delay initiating investigations into illegal Asian Organized Crime activities. The Asian Organized Crime groups are primarily comprised of bilingual or non-English speaking members with strong ethnic ties as a requisite for membership. This presents extreme difficulties in penetrating Asian Organized Crime organizations and makes the FBI more reliant upon electronic surveillance techniques to develop viable cases. The requested enhancements would provide adequate special agent strength which would enable the FBI to address Asian Organized Crime groups through the "Enterprise Theory of Investigation" and civil RICO investigative techniques. This request would also provide for qualified language specialists familiar with the culture and dialects for translation purposes, and sufficient support to buttress investigative endeavors.

In addition to efforts against Asian Organized Crime. 44 special agent, 208 general and special support positions and $32,138,000 in nonpersonnel funding are being requested to address increasing demands relating to other FBI investigative program activity. Enhanced personnel resources are necessary to expand and improve proactive investigative efforts designed to counter organized criminal activity, insure the integrity of the FBI's investigative activities, and enhance specialized investigative support in the area of surveillance and monitoring. Nonpersonnel funding increases are necessary to provide new and replacement technical support equipment associated with these investigative, surveillance, and information processing efforts. A critical purpose of the increased technical support equipment is to enhance court-approved electronic surveillance efforts which are crucial for discovering the scope and intent of organized criminal activity, identifying other subjects involved in such activity, or to maximize benefits derived from the application of other sophisticated investigative techniques such as undercover operations. This in turn allows the FBI to fully develop cases and meet strict evidentiary requirements so that increasingly complex matters relating to organized criminal activity can be brought to successful conclusion. Other operational surveillance techniques, such as physical and aerial surveillance, are also used in these investigations and would be enhanced to provide a comprehensive investigative support posture.

In addition to enhancements for these initiatives, changes to the 1991 base include a program decrease of $27,322,000, 227 special agent positions (227 workyears) and 287 support positions (287 workyears) that, in part, were taken in order to reach targeted deficit reduction levels established by the Administration. Further, these changes include a program decrease of $869,000 and 146 support positions (146 workyears) reflecting economies anticipated to be derived from the privatization of certain support functions to be studied pursuant to the Office of Management and Budget (OMB) Circular A-76. A final program decrease has resulted from the passage of P.L. 101-173 which allows administratively uncontrollable overtime (AUO) to be paid at a rate of 25 percent of base pay of a position in lieu of the previous method, which based this payment on the salary of a GS-10 step 1. As a result of this measure the FBI's cost for AUO will increase by $41,979,000. This expense would be met in part by permanent base reductions of $9,069,000 in equipment funding, $2,000,000 in travel and confidential expenditures resources, and $2,655,000 for Department of Justice nonreimbursable applicant investigations.

Federal Bureau of Investigation

Salaries and expenses

Justification of Proposed Changes in Appropriation Language

The 1991 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and Expenses

For expenses necessary for detection, investigation, and prosecution of crimes against the
United States; including purchase for police-type use of not to exceed [2,730] passenger 3,136
motor vehicles of which [1,850] will be for replacement only, without regard to the general 2,125
purchase price limitation for the current fiscal year, and hire of passenger motor vehicles;
acquisition, lease, maintenance and operation of aircraft; and not to exceed $70,000 to meet
unforeseen emergencies of a confidential character, to be expended under the direction of
the Attorney General, and to be accounted for solely on his certificate; [$1,423,340,000] $1,640,237,000
of which not to exceed $25,000,000 for automated data processing and telecommunications and
$1,000,000 for undercover operations shall remain available until September 30, [1991]; of 1992
which not to exceed $8,000,000 for research and development related to investigative
activities [and $15,000,000 for construction of Pod B of the Engineering Research Facility
at Quantico, Virginia,] shall remain available until expended; and of which not to exceed
$500,000 is authorized to be made available for making payments or advances for expenses
arising out of contractual or reimbursable agreements with State and local law enforcement
agencies while engaged in cooperative activities related to terrorism and drug investigations: Provided, That the Director of the Federal Bureau of Investigation may establish and
collect fees to process fingerprint identification records and name checks for non-criminal
justice, non-law enforcement employment and licensing purposes and for certain employees of
private sector contractors with classified Government contracts, and notwithstanding the
provisions of 31 U.S.C. 3302, credit such fees to this appropriation to be used for salaries
and other expenses incurred in providing these services, and that the Director of the
Federal Bureau of Investigation may establish such fees at a level to include an additional
amount to establish a fund to remain available until expended to defray expenses for the
automation of fingerprint identification services and associated costs: Provided further,
That not to exceed $30,000 shall be available for official reception and representation
expenses: Provided further, That not to exceed $7,500,000 for a language translation system
shall remain available until expended : Provided further, That $10,000,000 previously provided for the relocation of the FBI's Washington Metropolitan Field Office be made available for activities funded by this appropriation

Federal Bureau of Investigation

Salaries and expenses

Justification of Proposed Changes in Appropriation Language (continued)

(28 U.S.C. 524; 531-37; 18 U.S.C. 3052, 3059; 22 U.S.C. 4081, 4084; Department of Justice Appropriations Act, 1990; additional authorizing legislation to be proposed.)

[For carrying out efforts at National Drug Control, $97,045,000, to strengthen Federal domestic law enforcement at the local level to include additional agents, support personnel and equipment, improvements in automation and telecommunications, and enhancements in field equipment and training.]

(Department of Transportation and Related Agencies Appropriations Act, 1990.)

Explanation of changes

1. The FBI is requesting changes in the ceiling on the total number of motor vehicles to be purchased from 2,730 to 3,136 and the number of replacement-only motor vehicle purchases from 1,850 to 2,125. These changes are necessary to allow for the purchase of new automobiles and subsequent replacement of automobiles for the personnel requested in this submission.

2. Language is also being requested to allow the FBI to use no-year funding originally provided in 1984 for the relocation of the Washington Metropolitan Field Office. This request is made in conjunction with a requested base level decrease of $10 million to the FBI's Other Field Programs.

Congressional Appropriation Actions. Implementation of the user fee program for the processing of name checks for non-criminal justice, non-law enforcement employment and licensing purposes for certain employees of the private sector, in accordance with Public Law 101-162, resulted in the transfer of 184 positions and $5,893,000 within the Records Management program and 659 positions and $24,107,000 within the Fingerprint Identification program from direct to reimbursable funding in 1990.

1990 Sequestration. As provided by the Omnibus Budget Reconciliation Act of 1989, the FBI was sequestered an amount of $20,941,000, which included personnel reductions of 409 positions and workyears.

Reprogrammings. In order to address increased and/or new workload in several areas, such as deoxyribonucleic acid (DNA) and drug record examinations in the FBI Laboratory and the establishment of a Drug Demand Reduction Program coordination team at FBI Headquarters, and to implement certain functional reorganizations of personnel resources and activities, such as the Office of Equal Employment Opportunity and National Applicant Recruiting, the FBI submitted a reprogramming proposal, as shown. The narrative accompanying the notification stated that the reprogrammings were of a permanent nature and would carry into 1991 and beyond.

This budget activity includes resources for managing and coordinating field investigations and resources for all field investigative operations for the FBI. The operations are conducted out of 56 field offices and approximately 400 resident agencies located throughout the United States and Puerto Rico. Field offices are responsible for all investigations included the national priority law enforcement areas of organized crime, drugs, white-collar crime, terrorism, and foreign counterintelligence. This activity also includes the field legal attaches program. In 1990, the Organized Crime Drug Enforcement resources in the Drugs program were transferred to the Organized Crime Drug Enforcement appropriation. In 1991, the FBI is requesting reimbursement of $2,655,000 to conduct background investigations of Departmental Applicants and has transferred 80 positions (80 workyears) and referenced funding from direct to reimbursable funding.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Other Field Programs........	8,892	8,586	$619,194	8,892	8,689	$669,078	8,782	8,425	$685,541	-110	-264	$16,463

Long Range Goal: To reduce the incidence of violent criminal activities; to conduct appropriate applicant, civil rights, and fugitive investigations as directed by law and the Attorney General; and to counter within the United States the hostile activities of foreign intelligence officers, agents, and terrorists.

Major Objectives:

To conduct thorough, penetrative, and timely background investigations on candidates for appointment by and employment with the White House, the Department of Justice (DOJ), the Judiciary, certain Congressional committees, and other Federal agencies.

To investigate alleged violations of various civil rights statutes based upon self-initiation or at the request of the Attorney General, and to provide the results of civil rights investigations to the DOJ for prosecutive action or referral to another Federal agency for appropriate action.

To develop an automated capability to analyze civil rights investigations; to identify patterns of violence involving individuals, groups, or local police agencies; and to analyze the nature of civil rights complaints to determine patterns of discrimination directed against individuals.

To recruit, process, investigate, and appoint the most qualified individuals available to meet the internal staffing needs of the FBI.

To investigate threats and assaults against, kidnapings, or assassination of the President, Vice President, executive department heads, members of Congress, Justices of the Supreme Court, other designated Government officials, and Federal law enforcement officers; kidnapings; incidents involving the sexual exploitation of children; extortions; crimes aboard aircraft; tampering with consumer products; thefts of controlled substances; and other violent crimes under FBI jurisdiction.

To locate and apprehend State and local fugitives charged under the Fugitive Felon Act with unlawful flight to avoid arrest, prosecution, or confinement for violent crimes, substantial property thefts, and drug violations; major Federal drug offenders sought by the Drug Enforcement Administration; and United States military personnel who desert under aggravated circumstances. To assist local police agencies in criminal investigations and to conduct investigations of fraud and related activities in connection with identification documents without a disclaimer.

To achieve the maximum bank robbery solution rate; solve major bank burglaries and larcenies, as well as violations of the Hobbs Act involving armored carriers; and to achieve the most effective prosecutive results possible by providing an immediate investigative response to reported offenses and conducting logical investigations to identify, locate, and apprehend individuals responsible for these crimes.

To identify, investigate, and develop cases for prosecution against individuals and organized groups involved in thefts from interstate shipments or engaged in the interstate transportation of stolen property, motor vehicle theft rings, the fencing of stolen goods, and other Federal property crimes.

To investigate serious violent and major property crimes committed on Indian reservations, in Federal correctional institutions, and on United States Government property; thefts of United States property, funds, weapons, and explosives from Federal buildings, supply depots, and installations; and Selective Service Act matters. To investigate impersonation situations where a person assumes or pretends to be an officer or employee acting under the authority of the United States.

To fully identify and collect evidence on terrorist organizations/individuals and to successfully prosecute them for their criminal acts.

To expand existing liaison internationally as necessary to support the increasing investigative responsibilities of the FBI.

Base Program Description: Other Field Programs is the FBI's largest investigative program in the Criminal, Security, and Other Investigations budget activity. The program consists of several diverse investigative activities, which include violent crimes, interstate theft crimes, crimes on Indian and Government reservations, State and local fugitives, civil rights matters, and other security-related investigations.

Violent crime offenses involve the threatened or actual injury or loss of life against an individual including threats against the President, Vice President, executive department heads, Supreme Court Justices, members of Congress; bank robberies; kidnapings of U.S. citizens; extortions; tampering with consumer products; theft of controlled substances; aircraft hijackings; and matters involving the sexual exploitation of children under the White Slave Traffic Act and Interstate Transportation of Obscene Matters Statutes. The Interstate Theft subprogram investigates thefts from interstate shipments, interstate transportation of stolen property including motor vehicles, individuals and groups engaged in such activities, and fences dealing in stolen property. The Government Reservation Crimes subprogram investigates serious violent and major property crimes committed on Indian reservations and United States Government property, including major Department of Defense installations, civilian agency buildings and sites, national parks and recreational areas, and Federal penitentiaries. The Fugitive subprogram assists State and local law enforcement agencies seeking felons who cross state boundaries to avoid prosecution or confinement.

The Violent Crimes and Major Offenders (VCMO) portion of Other Field Programs encompasses four major subprograms as follows: Violent Crimes, Interstate Theft, Government Reservations Crimes, and Fugitive Investigations. The investigation of a wide range of violent personal and property crimes is conducted, in addition to assisting State and local law enforcement agencies in locating and apprehending dangerous criminals. For 1990, the VCMO program received an increase of 64 agent workyears (128 positions) and 39 general support workyears (78 positions) in support of the Comprehensive Crime Control Act of 1989. This enhancement enables the FBI to address the growing number of violent crimes in the United States. Additionally, this increase improves the FBI's cooperative efforts by providing greater assistance to State and local law enforcement agencies on Unlawful Flight to Avoid Prosecution, kidnaping, and bank robbery matters.

The Civil Rights, Applicant, and Other Investigations portion of Other Field Programs addresses several distinct areas, including background investigations, civil rights investigations, and FBI employment matters. The suitability and trustworthiness of candidates for appointment to executive and managerial positions and candidates for appointment to positions which are sensitive within the Federal Government are matters of fundamental concern for all citizens. The prompt and thorough investigation of alleged violations of Federal civil rights statutes is basic to constitutional guarantees. In addition, the citizenry expects the FBI to attract and employ the most qualified applicants for its internal staffing needs.

The FBI is the lead Federal law enforcement agency in the U.S. Government's fight against terrorism. The FBI defines terrorism as "the unlawful use of force or violence against persons or property to intimidate or coerce a government, the civilian population, or any segment thereof in furtherance of political or social objectives." The FBI's Counterterrorism Program (CTP) is responsible for preventing, interdicting, and investigating the violent acts and criminal manifestations of terrorist groups and individuals involved in terrorism and related activities. CTP activities can be broken down into two primary areas: 1) the prevention of terrorism through the timely development of intelligence which is augmented by an exchange of information between the FBI and other agencies, both in this country and abroad, and 2) reaction to terrorist activity through criminal and counterterrorism investigations and other law enforcement options designed to arrest and convict terrorist groups' members and individuals who perpetrate other criminal acts related to terrorist activities. The reactive portion of the program utilizes all the resources and techniques of the FBI to investigate and prosecute terrorists who commit violent and illegal acts in the United States. These criminal acts include violations of the Protection of Foreign Officials, Neutrality, and Extortion statutes, as well as firearms and explosives laws. Additionally, as a result of the passage of the Comprehensive Crime Control Act of 1984 (Title 18 U.S.C., Section 1203, entitled, "Hostage Taking"), the FBI acquired jurisdiction and authority to act, where appropriate, in certain terrorist related hostage situations both within the United States and internationally. Further, as a result of the passage of the Omnibus Diplomatic Security and Anti-Terrorism Act of 1986 (Title 18 U.S.C., Section 2331, entitled, "Terrorist Acts Abroad Against U.S. Nationals"), the FBI has acquired jurisdiction and authority to act, where appropriate, in any acts of terrorist violence inflicted upon a national of the United States while outside the United States.

Accomplishments and Workload: The statistical accomplishments and workload estimates for Other Field programs is presented in the following tables and narrative:

Civil Rights, Applicant, and Other Investigations

			Estimates	
Investigative Matters Received	1988	1989	1990	1991
Reimbursable Applicant (except DEA)	13,576	10,786	11,000	11,000
Nonreimbursable Applicant (except FBI Applicant)	25,660	32,470	30,000	30,000
Other Investigations	3,659	5,760	4,700	4,700
Civil Rights	6,176	5,951	6,000	6,500
Total Investigative Matters Received	49,071	54,967	51,700	52,200
Investigative Matters Completed				
Reimbursable Applicant (except DEA)	14,525	10,578	10,370	10,250
Nonreimbursable Applicant (except FBI Applicant)	25,977	30,542	30,000	29,500
Other Investigations	3,341	4,731	4,630	4,500

Since 1984 and through December 14, 1989, 177 identification orders were issued and 144 identification order fugitives were arrested. Identification orders are flyers that are issued on the most important fugitive cases involving individuals who have been convicted or charged with crimes of a more serious nature having considerable public interest. In this same time period, 42 hard-core and violence prone criminals in the "Ten Most Wanted Fugitives Program" were apprehended. To solve the violent and property crime investigations and apprehend the criminals responsible, the use of identification orders, the "Top Ten Program," and other investigative techniques, such as undercover operations; Title III and other electronic surveillance techniques; extensive physical surveillances; the National Bank Robbery Album; and the Fugitive Bank Robber Program are consistently and effectively utilized.

The following case examples are but a few of literally hundreds of successful investigations conducted in which FBI expertise, sophisticated investigative techniques, and close liaison and association with other Federal, State, and local law enforcement agencies were used:

A joint undercover operation (UCO) with the Defense Criminal Investigative Service (DCIS) was initiated to investigate the theft of stolen U.S. military jet engines. In March, 1989, an airman, assigned to the Security Squadron, Hill Air Force Base, Ogden, Utah, approached an undercover agent and discussed his plans to steal and sell an F-16 jet engine, a fully functioning guided missile and a communication vehicle. After numerous discussions with the airman, the undercover agent finalized the purchase arrangements for the jet engines. At approximately 10:30 p.m., July 2, 1989, an associate of the airman arrived from inside the base driving an Air Force tow vehicle behind which were three F-16 jet engines. The undercover agent took control of the tow vehicle and drove it approximately one-half mile to a pre-arranged temporary storage, where the associate was then paid $10,000 cash for the engines. As a result of this operation, an estimated $9.5 million in stolen U.S. Government property was recovered, 33 civilian subjects were indicted Federally, 22 military personnel were either charged under the Uniform Code of Military Justice or Court Martialed, and two subjects are pending trial by local authorities.

A successful investigation concluded with the arrest of Dean Ashley Lambey and Daniel T. Depew on August 14, 1989. These arrests were the result of a major FBI investigation directed at thwarting individuals who molest children, and as a result, have prevented numerous cases of heinous acts against children. This investigation was considered by the FBI to be a major case, due to the horrendous nature and type of crime being planned against a defenseless segment of our society. Every available investigative technique was utilized, including 24 hour a day physical surveillance of the subjects to insure no child or citizen was placed in danger. Originally initiated by undercover officers of the San Jose, California Police Department using a computer bulletin board system "designed to assist people seeking contact with others interested in diverse sexual pursuits," approximately 100 FBI agents joined in this investigation. By using the computer bulletin board the undercover police officers were contacted by Lambey who expressed an interest in sexual contact with pre-adolescent caucasian males and a desire to produce a sexually explicit video involving at least one minor. Later Depew was introduced by Lambey to the undercover officers and disclosed the details of a scheme devised by the two men to either purchase or abduct a minor boy, hold him in captivity for up to two weeks, videotape acts of sexual molestation, and ultimately to murder the child. This is another example of a case where the FBI has worked with other organizations and has prevented heinous crimes against children of our society.

On January 23, 1989, four Ku Klux Klan members were sentenced in the U.S. District Court, Birmingham, Alabama for civil rights violations stemming from a 1979 racial confrontation. This investigation represents one of the longest-running investigations conducted by the FBI into a single civil rights incident. Altogether, nine Klan members were charged in the indictment. Five other members have previously entered guilty pleas or have been convicted.

On May 30-31, 1989 several members of a group called "EMETIC" (Evan Mecham Eco-Terrorist International Conspiracy) were arrested by the FBI in connection with the cutting of a metal pole that supports the power transmission line which delivers electricity to a substation in Arizona. The substation is the main source of water supply for the State of Arizona. The attempted sabotage was intended to be a practice session for the subjects before they committed simultaneous acts of sabotage to power lines at three nuclear facilities in the near future. Subsequent to their arrest, all four subjects were indicted by a grand jury in the District of Arizona for multiple destruction-of-property incidents. EMETIC is a small group of people who commit illegal acts in furtherance of their beliefs of preserving the natural environment.

On July 12, 1989, Richard Clark Johnson, a United States citizen employed as an electronics engineer, was arrested by the FBI and charged with conspiracy to destroy the property of a foreign government. Three associates were also arrested. The FBI's investigation determined that Johnson provided technical assistance to the Provisional Irish Republican Army (PIRA) in the development and production of improvised explosive devices. It is anticipated that the arrest and imprisonment of these subjects will cause a major disruption of PIRA's ability to carry out its successful bombing campaigns in Northern Ireland and the United Kingdom. During early November, 1989, the FBI received information that four subjects would be traveling to the United States in the near future to attempt to unify opposing factions of the Irish Northern Aid Committee and to conduct a major PIRA fund-raising tour. Information was provided that all four subjects had previous arrests and/or explosives related charges and that all subjects knowingly denied any previous arrests and/or convictions on their visa waiver forms. On November 11, 1989, two of the subjects were arrested. They subsequently pled guilty and were deported. The third subject was arrested on November 13, 1989, and is currently awaiting prosecution. The fourth subject has not been located and is believed to have departed the United States.

Program Changes:

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Other Field Programs..............................	8,892	8,689	$669,078	8,782	8,425	$685,541	-110	-264	$16,463

The net changes of a decrease of 110 positions, and 264 workyears, and an increase of $16,463,000 includes program increases of 205 positions and $35,512,000, and program decreases of 315 positions and workyears and $19,049,000.

Program Increases:

Program increases of 61 agent positions (15 workyears), 144 support positions (36 workyears) and $35,512,000 are requested for Other Field programs, including: 104 support (26 workyears) and $32,838,000 for personnel and technical equipment in support of high priority field investigative activities; and 61 agent positions (15 workyears), 40 support positions (10 workyears), and $2,674,000 for the FBI Applicant program.

The request for 61 agent positions (15 workyears), 40 support positions (10 workyears), and $2,674,000 for the FBI Applicant program is essential to ensure the FBI's capability to staff its priority investigative initiatives. These initiatives include the FBI's National Drug Strategy, the Violent Crime, Organized Crime, and Financial Institution Fraud Initiatives, Protection of National Security, and the Investigative/Administrative Support Infrastructure. The FBI cannot fulfill or support its critical field investigative missions if qualified and dedicated personnel are not on board. Approximately one-third of this request, including 20 agent positions (10 workyears), 13 support positions (7 workyears), and $1,876,000 directly supports FBI drug investigations.

Since 1987, the FBI Applicant field program has experienced a dramatic growth in workload. It is anticipated that this growth would continue through the 1990s, perhaps until 2000. In previous years, the FBI had been able to accommodate fluctuations in the FBI Applicant program workload with base level resources. Long-range attrition projections indicate that over the next decade approximately 50 percent of the special agents currently onboard will retire.

In 1989, 353 agents, 118 special support, and 1,074 general support employees, or a total of 1,545 persons were hired. By 1991, these figures would change to 599 agents, 430 special support, and 1,280 general support employees. In 1989, 243 agent workyears were utilized in the FBI Applicant field program to recruit, select and hire 1,545 employees. The need to hire 2,309 employees in 1991 would require utilization of additional agent and support positions in the FBI Applicant field program. The requested increase of 61 field agent positions (15 workyears) and 40 support positions (10 workyears) will allow the FBI to conduct background investigations and appoint qualified individuals to various sensitive positions within the organization in 1991.

Approximately 2.5 background investigations are conducted for every one employee hired. Although this may appear high, total hires do not adequately represent the full nature of the workload in the FBI Applicant field program. In actuality, approximately 60 percent of the resources for the FBI Applicant program are involved in the recruitment, selection, administration of exams, and interviewing for applicants. In any case, it must be remembered that more than a majority of the workload is exclusive of the actual background investigations and this work would continue to be performed by FBI personnel.

Besides unprecedented employee separations and personnel enhancements, the FBI must dedicate more time to recruiting matters. The FBI must be able to dedicate the maximum number of personnel resources to ensure that future hiring requirements are attained. Due to expanding responsibilities and increasing casework, the FBI can no longer divert agents from other investigative programs; therefore, approval of the requested personnel enhancement would ensure the FBI's continued ability to meet its hiring needs.

Program Decreases:

Program decreases totalling 315 positions and workyears and $19,049,000 are proposed. This includes a reduction of 133 special agents, 102 support and $12,528,000 to reduce the Federal deficit to meet the targeted budget levels established by the Administration. In addition, program decreases are proposed to provide funding to implement Public Law 101-173 including $1,866,000 in technical equipment and $2,000,000 in Violent Crimes nonpersonnel operational funding, (a $1,000,000 reduction in travel and $1,000,000 in confidential case funding).

Also, to provide funding to implement Public Law 101-173, a reduction of $2,655,000 and 80 positions is proposed. This represents direct funding for background investigations for the U.S. Attorneys. Previously, these background investigations were performed at no charge. However, beginning in 1990, the FBI will be reimbursed from the U.S. Attorneys for these services up to $2,655,000.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Organized Crime.............	1,699	1,589	$110,342	1,699	1,629	$126,241	1,824	1,626	$128,128	125	-3	$1,887

Long-Range Goal: To eliminate the La Cosa Nostra (LCN) and other organized criminal groups as significant threats to American society through sustained, coordinated investigations that support successful prosecutive action.

Major Objectives:

To penetrate the hierarchy of the LCN by identifying the leadership and membership of these groups in an effort to determine their complicity in criminal activity as well as determine the extent of interrelationships among the LCN families and thereby develop successful prosecutions for specific violations of Federal statutes, including the Racketeer Influenced and Corrupt Organizations (RICO) and the Continuing Criminal Enterprise (CCE) statutes.

To further determine the extent of influence and control the LCN has established within the legitimate labor union community in the United States; continue to pursue investigations against the LCN through an aggressive and successful Labor Racketeering Program within the FBI that would eliminate this control and have a positive impact upon the nation's economy.

To insure that the capabilities of the Organized Crime Information System (OCIS) enable the FBI to collate the vast quantity of information concerning organized criminal activity so that complex associations between members of organized criminal groups may be identified.

To utilize the civil provisions of the RICO statute in order to rid the labor movement of the debilitating influence of the LCN while simultaneously removing a major financial and political resource of the LCN.

To initiate and conduct investigations into the illegal activities of other organized crime groups such as the emerging Asian Organized Crime groups.

To develop and maintain a national intelligence base which would consist of quality, high level informants to penetrate the organizational structure and operations of organized crime groups; cooperating witnesses to provide first hand testimony as to the day-to-day operations of these illegal organizations and sponsor their subsequent entry into the Witness Security Program if necessary, and liaison efforts with other law enforcement agencies.

To provide overall coordination and management oversight of efforts relating to the use of sophisticated and sensitive investigative techniques including court approved Title-III intercepts, consensual monitoring, undercover operations, aircraft and physical surveillances, and to perform a wide variety of administrative and investigative support functions in support of criminal investigations.

To improve, through active participation, the level of cooperation between foreign agencies and the FBI.

Base Program Description: The primary focus of the FBI's Organized Crime Program is the illegal activities of the LCN. The LCN, as well as other organized criminal groups such as the emerging Asian Organized Crime groups in the United States, affect the social, financial, and political framework of American society by directing and/or becoming involved in labor racketeering, corruption of public officials, illegal infiltration of legitimate businesses, loansharking, illegal gambling, and gangland slayings. There are few businesses or industrial sectors in American society that are not affected by organized crime groups.

Recent investigations focusing on the criminal activities of the 25 LCN families have developed information that reinforces earlier information indicating that four major labor unions (International Brotherhood of Teamsters-IBT, International Longshoreman's Association-ILA, Laborers' International Union of North America-LIUNA, and Hotel Employees and Restaurant Employees International Union-HEREIU) within the United States are being influenced or directed in an illegal manner by the LCN. The evidence presented in these cases has demonstrated that the LCN's influence in labor unions allows for the disruption of competitive free markets in various industries such as concrete, construction, trucking, and the air freight industry.

The recent successes against the LCN can be attributed to the evolution of the Enterprise Theory of Investigation. This approach requires that separate investigations conducted against individual members of a specific group or family be combined for prosecution, using both the criminal and civil provisions of RICO. Under this approach, the group or family is named as the enterprise. Convictions on this basis result not only in significant periods of incarceration, but provide for the seizure of assets accumulated by the enterprise through its illegal activity and a potential prohibition against the members of the enterprise associating with corrupted labor unions, infiltrated businesses, compromised institutions, or even with other members.

Organized crime investigations require numerous techniques which have proven to be resource intensive. To penetrate close knit, secretive organizations,such as the LCN, the FBI employs a variety of sophisticated investigative techniques, including court-ordered electronic intercepts, long-term undercover operations, extensive physical surveillance, including the use of aircraft, high echelon, quality informant coverage, and cooperating witnesses. In addition, the FBI's Organized Crime program complements its investigative efforts and maximizes its investigative resources by providing Headquarters and field locations with computer based capabilities via OCIS. OCIS personnel assist in the collection, collation, analysis, and dissemination of investigative information relative to organized crime matters. Within OCIS, particular emphasis is placed upon link analysis of relationships which exist between or among organized crime groups, and/or between corrupt organizations and union officials, business leaders, or public officials.

Within this decision unit is the Investigative Support Program, which provides for the coordination of all criminal informant operations, witness security, aircraft support, undercover operations, Special Operations Groups/Off Premise Sites (SOG/OPS), as well as a myriad of administrative activities that support all FBI investigative programs. Aircraft surveillance enables discreet contact with a moving target even though the target is using evasive maneuvers to elude surveillance. The aircraft equipment has enabled FBI personnel who staff specialized aircraft to recognize evasive maneuvers and can direct accompanying ground units clear of the target, where ground units might be unable to get close enough to observe the target without detection. The undercover technique offers investigative opportunities not available in the context of the traditional investigative process. Undercover agents have the ability, in certain situations, to penetrate the highest levels of criminal activity, thus permitting more effective and safer use of sources and informants. The information obtained from the undercover operative may avoid the necessity for sources/informants to testify in court. SOG/OPS give the FBI the ability to support effectively the integrated functions of tactical mobility, undercover operations, sensitive and complex Title-III electronic surveillance installations, and the tracking of extremely sensitive and surveillance-conscious subjects.

Accomplishments and Workload: The statistical accomplishments and estimates for the Organized Crime program are presented in the following table:

Item	1988	1989	Estimates 1990	1991
Investigative Matters: (1)				
Pending Beginning of Year (2)	3,017	2,476	2,526	2,576
Received During Year	6,117	5,100	5,130	5,020
Completed During Year	6,524	5,050	5,080	4,980
Pending End of Year (2)	2,610	2,526	2,576	2,616
Informant Matters (3)	3,083	2,100	2,115	2,070
Title IIIs: (1)				
Initiated	90	64	65	64
Extended	101	66	68	66
Informations and Indictments (1)	805	659	665	650

Item	1988	1989	Estimates 1990	 1991
Convictions and Pre-trial Diversions (1)	690	660	670	655
Fines ($000)	$8,445	$13,280	$13,500	$13,000
Recoveries and Restitutions ($000)	$12,200	$30,535	$31,000	$30,000
Potential Economic loss Prevented ($000)	$31,974	$6,589	$10,000	$6,000

(1) - Investigative Matters do not include informant matters.

(2) - The difference between the investigative matters pending at the end of 1988 and the beginning of 1989, as well as the decrease in matters received and the accomplishments recorded between the two years, reflect the transfer of investigative responsibility for non-LCN corruption matters from the Organized Crime program to the White-Collar Crime program during 1989.

(3) - The reduction in informant matters between 1988 and 1989 reflect the removal of drug informants from the Organized Crime program.

Organized crime investigations resulted in the conviction of a number of LCN organized crime members and their associates; non-LCN organized crime members and their associates, union officials, and public officials. The following indicates the type of criminal activity for which convictions and pre-trial diversions (PTD's) were obtained during 1988 and 1989, including new initiatives in civil RICO matters:

	1988 Conv.	 PTDs	 Total	1989 Conv.	 PTDs	 Total
Corruption................	64	3	67	27	0	27
Extortion.................	0	0	0	31	1	32
Illegal gambling..........	164	6	170	256	12	268
Labor racketeering........	71	0	71	47	1	48
Loansharking..............	45	0	45	19	0	19
Other violations..........	293	44	337	263	3	266
Totals..................	637	53	690	643	17	660
Labor-Civil RICO complaints (individuals/entities)...			70			75
Civil RICO judgments (individuals/entities)....			31			20

The following are specific case examples of the types of investigations being conducted within the Organized Crime program:

On June 6, 1989, a Civil RICO complaint was filed in the Eastern District of New York (EDNY) against the Luchese and Gambino LCN Families; the Private Sanitation Industry Association of Nassau/Suffolk, Inc., Teamsters Local 813; 43

carting companies, and 65 individuals. The suit is the largest Civil RICO ever filed by the Government and is the first ever directed at an entire industry.

On June 13, 1989, an eight-count indictment was returned in San Francisco charging U.S. District Court Judge Robert P. Aguilar, labor consultant Michael Rudy Tham and associate Abe Chapman with racketeering activity, influencing or injuring an officer or juror and the unlawful disclosure of wiretap information. This matter was initiated based upon information obtained from a court-authorized electronic surveillance and physical surveillance which indicated that Judge Aguilar was involved in an attempt to corruptly influence the actions of U.S. District Judge (USDJ) Stanley A. Weigel concerning a Rule 2555 motion filed by Michael Rudy Tham before Judge Weigel.

On June 28, 1989, a Federal grand jury in New York, New York, returned indictments against nine Gambino LCN members and associates, including Sal Mangialino, on RICO charges. These defendants were convicted of operating a racketeering enterprise responsible for over a dozen murders, loansharking, drug trafficking, interstate transportation of stolen vehicles, and other crimes. As a result of this investigation the New York City Police Department has cleared 58 homicides that were committed by this group. The actual number of murders committed by this group is believed to exceed 200.

On August 23, 1989, a Federal Grand Jury in the Western District of New York (WDNY) returned a seven-count indictment against Magaddino LCN Family capo Leonard Frank Falzone and his LCN associates Salvatore Spano, Joseph C. Sacco, Gaspar Cino and Charles Nigro. The five subjects were each charged with one count of violating the RICO Statute and one count of conspiracy to violate the RICO Statute, Title 18, U.S.C., Sections 1962 (c) and (d), respectively. Spano was also charged with violating conspiracy and money laundering statutes, Title 18, U.S.C., Sections 371 and 1956, as well as making false statements on Federal income tax returns for the years 1986, 1987 and 1988. All subjects were released on substantial cash bonds. Subsequent to the indictment, Spano's residence in Buffalo, New York, and two of his bank accounts, totaling in excess of $30,000, were seized. This investigation, initiated in early 1988, focused on Falzone's extensive loansharking activities.

On September 14, 1989, USDJ Vincent L. Broderick, Southern District of New York (SDNY), sentenced Gambino LCN soldier Salvatore Mangialino and Gambino LCN associates Anthony Senter and Joseph Testa on RICO charges. Mangialino was sentenced to 25 years. Senter and Testa were sentenced to the custody of the Attorney General for 20 years and a life sentence to begin after their 20 year terms are completed. The defendants were convicted of operating a racketeering enterprise responsible for over a dozen murders, loansharking, drug trafficking, transportation of stolen vehicles and other crimes.

On September 20, 1989, Gambino LCN capo Joseph Corrao was sentenced for two years and fined $5,000. Corrao was convicted on charges of conspiracy and obstruction of justice on July 28, 1989. His trial was especially important because it dealt specifically with the issue of LCN corruption of the Federal Judicial System. Mildred Russo, a SDNY clerk in charge of sealed indictments provided secret indictment information to Corrao which he subsequently revealed to LCN associates. Russo has been convicted and placed on probation for her role in this conspiracy.

On September 26, 1989, the United States District Court in Newark, New Jersey, imposed the following sentences on Genovese LCN consigliere Louis Anthony Manna and four Genovese LCN associates: Louis Anthony Manna, 80 years in prison, five years probation and a $250,000 fine; Martin Cassell, 80 years in prison, five years probation and a $25,000 fine; Richard De Sciscio, 75 years in prison, five years probation and a $300 fine; Rocco Napoli, six years and three months in prison, five years probation and a $25,700 fine; Frank Daniello, four years in prison, five years probation and a $150 fine. The above subjects, along with Genovese LCN associate John Derrico, whose sentencing has been postponed, were convicted of RICO, extortionate credit transaction, Taft-Hartley Act and illegal gambling business violations on June 26, 1989.

On September 29, 1989, a Federal Grand Jury in Elkins, West Virginia, returned a 218-count indictment charging LCN associate Paul Nathaniel Hankish and members of his organization with 29 different Federal violations ranging from RICO-murder and continuing criminal enterprise (CCE) charges to tax evasion. This investigation focuses on extortionate credit transactions, interstate transportation of stolen property, illegal gambling, interstate prostitution and contract murder.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Organized Crime....................................	1,699	1,629	$126,241	1,824	1,626	$128,128	125	-3	$1,887

The net change of 125 positions (-3 workyears) and $1,887,000 includes a program increase of 172 positions (44 workyears) and $4,119,000 and a program decrease of 47 positions (47 workyears) and $2,232,000.

The increase of 172 positions (44 workyears) and $4,119,000 includes a program increase of 78 agent positions (20 workyears), 50 general support positions (6 workyears), 26 Title III monitor positions (13 workyears), and 18 special support positions (5 workyears) for the Organized Crime program (OCP) to implement new initiatives to address the emerging problem of Asian Organized Crime (AOC).

Program Increase:

Asian Organized Crime: 78 agent and 50 general support positions (20 agent and 13 general support workyears) and $3,567,000.

An increase of 78 agent and 50 general support positions and $3,567,000 is being requested for AOC. Asian gangs were once considered to be merely street gangs, comprised of young members who restricted their activities to a limited geographical area. However, some gangs now appear to be an interstate menace in that they have factions throughout the United States and are headed or controlled by older members of the faction.

The extent of the AOC threat can be seen in the size and scope of these groups. The Royal Hong Kong Police estimate that Triads in Hong Kong claim 80,000 - 100,000 members in 50 separate organizations. The five most dominant Triads in Hong Kong are the 14K with a membership of 24,000; WO with 28,000 members; CHIU with 16,000 members; LUEN with 5,000 members; and TUNG with 3,000 members.

An intelligence report on the AOC, prepared by the FBI, cites that "there are well over 13 Triad societies operating in the United States at this time, 10 of which are in California." Among the most active are the UNITED BAMBOO GANG, active in six cities; the 14K in four cities; and the SUN YEE ON group in six cities.

Allegations of the illegal activities of Triads and criminally influenced Tongs within the United States include murder, gambling, loansharking, prostitution, extortion, smuggling, public corruption, and sweatshop labor racketeering. The transfer of the city of Hong Kong to the government of the Peoples' Republic of China in 1997 may result in an increase in the number of Triad members in the United States based upon reports that indicate that the communists are particularly brutal to Triad members. Recent Immigration and Naturalization Service statistics show a dramatic increase in emigration from Hong Kong to the United States.

The organized crime group in Japan is the Yakuza, which controls some 26,000 legitimate businesses and countless illegal ones. Available intelligence indicates a worldwide membership as high as 100,000 spread across 2,500 gangs. The illegal activities of the Yakuza appear to fall into two major categories: (1) obtaining contraband for export to Japan and (2) infiltrating legitimate United States businesses with the proceeds from illegal activities in Japan. The Yakuza control all handguns which enter Japan illegally, prostitution, and purchase legitimate United States businesses for laundering vast amounts of drug and extortion money. The FBI and the National Police Agency (NPA) of Japan have established a working group to exchange intelligence on organized crime, conduct joint organized crime investigations, and engage in mutual organized crime training.

Other Asian criminal groups, especially the Vietnamese and Korean groups, have shown a willingness to use violence with regard to their illegal activities. There are indications that Vietnamese groups may have criminal associations with chapters of Tongs that are involved in criminal activity.

Vietnamese gangs' strength varies from 65 to 200 members per gang. They are extremely mobile with a propensity toward violence, are proficient in murder, robbery, and extortion, and are known to integrate with Chinese gangs. Vietnamese gang activities have been identified in California, Texas, Louisiana, Mississippi, Virginia, New York, Illinois, and Colorado.

The Los Angeles Field Office has identified four major Hong Kong Triads and the Japanese Yakuza operating within its territory and has requested additional agent positions to address this problem. In addition, the Newark Field Office acknowledges AOC problems involving Chinese and Japanese groups which also affect New York, but due to the extent of the LCN problem it is addressing, is unable to conduct any investigations of AOC. The San Francisco Field Office reports a similar problem. Intelligence reflects criminal activity by the Yakuza, the United Bamboo Triad, various Vietnamese groups, and more significantly, various Triads and Tongs with direct ties to the parent organization in Hong Kong. FBI field offices in Houston, Dallas, Minneapolis, and Washington D.C., also report unaddressed or prolonged investigations of AOC matters due to a lack of adequate resources.

Recent investigations have identified active criminal associations between the LCN and the Chinese and Japanese organized crime groups. Based on the size of the AOC threat and their association with the LCN, the FBI can no longer delay the investigations into the illegal activities of these organized criminal groups. These investigations require additional resources to employ the highly successful techniques learned from LCN investigations. Thereafter, the Enterprise Theory of Investigation and civil RICO remedies, wherever appropriate, can be utilized to eliminate AOC as a threat to American society.

In line with the AOC agents requested, the FBI requires 50 additional general support positions to perform necessary clerical tasks essential to the special agents' ability to carry out their investigative responsibilities. Clerical or support performance affects the speed and reliability of action relating to the main investigative purposes of the FBI. The increased volume of investigative work necessitates more typing, secretarial, and filing support.

Language Specialists: 14 positions (4 workyears) and $227,000.

To further AOC investigative efforts, the Organized Crime program would require the services of personnel familiar with the culture and dialects of the individuals under investigation. The funded level of six language specialists is inadequate to support the Organized Crime program's investigations of AOC group activities. The scope of the AOC problem is such that an additional 14 language specialist positions (seven workyears) and $398,000 are being requested for 1991.

Groups such as the Chinese Triads/Tongs involved in criminal activity, and the Japanese Yakuza would be the focus of the FBI's new investigative initiatives and are comprised of a high number of bilingual or non-English speaking members. Experience has shown they prefer to communicate in their native or ancestral language. The degree of success the FBI would have against these crime groups would depend in large part on the ability to expeditiously handle the volume of non-English speaking Title III's and consensual monitoring tapes that these investigations are expected to generate.

Given the increase in the number of investigations concerning these AOC groups expected in 1991, it is essential to have readily available support employees capable of translating Title III and consensually monitored tapes as well as other documents. This increase would allow translations to be completed on a timely basis, allowing for timely responses to planned criminal activity.

Intelligent Research Specialists: 4 positions (1 workyear) and $52,000.

Additionally, this request would provide four positions (two workyears) and $103,000 to implement the Intelligence Research Specialist (IRS) program in field offices with a significant AOC problem, such as San Francisco, Los Angeles, and New York. By providing the field offices with well-trained analytical personnel, special agents would be relieved of many of their noninvestigative functions. The products generated by these employees would prove to be an invaluable program and case management tool. Expanding the intelligence base developed by FBI investigations by contact with State and local agencies, the IRS will conduct thorough research and analysis of the growing AOC problem. This analysis would be accomplished without diverting agents from investigative matters. Thereafter, the IRS would provide FBI management with information that would enable the FBI to better focus its efforts toward the most significant of these groups, thereby maximizing the FBI's investigative effectiveness.

These specialized support personnel develop a thorough knowledge of the Organized Crime program, conduct analyses of ongoing cases and identify investigative trends. The IRS position would expand beyond the intelligence support provided by the OCIS analyst using the OCIS automated intelligence system. The IRS would use data obtained from OCIS, from pending and closed investigative matters and through liaison efforts with the intelligence gathering entities of other agencies, both law enforcement and non-law enforcement, and provide the Organized Crime Program with forecasts, predictions, and trend analyses necessary to plot the investigative course of action required.

It is not unusual for a Title III to produce more investigative information than the agent assigned the case can manage. While the agent focuses on that information pertinent to the primary subjects of his investigation, the IRS would analyze the data regarding secondary individuals or violations which could become the focus of subsequent investigations. The IRS would prepare a report or summary which would serve as the basis for an expanded or a separate investigation. Without the IRS, the time-consuming task of analyzing this data would be left to the agent. Given that an investigation may continue for months after the Title III is terminated, and before the case is prosecuted successfully, the relevance and usefulness of this added information would be lost.

Title III Monitors: 26 positions (6 workyears) and $273,000.

The requested personnel would also provide 26 general support positions (13 workyears) and $591,000 to monitor electronic surveillances, prepare drafts of transcripts, if necessary, proofread the typed transcripts, analyze and collate relationships, and disseminate and coordinate intelligence with respect to ongoing Title IIIs within AOC investigations.

The Electronic Communications Privacy Act of 1986 contained provisions which would increase significantly the use of the Title III technique. The new law enables law enforcement officials to obtain an interception order to monitor a specific person rather than the specific premises or telephone that person might use. This expands significantly the opportunity to monitor effectively those subjects who have thwarted interception by changing facilities, for example, moving from phone booth to phone booth or place to place to avoid interception. In addition, statutory coverage for a wide range of communications within the defined term "electronic communication" was created to include non-aural communications such as electronic mail, computer transmissions, and video teleconferencing. Predicate offenses were expanded to include Murder for Hire and Mail Fraud. The law now permits non-agent Government personnel or contract employees to monitor ongoing electronic surveillance under the direction of law enforcement personnel. This portion of the law provides major efficiencies in personnel utilization by allowing many of the special agents normally required to monitor Title III's to participate in other more complex investigative activities.

The resources being requested for the AOC initiative have been determined through a review of the investigations the FBI has been able to address, an assessment of the unaddressed work, and a detailed evaluation of the threat posed by these groups. For example, 21 field offices have identified an AOC problem; however, due to resource constraints, only 16 field offices have been able to initiate a limited number of investigations. These additional resources would allow the FBI to begin directing an appropriate level of investigative resources to address the illegal activities of these groups before they can rise to a level equal to that of the LCN. The size of these groups, plus the development of their association with the LCN, makes it imperative that the FBI no longer delay initiating investigations into the groups' illegal activities. The requested resources would allow the FBI to utilize both the Enterprise Theory of Investigation and civil RICO wherever appropriate to eliminate AOC as a threat to American society.

Program Decrease:

Program decreases totaling 27 agent and 20 support positions and workyears and $2,232,000 are proposed to meet budget deficit reduction target levels established by the Administration. The reduction of 27 agent and 20 support positions and workyears would impact on the FBI's investigative efforts of the LCN; however, sufficient resources would remain to avert a resurgence of the threat of organized crime.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Drugs......................	1,377	1,359	$91,166	1,339	1,321	$88,341	1,672	1,440	$107,509	333	119	$19,168

Long Range Goal: To reduce the incidence of illegal drug trafficking and other criminal activity which drug trafficking generates in American Society through investigations conducted on a systematic, coordinated, and sustained basis.

Major Objectives:

To conduct effective, coordinated investigations against major drug trafficking organizations on a nationwide basis with the ultimate objective of neutralizing networks involved in the distribution of illegal drugs and seizing their ill-gotten assets through forfeiture proceedings.

Focus FBI resources on the identification, investigation, and asset seizure of major multi-national drug trafficking organizations which control predominant shares of the United States drug market.

To expand and enhance the intelligence base on domestic and international drug trafficking organizations and their financial support structure.

To provide assistance to other Federal, State, and local law enforcement agencies in the investigation of high-level drug trafficking organizations operating in a local or regional area of the country.

To remove the ability of criminal enterprises to function through the aggressive application of forfeiture sanctions contained in Federal statutes which fall within the investigative purview of the FBI.
To develop and implement the FBI Drug Intelligence System.

To increase the amount and improve the level of training, logistical and technical support for drug investigations.

Base Program Description: The mission of the FBI Drug Program is embodied in the Administration's recently announced Drug Strategy and the FBI's National Drug Strategy (NDS). The NDS is based on the premise that the FBI's drug resources must be used effectively and efficiently to achieve the highest impact possible on drug trafficking, supply reduction, and the attendant problems caused by drug trafficking. The NDS targets major, multi-jurisdictional drug trafficking organizations through long-term, sustained investigations aimed at dismantling trafficking networks; arresting their leadership; and seizing and forfeiting their ill-gotten gains. The NDS is structured to enhance the FBI's drug intelligence base, identify trends and make projections, concentrate resources in major centers of drug trafficking activity, and provide assistance to other law enforcement agencies.

The closely-focused, complex investigations, following the FBI's NDS tenets, target organizations rather than individuals. The benefits of this approach are based upon the FBI's experience and expertise developed through extensive investigation of traditional organized crime organizations. The neutralization of organizations yields the greatest and most lasting results. This is the extra dimension that the FBI's NDS brings to supply reduction and to combating the other illegal activities of drug trafficking organizations such as; corruption of public officials; money laundering; fraud and violent crimes not covered in Title 21, United States Code, violations in which the FBI has jurisdiction and decades of experience; therefore, enabling the FBI to address all aspects of drug conspiracies.

To achieve a significant impact on the established priorities the FBI's NDS is designed to expand and enhance the existing drug intelligence base. The FBI's effort is broad-based and covers the full spectrum of intelligence from the development of high-quality informants and cooperative witnesses to the selective use of Racketeering Enterprise Investigations (REIs). The FBI uses REIs, or criminal intelligence gathering investigations, to identify the organizational, geographical, and financial aspects of major drug groups, as well as to project their future activities. As a result, FBI managers can more effectively select initiatives and target operations against the highest levels of these organizations.

One of the most effective means for penetrating sophisticated drug trafficking organizations and networks is court-authorized electronic surveillance. This investigative technique allows the interception of even the most guarded criminal conversations of the leaders of drug trafficking groups providing strong evidence of the groups' structure, scope, and finances. Electronic surveillance also presents a unique opportunity to develop evidence of drug trafficking, using the words and voices of the traffickers themselves.

Long-term, complex Undercover Operations (UCOs) are a second area of recognized FBI expertise which facilitate the penetration of drug trafficking organizations. UCOs produce a great deal of intelligence information as well as evidence to support prosecution of the key leaders of these organizations. By interacting directly with the organization members, undercover agents have the opportunity to collect information on the inner workings of groups. Due to the sensitivity and inherent risks to undercover agents, UCOs are only used against major drug traffickers or networks of traffickers in long-term investigations after careful evaluation of the risks and anticipated accomplishments.

The FBI's goal is to more clearly focus investigative resources on those organizational-based trafficking groups controlling significant segments of the illegal drug importation and distribution markets. Investigations are directed at the following drug trafficking groups: Colombian/South American; Mexican; European/Italian; Asian; and other major drug trafficking organizations that are national in scope. They include emerging major drug trafficking groups, such as Jamaican Posses and notorious Los Angeles-based street gangs known as "Bloods" and "Crips."

During 1989, 71 percent of the FBI's Drug investigative agent resources were used in Colombian/South American, Mexican, European/Italian, and Asian subprograms. These drug trafficking organizations have been identified by the FBI as posing the greatest drug trafficking threat to the United States. Accordingly, the FBI Drug Program's field agent resources are allocated to those FBI field offices identified as primary centers for major organizations involved in illegal drug importation and distribution.

A brief description of major drug trafficking organizations addressed within the FBI's Drug Program is set forth below:

Colombian/South American: Colombian/South American traffickers control the importation of cocaine, which has been identified as the primary drug problem facing the United States. The areas of south Florida; Houston, Texas; and Los Angeles, California, are the regions impacted the most by these drug traffickers. In 1988, the wholesale price of one kilogram of cocaine was near all-time lows in Miami, Florida, despite record seizures by law enforcement. According to the National Narcotics Intelligence Consumer Committee (NNICC), use of the drug in this country has surged upward by 309 percent from 1985 to 1988 (the most recent figures available). There is no present indication of this trend abating.

Mexican: Mexican drug trafficking organizations are responsible for importation and distribution of brown and black-tar heroin, cocaine, and marijuana. In addition to the production and importation of heroin, the Mexican groups are transshipping to the United States increasing amounts of South American cocaine. The southwestern United States border area is long and vulnerable, compounding the drug trafficking problem Mexican groups pose. Their activities, once concentrated in the southwest and western United States, have now spread to the east coast (Massachusetts, New Jersey, New York, and Pennsylvania), southeast (Florida and Georgia), northwest (Oregon and Washington), and midwest (Colorado, Illinois, Indiana, and Oklahoma). The threat which Mexican drug organizations pose is underscored by 1988 NNICC statistics showing that such groups account for 30 percent of all heroin smuggled into this country. Trend analysis of trafficking indicators dating back to 1984 demonstrates a gradual, yet continuous increase in the availability of Mexican heroin in the United States and an increase in purity levels, reaching as high as 90 percent. Although the heroin user population appears static at about a half million addicts, studies are demonstrating that the user population is increasingly responsible for an inordinate amount of all crime. An intensive, aggressive investigative posture is unquestionably required to stem the drug flow and to effectively counter the groups responsible.

European/Italian: European/Italian drug trafficking activity, primarily by La Cosa Nostra (LCN) and the Sicilian Mafia, has been traditionally associated with cities located in the northeastern United States. However, the FBI's intelligence base has determined that these organizations have become more geographically diverse. The Sicilian Mafia is now active in drug trafficking in numerous cities throughout the United States. They are primarily responsible for importing southwest Asian heroin. Based upon drug "signature" figures, southwest Asian heroin accounts for 27 percent of the heroin smuggled into the United States.

Asian: The Asian groups are rapidly emerging criminal organizations involved in drug trafficking and other related crimes. Recent cases have established their activity in San Francisco and Los Angeles, California; Washington, D.C.; New York, New York; Boston, Massachusetts; and Houston, Texas. Expansion of the investigative effort and intelligence base is necessary to address these groups. Due to close knit traditions of Asian groups, penetration and successful investigation of these drug trafficking networks require full use of Title IIIs, UCOs, and other sophisticated surveillance techniques. FBI intelligence, and that of other law enforcement agencies, clearly shows an indisputable correlation between Asian drug trafficking and the increasing illegal immigration to the United States of Asian criminals. Such groups have a significant share in trafficking of southeast Asian heroin which represents 43 percent of the heroin market in the United States, according to the 1988 NNICC "signature" figures.

Other: Other major, multi-jurisdictional drug trafficking organizations also present a significant crime problem in the United States. Although these groups may not be involved in the direct importation of drugs, they may represent the dominant trafficking organizations in a geographic region. The threat they pose, combined with the inability of many local law enforcement agencies to conduct sustained, multi-jurisdictional investigations, is a prime factor behind FBI involvement in regional drug matters based on a case-by-case assessment. In some instances, corruption of local officials has precluded effective local investigation of these organizations.

Emerging gangs, such as the Los Angeles-based "Bloods" and "Crips," have become multi-kilogram entrepreneurs who deal directly with major Colombian and Mexican drug trafficking organizations as their source of supply for crack/cocaine. Jamaican Posses have also emerged as major drug trafficking organizations. Recent information indicates a new trend by inner-city drug users of mixing crack and heroin, a particularly dangerous development, which resulted in the leading cause of drug overdoses in Washington, D.C. during 1988. Additionally, in the past two years, the use of crack has become pandemic in inner-cities, contributing to record high homicide rates and violence.

The FBI's seizure and forfeiture program has initiated pilot Forfeiture and Asset Seizure Teams (FASTs). In January 1989, 12 Forfeiture Asset Seizure Teams (FAST) were formed in selected field offices. These groups are designed to assist substantive agents in the identification and seizure of forfeitable property. The formation of FAST is a new initiative which is expected to increase the number of seizures by approximately 90 percent by 1991. A commensurate increase in sharing requests is also projected. The FAST initiative is based upon pilot FAST efforts in the FBI's Miami and New York

Field Office's that have proven successful. Forfeiture of assets used in violation of Federal statutes has been clearly recognized as one of the most effective weapons against drug trafficking organizations. The sharing of seized assets with local police agencies has proven to be a powerful incentive for joint investigations. The combining of Federal and State resources in combating drug cartels has been very beneficial in not only dismantling these groups but also in enhancing the resources of the police agencies through the sharing of the seized assets.

The Forfeiture Program is responsible for processing property seized for evidentiary and other purposes. Tasks performed include recommending forfeiture-related policy and procedural initiatives; processing forfeiture actions including providing notice to interested parties; determining the sufficiency of probable cause; the management of seized assets; processing requests for sharing Federally forfeited property; administering the FBI's portion of the Department of Justice Asset Forfeiture Fund; and vesting title of abandoned property.

In 1991, the FBI will be subject to a reduction of 22 agent and 16 general support positions and $1,844,000 in order to meet targeted budget levels established by the Administration.

Accomplishments and Workload:

Actual and projected accomplishments in Drug Program, non-OCDETF, investigations from 1988 to 1991 are set forth below:

			ESTIMATES	
Item	1988	1989	1990	1991
Investigative Matters:				
Pending Beginning of Year	2,727	4,512	5,000	5,400
Received During Year	8,522	8,150	7,400	7,700
Completed During Year	6,737	7,662	7,000	7,400
Remaining End of Year	4,512	5,000	5,400	5,700
Title IIIs Used *	101	36	36	37
Informations and Indictments	1,456	1,923	1,600	1,650
Convictions/Pre-trial Diversions	895	1,327	1,050	1,100
Seizures Subject to Forfeiture ($000)	$40,668	$50,000	$65,000	$65,000
Forfeited ($000)	$22,096	$27,500	$43,000	$43,000

* Title IIIs used include extensions.

The following figures depict the breakdown of how Drug agents were utilized--the number of cases (includes cases received in year and cases pending beginning of year) from 1988-1989 and projections for 1990-1991 in the following Subprograms:

Drugs	1988		1989		1990		1991	
	% of agents	# of cases	% of agents	# of cases	% of agents	# of cases	% of agents	# of cases
Colombian/SA	35	2,585	35	2,575	36	2,460	38	2,600
Mexican	15	1,058	17	1,250	20	1,370	22	1,495
European/Italian	18	1,175	16	1,175	14	960	12	845
Asian	2	216	4	300	6	410	8	520
Other*	25	2,819	23	1,700	19	1,300	15	1,040
Total	95	7,853	95	7,000	95	6,500	95	6,500

The agent/case ratio is highly variable, being directly dependent on the complexity of the cases. As an example, some of the more complex cases require as many as 15 to 20 agents per case, whereas less expansive cases may be investigated by one or two agents. The NDS cases are increasingly more complex in nature. Thus, to give a "desirable" agent/case ratio is not representative of drug cases.

Explanation of Investigative Matters:

The accomplishments projected for 1989 and 1990 indicate a decrease in some areas and a leveling trend in other areas, with the exception of seizures and forfeitures. There are two reasons for this. First, the decreases in 1989 and 1990 accomplishments are due to an internal adjustment on the overutilization of resources. The Drug Program has had an overburn of approximately 20 percent above the funded level since 1983. In March 1989, an executive level decision was made that the FBI Drug Program could no longer overburn resources at the expense of other priority programs. This resulted in an approximate 30 percent reduction in workyears in 1989 from 1988 levels and consequently a reduction in the number of matters handled. Second, when the FBI first received Title 21 jurisdiction in 1982, it had a limited drug intelligence base. Therefore, the initial investigations conducted were of known regional drug distributors and organizations identified through the course of other FBI investigative responsibilities. These investigations added considerably to the intelligence base and an understanding of drug trafficking patterns; consequently, increasingly more complex drug trafficking organizations were investigated. This was also a time of rapid expansion of resources for the FBI Drug Program. Based on this enhanced intelligence base and experience, the FBI, in 1986, formulated its NDS. The NDS has led to a more effective focusing of resources on the highest level of drug trafficking organizations. These higher impact cases have necessitated the increased use of sophisticated investigative techniques, including undercover operations, and electronic and physical surveillance. These sustained, long-term investigations, although resource intensive, obtain commensurate results: the neutralization of the highest level of drug trafficking organizations, the arrest of their leaders, and the seizure and forfeiture of their assets. As the NDS is accelerated, fewer net investigative matters are anticipated, but there has been and would be a quantum increase in quality and impact of investigations, resulting in an increase in seizures and forfeitures (assuming a constant level of agent resources). Informations/indictments are anticipated to level off for the same reasons as given above; that is, more complex investigations would result in more complex, high impact prosecutions of higher level drug trafficking organization leaders, a process that is resource intensive. The leveling shown is an indication of the FBI's NDS resulting in the effective utilization of resources for investigations that result in the largest possible impact on the highest level drug trafficking organizations.

Other accomplishments include the following:

In July 1989, an FBI drug investigation in South Carolina resulted in the arrest of nine suspects; recovery of 502 kilograms of cocaine; seizures of $662,088 in currency; a house appraised at $400,000; and other property valued at $207,070. This case involved following a sailboat from Hilton Head Island, South Carolina, to Fort Lauderdale, Florida, where it was modified to conceal over 500 kilograms of cocaine and then sailed to the vicinity of the Caribbean Island of Bonaire. It was then met by another boat carrying Colombians and the cocaine. With the assistance of a FBI cooperating witness, after the sailboat returned to Hilton Head, the cocaine was taken to houses the FBI had covertly rented. The houses were equipped with CCTV and Title III authorized wire and microphone surveillance. This investigation required the utilization of several Special Operations Groups, air surveillances, and a translator. DEA assisted this case through the installation of a satellite tracking device on the boat and by facilitating the travel of two agents (one FBI, one DEA) to Aruba to provide coverage and support of the source during the voyage. Two of the subjects arrested have been identified as significant drug traffickers and many investigative leads into their drug smuggling activities are still being pursued, as well as the connection at Hilton Head. On December 12, 1989, after three weeks of trial, the jury returned guilty verdicts on all counts for subjects Gabriel Taboada, Jorge Samuel Cruz, and Peggy Ann Nelson. Six defendants previously had entered guilty pleas to the indictment and testified as Government witnesses in the trial.

As a result of a three year UCO, codenamed "Busico," 14 suspects were arrested in Baltimore, Buffalo, Miami, Newark, New York, Philadelphia, Rockford, and San Francisco, as well as in Italy, and were charged with drug trafficking violations. This complex and lengthy investigation was directed at Italian/Sicilian drug cartels operating throughout the United States. These cartels operated independently of each other, yet were connected through various associations with the common link of illegal drug trafficking. Three Italian law enforcement agencies, coordinating with the FBI Legal Attache in Rome, provided immeasurable assistance in this investigation.

Program Changes

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Drugs..	1,339	1,321	$88,341	1,672	1,440	$107,509	333	119	$19,168

Program Increases:

Agents - 94 positions; general support - 61 positions; special support - 178 positions and $19,168,000.

In 1991, the FBI's Drug Program requires personnel increases of 94 agents, 61 general support positions, 178 specialty support positions, and nonpersonnel increases of $9,447,000. The requested resources are necessary to address the sophisticated drug trafficking organizations operating in first- and second-level drug distribution cities identified through FBI intelligence. Use of electronic surveillance techniques, undercover operations and enhancement of the drug intelligence base have placed an extraordinary demand on the technical and intelligence handling capabilities of the FBI. Increased emphasis has been placed on Asian and Jamaican drug trafficking organizations as well as Los Angeles based street gangs which have developed drug distribution networks throughout the United States.

94 Field Agent positions (35 workyears); 61 general support positions (21 workyears) and $6,134,000.

The FBI is requesting an increase in its Drug Program personnel resources of 94 agent and 61 general support positions. This enhancement would bring the FBI's Drug Program funded level to the existing utilization level, thereby insuring that the FBI would be able to continue to devote investigative resources near its current level of commitment.

The FBI's Drug Program, through its NDS, addresses the Colombian/South American, Mexican, European/Italian, and other major emerging drug trafficking organizations, e.g., " Bloods" and "Crips" and Jamaican Posses. In investigating these drug trafficking organizations, the agent and support resources utilize physical and electronic surveillances; Racketeer Enterprise Investigations (REI); UCOs; asset seizures; and provide analytical functions to enhance the intelligence base. These sophisticated investigative techniques provide the most effective means for identifying and penetrating the principal drug trafficking organizations and their networks. Of the major drug trafficking organizations currently identified as operating in the United States, the FBI is able to address an estimated 40 percent at this time. An increased intelligence base is expected to identify still other major drug trafficking organizations. FBI intelligence has revealed that Colombian/South American trafficking organizations have expanded their operations from southern Florida to the southwest, eastern seaboard, and the Gulf Coast states. The Miami FBI Field Office alone has identified approximately 200 Colombian/South American drug trafficking organizations operating within southern Florida, all of which cannot be addressed due to insufficient resources. New York City and Los Angeles have also been identified as major distribution centers for these drug trafficking groups.

Additionally, intelligence has also disclosed that Mexican drug trafficking organizations, once operating primarily in the southwest United States and southern California, have now spread across the entire country. This problem is not being addressed adequately due to insufficient resources. Current personnel utilization levels, much less funded levels, do not permit investigation of all the identified organizations. The southwest U.S. border has been identified as a strategic drug trafficking region. Given that more than one-third of all heroin entering the U.S. comes from Mexico and that the Mexican Organizations play an increasing role as a conduit for South American cocaine, the FBI must at least maintain, if not enhance, its investigative commitment to this growing threat.

The 61 general support positions (21 workyears) are needed to perform clerical and related functions in support of FBI drug investigations. Critical word processing, file maintenance, evidence control, trial preparation, and other administrative functions, must be performed to support investigations. Without proper support, agents are relegated to performing clerical functions.

The FBI has attempted to balance its commitment to combatting the drug problem in all regions of the United States. Expanding drug investigative resources in the principal drug importation and distribution cities - Los Angeles, Miami, New York, and Houston - is a most effective and efficient method of cutting the chain of supply to smaller inland and rural areas. Yet, despite the major emphasis on metropolitan areas, the FBI maintains, to a limited degree, its drug investigative role in attacking regional drug trafficking groups in concert with state and local law enforcement. The requested increase of 94 agent positions (47 workyears) would enable the FBI to increase efforts in major distribution and importation centers but continue drug investigations in the principal and secondary distribution cities.

Electronic Surveillance Monitors 40 special support positions (14 support workyears) and $636,000.

The increase of 40 special support positions would assist agent personnel involved with monitoring and transcribing Title III intercepts, under the provisions of the Electronic Communications Privacy Act of 1986. The use of Title III court-authorized electronic surveillances is an invaluable investigative tool to expose secretive criminal organizational-based conspiracies. Although employing such a technique is personnel intensive, its use is essential if evidence is to be developed which incriminates the leadership of these organizations. This is especially important when it is considered that the FBI's NDS focuses resources to attack the top echelon structure of drug organizations posing the greatest threat to the United States.

Electronic surveillances save thousands of investigative hours that would otherwise be employed in attempting to climb the hierarchial ladder; that is, developing evidence against subordinate and lower level members in anticipation of reaching organizational leaders, a traditional technique--oftentimes referred to as a buy/bust approach--which often falls short of incriminating those individuals heading conspiracies. The cost of personnel and resources expended for Title III electronic surveillance, often augmented by undercover activity, more than offsets the cost of concentrating resources on other investigative techniques which likely would not reach the ultimate goal of dismantling criminal organizations.

The leaders of criminal enterprises, in an effort to insulate themselves from detection, are unlikely to engage directly in criminal transactions. They employ others to do their bidding. However, to manage organizational conspiracies, leaders must communicate their instructions to subordinates and co-conspirators. Their principal means of communication to maintain national and international criminal enterprises is the telephone. In some instances bugging devices may be necessary when subjects avoid telephonic communications.

During 1989, the FBI employed Title III electronic surveillances in 36 instances, including initial installations and extensions, against primarily Colombian/South American, Mexican, Italian and Asian cocaine and heroin trafficking conspiracies. The Drug Program is steadily increasing its use of the Title III investigative technique. With a projected 37 Title III requests in 1991, the use of these electronic surveillance monitors is imperative to process resulting information properly. Additionally, these support positions would relieve agent personnel of clerical responsibilities and allow them to concentrate on analyzing Title III results and dealing with unaddressed work in efforts to dismantle major drug trafficking organizations through sustained investigations and the seizure and forfeiture of the assets of major drug traffickers.

Forfeiture Analysts - Field 50 special support positions (18 workyears) and $927,000.

The 50 special support positions are required to support the FBI's forfeiture activities in the field offices. There are 72 full-time and 49 part-time Investigative Forfeiture Assistants (IFA) assigned to the field offices. Forfeiture actions are increasing at a rate of 50 percent per year, and a larger increase per year is projected beginning in 1990 when the FAST are fully operational. Each team is staffed by two special agents and three IFA's and their efforts should result in the value of pending forfeiture actions increasing from approximately $400 million as of December 31, 1989. Additional pending forfeiture actions with a value of $420 million resulting from two RICO cases have been excluded from this amount due to the unique and unusual circumstances surrounding the investigations. The value of pending forfeiture actions is expected to reach approximately $550 million in 1991. In 1991, 122 full-time IFAs and 49 part-time IFAs would be required to support the volume of seizures projected.

The 50 forfeiture positions are necessary if the FBI is to continue to effectively utilize forfeiture sanctions and to process requests for the sharing of Federally forfeited property with participating State and local police agencies. If the FBI is unable to adequately staff forfeiture operations many potential forfeiture actions would go unidentified; delinquencies would number in the thousands; and the processing of our forfeiture cases would become backlogged.

Undercover Operations $6,674,000.

Over the past several years, the number of long-term undercover operations (UCOs) opened has increased annually, from 157 during 1987 to 190 in 1990. At the same time, the costs associated with UCOs, especially in the area of purchase of evidence, have increased dramatically. With the FBI's emphasis on attacking the illegal activities of organizations and individuals involved in high-level drug trafficking, considerable amounts of funds are being expended to conduct effective operations directed against these groups.

The undercover technique has opened avenues of investigative pursuit not available in the context of the traditional investigative process. It is used when there is sufficient predication that criminal activity already exists. The presence of an undercover agent provides firsthand testimony relating to the nature and the scope of the criminal activities; the extent of involvement of the various offenders; and the location of evidence items. Undercover agents are often able to obtain evidence relating to the knowledge, intent, and predisposition of the individuals involved in criminal activity, which, combined with the use of audio and/or video tapes, produces the strongest and most convincing evidence in a court of law. Undercover agents have the ability, in certain situations, to penetrate the highest levels of criminal activity, which heretofore were unreachable.

The undercover technique allows for a more effective and safer use of sources and informants, since the information obtained from the undercover operative may preclude the necessity for sources/informants to testify in court. In addition, undercover operatives often obtain evidence of planned crimes, which affords the FBI the opportunity to take a proactive approach, rather than investigating solely after the fact, and in some cases, prevent the crime. The undercover technique can also assist in developing the information required to implement other investigative tools, for example, by furnishing the probable cause for non-consensual electronic surveillances Title III's. The firsthand testimony of the undercover agent increases the chance of conviction and, thus reduces the necessity to offer immunity or reduce charges against the defendants. As a result, individuals are more inclined to offer assistance in the investigation and prosecution of higher echelon subjects.

The use of the undercover technique by the FBI to investigate major drug trafficking is essential. An undercover operation affords the opportunity to conduct the investigation over an extended period of time without the suspects becoming aware they are being investigated. The operation can identify individuals who comprise the different levels of the organization, to include growers/producers, importers, distributors, and financial backers. Information may also be developed regarding corrupt law enforcement officials and/or other public officials who are paid by the drug traffickers for protection, or to look the other way. The undercover operation directed against drug traffickers can also evolve into a money laundering operation, which can trace the assets of the subjects and uncover the entire structure of the organization. The number and scope of undercover operations directed against the illegal drug trafficking organizations would continue to increase through 1991, and as a result, the cost of undercover operations would continue to escalate. Drug undercover operations require considerable resource commitments for the operation to be successful. Undercover agents, portraying high-level traffickers, must have adequate funds available to successfully convince the individuals being investigated that they are truly what they appear to be.

Informant Payments $2,773,000.

The Criminal Informant Program (CIP) is one of the FBI's most essential and cost effective programs. Of all the investigative techniques being employed by the FBI, the utilization of criminal informants is arguably the most effective and successful. Strategically positioned informants have been at the very core of virtually every major long-term criminal investigation conducted in recent years.

Expenditures are exceeding available funding. In 1989, the FBI expended approximately $2.3 million for drug informant payments. These over expenditures have required the diversion of resources from other critical areas of confidential funding to achieve the benefits informant information provides to criminal investigations.

Drug Intelligence Analysts - Field - 38 special support positions (13 workyears) and $924,000.

In 1991, 38 special support positions are requested to implement Phase One of the Drug Information Systen (DIS) data base for all FBI drug intelligence. These Drug Intelligence Analysts (DIAs) would be responsible for field aspects of the computerized, multi-source, central drug intelligence base, including intelligence reports, case support, and field drug program matters. The Drug Intelligence analyst would extract and consolidate pertinent information from drug data bases; utilizing link analysis these analysts will be able to track the progress of an investigation in uncovering conspiratorial interrelationships; criminal hierarchical charting; set out geographic maps showing drug smuggling routes as narrowly-focused depictions of city and neighborhood locations where conspiracies exist; and review video/closed circuit television surveillances of intercepted conspiratorial meetings. The DIAs would generate substantial proactive intelligence reports and queries as they conduct research and intelligence analysis utilizing the single comprehensive, integrated DIS.

Language Specialists - Field - 50 special support positions (18 workyears) and $1,100,000.

Due to the current high number and continuing influx of international drug trafficking organizations into the United States, 50 Language Specialists are needed to monitor and translate non-English language conversations, writings and electronic interceptions. In 1989, 59 Language Specialists positions were used to support drug investigations. An additional need exists for Language Specialists for languages other than Spanish since agents with foreign language abilities are still being used on foreign language Title III's and other related translation assignments in support of the Drug Program. Additionally, the agents who would no longer be needed for translation duties would be used for investigative responsibilities in the Drug Program, in support of the FBI's NDS.

FBI investigative responsibilities mandate a full complement of full-time Language Specialists to address the foreign languages most frequently confronted in drug conspiracies, including Spanish, Italian, Sicilian, and Chinese. Not only is it cost effective to hire FBI Language Specialists, but it allows for a better trained and experienced work force, which is desirable because of the statutory minimization requirements of Title IIIs.

The FBI's NDS focuses its investigative resources on the major drug trafficking organizations posing the greatest threat to this country. Many of these groups communicate in languages other than English; therefore, an increase in the number of drug investigations requires a proportionate increase in Language Specialists. Limited resources would have a detrimental impact on the number of international drug investigations being conducted. The additional 50 support positions would relieve agent personnel of non-investigative activity, allowing them to concentrate their efforts in dismantling major international drug trafficking organizations.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
White-Collar Crime..........	3,435	3,343	$218,673	3,435	3,343	$237,387	3,810	3,388	$246,548	375	45	$9,161

Long-Range Goal: To reduce losses in Government programs and private sector businesses from corruption, fraud, and embezzlements; and to provide investigative assistance to the Department of Justice, including United States Attorneys throughout the United States, in civil and antitrust matters.

Major Objectives:

To identify, investigate, and obtain prosecution in: major fraud against the Government cases involving illegal practices by program and management officials and officers of firms doing business with or for the Federal Government; Federal violations involving systemic corruption by Federal, State, and local public officials, as well as private citizens acting in complicity with corrupt public officials; Federal fraud, bribery, and embezzlement violations, particularly those that result in the financial institution's failure; Federal fraud violations committed by officers, directors, and major stockholders of financial institutions; and Federal fraud violations committed by major companies involved in the illegal disposal of toxic waste.

To establish new and innovative means of collecting and collating White-Collar Crime Program data from multiple sources in order to identify high impact white-collar criminal organizations for subsequent investigations.

To support the Antitrust Division of the Department of Justice in the enforcement of antitrust statutes in high-impact cases by conducting the necessary investigations.

To support the Civil Division of the Department of Justice and United States Attorneys throughout the country in representing significant Government interests in civil matters.

To identify, investigate, and obtain criminal prosecution under recent Federal statutes concerning significant trademark counterfeiting, computer fraud, and bankruptcy fraud.

To support and participate in the efforts of the President's Council on Integrity and Efficiency, the Attorney General's Economic Crime Council, and the Interagency Bank Fraud Enforcement Working Group to coordinate a unified attack on high impact white-collar crime.

To assist other Federal, State, local, and foreign law enforcement and regulatory agencies in making a coordinated and effective attack on white-collar crime.

To insure that White-Collar Crime Program management provides sufficient coordination, direction, and resources to enable the FBI to address all priority investigations.

To plan and implement undercover operations directed against the subjects of significant white-collar crime investigations.

To recruit, direct, and maintain white-collar crime informants, cooperating witnesses, and confidential sources and enhance liaison with professional associations and private businesses in order to maintain an adequate intelligence base concerning white-collar crime matters within the investigative jurisdiction of the FBI.

To promote the utilization of electronic surveillance investigative techniques in white-collar crime investigations.

Base Program Description: White-collar crime is defined as those illegal acts which are characterized by deceit, concealment or violation of trust and which are not dependent upon the application or threat of physical force or violence. Such acts are committed by individuals and organizations to obtain money, property, or services, to avoid the payment or loss of money or services, or to secure personal or business advantage.

The FBI has established three major priorities within the White-Collar Crime Program. They are: fraud against the Government, matters involving United States Government officials (and/or losses exceeding $25,000), bribery and other public corruption involving Federal officials, and environmental crimes (Government Fraud); Federal, State, and local public corruption (Public Corruption); and financial institution fraud and related activities (Financial Crimes).

Accomplishments and Workload: The White-Collar Crime program's workload and accomplishment indicators are set forth in the following table (dollars in thousands):

			Estimates	
	1988	1989	1990	1991
INVESTIGATIVE MATTERS:				
Beginning	21,594	21,943 (1)	21,025	20,075
Received	48,082	52,906	56,350	64,050
Resolved	48,935	53,824	57,300	65,120
Remaining	20,741	21,025	20,075	19,005
JUDICIAL PROCESSES INITIATED:				
Convictions	4,289	4,251 (3)	4,600	5,230
Pretrial Diversions	332	308 (3)	345	391
Fines	$ 45,854	$ 52,492	$ 53,500	$ 62,925
Recoveries(2)	$638,346	$893,849	$955,000	$1,085,500
Potential Economic Loss Prevented (PELP)	$815,933	$1,504,575	$1,623,500	$1,845,350

	1988	1989	Estimates 1990	 1991
Claims Against the Government				
Filed	$247,150	$262,357	$280,000	$319,100
Settled	34,100	36,391	38,200	43,500
Claims by the Government				
Filed	$31,750	$33,893	$35,300	$40,150
Settled	20,100	21,456	22,500	25,650

(1) Increase in investigative matters at the beginning of 1989 from those pending at the close of 1988 reflects the transfer of investigative responsibility for non-La Cosa Nostra corruption matters from the Organized Crime program to the White-Collar Crime program.
(2) Includes recoveries and restitutions.
(3) The figures set forth here do not total to those specified under the narrative accomplishments that follow. The difference of 23 other convictions and pre-trial diversions relate to jury panel, contempt of court, obstruction of justice, perjury, and bondsmen and sureties violations.

Governmental Fraud: During FY 1989, 807 convictions and pretrial diversions, recoveries and restitutions totaling $258.8 million, and fines totaling $29.5 million were recorded within this investigative subprogram.

In a major investigation concerning governmental fraud and corruption, code named "ILLWIND", in the Department of Defense (DOD) weapons procurement process, approximately 200 subjects have been identified as involved in various schemes to defraud the United States Government through bribery and other means to corrupt the procurement process. The first of a series of indictments was returned in January, 1989. As of December, 1989, 27 individuals and four corporations have pled guilty to various felony violations. Investigation continues to accelerate as additional defendants agree to cooperate.

A joint investigation is being conducted by the Washington Metropolitan Field Office and the Office of Inspector General-Department of Housing and Urban Development (OIG-HUD), into allegations that Washington D.C. area real estate brokers were involved in a scheme to defraud Veterans Affairs (VA) and Federal Housing Administration (FHA), a component of HUD. These brokers submitted documents to VA and FHA that falsely inflated the market values of property, purported to establish the bona fides of "straw" or non-existent buyers, and falsely reported employment and earnings data on otherwise unqualified borrowers. During 1989, seven additional subjects were convicted, bringing the three year total to 34. Investigation is continuing and additional plea agreements and indictments are anticipated.

Public Corruption: During 1989, 459 convictions and pretrial diversions, recoveries and restitutions totaling $21.8 million, and fines totaling $10.3 million were recorded in this subprogram.

In a major investigation into allegations of corruption within the California State Legislature, conducted by the Sacramento Field Office, a number of subjects have been developed, including legislators and/or their aides, who solicited money in exchange for their support of specific legislation. In May, 1989, a State senator and his aide were indicted. The Senator is currently in trial and the aide's trial is scheduled for January, 1990. In November, 1989, a former State Senator was indicted and is awaiting trial. A former undersheriff and a sheriff have also been indicted in related matters. The undersheriff has entered a guilty plea while the sheriff awaits trial. The investigation is continuing and additional indictments are anticipated.

A two year undercover operation in Mississippi resulted in 74 subjects, including 56 county supervisors, being charged with Hobbs Act, Mail Fraud, and Conspiracy, following indictments stemming from extensive kickback schemes related to systemic corruption in the purchase of road construction materials throughout the State. Seventy-one subjects have been convicted as of December, 1989. The investigation is continuing.

Financial Crimes: During 1989, there were 3,270 convictions and pretrial diversions within this subprogram, of which 2,174 or 66 percent were bank related. Fines totaled $12.7 million, and recoveries and restitutions totaled $612.2 million.

On December 6, 1989, Woody F. Lemons, the former Chairman of the Board of Vernon Savings and Loan Association (VSLA) was convicted by a jury on all thirteen counts of an indictment charging him with Bank Fraud and Conspiracy. Patrick G. King, the former President of VSLA, was convicted in September, 1989. The VSLA was closed in 1987 at a cost to regulators of $1.3 billion and represents the largest failure under investigation by the Dallas Bank Fraud Task Force. The efforts of the Dallas Bank Fraud Task Force have resulted in charges against 57 subjects, with 45 convictions recorded as of December, 1989. This task force consists of Assistant United States Attorneys, FBI agents, the Internal Revenue Service, and Office of Thrift Supervision examiners. The task force is investigating allegations of fraud in 26 failed Savings and Loan Associations in the Dallas area. The total loss which was insured by the former Federal Savings and Loan Insurance Corporation is estimated at $10.5 billion.

On October 21, 1988, the Federal Grand Jury in the Southern District of New York, returned a four-count indictment which charged former Philippines President Ferdinand Marcos and his wife Imelda, with Racketeer Influenced and Corrupt Organizations, Fraud by Wire, Mail Fraud, and Obstruction of Justice. The indictment primarily focused on financial transactions which resulted in the Marcos' acquisition of four major real estate properties through nominee buyers. These New York properties were purchased for a total of over $188 million. In addition, indictments were returned by a New York Federal Grand Jury on October 11, 1988, charging eight of Marcos' associates, including international financier Adnan Khashoggi, and one Marcos-controlled bank with various fraud charges and Racketeer Influenced and Corrupt Organizations. On July 19, 1989, Adnan Khashoggi was extradited to the United States from Switzerland. At his arraignment Khashoggi pled not guilty to the mail fraud and obstruction of justice charges. The RICO charges were dropped as part of his extradition agreement. Khashoggi was released from custody after posting a $10 million bail. To date, seven Marcos' associates remain fugitives. On September 28, 1989, Ferdinand Marcos died of natural causes in Honolulu, Hawaii. The trial date for Imelda Marcos and Adnan Khashoggi is scheduled for March 14, 1990, in the Southern District of New York.

Program Changes:

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
White-Collar Crime................................	3,435	3,343	$237,387	3,810	3,388	$246,548	375	45	$9,161

For 1991, a net program change of 375 positions (45 workyears) and $9,161,000 is proposed for the White-Collar Crime program. Program increases of 440 positions (110 workyears) and $12,416,000 for the field are proposed to address DOD procurement fraud, Bank Fraud and Embezzlement matters, Fraud by wire, and Bankruptcy Fraud investigations. A program decrease of 65 positions (65 workyears) and $3,255,000 is also proposed.

Program Increases:

Department of Defense Procurement Fraud: 120 agent positions (30 workyears), 78 general support positions (20 workyears) and $5,349,000.

A continuing priority of the FBI's White-Collar Crime program is the investigation of Department of Defense (DOD) procurement fraud matters. Bribes and kickbacks paid to Government employees, contract labor mischarging, and defective pricing in negotiated contracts have resulted in millions of dollars in wasted Government expenditures. Of additional consequence is the heightened concern for safety and defense preparedness such as faulty products or components and non-conforming, substandard goods.

Due to the size and scope of the DOD budget, the extent of the procurement fraud problem is difficult to estimate accurately. To more effectively address the overall problem, the FBI initiates investigations aimed at uncovering systemic procurement fraud. In these types of investigations, the FBI seeks to penetrate core elements within the Government and/or private sector that are acting in concert to defraud Federally-funded programs. This investigative strategy often requires the use of highly sophisticated, personnel intensive investigative techniques such as undercover operations, electronic surveillance, and physical surveillance. Yet, while the resource utilization can be exhaustive, these types of investigations allow the FBI to identify seemingly unrelated or previously undetected incidences of fraud and obtain irrefutable evidence of criminal activities. In addition to the substantial cost to the Government, defense frauds may imperil the safety and capabilities of the United States Armed Forces.

From 1987 to 1989, DOD fraud investigations increased from 1,656 to approximately 1,900. This 15 percent increase in investigative matters has resulted, in part, from initiatives undertaken by the FBI with the Defense Procurement Fraud

Unit (DPFU) of the Department of Justice, the Defense Contract Audit Agency (DCAA), the Defense Audit Service, and various DOD internal investigative agencies to provide for referral of criminal cases at an early stage when the DOD is the victim. Whenever possible, the FBI initiates joint investigations with DOD investigative agencies in order to economize resources and utilize the DOD's in-house expertise.

An increase of resources to address this type of fraud is needed in 1991 in order for the FBI to expand on and maintain investigative inroads currently being made in the "ILLWIND" DOD Procurement Fraud investigation. With a further increase in caseload projected from new efforts being mounted in the classified defense contract area; continued reporting of suspected irregularities by DCAA; continued reporting of cases under a Memorandum of Understanding developed in 1984 between the DOJ and DOD, which established a framework for undertaking joint investigations with various military investigative agencies, and from spin-off investigations from existing investigations, an additional 120 agent and 78 general support positions are needed.

During 1989, funding of approximately $9.8 million (personnel and nonpersonnel) was obligated for FBI Defense Fraud investigations. During the same period, these investigations resulted in monetary accomplishments of $214,476,665 for a return to funding ratio of $21.94 to $1.00. This ancillary benefit is in addition to the FBI's primary focus on prosecution and its associated deterrence value.

Bank Fraud and Embezzlement: 42 agent positions (10 workyears), 26 general support positions (7 workyears) and $1,798,000.

Epidemic bank and savings and loan failures are among the most significant problems facing the United States today and are contributing to a dramatically increasing bank fraud and embezzlement workload for the FBI. The number of failed/merged financial institutions under investigation due to fraudulent criminal activities has grown to over 400. In the eight year period from 1984 through 1988, a total of 1,219 financial institutions across the country failed. Based on statistics through August 31, 1989, the FBI had 7,991 bank fraud and embezzlement matters pending of which 3,780, or 47 percent, were major bank fraud and embezzlements where fraud losses were in excess of $100,000. These figures represent a 44 percent increase in total bank fraud and embezzlement caseload pending from the end of 1984 to the end of 1989. More significantly, major bank fraud and embezzlement matters, where fraud losses were in excess of $100,000, increased 68 percent during the same time period.

At present, there is no indication that this upward trend in bank fraud and embezzlement matters would abate. It is noted from recent information, through Congressional testimony and the media, that the Office of Thrift Supervision has an additional 350 troubled institutions that have not been allowed to fail. Many of these have probable fraud-related problems associated with them, and audits by the Office of Thrift Supervision or other regulatory agencies are expected to result in numerous referrals. The growth and nationwide scope of bank fraud and embezzlement has resulted in the designation of this crime problem as the top priority of the Attorney General's Economic Crime Council, coequal to DOD procurement fraud, and a top priority of the Bush Administration.

In a report issued October 13, 1988, entitled "Combatting Fraud, Abuse, and Misconduct in the Nation's Financial Institutions: Current Federal Efforts are Inadequate" by the House Committee on Government Operations, the FBI and Department of Justice were criticized for an inadequate response to this problem. The basis for this criticism was primarily "...acute shortages of sufficiently compensated and experienced prosecutors and investigators to handle these complex cases," and "the lack of funding to support bank fraud investigations in the Fraud Section, DOJ, and the FBI now or in the budgets currently in Congress."

In 1984, the FBI utilized 838 agent workyears on financial crime matters. Of these 838 workyears, 335 agent workyears, or 40 percent, were utilized on bank fraud and embezzlement matters. Two hundred twenty-six or 67 percent of the 335 agent workyears expended on bank fraud and embezzlement matters were utilized on matters where fraud losses were in excess of $100,000. In 1989, the FBI utilized 947 agent workyears on financial crime matters, of which 470, or 49 percent, were utilized on bank fraud and embezzlement matters. Three hundred fifty-four or 75 percent of the 470 agent workyears expended on bank fraud and embezzlement matters were utilized on matters where fraud losses were in excess of $100,000.

From the period of 1984 through 1989, resource allocation to overall bank fraud and embezzlement matters increased by 40 percent. Even more dramatic is the 56 percent increase in resources devoted to major bank fraud and embezzlements (where losses exceed $100,000) during the same time period. While this resource allocation is consistent with the FBI's objective of addressing the highest priority and highest impact cases, a large part of this increase has resulted from reallocation of agents away from other priority white-collar crime investigations.

Notwithstanding the immense reallocation of agent resources by the FBI to the bank fraud and embezzlement crime problem over the last several years, the FBI has been unable to fully address the existing bank fraud and embezzlement workload. In a number of field offices, including Dallas, Houston, Los Angeles, Little Rock, and New Orleans, the lack of investigative resources has resulted in raising the effective dollar value floor determining priority cases, or has made it difficult to adequately address identified bank fraud and embezzlement crime problems. For example, the Los Angeles Field Office has reported that, due to resource restrictions and high concentration of bank failures and other high priority financial crimes cases in its territory, it is unable to effectively address those bank fraud and embezzlement cases in which the criminal fraud loss to the financial institution is below $250,000. FBI experience shows that fraud-related failures take up to four years to investigate due to the complexity of the investigations. The FBI is constantly striving to improve its investigative techniques to reduce this time, but has been only partially successful. Because of the enormous amount of resources expended on fraud-related failures or mergers, a number of other priority cases are not being investigated, resulting in an increase of pending year-end caseload in this area. Delays resulting from resource limitations and reallocations create problems for an initiated investigation due to statutory limitations on financial crimes, more voluminous and complex records, and accounting analyses that must be completed.

During 1989, FBI bank fraud and embezzlement investigations were funded with approximately $52,796,530. During this same time period fines, recoveries, and restitutions achieved as a result of these investigations totaled $455,866,673. Thus, FBI investigations of bank fraud and embezzlement matters resulted in monetary accomplishments of $8.63 for each funded dollar during 1989. This result is ancillary to the FBI's primary focus toward criminal prosecution and fraud deterrence. The recent and projected growth previously cited in the FBI's bank fraud and embezzlement caseload, the unaddressed workload, and the time consuming and personnel intensive nature of Bank Fraud and Embezzlement investigations necessitate further resource allocations to this investigative area. Therefore, the FBI is requesting an enhancement of 42 agent and 26 general support positions to augment current investigative efforts for 1991.

Fraud by Wire: 70 agent positions (17 workyears), 46 general support positions (12 workyears) and $3,061,000.

Frauds are perpetrated upon citizens of the country by greedy, unscrupulous individuals through the use of advance fee schemes, boiler rooms, telemarketing schemes and ponzi schemes. The major concentration of FBI resources in this area is devoted to significant international and national fraud schemes by con men whose individual victims lose millions of dollars. The emergence of technological advances in the daily conduct of business has made routine transactions more efficient, but has created new and complex problems for the FBI. Among the areas of concern are frauds perpetrated by individuals utilizing telemarketing schemes and major commodity and securities manipulations. Technological advances have given con men new tools with which to ply their trade.

Boiler room operations continue to be concentrated in the southeast and the west. Boiler room task forces are in place in Miami, San Diego, Los Angeles, and Las Vegas. The task force is viewed as an efficient method to address the boiler room/telemarketing fraud problem. However, the proliferation of this genre of fraud has made additional resources an absolute necessity. For example, literally hundreds of these schemes are not being addressed in southern California because of resource limitations. Additional resources would permit the assignment of agents to address this high profile problem. The victims of boiler room operations have been investing and losing their life savings, retirement income, and daily living expenses.

Investigative commitment continues to increase in the area of securities fraud matters. Complex financial schemes in the securities area require additional resources to address insider trading, stock manipulation, and frauds perpetrated by participants of the securities industry. Effective liaison with securities regulators through the Securities and Commodities Fraud Working Group continues to identify significant criminal violations in areas traditionally regulated through civil action. The FBI is addressing this problem through traditional investigative techniques augmented by effective use of court ordered electronic surveillances and undercover operations. The need to aggressively pursue these individuals who attack the basis of economic institutions must continue to be appropriately funded.

The specific needs in the securities enforcement area have been addressed in personal discussions between the Chairman of the Securities and Exchange Commission and the Director of the FBI with agreement on cooperative joint efforts. In 1988, the FBI was funded approximately $36.7 million (includes personnel and nonpersonnel) to investigate Fraud by Wire matters. In the same year, these investigations resulted in monetary accomplishments of $277.2 million. In 1989, the FBI was funded approximately $41.1 million (personnel and nonpersonnel) for fraud by wire investigations resulting in $115.4 million in monetary accomplishments (includes fines, recoveries, and restitutions) for a Returns to Funding ratio of $2.81 to $1.00. Also in 1989, estimates based on statistics acquired through August 31, 1989, the total investigative origin matters received was 2,864. Fraud by Wire cases nearly always involve multiple field offices. In 1989, an estimate of 7,658 auxiliary matters were received.

The proliferation of Fraud by Wire matters has made additional resources a necessity. For example, literally hundreds of these schemes are not being addressed in southern California because of resource limitations. In Los Angeles, there are 300 known Boiler Rooms in operation. In San Diego, there are 13 known Boiler Room operations, but there are not enough resources to open cases on these operations. Additional resources would permit the assignment of agents to address this high profile problem. The victims of boiler room operations have been investing and losing their life savings, retirement income, and daily living expenses.

Bankruptcy Fraud: 17 agent positions (5 workyears), 11 general support positions (1 workyear) and $800,000.

The number of bankruptcies in the United States has increased dramatically between 1980 and 1989. This increase is partially due to economic conditions, but is also due to recently enacted amendments to the bankruptcy law which have had the effect of liberalizing the process. The increased caseload has severely strained the ability of the bankruptcy court to monitor the progress of individual cases, which in turn has greatly enhanced the opportunity for fraud. In some cities, there is a widespread belief that there is a virtual license to steal by committing bankruptcy fraud.

It is readily apparent that the sheer volume of cases and dollars flowing through the system, in and of itself, offers a ripe opportunity for abuse. This abuse, known to exist, is largely unaddressed. FBI resources are concentrated on major "bust-out" operations, the organized type of bankruptcy, leaving individual type fraud cases, even those involving millions of dollars, too infrequently investigated.

On October 26, 1986, then President Reagan signed into law the "Bankruptcy Judges, U.S. Trustees, and Family Farmer Bankruptcy Act of 1986", which greatly expanded the U.S. Trustee Program. The sizeable increase of officials involved in addressing the bankruptcy backlog has resulted in an increase in the number of bankruptcy fraud referrals. The United States Trustee is the Government's "watchdog" in identifying fraud within the bankruptcy system and referring matters to the FBI and U.S. Attorney's Office for investigation and prosecution. The United States Trustee actually seeks and encourages prosecution of these cases to establish the necessary deterrence and actively support such prosecution through expertise in understanding complex bankruptcy matters and investigative/prosecutive support. Research conducted by VISA Bankcard determined that one-third of the 600,000 bankruptcies filed in 1988, were fraudulent or were, in one way or another, connected with some type of fraudulent activity. Due to the morass of paperwork and the complexity of the bankruptcy procedure, fraud is easily hidden, and as the research indicates, is rampant.

The bankruptcy courts have swelled with the onslaught of bankruptcy filings. In addition to having an impact on the courts, the massive number of bankruptcy filings also are having an effect on FBI workload. Efforts are currently underway between White-Collar Crime agents and members of the United States Trustees office to closely examine and screen all of the cases coming to the attention of the bankruptcy courts. It is anticipated that with the current number of bankruptcy matters the FBI has together with the increased liaison with the Trustee's office, additional agents will be required to adequately address this area of fraud.

During the economic boom years of the 1970's and the early 1980's, venture capital was easily obtained by fledgling entrepreneurs who desired to set up business in north Texas. These conditions of easy money from rapidly growing savings and loan institutions created millions of dollars in loans that would be defaulted due to not only bad economic conditions, but also to massive fraud. These same conditions caused hundreds of businesses to develop and/or grow beyond their realistic means and later to sink into bankruptcy.

Debtors, who are faced with bankruptcy, may hide their assets prior to filing bankruptcy and/or otherwise make gross misrepresentations to the U.S. Bankruptcy Court in order to fraudulently convert assets rightfully belonging to creditors to themselves. Bankruptcy "specialists" are acting in concert with bankruptcy trustees, attorneys, and auctioneers to deceive the bankruptcy court and embezzle and/or steal assets from the estates.

The impact of bankruptcy matters began to manifest itself during 1989 and is a growing crime problem. The FBI anticipates that the current operations will expand and reveal other areas of bankruptcy crimes.

An increase of resources in 1991 would allow the FBI to begin addressing this problem. An additional 17 agent and 11 general support positions for bankruptcy fraud matters are being requested for 1991 to address a predicted increase in bankruptcy referrals as well as to address individual type fraud cases which are investigated infrequently. The FBI is the only law enforcement agency responsible for bankruptcy fraud and must maintain its support of the recently created Office Of The United States Trustee.

Accounting Technicians (ATs): 30 positions (8 workyears) and $605,000.

ATs provide an important investigative support function in a specialized area of forensic accounting. This support group provides the agents with analyses of financial records received primarily as evidence in ongoing white-collar crime investigations. These analyses are considered an integral part of the investigation and can play a key role in subsequent prosecutions. Additionally, through the ATs' analyses of these financial records, assets are often identified for forfeiture and seizure by the Government. There has been an increasing demand for the use of ATs in drug investigations which involve the laundering of money. Because of the increased use of ATs in complex investigations for the analysis of voluminous financial records for evidentiary purposes, a severe shortage of funded AT positions has resulted. The AT serves as an information resource to special agents who do not have an extensive accounting background.

Because of their specialized expertise, ATs can perform case-related accounting tasks in a more timely manner under the supervision of field agents who would otherwise have to perform these tasks personally. With projected increases in workload in investigative areas, including DOD procurement fraud and public corruption, in which ATs are of great assistance, additional ATs will be needed in 1991. Due to the immense Bank Fraud and Embezzlement problem and the new emphasis being placed on the Financial Institution Fraud Initiative, ATs will be in even greater demand.

FBI investigations which utilized ATs in 1989 resulted in 820 convictions and pretrial diversions, $9 million in fines, and $457 million in recoveries and restitutions. The FBI was unable to meet all of the requests from field offices for AT assistance in 1988. The Financial Fraud Initiative will provide an additional 100 ATs which would enable the FBI to address 97 percent of field office requests for ATs. The 1991 request would enable the FBI to fully address the total needs. Without an increase of 30 AT positions in 1991, the FBI would be forced to continue to deny AT assistance to priority investigative matters.

Payments to Cooperating Witnesses: $503,000.

The FBI extensively utilizes informants in its criminal investigations. Informants are essential to the success of these investigations as well as to the success of the FBI in fulfilling its law enforcement mission. Cooperating Witnesses (CWs) are just as essential to the FBI as informants. The most notable difference between an informant and a CW is that while both provide information to the FBI on a confidential basis, the CW agrees to testify while the informant does not. Both sources of information (the CW and the informant) are beneficial for successful investigations. In 1986, in excess of $1.2 million was expended for payments to CWs. In 1987, in excess of $2.3 million was expended on payments to CWs for services, expenses, and protection-related expenses. In 1989, approximately $3.7 million was expended for services, expenses, and protection-related expenses.

The FBI is finalizing joint revised Attorney General Guidelines on informants with the Drug Enforcement Administration. This change in policy affects the way in which CWs will be paid for services rendered. Under previous guidelines, CWs were paid on a one time basis. Under the new policy, CWs may be paid multiple times for their services and expenses.

CW's are currently paid from confidential case funds. Inasmuch as the FBI expends a substantial amount of money for the payment of CWs and this amount has increased significantly over the past three years, the FBI is requesting separate funding for payments to CWs. Confidential case funds are primarily designated for purchase of evidence, rental of property or vehicles, and other investigative expenses. If the FBI is not provided with separate funding for CW payments, these payments for CWs will continue to be charged to confidential case funds, seriously affecting the ability of the FBI to conduct other investigative activity.

Program Decreases:

Additional program reductions totalling 44 special agents, 21 support and $3,255,000 are requested by the FBI to meet budget deficit reduction levels established by the Administration. This reduction would preclude the expansion and maintenance of investigative inroads made in Fraud Against the Government cases, such as the "ILLWIND" investigation, or to focus upon similar bribery and fraudulent activities in other areas of the Department of Defense.

Federal Bureau of Investigation

Investigative support for FBI programs is provided through training, forensic laboratory examinations and research, efficient management of investigative and administrative records, automatic data processing and telecommunications management and maintenance, and technical field support and equipment supply. In 1990, 184 workyears and $5,893,000 was transferred to reimbursable funding in the Records Management Decision Unit as a result of the Federal User Fee Program.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Training....................	379	365	$26,165	379	368	$27,843	386	362	$27,565	7	-6	$-278

Long-Range Goal: To develop and improve the investigative, managerial, and technical capabilities of FBI special agents and support personnel through research, education, and training to insure that they are prepared to carry out their responsibilities in an efficient and effective manner and in compliance with the law and Government regulations.

Major Objectives:

To provide the highest level of training services for new agents to insure that their knowledge and skills are developed to enable them to discharge their complex responsibilities in a professional manner from the outset of their careers.

To afford advanced professional training and investigative support at the FBI Academy and in the field for special agents and support personnel, enabling them to carry out their responsibilities in an efficient, professional, and effective manner.

To improve the ability of mid-level and upper level FBI executives to carry out more effectively their increasingly complicated responsibilities and provide for job enrichment and career development opportunities for support personnel through educational and training programs at the FBI Academy and in the field.

To conduct necessary research and provide evaluative, investigative, and operational assistance to FBI field and Headquarters units in areas where FBI Academy personnel have specialized expertise.

To enhance FBI/Drug Enforcement Administration (DEA) investigative operations through the continued collocation of FBI and DEA Basic Agent training at the FBI Academy.

To maintain and improve the land, buildings, equipment, furnishings, and fixtures which make up the FBI Academy complex in a manner consistent with and conducive to an effective, efficient, safe, and healthy learning and living environment.

To provide firearms and related equipment to FBI special agents to insure that they are better prepared than today's criminal element and, at the same time, to insure the safety of these agents when conducting investigations.

Base Program Description: The Training program supports the FBI's mission by developing and improving the investigative, managerial, and technical capabilities of FBI personnel through research, education, and information to insure that they are prepared to carry out their responsibilities efficiently and effectively, and in compliance with the law and

Government regulations. The Training program consists of four program elements: New Agents Training; Advanced Professional (in-service) Training and Direct Field Support; Research, Faculty Development, and Liaison; and Maintenance and Improvement of the FBI Academy's Physical Plant. The four program elements of the Training program are described as follows:

New Agents Training: The period of instruction for a special agent trainee at the FBI Academy includes, but is not limited to, the following major topics over a period of 13 weeks and three days: substantive statutory violations, national security matters, basic law enforcement and forensic skills, behavioral science, legal instruction, communications, field office administration, firearms, arrest techniques, physical fitness, professional conduct, and ethics. Newly acquired skills in these areas are applied in various practical problem and moot court situations. The new agents training staff continually reviews and modifies the curriculum for new agents' training to insure that trainees receive proper instruction in priority areas.

Advanced Professional Training and Direct Field Support: Special agents are brought back periodically to the FBI Academy for instruction in specialized areas based upon the investigative needs and priorities of the FBI. Specialized training and direct field support are also provided by FBI Academy instructors and FBI Headquarters personnel in field offices if this method is more cost-effective or responds to the particular need of a specific field office.

Research, Faculty Development, and Liaison: A limited number of FBI Academy faculty members and field instructors are pursuing graduate study in job-related areas at various colleges and universities when instructional and investigative duties permit. In addition, ongoing faculty exchange programs exist between FBI Academy personnel and the Australian, British, and Canadian Police Colleges. FBI Academy instructors attend symposia and seminars and participate in other relevant educational experiences when possible. The faculty also maintains liaison with selected foreign law enforcement agencies and several foreign and United States military counterterrorism units for exchange of training information and equipment.

Maintenance and Improvement of Physical Plant: Employees assigned to eight maintenance and craft shops perform the required maintenance and improvements for the FBI Academy complex, which includes the following: 385 acres; 25 major buildings; 23 fully-equipped classrooms; 15 training, storage, and utility structures; the Practical Problems Training Complex; and six FBI firearms ranges.

Accomplishments and Workload: Accomplishments of the Training program are presented in the following table:

			Estimates	
Item	1988	1989	1990	1991
1. New FBI Special Agents Trained/ Student Training Days (STD):				
a. Actual/Planned	656/43,178	355/27,663	836/56,848	599/44,925
b. Demand	746/53,170	536/36,448	836/56,848	599/44,925

Item	1988	1989	Estimates	
			1990	1991
2. Employees Attending Specialized/Advanced In-Service Training at Academy/STD:				
a. Actual/Planned	3,981/23,337	6,990/38,240	6,874/42,000	7,365/45,000
b. Demand	13,000/84,500	14,000/91,000	14,000/98,000	15,000/120,000
3. SAs Trained in Field & HQ/ Total Hours Training:				
a. Actual/Planned	9,596/596,368	9,592/596,576	9,000/559,756	8,500/528,658
b. Demand	9,596/586,640	9,592/596,576	9,978/622,524	10,385/653,320
4. Support Employees Trained in Field & Headquarters/ Total Hrs. Training:				
a. Actual/Planned	13,843/55,372	13,316/53,264	11,000/44,000	10,000/40,000
b. Demand	13,843/51,232	13,316/53,264	13,561/54,244	14,032/56,128
5. Academy Custodial and Grounds Maintenance - Work Hours:				
a. Actual/Planned	86,443	106,080	125,840	133,120
b. Demand	104,000	118,560	133,120	133,120
6. Academy Complex Service & Repair Work Hours:				
a. Actual/Planned	161,520	264,160	297,440	297,440

NOTES: Figures in decision unit workload charts which refer to students are presented in two ways: (1) the number of students and (2) student training days (STD), which is the number of students in each course multiplied by the number of training days in each course or total training hours. Projections are based on an estimated allocation of 45,000 STD for DEA training at the FBI Academy in 1990 and 40,000 STD for 1991.

Figures for new agents trained represent those who entered on duty in each fiscal year. Effective January, 1987, the training period for the New Agent Training program was reduced from 15 to 13 weeks. It was expanded to 13 weeks and three days (68 days) at the beginning of 1989.

Approximately 866 DEA employees were trained at the FBI Academy in 1989. This included 128 basic agents, 237 advanced agents, 86 diversion investigators, and 24 intelligence analysts, and others. DEA student days in 1989 constituted 12 percent of available FBI Academy space.

The statistics for special agents trained in the field and at FBI Headquarters (item #3) represent 68 hours and eight hours of mandated training for field agents and Headquarters' agents, respectively. This training, mandated by current FBI policies and regulations, is designed to maintain and improve investigative, technical, and administrative skills and includes a wide variety of instruction such as firearms, defensive tactics, Federal legal procedures, and other issues which impact on FBI investigative personnel.

The statistics for support employees trained in the field and at FBI Headquarters (item #4) represent four hours of mandated training for all field and Headquarters' support personnel. This training is designed to update support employees on administrative and operational functions of the FBI with particular emphasis on policy changes, personnel matters, and suggestions to improve efficiency and effectiveness.

With the increase in the number of personal problems resulting from shooting incidents, other life-threatening events, and specialized assignments projected in 1990, the Behavioral Science Instruction/Research Unit would utilize its existing resources to provide increased counseling and consultation to affected FBI employees and their families as well as provide FBI-wide peer support programs. It is anticipated that the demand for these services would continue to increase in 1991 (item #8).

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Training	379	368	$27,843	386	362	$27,565	7	-6	$-278

The net change of an increase of seven positions and a decrease of six workyears and $278,000, includes a program increase of 18 positions and $251,000 and a program decrease of 11 positions and $529,000 to meet targeted budget levels of the Administration.

Program Increases:

Custodial Support: 6 positions (2 workyears) and $103,000.

Six support positions (two workyears) and $162,000 are needed to perform custodial duties at the FBI Academy Complex. This request supports maintenance staff requirements at the new Engineering Research Facility (ERF).

From 1983 to 1991, the FBI Academy's gross square footage would have grown from 618,985 to 969,963, an increase of 57 percent. In addition, student capacity at the FBI Academy increased by approximately 250 students with the opening of a new dormitory in 1989. A commensurate growth of custodial staff has not ensued to keep pace with this tremendous expansion. Moreover, the maintenance staff workload demand is projected at 137,280 hours. The existing base of 54 support positions is not sufficient to complete all custodial maintenance required. A management study completed by Peat Marwick Main and Company in 1989 supports this request.

Deferred maintenance creates a neglected appearance, can cause an odor and vermin problem, and decreases the life expectancy of some surfaces. As a result of the unchanged size of the custodial staff during a period of recent physical growth, low and medium priority maintenance activities were deferred. The FBI is unable to remove and clean curtains and drapes, shampoo upholstered furniture, or wash windows (except for priority locations). The interval between stripping, waxing, and buffing resilient floors and shampooing carpets was lengthened. Also, rather than destroying confidential trash on a daily basis, it is accumulated and processed when an operator is available. In the event custodial staffing needs are not met, additional deferral of medium priority maintenance work at the FBI Academy would occur.

Operating Engineers: 8 positions (2 workyears) and $103,000.

An increase of eight support positions (two workyears) and $103,000 is requested for the FBI Academy Operating Engineer's Shop. In 1989, this facility reached the absolute minimum staffing level at which the central plant and supporting air distribution heating ventilation system can be effectively operated and safely monitored. A management study completed by Peat Marwick Main and Company in 1989 supports the need for additional operating engineers.

Operation of the new Engineering Research Facility (ERF) has had a significant impact on the Plant Operations Shop because the ERF contains a separate and distinct central heating and cooling plant from the existing FBI Academy. The USMC boiler inspector, who has jurisdiction over the FBI Academy, advised the FBI that one operating engineer must be physically located in the main mechanical room and a second operating engineer in the main control room at all times while the plant is in operation (24 hours a day, 365 days a year). Consequently, a third operating engineer is required to handle functions outside these areas and to act as a relief for the two stationary operating engineers. To staff the three engineer positions 24 hours a day with consideration for holidays, sick leave, annual leave, and training, 15 operating engineers are required. The FBI's existing staff is insufficient for the additional workload associated with ERF operations.

The increases sought are the minimum enhancements required to support a 57 percent enlargement of the FBI Academy without a curtailment of the training mission for 1991. The last increase for training support and services personnel at the FBI Academy occurred in 1986 as a direct result of the collocation of the FBI and DEA. At the end of 1986, the FBI Academy consisted of 667,088 gross square feet on 385 acres of land. In 1987, the Instructional Support Building, the Crime Scene/Motel Building, and the Maintenance Center Building were completed, and the FBI Academy's gross square footage increased to 731,418 square feet. In late 1988, the new dormitory building was completed and the gross square footage of the FBI Academy increased to 871,418 square feet. In 1989, Pod A of the ERF was completed and the enclosed building area of the FBI Academy grew to 969,963 square feet. Construction of Pod B of the ERF is anticipated to begin in 1990. The rapid growth of the FBI Academy and its physical plant facilities drives the requirement for eight additional operator engineer positions (four workyears). Without these resources, the FBI will be unable to safely support the expanding instructional program at the FBI Academy and primary operations at the ERF.

Security of the Engineering Research Facility (ERF): 4 positions (1 workyear) and $45,000.

An increase of four support positions (two support workyears) and $45,000 is requested for security warders at the ERF. With the completion of ERF-Pod A in July 1989, four full-time security posts are needed. A staffing level of five persons is required to fill one security post, 24 hours a day, 365 days a year, with consideration for holidays, sick leave, annual leave, and training. The ERF is a secure facility containing highly sensitive and foreign counterintelligence projects and materials which must by law be afforded certain special security measures. Adequate security staffing is required to afford the materials proper protection and safeguards. The four posts to be staffed are one full-time front gate post, one full-time front desk post, and two full-time communications/security center posts. Twelve positions are available from existing FBI resources; therefore, the FBI requires additional support personnel for security of the FBI Academy training complex.

Program Decreases:

Program reductions totaling four agents and seven support personnel and $529,000 are proposed to meet targeted budget levels established by the Administration. This will require a reduction in some training activities for FBI employees.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Forensic Services - Federal......	346	331	$24,148	346	335	$26,209	361	331	$27,325	15	-4	$1,116

Long Range Goal: To support the Federal Criminal Justice System by insuring, through scientific means, that all physical evidence is fully used to develop as much probative information as possible to reconstruct the crime, identify the guilty, and exonerate the innocent; and to provide specialized scientific and technical support to ongoing FBI and Drug Enforcement Administration (DEA) investigations.

Major Objectives:

To provide professional, expeditious handling of Federal requests for scientific examination of physical evidence.

To assist in the prosecution of criminal matters by providing expert testimony in a full range of forensic disciplines.

To make significant progress in research projects designed to make the best use of physical evidence, stay abreast of new technology, and improve the ability to support ongoing investigations.

To provide forensic science training to Federal investigative and crime laboratory personnel to maximize the use of physical evidence in the solution and prosecution of criminals.

To provide specially designed investigative devices and apparatus, as required, for use in support of ongoing investigations.

Base Program Description: Under the Forensic Services - Federal program, FBI Laboratory examiners participate in ongoing field investigations by conducting crime-scene searches; performing special surveillance photography; executing search warrants; and providing other on-scene scientific and/or technical services as necessary. Forensic examinations of evidence are performed in the Laboratory in support of both FBI and DEA. In addition, other Federal evidence is provided as necessary to enhance prosecutive efforts. Funding in this program also supports an active and successful forensic science research program and forensic science training for Federal investigative and crime laboratory personnel at the Forensic Science Research and Training Center; specialized photographic and investigative equipment in support of ongoing investigations; oversight of such programs as the Polygraph Program, the Foreign Language Services Program, and the Photographic Equipment Program; and the training, publication, research, and operational support provided by the Bomb Data Center.

In December, 1988, the FBI Laboratory initiated a new service to the Federal law enforcement community by beginning to process evidence submissions requesting deoxyribonucleic acid (DNA) analysis. This technique promises to revolutionize the identification of individuals where certain body fluids or tissues are present. It is anticipated that DNA analyses will mature and demand will increase. The FBI Laboratory is the first crime laboratory in the United States to provide this forensic service.

Accomplishments and Workload:

Item	1988	1989	Estimates 1990	 1991 4

[1] Decrease due to contracting out urinalysis testing for the drug screening program.

[2] Increase due to drug, explosives and firearms examination support for the President's Violent Crime Initiative.

[3] Increase due to new agent and DEA agent training.

[4] Increases due to projected increases in Drug, Organized Crime, and White-Collar Crime investigations.

[5] Base level continues higher than 1989 due to proposed sustained high level of new agent training.

Program Changes:

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Forensic Services-Federal............................	346	335	$26,209	361	331	$27,325	15	-4	$1,116

The net change of 15 positions and $1,116,000 includes a program increase of 25 positions and $1,605,000 and a program decrease of 10 positions and $489,000.

Program increases totalling 25 support positions (6 workyears) and $1,605,000 are requested in 1991 for the Forensic Services-Federal program. These increases are needed for the following purposes: to handle the examination of evidence and quality assurance of the expected caseload increase in drug records analysis, magnetic media examinations, drug and explosives analyses; to improve coordination of polygraph intelligence activities; for increased involvement with drug trafficking and terrorism in extra-territorial investigations and aerial photographic missions; to administer the expanding language testing, training, and court-mandated achievement programs, and to handle the increase in requests for foreign language translations. Program decreases totaling 10 positions and workyears and $489,000 are also proposed to meet targeted deficit reduction levels established by the Administration.

Program Increases:

Drug Records Analysis: 7 positions (1 workyear) and $84,000.

Five technical and two general support positions (one workyear) and $84,000 are requested in support of drug records analysis. The President targeted illicit drug trafficking as one of the Nation's law enforcement top priorities. The FBI Laboratory's forensic support to FBI and DEA investigations, is staffed from existing personnel resources and has remained constant, whereas the caseload and workload has increased dramatically.

A typical drug conversation examination consumes three times the length of recording time. For example, a court approved electronic surveillance active for ten hours per day over a 30-day period would require 900 workhours to thoroughly analyze the recorded material. Additionally, more than 50 percent of the records and tapes in drug investigations are in Spanish, dramatically increasing the time needed to conduct those examinations. The analysis is further complicated by the short deadlines imposed by the Speedy Trial Act. The majority of drug defendants are incarcerated following arrest and are held without bond, resulting in trials within 90 days of the arrest. This causes extremely demanding turn-around times between receipt of evidence and the trial. The number of requests for examination increased 11.8 percent in 1988 and, for the first ten months of 1989, 14.1 percent. The following table sets forth the number of requests received for drug records analysis by the FBI Laboratory and projects the estimated growth.

DRUG RECORDS ANALYSIS CASES AND PERSONNEL RESOURCES

	1983	1984	1985	1986	1987	1988	1989 est	1990 est*	1991 est*
Cases Received	10	30	59	82	161	180	200	250	300
Technicians	1	2	3	4	4	9	9	9	14
Technicians in Training	0	1	2	2	1	5	5	0	5

* Based in part on an expected increase in the number of FBI agents assigned to investigate drug matters.

Magnetic Media Examinations: 2 positions (1 workyear) and $84,000.

One cryptanalyst and one computer assistant (one workyear) and $84,000 are requested to perform forensic examinations of magnetically stored information, such as computer floppy diskettes and hard disks, which may be encrypted, such as in gambling, illicit drug, or counterintelligence records. Magnetic media examinations were first established within the FBI Laboratory in 1984 as the need to translate, convert, and/or decrypt records stored on floppy disk and other magnetic storage media began to burgeon due to the proliferation of microcomputers and their use in record keeping by drug traffickers and other illicit operations. Requests for cryptanalyst examinations have increased from two in 1985 to 19 in 1986, 34 in 1987, 48 in 1988, and 63 in 1989. By 1991, 92 requests are anticipated. Furthermore, at any given time, there are at least six cases on hand, ranging in age from six months to one year. This has forced the FBI to turn down requests from other agencies for these services. To date, examinations have been accomplished with no specific augmentation of personnel resources. However, by 1991, as this service becomes more established, the increased volume would demand additional personnel resources. Without increased analytical personnel additional restrictions in services will be implemented.

Polygraph Analysis: 1 position (1 workyear) and $84,000.

A polygraph systems intelligence analyst (one workyear) and $84,000 is requested to serve as liaison with all operational entities of the FBI, as well as outside agencies. All of these entities have reporting requirements to the various oversight committees of Congress, as well as their own management, and numerous status inquiries are made of the Polygraph Unit by their analysts. Achieving an integrated information flow from field inputs is essential. As no effective system is in place, valuable supervisory time is diverted from case management to data retrieval. A current problem would serve to demonstrate this requirement. A hostile intelligence service defeated a polygraph safeguard using countermeasures. There was no way the FBI could determine how many individuals from that country had ever been tested. Laborious, time-consuming hand searches relying on institutional memory were required to respond to this threat. Only integrated data with programs designed to detect these trends can protect the FBI from further hostile penetration. The number of specialized inquiries on a day-to-day basis is now a full time job for one polygraph examiner. The complexity of polygraph testing reveals validity in a situational context which implies more accurate analysis of interacting variables and personality, purpose and cultural background is required.

Aerial Surveillance: 5 positions (1 workyear) and $84,000.

Five photographer positions (one workyear) would be used in the "Eagle-Eye" project, a new aerial surveillance photography technique capable of taking high-resolution photographs from more than a mile away. This capability is invaluable in photographing FCI, drug trafficking, and terrorist activities. In addition to taking high resolution photographs, this system would be used to assist with discreet surveillances, and to assist the FBI's emergency response teams (Hostage Rescue Team and Disaster Squad). The number of full, on-site workdays dedicated to the aerial photographic program is projected to increase to 1,100 in 1991 based upon increases experienced from 1986 to 1988 in the number of missions and photographs. Another important factor contributing to the need for additional personnel is the implementation of air-to-ground transmission of surveillance images, which began in 1989. The table details the aerial photography missions and photographs taken for 1986 through 1988 and projects the requests for missions and aerial photographs for 1989 through 1991. This chart also demonstrates the performance improvements made in personnel resource needs per mission by showing that the workdays per mission have decreased from 7.6 in 1986 to 6.2 in 1989 and is estimated to be approximately five in 1991. This has been accomplished through the use of better equipment such as stable platforms and other automated photographic aids.

AERIAL PHOTOGRAPHIC MISSIONS

	1986	1987	1988	1989 est	1990 est	1991 est
Missions	62	82	104	136	175	220
Photographs	7,690	24,894	38,866	45,000	55,000	82,500
Workdays	470	621	750	838	980	1,100

Forensic Analysis: 6 positions (1 workyear) and $84,000.

An increase of six positions (one workyear) and $84,000 is needed to effectively address a growing forensic examinations workload in the areas of analysis of explosive materials and firearms, as well as to provide drug deterrence quality assurance and auditing. These positions would be used as follows:

Two chemist positions are requested to support analytical chemistry examinations for analysis of explosive materials. The FBI Laboratory initiated a test program for explosives examinations in 1988. Results from the effort have proven to be very effective in linking explosive related investigative matters. However, by 1991, it will have grown to the point that two additional chemists would be required to effectively sustain the project.

Two chemist positions are requested to administer programs for both FBI and DEA Laboratories and the FBI/DEA Drug Deterrence Program. Because of the increasing demands by the courts on the crime laboratory examiner to provide documentation as to the soundness of his scientific methods, it is essential that the FBI Laboratory establish a program to insure the best available scientific analysis and technical services. These positions would establish audit procedures, conduct reviews of quality control procedures, and administer and expand the already existing "blind" testing programs to the FBI Laboratory, DEA regional laboratories, and the FBI/DEA Drug Deterrence Program. Duties would also include responsibility for designing and conducting quality assurance training for FBI Laboratory management and Federal, State, and local crime laboratory personnel.

One chemist position is requested to address the projected workload increase in drugs and to properly maintain the quality and calibration of laboratory instruments. Increased emphasis on cases involving drugs of abuse and recent analytical breakthroughs in the area of analyzing for drugs in hairs are causing an increase in cases. Also, a major increase of ink comparisons and ink dating would occur due to an increased emphasis on white-collar crime investigations. Laboratory chemists and toxicologists are becoming increasingly involved in analyses which can only be conducted using very complex instruments.

One technician position is requested to assist firearms examiners who are frequently selected when FBI Laboratory personnel are deployed in terrorism cases involving extra-territorial jurisdiction or in drug trafficking investigations. These are new and expanding areas of responsibility which continue to consume personnel resources. At present, domestic firearm examinations are delinquent an average of 70 percent, due essentially to the fact that the examination request workload exceeds the available personnel resources. This severely hinders the possibility of addressing new examination initiatives.

Foreign Language Translation: 4 positions and (1 workyear) and $1,185,000.

A total of four positions (one workyear), $85,000 in personnel funding, and $1,100,000 in nonpersonnel funding is requested for the FBI's foreign language translation programs. These resources would be used as follows:

A foreign language testing research specialist position is requested to assist in certification and review of approximately 5,500 language examinations per year. This position requires linguistic and psychometric knowledge as test development is complex, costly, and time-consuming.

The increased workload in Spanish language translations in support of drug trafficking investigations has created a backlog of approximately 1,200 pages. The addition of one Spanish translator position is needed to stay abreast of work in this language.

A general support position is requested to help administer the Foreign Language Achievement and Incentive Programs. Approximately 400 to 500 FBI employees are currently in this program. In addition to monitoring the progress of program individuals, this employee will continually study the effectiveness of all foreign language incentive programs. This program has been implemented as a remedial measure in the equal employment opportunity matter involving Hispanic agents. The United States District Court judge adjudicating this lawsuit has been advised of this remedial action and has so ordered it.

The FBI Laboratory's Contract Linguist Program has doubled in the last two years. A program assistant position is requested to supervise the preliminary background investigations of potential contract linguists, numbering approximately 80 at any time; coordinate security clearances; issue contracts and purchase orders with appropriate Headquarters components, and approve payment of invoices. In addition to full-time management of the Contract Linguist Program, this assistant would be responsible for recruitment initiatives, i.e., contracting for booths at conventions and ensuring appropriate personnel are available to participate.

Nonpersonnel funding totaling $700,000 is required to maintain the FBI's contract linguist and contract tester resources to augment current linguist resources. This program manages the provision of linguistic resources and language assistance in languages for which there is no FBI capability or where internal FBI resources must be augmented. Due to the sporadic nature of language needs today, the implementation of the contract linguist program has made a positive impact on the FBI's ability to investigate activities that have foreign language requirements. In 1988, the number of contract linguists increased from 63 to 78, and the number would again increase proportionately during 1989. The present budget is inadequate to support this program which plays a vital role in critical FBI drug, organized crime, and counterintelligence investigations. Reasons for this are: 1) The number of contract linguists has increased from 63 in 1988 to 89 in 1989. 2) The approximate cost for contract linguists was $1,169,000 in 1988 and estimated to be $1,675,000 in 1989. Even with the services of contract linguists, the FBI still is experiencing a backlog in transcription of evidentiary material. 3) The industry rate for linguists is $35 per hour, the FBI pays $18, thus potential resources are being lost to other contracts. 4) Finally, most work contracted to linguists is of a short term nature where unit costs are higher than normal. Currently, eighty contract linguist candidates are being processed.

A nonpersonnel increase of $400,000 is needed to provide foreign language training to special agent and support personnel, including translators and other language specialists. This training covers basic language training, maintenance and enhancement training, tuition, travel, and temporary duty expenses. Foreign language expertise gained through training directly enhances the FBI's criminal and intelligence missions. Funding requested is needed to accommodate increased costs in providing training. Tuition for the Defense Language Institute more than doubled in 1988 for approximately the same number of attendees. Additional funds are required to cover a projected increase in student population. The Foreign Language Achievement Program is expected to generate additional requirements for enhancement and maintenance courses. In addition, a considerable increase in the number of full-time Spanish students enrolled in a variety of Federal Government and non-government training courses during 1991 is anticipated. Increased requirements, such as the incentive and achievement programs mentioned above, are also creating a need for substantially increased training in additional foreign languages by current linguists. Furthermore, more stringent security clearance criteria for FBI applicants has had a severe negative impact on employing applicants possessing language skills. This has forced the need for more comprehensive language training of existing FBI personnel.

Program Decreases:

Program decreases totalling 10 positions and workyears and $489,000 are requested by the FBI to meet budget deficit reduction target levels established by the Administration. This will limit the FBI's ability to perform certain forensic examinations with the same timeliness as previously had been done.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Automated Data Processing and Telecommunications.....	538	506	$142,746	538	526	$145,733	517	501	$140,218	-21	-25	-$5,515

Long Range Goal: To support the FBI's information collection, storage, retrieval, and dissemination requirements through management of automated data processing and telecommunications (ADPT) resources and implementation of the FBI's Long-Range Automation Strategy.

Major Objectives:

To provide select FBI field locations with full Field Office Information Management System (FOIMS) functionality. This capability would be available to all FBI field offices in 1993.
To enhance secure voice communications capabilities between FBI and other agencies within the Federal Government by acquiring and installing third generation Secure Telephone Units (STU-IIIs).

To examine all data base designs initiated or brought into production for integration and conformance with FBI distributed data base architecture.

To evaluate expansion of secure voice capabilities in field offices using integrated services digital network (ISDN) technology, digital private branch exchanges (PBXs), and digital handsets.

To convert, test, and migrate FOIMS applications to a relational data base management system (DBMS) environment.

To implement production versions of labor racketeering and counterterrorism expert systems in three additional field offices, bringing the number of field offices served to six in 1991.

To modify the operational system components of the counterterrorism and labor racketeering expert systems to meet the requirements of the crime scene analysis and white-collar crime expert systems.

To evaluate automated system compliance with Federal laws, regulations, and policies; perform audits on mainframe operating systems, telecommunications networks, and artificial intelligence initiatives to ensure conformance with standards as established by both industry and the United States Government.

To improve the quality, integrity, effectiveness, and value of the FBI's data resources by designing data architecture, supporting the planning and development of FBI automated systems, and ensuring that systems developed conform to the FBI data architecture plan.

To ensure the confidentiality, integrity, and availability of FBI automated systems through policy review, certification, and accreditation; to implement system safeguards through the identification, assessment, and monitoring of the operational threats and vulnerabilities to ADP systems (risk analysis); to establish ADP contingency, disaster, and continuity plans; and to continue research and development efforts in the areas of ADP system intrusion detection (IDES and biometric techniques) and PC/network security.

Base Program Description: The Automated Data Processing and Telecommunications (ADPT) program provides information collection, storage, retrieval and dissemination support to the FBI's Foreign Counterintelligence, Criminal Law Enforcement, Law Enforcement Support, Investigative Operations and Support, and Executive Direction and Control missions. The strategic objective of this program is to improve the efficiency and effectiveness of the FBI's mission through the application of state-of-the-art information technology. Since approval of the FBI's Long-Range Automation Strategy (LRAS) in 1981, and with the support of the Administration and Congress, the FBI has made significant progress in achieving its automation goals and objectives. Baseline FOIMS capabilities, which include field office administrative functions such as word processing, case management (leads, indices, case assignments) and personnel management are now on-line to all field offices and over 400 additional field locations are supported by two regional computer support centers and a nationwide network of 4,804 intelligent workstations.

The FBI has begun implementation of the extended FOIMS operating environment, which provides functions for the following: vehicle management, time capture, evidentiary exhibits, and forfeiture activities; single source data entry; real time global query/transaction processing capabilities; the Generic Case Management System; and embedded expert systems capabilities to support investigative work functions through standardized information processing methodologies. A 1987 study of extended FOIMS cost/benefits conducted by the Institute for Defense Analyses reported that efficiency benefits--the value of time saved by investigative personnel using FOIMS to access and retrieve data rather than manually searching files--would result in cost avoidances of more than $115 million through 1992. Effectiveness benefits--the value of answers to questions that would not have been obtained using a manual search method--would total more than $4.8 billion through 1992. Overall, a 6:1 benefit to cost ratio was projected for extended FOIMS through 1992. The implementation of extended FOIMS functionality is dependent upon a secure distributed data base and processing architecture throughout the FBI.

Accomplishments and Workload: Workload and accomplishments for the Automated Data Processing and Telecommunications program are presented in the following table and narrative:

			Estimates	
Item	1988	1989	1990	1991
1. Field Office Information Management System				
a. Field office support demand (cumulative)*	58	57	56	56

Item	1988	1989	Estimates 1990	 1991
b. Field offices provided FOIMS support (cumulative)	58	57	56	56
c. Workstations required	6,500	6,500	6,500	6,500
d. Workstations available	4,052	4,804	5,394	6,305
2. FBI Headquarters Computer Center				
a. Total batch jobs requested	47,787	3,668	445,125	447,350
b. Total batch jobs processed	447,787	453,668	445,125	447,350
c. Total on-line applications	216	234	250	256
d. Total number of users	73,212	73,608	74,763	86,422

* Changes in the level of field offices are due to the consolidation of Alexandria/Washington (1988); Butte/Salt Lake City (1989); and Savannah/Atlanta (1990).

In addition, the following accomplishments were achieved during 1989:

Thirty statutes that identify elements of labor racketeering and counterterrorism violations were codified for incorporation into the knowledge bases of labor racketeering and counterterrorism expert systems. Also, 40 rules were added to these systems to provide expanded biographies on subjects to provide extensive investigative guidance.

Contracts to determine firm cost estimates for the options of constructing the proposed joint Mid-Atlantic Regional Computer Support Center/FBIHQ Computer Center, expanding existing regional computer support centers, and renovating the existing FBIHQ Computer Center were awarded. These studies were completed in August, 1989.

Computer-assisted audit techniques required for evaluating the integrity of automated information in a distributed data architecture were defined and developed.

The Generic Name Search expert system was expanded to handle Slavic names. This system is now capable of identifying names belonging to or derived from a particular nationality/language with a reliability in the high 90 percentile. The ability to track and monitor maritime vessels in real-time for interdiction purposes was enhanced through modification of mapping software and installation of an additional workstation at the El Paso Intelligence Center.

Implementation of baseline FOIMS applications was completed in 28 field offices. Baseline FOIMS capabilities are now on-line to all field divisions and 170 locations (resident agencies, legal attache posts, and off-sites).

Field agents were provided with a telephone application which provides a central repository of subscriber information which would allow agents to correlate telephone numbers across cases on a national basis.

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Automated Data Processing and Telecommunications	538	526	$145,733	517	501	$140,218	-21	-25	-$5,515

The net decrease of 21 positions (25 workyears) and $5,515,000 includes program increases of five positions and $89,000 and program decreases of 26 positions and $2,888,000 to meet targeted budget reductions of the Administration and a reduction of $2,716,000 to absorb the costs to implement Public Law 101-173.

Program Increases:

New Generation Systems Support: 5 positions (1 workyear) and $89,000.

An increase of five positions (one workyear) and $89,000 is requested to design, develop, implement, maintain and enhance a new generation of automated systems to support FBI requirements. The requested personnel resources are integral in the success of the FBI's LRAS and in providing adequate support to investigative, intelligence, and administrative information systems. This request includes two positions for the Generic Case Management System (GCMS) and three positions for the Scientific Management Information and Research System (SMIRS).

Three Computer Scientist positions (one workyear) and $77,000 are required for support of the Scientific Management Information and Research System (SMIRS) deoxyribonucleic acid (DNA) application. The FBI has initiated an aggressive research program to develop this technology for eventual implementation by State and local agency crime laboratories as well as the FBI laboratory. The DNA effort would design, develop, implement, and maintain a new computer-based system to support the analysis of DNA and the effective use of DNA profiles during the investigation and prosecution of criminal activity. Requirements include developing the following: image processing storage and retrieval capabilities; interfaces between the DNA system and the National Crime Information Center, the National Center for the Analysis of Violent Crime, and other State identification systems; a database system with established standards for management of information related to DNA coding, analysis methods, test scheduling/sequencing, and evidence tracking and control; applications to perform statistical analysis to support underlying assumptions of DNA identification; and, development of software and identification of hardware to integrate DNA information automation requirements into existing SMIRS systems.

Two Computer Scientist positions (one workyear) and $77,000 are required for the Generic Case Management System (GCMS). This system provides the architecture for an integrated system which would support all functions of any investigation conducted by the FBI. The major functional components of the GCMS are investigative and administrative. Within each of these major components are various sub-components which form the multi-level structure of the system. The development of GCMS would be conducted in phases. Implementation of the system would commence with existing and critically identified components. These initial components include tracking and analysis of telephone information, on-line Manual of Investigative and Operational Guidelines, transfer of digitized photographs, global searching of indices, preparation of documents for search warrants, grand jury testimony, and trial proceedings.

Program Decreases:

These program decreases includes the reduction of 2 agent and 24 support positions and workyears and $2,888,000 to meet targeted budget levels established by the Administration and a reduction of $2,716,000 in equipment to absorb the costs to implement Public Law 101-173.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Records Management..........	805	764	$39,360	805	764	$42,346	783	685	$43,205	-22	-79	$859

Long-Range Goal: To improve information systems and services; anticipate and adopt new capabilities; reduce the risk of loss of FBI and National Security Information through early detection of vulnerabilities and improvement of protection measures; and facilitate lawful public access to FBI records in response to Freedom of Information Privacy Acts requests.

Major Objectives:

To provide file review, name search, and locate services in response to name check requests received from Executive Branch agencies and FBI Headquarters divisions.

To provide for the protection and safeguarding of National Security Information.

To identify user requirements, conduct feasibility studies, define system requirements, initiate pilot projects and implement information systems to support records management activities.

To reduce the processing time of Freedom of Information Privacy Act requests, thus meeting the time limits set by Federal statutes.

To streamline FBI case management through the application of a Universal Case File Number to all administrative and investigative activities.

Base Program Description: The Records Management program is comprised of five major components: Administrative Unit, Office of Automation and Information Management (OAIM), Operations Section, Freedom of Information/Privacy Act Section, and the Records Section. All components support the management of FBI information during its life cycle, from collection to disposition, by establishing, implementing, and monitoring systems and procedures for the storage, maintenance, security, retrieval, quality assurance, and final disposition of the information.
The Administrative Unit coordinates personnel matters, staffing, employee relations, position classification services, training matters, and the preparation of budget submissions. This unit also coordinates long-range planning and is responsible for facilities management.

The OAIM is the single focal point for oversight of all automation initiatives sponsored by the Records Management program and provides oversight of any automation initiatives within the FBI that impact information management functions. OAIM activity is supported through Information Planning and Analysis, System Integration, Training and Technical Management, and Records Assurance and Word Processing. Information Management, Planning and Analysis is responsible for the development of an information architecture for the FBI which focuses on treating information as a key resource of the organization, the development of a long-range plan for information management within the framework of the agency's information architecture, and all new high technology information management initiatives. System Integration, Training and Technical Management is responsible for implementing new information systems, consistently monitoring and evaluating both the new and existing systems, coordination of microcomputer support through equipment distribution, training, problem management, and the development of special software applications. Records Assurance and Word Processing is responsible for managing the National Name Check Program, implementing a complete records assurance program, and reviewing the completeness, accuracy, and timeliness of data, principally in automated records systems.

The Operations Section is responsible for the FBI's Security Programs; the processing of National Security classification appeals matters and preparation of affidavits concerning National Security Information, and a classification review of records to be accessioned to the National Archives. The Security Programs's mission is the protection of National Security Information through the management of six operational activities known as Industrial Security, Security Clearance Investigations, Personnel Security, Information Security, Physical Security, and Sensitive Compartmented Information/Special Access Programs.

The Freedom of Information Privacy Acts (FOIPA) Section is accountable for the overall management of the FOIPA program both at FBI Headquarters and all field offices. It is responsible for ensuring compliance with the requirements of the Freedom of Information and Privacy Acts, as well as Department of Justice regulations implementing both Acts. The program includes processing requests for access to FBI records, answering administrative appeals, preparing affidavits and declarations in response to litigation challenging the withholding of information and records not released, and training field office personnel to ensure proper handling and coordination of requests sent directly to the various field offices of the FBI.

The Records Section is comprised of four units. Records Maintenance is responsible for mail management and the maintenance of files in the Personnel Records Subunit. The Consolidation and Records Processing Unit is responsible for the consolidating and correcting of records, processing correspondence, and implementing records-processing procedures for correspondence. Records Research is responsible for duplicating matters, field office matters, the Forms and Reports Management Desk, the Manuals Desk, the Micrographics program, and Records Disposition and Archival matters. The Special Records and Filing Unit is responsible for the maintenance of the electronic surveillance (ELSUR) index and the promulgation of ELSUR recordkeeping policy, and the maintenance of all FBI files. This unit is also responsible for the processing and control of all Top Secret/Sensitive Compartmented Information documents at FBI Headquarters.

Workload and Accomplishments: Workload and accomplishments relating to programs within Records Management are presented in the chart below:

			Estimates	
WORKLOAD	1988	1989	1990	1991
Limited background investigations	...[1]	4,015	7,628	9,278
Full field background investigations	...[1]	254	437	620
Mail to be handled	2,700,000	2,900,000	3,000,000	3,100,000
Files Requested	544,542	582,820	600,000	600,000
Names Checks Received	3,740,990	3,185,000	2,200,000[2]	2,200,000
ACCOMPLISHMENTS				
Limited background investigations	...[1]	4,015	4,015	4,049
Full field background investigations	...[1]	254	254	269
Mail Processed (single-station)	...[1]	777,256	500,000[3]	425,000
Mail Filed	1,603,598	1,779,797	1,800,000	1,170,000
Name Checks handled	3,935,435	3,168,085	2,200,000[2]	2,500,000
Records Disposition & Archival				
Files Reviewed	128,095	175,370	190,000	190,000
Privacy pages expunged	755[4]	181	200	200
Litigation/Destruction:				
Cases searched & reviewed	312	276	300	300

[1] No record kept of workload and accomplishments in 1988.

[2] Decrease due to the reduction in the number of name checks submitted under the Immigration Reform and Control Act of 1986.

[3] Headquarters will not be processing all field office mail in 1990.

[4] Special Projects.

The OAIM's accomplishments include: Field Office Information Management System (FOIMS) implementation of 100 percent of the field offices as of July, 1988, and 12 Legal Attaches as of September 30, 1989; development of an automated microfiche system as interim emergency backup to the automated Headquarters General Index; completion of feasibility studies of a bar code file tracking system and a departmental office automation system to provide distributed processing;

initiation of a study to improve name searching techniques by use of expert systems which have linguistics capabilities; initiation of feasibility studies which would allow FBI Headquarters and field offices to use existing technology to employ remote records processing procedures; and implementation of the Universal Case File Numbering system in all automated offices. Completion of study and procurement phases for the establishment of optical disk technology prototype for FOIPA request processing enhancements.

The Security program established new procedures and policies for providing a five-year reinvestigation of all FBI employees as well as notification for employees to furnish background information concerning individuals other than immediate relatives with whom they reside. The expanded scope of these reinvestigative matters is to further enhance personnel security countermeasure efforts and to thwart penetration of the FBI by hostile intelligence services.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Records Management..................................	805	764	$42,346	783	685	$43,205	-22	-79	$859

For 1991, a net change of -22 positions (-79 workyears) and $859,000 is proposed for the Records Management programs. Program increases of 75 positions (18 workyears) and $2,093,000 for both Headquarters and the field are proposed. A total program decrease of 97 positions and workyears and $1,234,000 is also proposed.

Program Increases:

Security Programs: 75 positions (18 workyears) and $2,093,000.

To enhance efforts in the protection and safeguarding of National Security Information, the FBI is requesting an increase of 75 positions and $2,093,000. This includes resources to improve countermeasures in industrial and personnel security matters. The requested resources would enhance field investigative efforts and Headquarters program activities and management. These resources are necessary to insure effective, preventative countermeasures against efforts to compromise National Security Information by those individuals and groups whose actions are inimical to United States national security.

Program Decreases:

A program reduction totaling 24 positions and workyears and $796,000 are proposed to meet budget deficit reduction target levels established by the Administration. An additional program reduction of 73 support workyears and $438,000 is proposed in anticipation of savings from contracting out certain functions of the Records Management program.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Technical Field Support and Equipment.............	208	177	$64,026	208	205	$61,494	209	202	$62,121	1	-3	$627

Long-Range Goal: To provide essential technical support and equipment to FBI field offices and conduct necessary research and development to maintain a level of technology sufficient to overcome criminal and terrorist adversaries.

Major Objectives:

To advance technology and develop new audio analysis and processing capabilities.

To develop a capability to analyze and respond to advances in digital telephone technology such as Integrated Services Digital Network (ISDN).

To complete installation of Digital Voice Privacy (DVP) Systems in 13 remaining field offices and provide needed DVP system upgrades and maintenance in other field offices.

To initiate the upgrade of the emergency high frequency radio system to include adaptive technology; to enhance the special case radio equipment available to the field to support major incidents and special investigations.

To provide improved high resolution and airborne closed circuit television (CCTV) to support enhanced physical surveillances and to replace and upgrade security CCTV systems in field offices.

To purchase tracking equipment and systems to enhance tracking capabilities against narcotics traffickers.

To initiate development of more sophisticated and effective technical devices which will provide better investigative support to the field.

Base Program Description: The Technical Field Support and Equipment (TFSE) program provides technical investigative support to FBI field offices and maintains centralized management of all field equipment to maximize its use and to expedite the completion of complex investigative matters. Frequently, investigative objectives can only be met with sophisticated technical support. All FBI field investigative programs are dependent upon the technical support and services provided by this program. The primary thrusts of the TFSE program are the development, design, engineering, acquisition, distribution, and installation of technical support equipment used for the successful accomplishment of the FBI's investigative mission, as well as the development of an adequate, trained staff to install, maintain, and assist in the operation of that equipment.

The 1991 base level reflects the proposed nonrecurral of $15,000,000 for construction of the Engineering Research Facility - Pod B, of which $7.5 million is from the TFSE program.

Accomplishments and Workload: Workload and accomplishment indicators for the TFSE decision unit are presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Voice Privacy Radio				
a. Field Locations Demand [1]	59	58	57	57
b. DVP Systems Funded (cumulative)	47	58	57	57
c. Full DVP System Installations (underway or completed)	20	31	49	57
d. Offices w/full DVP Capability	59	58	57	57
Locks and Alarms				
a. Number of Entries	177	252	252	252 [2]
b. Operational Travel Days	528	644	644	644 [2]
c. Operations	72	85	85	85
Microphone/Telephone/Drilling				
a. FO Liaison (workdays)	363	363	363	363
b. Contract Liaison (workdays)	87	120	120	145
c. Operational Travel (workdays)	93	130	130	165
d. Training (workdays)	120	120	120	120
e. Equipment, Test, and Evaluation (workdays)	390	410	410	510
Electronics Technician In-Service Attendees	114	104	238	238
Frequency Management				
a. FBI Frequency Assignments	12,500	15,000	17,500	20,000
b. DOJ Frequency Assignments	20,000	25,000	30,000	35,000
c. Radio Interference Instances	12	19	26	32

[1] Field locations include field offices and the FBI Academy, Quantico, Virginia. The change in number of locations is due to the consolidations of the Alexandria/Washington Field Offices (1988), Butte/Salt Lake City Field Offices (1989), and Savannah/Atlanta Field Offices (1990).

[2] These indicators are static since they are based on maximum accomplishments of existing staff levels.

Item	1988	1989	Estimates 1990	Estimates 1991
Closed-Circuit TV (CCTV)				
a. Concealments Produced	20	20	20	30
b. Equipment (number of items provided the field)	400	350	450	600
Audio Processing				
a. Cumulative Stations Installed	6	8	10	12
b. Forensic Specimens Received	3,147	2,596	2,856	3,140
c. Forensic Specimens Examined	2,980	2,457	2,400	2,640
d. Examinations Conducted	24,883	28,534	27,000	30,000
e. Testimony Requested	40	42	44	46
f. Testimony Provided	40	42	44	46
FBI Dialed Number Recorder Usage (lines covered per year)	3,912	4,300	4,700	5,100
Cellular Intercepts	52	94	144	194
Field Recording Equipment Recorders (Open Reel, Cassette, Body)				
a. Increase Required	995	883	774	903
b. Increase Purchased	654	796	180	525
c. Obsolete Recorders	1,788	1,748	1,674	1,423
d. Obsolete Recorders - Replaced	0	0	74	251

In addition, the following accomplishments were also achieved:

All field offices have baseline DVP capability as a result of the acquisition of mini-systems. Contracts have been awarded for 57 full DVP radio systems. Seventeen systems will be fully accepted by the end of calendar year 1989. Full system designs have begun for the 23 field offices that are using mini-systems. All repeater equipment and 50 percent of the needed radio sites for FBI/DEA radio communications interoperability have been obtained.

Special case radio equipment was provided on 89 occasions to meet investigative requirements.
Special technical support was provided to United States Government agencies investigating the bombing of Pan American Flight 103 over Lockerbie, Scotland.

Automated dialed number recorder systems (ADNRS) with multi-line capability were deployed to 13 field offices in 1989. These systems will result in faster and more efficient collection and processing of dialed number information in criminal investigations. A total of 130 ADNRS units have been deployed in field offices.

Equipment and technical support to effect 94 cellular intercepts, 4,300 telephonic intercepts for dialed number information, and 254 court-approved electronic surveillances was provided.

A prototype portable repeater which extends the range of body transmitters and hand-held radios, enhances the quality of audio evidence, and increases the protection of agents operating in dangerous circumstances, was developed. Three repeaters have been delivered for test and evaluation.

More than 3,000 CCTV and over 500 items of other optical surveillance equipment (binoculars, telescopes, night vision equipment) for use during criminal investigations were provided to field offices.

Machine shop and fabrication support in over 100 instances supporting field investigations, equipment development, testing of surveillance vehicle conversions and deployment of field operational hardware was provided.

Computer numerical control (CNC) machining capability was added to the FBI fabrication shop to facilitate the fabrication and production of metal components for technical equipment developed for the field. This capability greatly reduces the time needed to produce custom devices.

A basic capability was established for integrated circuit design with the rapid prototyping facility. Fourteen separate circuits were designed and fabricated at considerable savings of cost and time.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Technical Field Support and Equipment....................................	208	205	$61,494	209	202	$62,121	1	-3	$627

Net program changes of 1 position (-3 workyears) and $627,000 are proposed for the TFSE. Program increases totaling five positions and $6,409,000 are requested for the TFSE program. These resources would directly support the FBI's Criminal Law Enforcement mission as well as the law enforcement priorities of the President and Attorney General. Enhancements requested would augment physical and electronic surveillance capabilities of the FBI to more adequately support court-approved electronic surveillances, particularly in drug matters. These types of complex investigations are increasingly dependent upon the collection of audio and video evidence to assist in the focusing of investigative resources, identify participants in criminal activities, and to aid in the prosecution of subjects. Program decreases of four positions and workyears and $1,295,000 to meet targeted levels established by the Administration and a reduction of $4,487,000 in equipment to absorb the costs to implement Public Law 101-173 are proposed.

Program Increases:

Physical Surveillance: 2 positions (1 workyear) and $3,289,000.

Drug investigations require extensive physical surveillance to establish identities of associates and locations used to conduct drug trafficking, gather evidence, and provide security for undercover agents, cooperating witnesses, and informants. The success of surveillance activities is directly related to the availability of adequate types of technical equipment and techniques used to track and observe subjects engaged in criminal activities. An increase of two electronics technician positions (one workyear) and $3,290,000 including $3,200,000 in equipment funding, is requested to augment FBI physical surveillance capabilities in drug-related investigations, described as follows:

CCTV is a key investigative and prosecutive tool that is employed to maintain discreet surveillances of subjects, buildings, and other locations. Video recordings of drug deals and meetings between traffickers and associates are used by agents to help direct investigations and aid in the prosecution of subjects by providing juries with visual evidence of illegal acts. Equipment funding totaling $1,800,000 is needed to acquire various CCTV equipment used to equip surveillance vehicles, conduct stationary surveillances, and protect FBI off-site and office space. Additionally, two electronics technicians positions and $90,000 are needed to service and maintain CCTV equipment.

Tracking devices that emit radio signals, such as vehicle tracking systems and satellite tracking beacons, are used in surveillances of drug traffickers and others involved in transporting smuggled drugs. Equipment funding totaling $1,000,000 is needed to acquire additional radio surveillance tracking systems and devices to replace existing equipment that have exceeded planned life-cycles and to expand inventories so that sufficient equipment is available to meet projected requirements.

Conducting court-approved electronic surveillances often requires a surreptitious entry to deploy and/or retrieve electronic and physical surveillance devices. A nonpersonnel increase of $400,000 is requested to acquire equipment needed to allow the FBI to maintain its ability to comply with the growing number of court-approved entries associated with drug investigations.

Electronic Surveillance: 3 positions and $3,120,000.

The increasing use of court-approved electronic surveillances in drug cases generates a demand for additional technical equipment used to collect and process intercepted conversations. Without question, the evidentiary value of recorded conversations is one of the strongest tools available to agents and prosecutors. This evidence directly places subjects as participants in drug deals and related criminal activities. To augment the electronic surveillance capabilities of the FBI, an increase of three positions and $3,300,000 including $3,120,000 in equipment funding is needed.
Funding totaling $1,200,000 is required to acquire eight digital audio transcriber workstations which allow for the efficient and timely transcription and reporting of intercepted audio conversations made from on-body recorder transmitters and from court-approved microphone surveillances. These workstations are capable of reducing by 30 to 40

percent the time required to prepare transcripts of recorded conversations. One electronics engineer position and workyear and $90,000 are needed to support and maintain workstations.

Recording and analyzing telephone number information collected by pen registers are valuable in identifying associates, contacts, and customers of drug traffickers. The FBI has developed a capability to directly download telephone call record information into its Field Office Information Management System. This automatic downloading capability eliminates the need to manually enter telephone call records and is more accurate and timely. Drug traffickers and persons engaged in money laundering activities are embracing and exploiting the latest high-technology communications capabilities to control and support drug networks and activities. Funding totaling $720,000 is needed to acquire additional dialed number recorders and software and telephone and data intercept equipment.

The successful conduct of court-approved microphone surveillances requires sufficient quantities of open reel, cassette, and digital recorders. The FBI's inventory of recording equipment is inadequate to support the repetitive requirements associated with an increasing number of drug-related electronic surveillances. Additionally, more than 1,400 pieces of recording equipment that have exceeded planned life-cycles remain in inventory and must be replaced. The failure of recording equipment during a critical microphone surveillance could result in the loss of key evidence against drug traffickers and others. An increase of $1,200,000 is needed to acquire recording equipment for deployment to field offices.

Additionally, two electronics technicians positions are needed to develop operational techniques for audio processing and field recording equipment maintenance.

Program Decreases:

Program reductions of four support positions and workyears and $1,295,000 are proposed by the FBI to meet budget deficit target levels established by the Administration. In addition, a reduction of $4,487,000 in equipment is proposed to absorb the costs to implement Public Law 101-173. The personnel reduction would defer preventive maintenance for some technical equipment items. Additionally the FBI would defer the acquisition of new and replacement furniture for field offices.

Federal Bureau of Investigation

Salaries and expenses

Justification of Program and Performance

Activity Resource Summary

(Dollars in thousands)

Activity: State and Local Assistance	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
General Law Enforcement Training.	273	265	$19,608	273	265	$21,437	265	257	$21,040	- 8	- 8	$ -397
Forensic Services - Non-Federal..	108	105	9,542	108	105	10,194	104	101	10,001	- 4	- 4	-193

Total..........................	2,109	2,105	$101,943	2,109	2,105	$110,099	1,975	1,971	$107,606	-134	-134	$-2,493

This activity supports State and local law enforcement by providing training and furnishing laboratory, identification, and informational services. The FBI National Academy, the National Crime Information Center (NCIC), and the Uniform Crime Reporting (UCR) programs are several of the services funded under this activity. In 1990, 659 workyears and $24,107,000 was transferred to reimbursable funding in the Fingerprint Identification Decision Unit as a result of the implementation of the Federal User Fee Program.

	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
General Law Enforcement Training..................	273	265	$19,608	273	265	$21,437	265	257	$21,040	-8	-8	-$397

Long-Range Goal: To improve the investigative, managerial, and technical capabilities of local, county, State, and international law enforcement personnel through research, education, and training.

Major Objectives:

To provide training to 850 State and local law enforcement officers annually through the FBI National Academy program.

To participate in one sectional and 35 FBI National Academy retraining sessions for the 47 Chapters of the FBI National Academy Associates.

To improve the investigative, managerial, and technical capabilities of criminal justice personnel by providing continually updated education programs at the FBI Academy, at locations throughout the United States, and at selected international sites.

To conduct approximately 270 advanced-level training schools annually by FBI Academy personnel in support of the Field Police Training Program (FPTP) and to conduct 5,000 schools annually for 190,000 criminal justice personnel using FBI Field Police Instructors.

To conduct research and provide evaluative, investigative, and operational assistance in areas where FBI Academy personnel have specialized expertise.

To conduct the FBI National Law Institute for the instruction of State and local legal advisors.

To operate and promote the National Center for the Analysis of Violent Crime and administer research, training, and investigative support programs designed to assist the law enforcement community in their understanding and investigation of unusual, bizarre, and vicious violent crimes.

To provide crime analyses, criminal personality profiles, and violent crime-related information to assist the local law enforcement community in the resolution of major crimes of violence.

To publish scholarly articles by National Academy personnel on a wide variety of subjects of concern to the local law enforcement community.

Base Program Description: The General Law Enforcement Training (GLET) program directly supports the FBI's Law Enforcement Services mission, which encompasses the responsibility of the agency to provide forensic, identification, information, and training services external to the FBI. The GLET mission of the FBI is achieved by the interaction of diverse programs offered at the FBI Academy and provided through the Field Police Training Program (FPTP). The FBI Academy offers a wide variety of training programs which are made available at no cost to select criminal justice personnel. The programs range from highly technical one-week classes to the eleven-week National Academy program. The FBI Academy staff conducts research, establishes program objectives, and develops courses of instruction to meet identified training needs. Through the FPTP, over 2,000 trained FBI instructors assigned to 56 field offices and numerous resident agencies participate in local police training programs throughout the nation.

Accomplishments and Workload: Accomplishments of the GLET program are presented in the following tables:

			Estimates	
Item	1988	1989	1990	1991
1. Persons Trained in NA Program at Academy/Student Training Days (STD):				
a. Actual/Planned	797/43,835	812/44,660	880/48,455	1,000/55,000
b. Demand	3,000/165,000	3,000/165,000	3,000/165,000	3,000/165,000
2. Persons Trained at Academy in Executive Development Program/STD:				
a. Actual/Planned	120/1,440	142/1,014	166/1,660	170/1,700
b. Demand	2,500/25,000	2,500/25,000	2,500/25,000	2,800/28,000
3. Persons Trained at Academy in Specialized or Technical Program/STD:				
a. Actual/Planned	2,344/18,416	3,683/21,698	3,240/265,200	3,520/25,000
b. Demand	39,000/265,200	39,000/265,200	39,000/265,200	39,000/265,200
4. Persons Trained at Local, State, & Regional Facilities by Academy Instructors/ # of Schools:				
a. Actual/Planned	16,861/226	22,000/250	22,000/250	15,000/170
b. Demand	66,907/780	66,907/780	70,000/824	70,000/824

Item	1988	1989	Estimates	
			1990	1991
5. Criminal Justice Personnel Receiving Training at State, Local & Regional Training Facilities by FBI Instructors:				
a. Actual/Planned	165,409	150,000	140,000	150,000
b. Demand	360,000	360,000	360,000	360,000
6. Investigative Cases Analyzed:				
a. Actual/Planned	1,428	1,264	1,000	19,500
b. Demand	10,000	15,000	20,000	30,000

NOTE: Data for program workload charts which refer to students are presented in two ways: (1) the number of students and (2) student training days (STD), which is the number of students in the course multiplied by the number of training days in the course. Data is based on an estimated allocation of 45,000 STD for DEA training at the FBI Academy in 1990 and 40,000 STD for 1991.

Demand for executive development programs in 1989 through 1991 is based on minimal estimates of the training needs in the Drug Enforcement Administration, National Executive Institute, Law Enforcement Executive Development Seminar, and the National Law Institute.

Training for persons at local, State, and regional facilities by Academy instructors includes sophisticated and advanced training in such areas as forensic science, criminal psychology, labor relations, instructor development, and executive development. In addition to above cited figures in item #4, other FBI Headquarters divisions furnished training to 7,104 personnel in 122 schools in 1989.

In 1989, the Field Police Training Program included 41,565 hours of instruction at 5,791 schools. This training does not include figures cited in item #4 above.

The demand figures for 1988 through 1991 for investigative cases analyzed represent a demand for services from a fully operational and computerized National Center for the Analysis of Violent Crimes for unsolved homicides and serial violent crimes in the United States and are based upon Uniform Crime Records statistics primarily reflecting annual unsolved homicides in the United States. Approximately one-third of the current cases in the Violent Criminal Apprehension Program were received as "known offender" cases which may relate to unsolved cases. The planned estimates reflect the FBI's projected ability to address these cases in response to requests received from local law enforcement and past experience.

The planned number of investigative cases analyzed (item #6) assumes resources gained through the Comprehensive Crime Control Act of 1989 are fully utilized in 1991.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
General Law Enforcement Training	273	265	$21,437	265	257	$21,040	-8	-8	-$397

A program reduction totaling five agent positions, and three support positions (8 workyears) and $397,000 is a result of a reduction to meet targeted budget levels established by the Administration. As a result, the FBI would reduce the level of training in the Field Police Training program.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Forensic Services-Non-Federal	108	105	$9,542	108	105	$10,194	104	101	$10,001	-4	-4	-$193

Long Range Goal: To support the non-Federal criminal justice system through programs which provide specialized forensic science training to crime laboratory personnel, crime-scene training to law enforcement personnel, and cost-free examination of physical evidence and necessary court testimony for agencies which do not have access to crime laboratories or in complex cases which are beyond the capability of the local laboratories.

Major Objectives:

To utilize fully the Forensic Science Research and Training Center (FSRTC) to train State and local crime laboratory personnel to improve the ability of jurisdictional laboratories to keep pace with the rising forensic examination case load.

To share the results of successful forensic science research projects with State and local crime laboratories.

To publish the "Crime Laboratory Digest" as a means for the nation's crime laboratories to rapidly share ideas and information.

To maintain leadership in the crime laboratory community by hosting the "Annual Symposium on Crime Laboratory Development" and two additional scientific symposia and through participation in various other scientific meetings and symposia.

To provide professional and expeditious handling of requests for examination of physical evidence and provide necessary expert testimony in cases submitted by State and local law enforcement agencies.

Base Program Description: The FBI Laboratory conducts forensic science examinations of evidence submitted in connection with criminal investigations and prosecutions and provides necessary expert court testimony, without charge, for all duly constituted law enforcement agencies in the United States. All requests for examinations involving State and local matters are carefully screened. It is the policy of the FBI Laboratory to return requests from State and local laboratories when it can be determined that the contributing laboratory has the capability to perform the examination. State and local law enforcement agencies are encouraged to use jurisdictional laboratories when available. However, some law enforcement agencies still do not have access to jurisdictional laboratories and even when available such laboratories often do not have the sophisticated instrumentation and/or expertise to perform the necessary examination(s).

The FSRTC, located at the FBI Academy, Quantico, Virginia, uniquely combines forensic science research with forensic science training in a physical plant designed and equipped to meet the rigorous requirements of these activities. Federal, State, and local crime laboratory and investigative personnel receive training in courses which have been carefully selected and developed after consultations throughout the law enforcement and crime laboratory communities. Many of the courses offered are not available anywhere else in the United States. The research staff is augmented with visiting scientists from the academic community and other government agencies, and the training staff is augmented, as necessary, with experts from the FBI Laboratory. Training is normally conducted at the FSRTC; however, where proper training facilities exist, Laboratory instructors conduct specialized forensic schools in the field. Results of successful research projects are shared with the crime laboratory community.

The FBI Laboratory initiated a new service to the non-federal law enforcement community in December, 1988, by accepting evidence submissions requesting deoxyribonucleic acid (DNA) analysis. This technique promises to revolutionize identification of individuals where body fluids or tissues are present. It is anticipated that analytical analysis methods in this field will mature and the demand for examinations will expand dramatically as State and local investigators and prosecutors become aware of the technique and its identification capabilities. The FBI Laboratory is the first crime laboratory in the United States to offer this service.

Accomplishments and Workload:

Item	1988	1989	Estimate 1990	Estimate 1991
Forensic science examinations				
a) Cases addressed	4,924	4,986	4,500	4,500
b) Requests for examination completed	5,249	4,792	4,900	4,900
c) Specimens submitted for examinations	52,877	48,127	55,000	55,000

Item	1988	1989	Estimate 1990	Estimate 1991
d) Examinations conducted	350,736	311,770	330,000	330,000
e) Days spent in testimony	1,066	1,082	1,050	1,050
Forensic science training				
a) National Academy training				
1) Courses instructed	37	42	20[1]	36[3]
2) Work hours devoted	4,002	4,272	2,136[1]	3,912[3]
b) Specialized forensic schools				
1) Conferences, seminars and schools held	36	60[2]	34[1]	34
2) Work hours devoted	13,776	24,240[2]	14,400[1]	14,400
c) Road schools				
1) Schools held	7	6	6	6
2) Work hours devoted	1,560	1,440	1,440	1,440

[1] Decrease due to increased emphasis in new agent training in 1990.

[2] Increase due to the decrease in new agent training which created excess room capacity for specialized forensic schools.

[3] National Academy increases to four sessions of 200 students per session in 1991.

Program Changes:

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Forensic Services Non-Federal........................	108	105	$10,194	104	101	$10,001	-4	-4	-$193

Program Decreases:

Program reduction totalling four positions and workyears and $193,000 are requested by the FBI to meet targeted budget levels established by the Administration. The reduction of four positions and workyears could increase turnaround time for some laboratory examinations.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Fingerprint Identification...	1,537	1,549	$63,138	1,537	1,549	$68,238	1,421	1,433	$66,530	-116	-116	-$1,708

Long-Range Goal: To provide accurate and timely fingerprint identification and related services to Federal, State and local criminal justice agencies, as well as other governmental agencies and entities, as mandated by Federal statutes, regulations, and executive orders.

Major Objectives:

To process all fingerprint cards, related documents, and name checks, while reducing response time and costs.

To increase employee productivity.

To enhance automation of work operations through research and development.

To provide state-of-the-art forensic science services and improve reporting procedures.

Base Program Description: Over 187 million fingerprint cards representing over 62 million individuals are currently maintained in the FBI's fingerprint files. Fingerprint processing is just one of many services the FBI's Fingerprint Identification program offers to the public and the criminal justice community. The FBI also: (1) examines and processes physical evidence submitted by Federal, State, and local law enforcement agencies for latent "crime scene" fingerprints and provides expert testimony in criminal trials involving this evidence, if necessary; (2) assists Federal, State, and local authorities in the identification of unknown deceased persons, including on-site assistance at major disasters; (3) conducts fingerprint training schools for Federal, State, and local law enforcement personnel; and (4) posts wanted and parole/probation notices on criminal history records to notify criminal justice agencies when there is new arrest activity involving these individuals.

As the national clearinghouse for fingerprint and arrest records, the FBI has a responsibility to the public to be effective and efficient. Prompt reply to contributor correspondence is vital to the operation of the nation's criminal justice effort. Delay in the processing of criminal information can lead to the inadvertent release of fugitives, inhibit criminal investigations, and handicap judicial, prosecutorial, penal, and parole/probation actions. Further delay in the processing of applicant fingerprint cards can result in monetary losses and hardships in the hiring or licensing of individuals. The previously established user-fee program assesses a fee for the processing of certain non-Federal fingerprint cards. The fee is currently used to pay the full cost of the processing services. In 1989, 1,286,585 revenue producing prints resulted in total revenues of $16,504,036. As provided for by the Department's 1990 Appropriation Act, the fee for these services will be increased during 1990 to provide additional funding for future automation projects related to the fingerprint identification services. Additionally, the Fingerprint Identification Program has initiated a new user-fee program for Federal applicants for non-criminal justice, non-law enforcement purposes, as required by Public Law 101-179. All fees collected from this program are to be used to pay for the services provided and State and local licensing.

Phase III of the Automated Identification System (AIS) was implemented June 4, 1989. This phase combined all of the Fingerprint Identification program's automation achievements into a fully-integrated, high-performance system which is designed to decrease the FBI's work-processing time for 95 percent of the workload to one workday.

Accomplishments and Workload: The accomplishments and workload of the Fingerprint Identification program are presented in the following table:

			Estimates	
Item	1988	1989	1990	1991
Fingerprint cards				
Criminal Justice and Federal Applicant				
Received................	6,827,002	6,610,283	4,396,000[1]	4,528,000

Fugitives Identified Through Posting of Wanted Notices	26,455	29,427	31,000	32,000
Latent Fingerprint Cases Processed	15,554	15,479	15,550	16,000
Suspects Identified by Latent Fingerprint Examinations..	2,526	2,650	2,700	2,750
Fingerprint Schools Conducted.......	157	178	183	188
Interstate Identification Index				
Name Check Requests.....	10,750,387	12,741,570[5]	13,746,080	14,158,000
Record Requests.........	2,190,837	2,760,775	3,042,236	3,134,000
Communications Mailed...........	11,465,066	8,867,527	9,450,000	9,922,000

[1] Reduction based on implementation of the new Federal user-fee program.

[2] All user-fee receipts are not processed because of immediate rejections (failure to comply with established procedures and/or requirements) and returns due to illegible fingerprints.

[3] Receipts may be lower because of pending regulations as to what receipts will be considered criminal justice applicants. Federal user-fee revenue is based upon receipts projected after January 1, 1990.

[4] No submissions are planned after 1990 for permanent residency under Immigration Reform and Control Act of 1986.

[5] Reflects the integration of AIS-III and the Interstate Identification Index into a single system.

Latent Fingerprint Specialists examined 198,484 specimens in 15,479 cases in 1989. This resulted in the identification of 2,650 criminal suspects by latent prints. A total of 99 deceased individuals were identified by fingerprint or footprint specimens. Latent Fingerprint Specialists also made 288 court appearances. Testimony provided in cases resulted in 2,894 years in prison terms for guilty offenders, as well as 33 life terms, and five death sentences. Fines totaling $4,977,801 were levied.

The FBI Disaster Squad traveled domestically and internationally in 1989 to assist in the identification of 173 victims of two airplane disasters and one ship explosion. Seventy-three of the victims were identified by fingerprints. The FBI

Disaster Squad traveled to Sioux City, Iowa, to help in the identification of victims in the crash of a United Airlines plane and to Dover Air Force Base, Delaware, to assist in the identification of crewmen killed in an explosion aboard the U.S.S. Iowa, near Puerto Rico. Assistance was provided in the crash of an airplane in Ethiopia involving United States citizens on a Congressional fact-finding tour lead by Texas Congressman Mickey Leland.

Efforts to improve the overall quality within the Fingerprint Identification program were continued in 1989 by emphasizing two particular areas. A Quality Improvement Pilot Project was implemented for typing special correspondence responses. Production standards were removed and replaced by a pass/fail number with extensive emphasis placed on "quality the first time through." A unified effort from management and employees has proven the project a success. Additionally, in July 1989, a National Crime Information Center Identification Services Task Group met at FBIHQ to present recommendations for future enhancements to systems and services of the FBI's Fingerprint Identification Program.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Fingerprint Identification........................	1,537	1,549	$68,238	1,421	1,433	$66,530	-116	-116	-$1,708

Program Decreases:

A program reduction totaling 43 positions and workyears and $1,277,000 is proposed by the FBI to meet targeted budget levels established by the Administration. Additionally, a program reduction of 73 support positions and workyears and $431,000 is proposed in 1991 in anticipation of savings from contracting out certain functions of the Fingerprint Identification program. The activities in this program which will be studied for contracts with private industry include various support functions. With reductions, the FBI would experience some delays in processing fingerprint cards.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Criminal Justice Data and Statistics Services...	191	186	$9,655	191	186	$10,230	185	180	$10,035	-6	-6	-$195

Long-Range Goal: To generate reliable statistics for use in law enforcement administration, operation, and management, and to improve the overall effectiveness of the criminal justice system through effective handling and exchange of documented criminal justice information.

Major Objectives:

To provide for the storage and dissemination of documented information concerning wanted and missing persons, stolen property, and criminal histories through the operation of the National Crime Information Center (NCIC) telecommunications system.

To promote compliance by NCIC State Control Terminal Agencies and Federal Service Coordinators with NCIC policies, procedures, and data quality standards mandated by the NCIC Advisory Policy Board through biennial audits.

To ensure continuation of a user-oriented management process by coordinating meetings and facilitating informational input from the NCIC Advisory Policy Board and Regional Working Groups.

To continue implementation of the National Incident Based Reporting System for the Uniform Crime Reporting (UCR) program.

To collect, record, analyze, publish, and report detailed and comprehensive data contained in the "Crime in the United States" and "Law Enforcement Officers Killed and Assaulted" publications; to collect, compile, and tabulate information concerning the crime of arson, and develop a special arson publication; and to collect, compile, tabulate, and publish statistical reports in compliance with the "Uniform Federal Crime Reporting Act of 1988."

To provide training, technical consultation, and assistance to Federal, State, and local law enforcement officials for developing and maintaining accurate UCR data; to improve management and operational strategies; and to compile UCR crime statistics on a monthly, semiannual, and annual basis for criminal justice reports and analysis.

To provide statistical crime analysis and research in response to requests from academicians, the legal profession, members of Congress, law enforcement officials, and the public.

Base Program Description: The NCIC is a nationwide information system supporting 58,000 components of law enforcement and criminal justice agencies - local, State and Federal. The system consists of a host computer and a supporting telecommunications network which provide access to 12 computerized information bases. NCIC databases are maintained on wanted and missing persons, foreign fugitives, unidentified persons, originating agency identifiers, persons posing a serious threat to U.S. Secret Service protectees, and stolen property (articles, boats, guns, license plates, securities and vehicles). Criminal histories are also accessed through a subsystem know as the Interstate Identification Index. Over 20 million records are accessible through NCIC. At the close of 1989, 247,383,583 transactions were completed. On the average, there are 906,167 NCIC transactions each day.

As part of its Long Range Automation Strategy (LRAS), the FBI intends to redesign, develop, and implement in multiple phases a new generation NCIC system that provides significantly advanced and expanded functionality. The first phase of this process involved a contractual study to identify new functional requirements for the system. The study began in

January, 1986, and was completed in April 1988. Knowledge gained and substantive information collected in this phase coupled with the study results are the foundation for Phase II to establish the new NCIC system's life cycle.

The UCR program directly administers the collection and processing of crime data from contributors to ensure an accurate, comprehensive, and nationwide compilation of crime-related statistics for use by all levels of government in formulating productive programs to reduce lawlessness in the American society. UCR is unique in that it is the only Federal program which collects offense, arrest, clearance, and police employee data from a national network of approximately 16,000 law enforcement agencies, representing 98 percent of the United States' population. One of the FBI's first established support systems for law enforcement, the UCR program has been maintained for more than 58 years due to the need for a national repository and a training base for crime statistics. The UCR program, initiated by law enforcement for law enforcement and voluntarily supported by law enforcement, is an important link between Federal, State, county, and city agencies.

The FBI in conjunction with the UCR community are presently implementing a change in the way crime statistics are reported. This ongoing re-design project, endorsed by the Attorney General and the Director of the FBI, involves the timely conversion from a summary reporting program to an incident-based system. This new system, the National Incident-Based Reporting System, will benefit all law enforcement and citizens across the Nation. The National Incident-Based Reporting System is an added expense to the local contributor as well as to the FBI. Presently, 27 states have made a financial commitment to the new program and are developing systems to start incident-based reporting. Three volumes regarding the implementation and data specifications have been published and disseminated to law enforcement contributors. Members of the law enforcement community are sending incident-based data to the FBI.

Accomplishments and Workload: Accomplishments of the National Crime Information Center and Uniform Crime Reporting programs are presented in the following table and narrative:

			Estimates	
Item	1988	1989[1]	1990	1999[2]
NATIONAL CRIME INFORMATION CENTER				
1. NCIC Transactions	222,515,962	303,000,000	332,000,000	473,500,000
2. Vehicles				
A. Stolen Vehicle Records Entered	1,329,733	1,410,000	1,494,000	1,584,000
B. Stolen Vehicle Records Cleared	1,136,115	1,212,000	1,293,000	1,380,000
C. Average Value of Vehicles ($000)	5,100	5,500	6,000	6,200
D. Total Value of Recovered Vehicles ($000)	3,476,512	4,000,000	4,024,000	4,278,000
3. Number of States Participating in Interstate Identification Index (III)	20	21	23	23
4. III Transactions	20,707,054	24,000,000	28,000,000	32,000,000
5. Training Sessions Conducted for Non-FBI Personnel	42	35	40	45
6. Audits of Control Terminal Agencies	23	28	28	28

Explanation: Vehicle theft statistics do not include construction and farm equipment operated off-road because these vehicles are not registered.

[1] Includes 73 million additional transactions annually resulting from the Treasury Enforcement Communications System.
[2] Includes 109.5 million annual transactions anticipated from the start-up of optical passport reader operations at United States border land crossings and airports.

Other accomplishments of the National Crime Information Center include:

The MITRE Corporation submitted the completed NCIC 2000 study.

An image storage and transmission capability that instantly transmits a photograph, fingerprint, and wanted and missing person record to a computer terminal in a police vehicle was successfully tested.

			Estimates	
Item	1988	1989	1990	1991
UNIFORM CRIME REPORTING				
1. Monthly Statistical Reports Received and Processed				
A. Demand	1,580,420	7,000,000[1]	30,000,000[1]	30,000,000[1]
B. Actual	1,580,420	6,000,000	10,000,000	10,000,000
2. Requests for Training, Liaison, Program Development, Speeches, Meetings, and Police School

B. Actual	150	150	160	160
3. Correspondence	55,150	55,150	55,150	55,150
4. Newsletters/Bulletins Distributed	150,000	150,000	210,000	210,000
5. Publications Produced				
A. Actual	20	23	27	27
B. Distribution	62,500	62,500	85,500	85,500

[1] Increases due to contributors conversion to National Incident-Based System program.

Additional accomplishments of Uniform Crime Reporting include:

The National Incident-Based Reporting System was redesigned to include Federal Crime Reporting requirements and a conference with various Federal Departments participating in the Federal Crime Reporting Program was held.

The Department of Interior was identified as the test agency for the Federal Crime Reporting Program.

Training and technical assistance was provided to 25 States who will be participating in the National Incident-Based Reporting Program by the end of 1990.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease

Long-Range Goal: To provide effective leadership, management, direction, and control for the Federal Bureau of Investigation.

Major Objectives:

To provide leadership for the FBI in support of the organization's long-range goal through the promotion of high morale and efficient commitment of personnel and nonpersonnel resources.

To promote the equality of opportunity in the FBI through affirmative action programs, review and formulate policy regarding Equal Employment Opportunity (EEO) matters, and process complaints of discrimination.

To advocate effectively the FBI's positions with respect to all legislative proposals with the Department of Justice, Office of Management and Budget (OMB), and the Congress; to represent effectively the interest of the FBI with respect to responses to Congressional inquiries and oversight responsibilities; to advise competently the Director and other FBI officials on matters relating to the Congress; to represent FBI interests with national legal organizations.

To obtain public cooperation and support in the FBI's investigative areas; to increase the public's awareness of FBI activities and accomplishments through news releases, feature articles, interviews, speeches, publications, radio and television appearances, and announcements; to reduce the demand for illegal drugs through prevention and education.

To provide legal advice and guidance to FBI personnel in administrative and investigative matters; to conduct legal training of FBI, State, and local personnel; to prepare training monographs and legal articles; to provide legal advice concerning civil administrative forfeitures and rule on petitions for remission or mitigation; to provide legal counsel and coordinate the defense of civil litigation and administrative claims involving the FBI, its personnel, and FBI records.

To carry out audits and evaluations of FBI investigative and administrative programs so as to ensure their economic value and effective compliance with objectives, governing laws, rules, regulations and policy, and to ensure that FBI personnel conduct the organization's activities in a proper and professional manner.

Base Program Description: The Director, with the advice and counsel of the FBI's Deputy Director, Associate Deputy Directors, and members of the Executive Conference, sets policy and provides leadership and direction to the organization. The Associate Deputy Directors, with the assistance of their respective staffs, transmit policy statements, guidelines, and other managerial information to the Assistant Directors, who direct the daily operations of the headquarters divisions.

Components supporting the aforementioned functions of the Director, Deputy Director, and the remainder of FBI executive management include the following areas: the Budget Program which provides overall direction and control in all phases of budget and accounting functions; the Equal Employment Opportunity (EEO) Office, which promotes program management, guidance, and review for the FBI's Affirmative Action Program and the EEO complaint processing system; the Congressional Affairs Office, which seeks to advocate effectively FBI positions with respect to all legislative proposals before the Congress and to competently advise the Director and other FBI executives on matters relating to the Congress; and the Public Affairs Office, which is responsible for providing the American public with factual information concerning the FBI's programs, operations, and services and for managing the Drug Demand Reduction Program.

Also included are the General Legal and Civil Litigation Programs, which provide legal advice and guidance to agency management and personnel concerning all aspects of FBI operational and administrative matters, provide legal training to FBI, Drug Enforcement Administration, and State and local personnel; and coordinate the defense of lawsuits and administrative claims resulting from investigative and administrative actions in the field and at FBI Headquarters. The Internal Inspections Program reviews and assesses, on a continuing basis, FBI operations including the investigation and supervision of all allegations of criminality and serious misconduct on the part of FBI employees. Additionally, the Program Evaluations and Audits Program assists managers by identifying, analyzing, and resolving organizational performance and policy issues and conducting financial and other audits of the FBI's fiscal affairs.

Accomplishments and Workload: Accomplishments of the Executive Direction and Control decision unit are presented in the following table.

Item			Estimates	
	1988	1989	1990	1991
Testimony, constituent requests, and Congressional investigative liaison	4,745	4,800	4,800	4,800
ABC Radio script	48	52	52	52
Correspondence researched and dictated	9,526	9,526	9,526	9,526
Tourists	553,536	554,500	556,000	556,000
Title III applications [1]	280	256	276	298
Undercover proposals	194	224	216	216
Priority service projects	3,255	3,297	3,395	3,497
Priority research projects	385	414	405	410
Total number of pages reviewed for Civil Discovery.[2]	1,092,138	918,902	1,000,000	1,000,000
Forfeiture recommendations reviewed [3]	1,988	1,902	2,320	2,830
Petitions reviewed	371	377	420	468
Civil Actions	210	200	200	200
Inspections completed	40	36	36	36
EEO complaints [4]	15	30	30	35
Administrative inquiries completed	11	5	15	20
Investigations closed	502	515	600	600
Intelligence Oversight Board matters closed	22	30	30	30

---

[1] The number of Title III applications reviewed increased 27 percent from 1987 to 1988 (206 to 280), due in part to rapid increase in applications following enactment of the Electronic Communications Privacy Act of 1986. Although the number of applications reviewed decreased slightly in 1989, a steady growth in this workload is expected as use of electronic surveillance in narcotics and other criminal investigations increase.

[2] The relatively high number of pages reviewed for civil discovery in 1988 was attributable in part to the large number of files reviewed in support of the government's civil RICO lawsuit against the International Brotherhood of Teamsters.

[3] Forfeiture recommendations reviewed increased 50 percent from 1987 to 1988 (1,321 to 1,988). After this dramatic increase, a slight decline occurred in 1989. A steady, moderate growth in this area is expected; however, if legislation by Congress increases the value of assets subject to civil forfeiture, this workload will increase substantially.

[4] The number of EEO complaints is expected to escalate significantly due to the increased visibility of the program.

Item	1988	1989	Estimates 1990	 1991

---

[1] Centralized headquarters, general ledger, electronic data processing, and Congressional audit requirements have increased so drastically that even with the addition of seven auditor positions, the FBI would be unable to complete the same number of field office audits as in the past. At present, the length of time between audits has increased from one year to 18 months and reduced the estimated number of audits per year.

[2] As a result of the use of third party drafts, the demand for confidential case advances is expected to decrease from 1990 to 1991 by a net of about ten percent.

[3] The increase in confidential funding reports from 1989 to 1990 is due to newly implemented reporting requirements from FBI Headquarters to FBI field offices. Prior to 1990, these reports were distributed at FBI Headquarters only, with no requirement for reporting to field offices.

Program Changes:	1991 Base Perm. Pos.	 WY.	 Amount	1991 Estimate Perm. Pos.	 WY.	 Amount	Increase/Decrease Perm. Pos.	 WY.	 Amount
Executive Direction and Control	527	508	$30,804	522	498	$30,319	-5	-10	-$485

The net reduction of five positions and $485,000 includes a program increase of seven positions and $90,000 and a program decrease of 12 positions and $575,000.

Program increases of seven support positions (two workyears) and $90,000 are requested for 1991 to ensure that program direction continues to provide the FBI with effective leadership and is able to adequately address increased responsibilities. This increase would ensure that the FBI is able to address the increasing number of Congressional Undercover Operation (UCO) Audits and audits of the FBI general ledger in compliance with standards established by the General Accounting Office (GAO). Program decreases totaling 12 positions and workyears and $575,000 are also proposed, to meet targeted deficit reductions proposed by the Administration.

Program Increases:

Program Evaluations and Audits: 7 positions (2 workyears) and $90,000.

Five auditor positions (one workyear) and $45,000 are requested to conduct audits of the FBI's overall financial activities. The Audit Unit has been tasked to perform audits of the FBI's financial statements (general ledger) to comply with the GAO's financial and compliance standard for expanded scope auditing. As stated in the Comptroller General of the United States' Government Auditing Standards, the audit organization must "determine (a) whether the financial statements of an audited entity present fairly the financial position and the results of financial operations in accordance with generally accepted accounting principles and (b) whether the entity has complied with laws and regulations that may have a material effect upon the financial statements." In order for the Inspection Division to render an opinion as to the fairness of the presentation of the FBI's financial statements, preliminary audit work began in 1988 to obtain an operational understanding of the general ledger system. Starting in 1989, the actual resource-intensive audit began to determine the reliability of general ledger account balances with internal control and compliance reviews being conducted.

An additional two auditor positions (one workyear) and $45,000 are requested to conduct and report on UCOs. The number of UCOs requiring Congressional audits has increased substantially during the past few years due to an additional reporting requirement which became effective in 1984. Prior to 1984, the only requirement for submitting a detailed financial audit report of an UCO to Congress was if an operation generated gross receipts exceeding $150,000. Since 1984, in addition to the $150,000 gross receipts rule, a detailed audit report must also be submitted to Congress if an UCO had expenditures exceeding $150,000. This requirement has a major impact on the Unit's workload, especially due to the increase in UCOs supporting narcotics and dangerous drug trafficking investigations which generally require large expenditures.

Program Decrease:

This program decrease includes the reduction of four agent, eight support positions and 12 workyears and $575,000 to meet targeted budget levels established by the Administration.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount	Perm. Pos.	WY.	Amount
Administrative Services.....	821	804	$33,257	821	804	$34,825	802	785	$34,152	-19	-19	-$673

Long-Range Goal: To provide a complete range of administrative services to maintain the FBI as a functional entity; and to effect, maintain, and enhance liaison with United States and friendly foreign police and other agencies.

Major Objectives:

To provide personnel related services such as employee safety, health and assistance programs, human resources planning, biweekly payroll, and relocation assistance for transferred employees.

To provide general services such as printing, warehousing, and supply services, disintegration of confidential and official trash, maintenance of the J. Edgar Hoover (JEH) FBI Building, and coordination and supervision of space provided by the General Services Administration.

To enhance the administration of financial matters as required by external entities through improvement of financial management system capabilities needed for decision making and enhanced internal controls.

To procure goods and services necessary to conduct business and to process property which has been seized from criminals for forfeiture purposes.

To expand liaison, both domestically and internationally, with Federal, State, and local law enforcement agencies and members of the intelligence community to support increasing investigative responsibilities of the FBI.

Base Program Description: This program encompasses the major program areas of Personnel Services, General Services Support, and the Office of Liaison and International Affairs.

The Personnel Services program is responsible for the administration, coordination, and policy formulation of pay administration, retirement, leave, safety, and disciplinary action; employee performance, recognition, and indoctrination; applicant recruitment; employee transfer matters; and compiling and reporting personnel statistical data. This program is also responsible for the administration of the performance appraisal and merit pay systems and the Employee Assistance program, to include the recently implemented mandatory drug deterrence program.

The General Services Support program is responsible for procuring and processing property seized for forfeiture purposes. The program also provides support service functions relating to printing, warehousing, security, safety, supplies, and space requirements. The voucher/payroll portion of the systems support staff prepares the FBI's payroll and distributes statements of earnings, salary and expense checks, leave accounting records, and savings bonds. The financial management system staff provides overall direction and control in all phases of accounting functions. The General Services Support program is also responsible for relocation and travel matters involving FBI personnel and administering vouchers relative to the field support account, imprest fund, and undercover operations.

The Office of Liaison and International Affairs (OLIA) is responsible for effecting, maintaining, and enhancing liaison with United States and friendly foreign police and intelligence agencies in support of FBI Headquarters and field offices in their management of the FBI's investigative responsibilities. Liaison and cooperation with foreign police and intelligence services is facilitated by the FBI's Legal Attaches. The Legal Attache's mission is to establish and maintain close personal liaison with all principal law enforcement and intelligence/security services throughout designated foreign countries thereby providing the means by which FBI responsibilities in the applicant, white collar crime, violent crimes, organized crime, international counterterrorism and foreign counterintelligence fields are met efficiently, effectively and expeditiously. The Legal Attache program provides for the prompt and continuous exchange of information and assistance to foreign law enforcement and other agencies. By way of reciprocation, the FBI assists cooperative foreign agencies with their legitimate and lawful interests in the United States.

Accomplishments and Workload: Workload generated by the Administrative Services program is as follows:

			Estimates	
	1988	1989	1990	1991
Senior Executive Service Matters	50	571	618	618
Special Agent Transfer Actions	1,921	2,613	1,943	2,500
Drug Deterrence Tests Conducted	3,265	5,138	14,000	16,000
Relocation Services	769	685	800	800
Relocation Invoices Audited	527	467	550	550
Forfeiture Sharing Requests Completed	1,213	1,800	1,800	1,800

OMB Circular A-76 Savings

Savings anticipated by the conversion of certain functions now performed by Federal employees to contract services is the basis for the reduction of 146 support positions and workyears and $869,000. The details of exactly which services will be converted to contract operations will be available after cost comparison studies have been conducted and reviewed.

Targeted Budget Levels

Program reductions are being taken by the FBI to meet targeted budget levels established by the Administration in compliance with the Balanced Budget and Emergency Deficit Control Act of 1985. As a result of these reduction, some non-personnel resources devoted to program operations will be reduced. FBI management will make necessary changes to ensure that critical and priority investigative programs have adequate resources to maintain a high level of of performance and accomplish the agencies primary goals and objectives. However, with a reduction of this magnitude, certain functions that are not considered critical to National security and the agency's primary investigative goals and objectives will be given lower priority.

Funding for P.L. 101-173

As a result of Public Law 101-173 which amends 5 U.S.C. 5545 (c)(2), the FBI must identify other funding, $13,724,000, associated with the payment of administratively uncontrollable overtime (AUO) effective October 1, 1990. The AUO will be paid at a maximum rate of 25 percent of the rate of basic pay for a position. In order for the FBI to comply with this law, nonpersonnel items (travel, confidential case, and equipment) have been identified for reduction. In addition, 80 workyears (positions) and $2,655,000 have been transferred from direct to reimbursable funding to do background investigations of the Department of Justice applicants.

Status of Congressionally Requested Studies, Reports, and Evaluations

1. The Senate Conference Report relating to the Department of Justice Appropriation Act, 1990, directed that a study be conducted regarding the relocation of the FBI's Identification Division. A scope of services is being drafted addressing the major considerations for relocating the Identification Division within the Mid-Atlantic region. Completion of this statement is expected in 1990. The FBI will then proceed with appropriate contracting steps to award a contract to a commercial vendor for a full feasibility study of the relocation proposal.

[1] The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.

Justification of Adjustments to Base
(Dollars in thousands)

	Pos.	WY	Amount
Mandatory increases:			
1. Annualization of 397 new positions in 1990	...	198	$22,844

This provides for the annualization of 300 positions requested for the Comprehensive Crime Control Act of 1989.

	1990 Increases	Annualization Required
Annual salary rate of 300 approved positions	$9,784,000	
Less lapse rate (50 percent)	4,892,000	$ 4,892,000
Net compensation	4,892,000	
Other personnel compensation	598,000	596,000
Associated employee benefits	3,785,000	3,785,000
Travel and transportion of persons	402,000	403,000
Transportation of things	662,000	663,000
GSA Rent	444,000	443,000
Printing and reproduction	11,000	12,000
Other services	4,908,000	2,210,000
Supplies and materials	207,000	208,000
Equipment	3,591,000	3,489,000
Total costs subject to annualization	19,500,000	16,701,000

This also provides for the annualization of 97 investigative support positions approved in 1990.

	1990 Increases	Annualization Required
Annual salary rate of 97 approved positions.........	$ 2,398,080	
Less lapse rate (51 percent)........................	1,219,616	$ 1,219,616
Net compensation..................................	1,178,464	
Associated employee benefits........................	471,753	900,409
Travel and transportation of persons................	...	263,247
Transportation of things............................	...	220,759
GSA Rent..	144,991	151,200
Printing and reproduction...........................	3,479	3,504
Other services......................................	3,626	752,335
Supplies and materials..............................	22,197	50,436
Equipment...	679,490	2,581,494
Total costs subject to annualization..............	2,504,000	6,143,000

	Pos.	WY	Amount
2. Additional compensable day..	...	...	$3,886

The annual salary for Federal employees is based on 260 paid days. During 1991 there is one more compensable day (261) than 1990 (260). Appropriate personnel benefits are included in this figure.

	Pos.	WY	Amount
3. 1990 full-year pay increase impact on 1991....................................	...	...	39,245

This request provides for the full-year pay increase of 3.6 percent as contained in the general provisions of the U.S. Treasury, Postal Services and General Government Appropriations Bill, 1990, for civilian and military personnel to be effective in January of 1990. The Department will be required to absorb the total pay raise in 1990. The requested increase of $39,245,000 is the amount required for full year funding in 1991. NOTE: The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.

	Pos.	WY	Amount
4. 1991 pay increase For the first time, the Administration is proposing to include the costs of the pay increase effective in the budget year with the initial budget request. This request provides for 50 percent of the proposed 3.5 percent pay increase effective in January of 1991. The Department will be required to absorb half of the costs of this pay raise. The amount requested, $14,160,000, is the cost of the pay increase for approximately three-quarters of the year assuming a 50-percent absorption.	...	...	$14,160
5. Senior Executive Service pay increase This requests represents the 1991 costs of the pay increase for Senior Executive Service employees. This pay increase is to be effective in January of 1990, but will be absorbed completely for the first year. In 1991, an increase of $727,000 is necessary for this requirement. Funding for executive level employees pay raise is completely absorbed in both years.	...	...	727
6. Special Salary Rates This request provides increases as authorized by law in 5 U.S.C. 5303. The Office of Personnel Management has approved these rates for positions where retention and recruitment of qualified applicants is a problem. The Department's request represents coverage of 33 authorized special rates.	...	...	1,893
7. Administratively Uncontrollable Overtime (AUO) P. L. 101-173 increased the limit on AUO payments from 25 percent of a Grade 10 step 1 to 25 percent of compensation. Since most law enforcement agents in the Department are compensated at levels above a GS-10 step 1, this act increases the Department's AUO payments substantially. Total increased costs for the Federal Bureau of Investigation are $41,979,000.	...	...	41,979
8. Health Benefits The Federal Employees Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1990, the actual contribution to health insurance increased 27 percent. The requested increase of $6,747,000 provides funds for actual increased costs from pay period 1 to pay period 2, projected for a full year.	...	...	6,747
9. Federal Employees' Compensation Act (FECA) - Workers' Compensation This increase reflects the billing provided by the Department of Labor for the actual costs in 1989 of employees' accident compensation. The amount will be $6,184,000 or $1,413,000 over the 1990 base.	...	...	1,413

	Pos.	WY	Amount
10. GSA Rent	...	...	$4,740
GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. An uncontrollable increase of $4,740,000 is required to meet our commitment to GSA.			
11. Government Printing Office (GPO) printing costs	...	...	125
The GPO is currently projecting a seven-percent increase over the 1990 printing costs of $1,786,000. An additional $125,000 will be required in 1991.			
Total mandatory increases	...	198	137,759
Decreases (Automatic non-policy):			
1. Federal Employees' Compensation Act (FECA) - Unemployment Compensation	...	...	-102
This decrease reflects the billing provided by the Department of Labor for the actual costs in 1989 of employees' unemployment compensation. The 1991 amount will be $259,000 or $102,000 below the 1990 base.			
2. Federal Telecommunications System (FTS)	...	...	-1,700
In 1991, the General Services Administration (GSA) is to have the FTS 2000 system fully implemented. At present, GSA projections indicate costs for current FTS minute usage charges will decrease from 34 cents per minute to 18 cents per minute. The requested reduction of $1,700,000 from a 1990 base of $3,211,000, reflects this decrease.			
3. 1989 Drug Supplemental	...	...	-6,340
This request reflects a reduction in 1991 for nonrecurring costs associated with the implementation of the Anti-Drug Abuse Act of 1988. The reduction includes the following:			

	Nonrecurring Costs
Personnel benefits	$1,409,434
Travel and transport of persons	190,749
Transportation of things	628,885
Other services	1,648,058
Equipment	2,462,874
Total, nonrecurring costs	6,340,000

	Pos.	WY	Amount
4. 1990 Financial Institutions Fraud Amendment This request reflects a reduction in 1991 for nonrecurring equipment costs associated with the implementation of the Financial Institutions Fraud Initiative in 1990.	...	...	-$1,049
5. Targeted deficit reduction A reduction of 38 positions and $1,844,000 is requested in order to meet targeted budget levels established by the Administration.	-38	-38	-1,844
6. Replacement of agents in administrative positions at FBI Headquarters with non-agents This request reflects a reduction in funding due to savings from the proposed replacement of 55 FBI Special Agent positions with support positions in selected headquarters functions. The decrease in funding represents reduced requirements for administratively uncontrollable overtime and associated personnel benefits.	...	...	-768
7. Base decrease associated with Washington Metropolitan Field Office funding This request reflects a decrease in base equipment funding for the FBI's Other Field Pograms totaling $10,000,000. This decrease is proposed in conjunction with the requested appropriations language change that would allow for the use in 1991 of the no-year funding currently reserved for the relocation of the Washington Metropolitan Field Office.	...	...	-10,000
8. Engineering Research Facility (ERF) Pod B construction This request reflects the nonrecurral of funding allocated from within the 1990 appropriation for construction of Pod B of the ERF at Quantico, Virginia.	...	...	-15,000
Total decreases	-38	-38	-36,803
Total, adjustments to base	-38	160	100,956

Mr. Smith. We are pleased to have back with us Director William Sessions.

How do you wish to proceed?

Mr. Sessions. Thank you, Mr. Chairman.

I am prepared to read a statement to you that would be the basis for my testimony here.

Mr. Smith. Thank you.

Mr. Sessions. Mr. Chairman, Members of the Subcommittee, I am pleased to be back here today to talk about the FBI's budget for fiscal year 1991.

In these times of sweeping international changes, it is no easy matter to predict and allocate funds for future needs. More and more, we are seeing that matters of national concern last year are not necessarily matters of national concern this year.

But in a shifting world, one thing is certain: Crime is here to stay. It is constant in times of stability and it inevitably intensifies in times like these of political and social realignments.

In fact, national and international crime problems have burgeoned in recent years. As an example, the illegal drug trade has sunk its roots deep into societies across the world and directly forced the growth of related crimes of violence, money laundering, and terrorism. At the same time, advances in modern technologies have been turned to dark purposes. They have created new kinds of crime and they have rendered traditional crimes more sophisticated and more difficult to trace.

FBI INCREASED RESPONSIBILITIES

FBI responsibilities, as you know, have increased dramatically in the face of these challenges. We have new jurisdictions to investigate and we have greater responsibilities within our traditional jurisdictions. Think of savings and loan fraud as an example. In addition, our investigations are increasingly long-term, labor-intensive, and technical.

Today the FBI is rapidly adapting to a changing environment. We have restructured and streamlined operations. We have cut away outdated activities. And we have implemented efficiency measures to maximize our effectiveness. We have the people, the programs, the knowledge, and the determination to take on the difficult tasks that lie ahead, but we cannot succeed without the resources. Therefore, I am asking you today to support fully the requests for resources that are contained in the President's budget.

For fiscal year 1991, as you noted, we are requesting a total of $1.64 billion in direct funding and 21,643 permanent positions. The total funding requested constitutes an increase of approximately $141 million over the final 1990 appropriation. This budget request also provides for a net increase of 507 permanent positions over the fiscal year 1990 level. This increase consists of 335 support positions and 172 agent positions.

The adjustments to base level funding include an increase of $16.7 million which reflects the annualization of additional resources received pursuant to the President's Violent Crime Initiative. Increases totaling $121.1 million to cover mandatory increases in expenses such as rent, salaries and administratively uncontrollable overtime are also included. These increases are offset in part by decreases to base level funding totaling $36.8 million. These decreases include a reduction of $15 million associated with the cost of construction of POD B of the engineering research facility at Quantico, Virginia and $10 million associated with the cost of relocating the Washington metropolitan field office.

In total, the changes to base level funding amount to a net increase of $100,956,000. Under today's circumstances, it is essential that these adjustments be fully funded if the FBI is to be able to operate effectively in the coming year.

In preparing the budget for 1991, the FBI found itself somewhat overtaken by events related to the passage of Public Law 101-173, which modified the basis on which the rate of pay for administratively uncontrollable overtime is calculated. The enactment of this law will make it possible to pay up to 25 percent of an agent's base pay for administratively uncontrollable overtime, thus raising the previous limit of 25 percent of base pay of a GS-10 entry level agent. While I believed strongly in the need for this legislation, I was concerned about the impact of its passage because the law created a $42 million unfunded salary expense for fiscal year 1991.

ABSORPTION OF ADMINISTRATIVELY UNCONTROLLABLE OVERTIME

In seeking to find a way to absorb the additional $42 million in salary expenses attributable to Public Law 101-173, the FBI originally proposed to reduce the funded agent complement. The only options I thought were open to me at that time were to reduce personnel or to reprogram equipment. Because our equipment budget has been so affected by past absorptions, I considered a permanent reduction of this magnitude to be ill-advised and unacceptable.

Over the past several years, all of the agencies of the Federal Government have had to absorb many increases in expenses, while the demand for services also continued to increase. During this time, the FBI has sought to maintain the level of investigative operations and support functions, and in order to do this, has had to reduce expenditures for equipment.

The FBI's expenditures can only be made for personnel in the form of salaries and benefits or for expenses which take the form of supplies, equipment and various overhead items. We have historically chosen to preserve our personnel base at the expense of equipment. I have brought with me a chart which depicts some of the cost increases that have been funded by offsetting them against our equipment budget. As you can see on the chart, the absorptions the FBI has, have increased from 2.5 percent of our total budget in 1989 to 7.9 percent in 1991. This indicates that $36,575,000 was taken out in 1989 and that $130,077,000 will be taken out in 1991.

The matter of absorbing the increase in cost for administratively uncontrollable overtime has now been reconsidered in cooperation with the Department of Justice and the Office of Management and Budget. This budget proposes a means of funding the increased cost in fiscal year 1991 which requires manageable program decreases, along with an adjustment in the lapse of new positions. Since the FBI is no longer faced with a permanent reprogramming to fund the additional cost of administratively uncontrollable overtime, we are now able to absorb these costs for fiscal year 1991 without reducing personnel.

Accordingly, this budget request includes program reductions for regional conferences and confidential expenditures of $1 million each and base equipment for $9.1 million. In addition, $1.6 million originally identified for capital improvement projects will be applied to the administratively uncontrollable overtime (AUO). Another $26.7 million of the cost associated with the AUO will be absorbed by delaying the hiring of personnel for the President's 1991 initiatives until the latter part of the year.

In addition, the FBI is seeking approval to conduct certain background investigations for the United States Attorneys offices on a reimbursable basis, which would allow an additional $2.6 million to be applied to the overtime cost.

DRUG ISSUE

I would like to take this opportunity to discuss very briefly the most significant programs of the FBI, to remind you of their importance to the American people, and to ask you to support fully the request for resources contained in this budget.

It is widely accepted that the foremost law enforcement issue today is the drug problem. Dealing with this complex problem will continue to require a coordinated effort on many fronts and at many levels of government. Although there is much debate concerning the manner in which the production, transportation, sale, and consumption of illegal drugs should be handled, one thing is clear, the supply side of the drug problem must be dealt with in a strong and consistent fashion. This mandates attacking the suppliers, the transporters and the merchants. It means identifying and investigating the groups and organizations which traffic in illegal drugs, bringing them to justice, and seizing the fruits and instrumentalities of their crimes.

In 1986, four years ago, the FBI, with the concurrence of the Attorney General, adopted a well-defined National Drug Strategy which concentrates resources of the FBI on the trafficking organizations at the highest levels of international and national drug trafficking. Since 1983, seven years ago, the FBI has shifted resources in such a way as to enable us to conduct vigorous long-term investigations, expand the drug intelligence base, coordinate continuously with the Drug Enforcement Administration, and provide assistance to other Federal, state and local law enforcement agencies.

Our implementation of the National Drug Strategy, is having significant results. Cases such as "Polar Cap" in which $50 million worth of assets were seized, "Cat-Com" which resulted in the indictment of 93 individuals and dismantlement of seven drug trafficking organizations, and "White Mare" which resulted in the largest domestic seizure of heroin ever, 900 pounds, and the identification and indictment of five international heroin trafficking organizations are proof that our strategy works.

In fiscal year 1989, drug-related indictments and informations were brought against 4,467 individuals, convictions were obtained against 2,853, and over $125 million in assets were seized and $45 million in assets were forfeited as a result of FBI investigations.

Our mission is clear, our strategy is working, and we are having an impact. The FBI intends to keep the pressure on the enterprises in this vital part of the war on drugs. Therefore, this 1991 budget requests an increase of 333 positions, 119 workyears, and $19.2 million in direct funding for the drugs program, along with an additional 224 reimbursable workyears for our participation in the Organized Crime Drug Enforcement Task Force program.

WHITE-COLLAR CRIME

The investigation of white-collar crime remains one of the top national priorities of the FBI. The White-Collar Crime program covers a broad range of activities which are generally classified as Government fraud, environmental crimes, public corruption and financial crimes. Each of which deals with issues critical to America's confidence in the institutions of Government and to private enterprise. The magnitude of the white-collar crime areas is such that it is impossible for the FBI to investigate all of the white-collar crime cases that come to our attention. We must, therefore, constantly analyze trends so as to direct our resources to the maximum advantage.

Cases such as "Hedge Clipper" and "Sour Mash", which exposed corrupt trading practices in the commodities trading industry in Chicago, and "Illwind" which focused attention on defense procurement fraud, stand as proof that the FBI is on the cutting edge of law enforcement in this country. In fiscal year 1989, the FBI's investigations were the basis for over 4,500 convictions and pretrial diversions in white-collar crime cases.

In addition, white-collar crime cases resulted in fines, recoveries, and restitutions totaling $946 million along with $24 million in forfeitures and $328.4 million in seizures. This is a return of almost seven to one over the total cost of the White-Collar Crime program.

Here, again, the FBI's strategy is working and we are having an impact. We are continuing investigation of significant cases in each of the categories of white-collar crime and are mobilizing resources to vigorously pursue financial institutions fraud. We are, therefore, requesting an increase of 440 positions, 110 workyears, and funding in the amount of $12.4 million for the White Collar Crime program.

ORGANIZED CRIME

The FBI's Organized Crime program continues to counter the criminal activities of La Cosa Nostra and other organized criminal groups. The FBI's enterprise theory of investigation coupled with prosecutions under both the civil and criminal provisions of the Racketeering Influenced and Corrupt Organizations (RICO) statute have proven to be extremely effective.

The Organized Crime National Strategy, which was based on careful analysis and judicious application of the law, has enabled the FBI to have a profound effect upon the criminal organizations while minimizing the resources required to do so.

LA COSA NOSTRA CONVICTIONS

In fiscal year 1989, the FBI's Organized Crime National Strategy resulted in the indictment or conviction of 18 members of La Cosa Nostra hierarchy. Additionally, 643 convictions were obtained and 510 indictments were filed against members and associates of La Cosa Nostra. In addition, 119 defendants were charged in civil complaints filed under the RICO statute, and 20 judgments were obtained against La Cosa Nostra members, unions and others. Property valued at over $9 million was seized utilizing the civil provisions of the RICO statute.

These investigations and cases have caused serious disruption of La Cosa Nostra activities in Philadelphia, Buffalo, New York City, and West Virginia, among other places. We can have this continuing impact by aggressive implementation of our National Strategy.

In addition to applying resources to the investigation of criminal enterprises of La Cosa Nostra, we are troubled by the dynamic emergence of Asian groups engaged in organized criminal activity. Toward this end, we are requesting an increase of 172 positions, 44 workyears, and $4.1 million for the Organized Crime program in order to respond to the emergence of Asian organized crime.

The crime problems for which the FBI is responsible are many and varied, but they share certain characteristics. They are each, in their own right, complex and sophisticated. They each require complex and sophisticated investigative techniques, and this translates into a need for extensive technical support based upon careful analysis and conservative estimates.

The program enhancements we are requesting involve resources needed to continue initiatives which the Congress has supported in the past. Over 87 percent of the program increases requested in this budget are concentrated in the FBI's priority investigative programs. The remainder of the increases are spread among the various initiatives which directly support those investigative programs.

OTHER FUNDING AREAS

I cannot overstate the importance of maintaining a balance in the mix between personnel and equipment in the FBI. Critical programs including the Automated Data Processing and Telecommunications program, the Technical Field Support and Equipment program, the Records Management program, and the Forensic Services Federal program are essential to the continued success of the FBI.

In the final analysis, the work of the FBI involves collection, analysis, and preservation of information about, or physical evidence of violations of law. If we are unable to gather and process information and evidence, all the planning in the world is of little use.

In the aggregate, this budget includes program increases of 1,285 positions, 357 direct workyears, and funding in the amount of $81.8 million.

PROGRAM DECREASES

This budget also includes program decreases of 740 positions, 660 workyears, and funding in the amount of $41.9 million. Most of this reduction, 514 positions, 514 workyears, and $27.3 million, is necessary to comply with deficit reduction targets established by the Administration.

A-76 REDUCTIONS

An additional reduction of 146 positions, 146 workyears, and $869,000 reflects anticipated savings to be derived from the implementation of the Office of Management and Budget's Circular A-76. The remaining program decreases are included to allow for funding the increased cost of administratively uncontrollable overtime, as I explained earlier.

CONCLUSION OF STATEMENT

At the outset of my remarks I touched briefly on the priority programs of the FBI and spoke about the strategies designed to maximize the impact of the resources allocated to each. I also spoke about the many base level and program changes that are included in this budget.

If the FBI is to continue to serve the American people in the way they have come to expect, we must be able to attract and retain people who meet rigorous standards and who can stand up to the demands made of them. Such people deserve to be compensated fairly, and they also deserve the tools necessary to do the job.

This budget request, if funded, will enable the FBI to meet our obligations. I am confident that we can do this because the men and women who make up the FBI have a strong, continuing commitment to duty and a well-established passion for excellence.

I present this budget request to you today, certain in the knowledge that our mission is clear, that our strategies work and that the FBI will continue to serve proudly and well, and I ask for your support.

Thank you and the Members of the Committee for listening so carefully to me.

[The prepared statement of FBI Director Sessions follows:]

DEPARTMENT OF JUSTICE
FEDERAL BUREAU OF INVESTIGATION
STATEMENT OF THE DIRECTOR
WILLIAM S. SESSIONS
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE, THE JUDICIARY, AND RELATED AGENCIES
MARCH 14, 1990

MR. CHAIRMAN, MEMBERS OF THE SUBCOMMITTEE, I AM PLEASED TO BE HERE TODAY TO TALK ABOUT THE FBI'S BUDGET FOR FISCAL YEAR 1991.

IN THESE TIMES OF SWEEPING INTERNATIONAL CHANGES, IT IS NO EASY MATTER TO PREDICT AND ALLOCATE FUNDS FOR FUTURE NEEDS. MORE AND MORE, WE ARE SEEING THAT MATTERS OF NATIONAL CONCERN LAST YEAR ARE NOT NECESSARILY MATTERS OF NATIONAL CONCERN THIS YEAR. BUT IN A SHIFTING WORLD, ONE THING IS CERTAIN: CRIME IS HERE TO STAY. IT IS CONSTANT IN TIMES OF STABILITY--AND IT INEVITABLY INTENSIFIES IN TIMES, LIKE THESE, OF POLITICAL AND SOCIAL REALIGNMENTS.

IN FACT, NATIONAL AND INTERNATIONAL CRIME PROBLEMS HAVE BURGEONED IN RECENT YEARS. AS AN EXAMPLE, THE ILLEGAL DRUG TRADE HAS SUNK ITS ROOTS DEEP INTO SOCIETIES ACROSS THE WORLD--AND DIRECTLY FORCED THE GROWTH OF RELATED CRIMES OF VIOLENCE, MONEY LAUNDERING, AND TERRORISM. AT THE SAME TIME, ADVANCES IN MODERN TECHNOLOGIES HAVE BEEN TURNED TO DARK PURPOSES: THEY HAVE CREATED NEW KINDS OF CRIME, AND THEY HAVE RENDERED TRADITIONAL CRIMES MORE SOPHISTICATED AND MORE DIFFICULT TO TRACE.

FBI RESPONSIBILITIES, AS YOU KNOW, HAVE INCREASED DRAMATICALLY IN THE FACE OF THESE CHALLENGES--WE HAVE NEW JURISDICTIONS TO INVESTIGATE, AND WE HAVE GREATER RESPONSIBILITIES WITHIN OUR TRADITIONAL JURISDICTIONS. JUST THINK OF SAVINGS-AND-LOAN FRAUD AS AN EXAMPLE. IN ADDITION, OUR INVESTIGATIONS ARE INCREASINGLY LONG-TERM, LABOR INTENSIVE, AND TECHNICAL.

TODAY THE FBI IS ADAPTING TO A CHANGING ENVIRONMENT. WE HAVE RESTRUCTURED AND STREAMLINED OPERATIONS; WE HAVE CUT AWAY OUTDATED ACTIVITIES; AND WE HAVE IMPLEMENTED EFFICIENCY MEASURES TO MAXIMIZE OUR EFFECTIVENESS. WE HAVE THE PEOPLE, THE PROGRAMS, THE KNOWLEDGE, AND THE DETERMINATION TO TAKE ON THE DIFFICULT TASKS THAT LIE AHEAD--BUT WE CANNOT SUCCEED WITHOUT THE RESOURCES. THEREFORE, I AM ASKING YOU TODAY TO SUPPORT FULLY THE REQUESTS FOR RESOURCES THAT ARE CONTAINED IN THE PRESIDENT'S BUDGET.

FOR FISCAL YEAR 1991, WE ARE REQUESTING A TOTAL OF $1.64 BILLION IN DIRECT FUNDING AND 21,643 PERMANENT POSITIONS. THE TOTAL FUNDING REQUESTED CONSTITUTES AN INCREASE OF APPROXIMATELY $141 MILLION OVER THE FINAL 1990 APPROPRIATION. THIS BUDGET REQUEST ALSO PROVIDES FOR A NET INCREASE OF 507 PERMANENT POSITIONS OVER THE FISCAL YEAR 1990 LEVEL. THIS INCREASE CONSISTS OF 335 SUPPORT POSITIONS AND 172 AGENT POSITIONS.

ADJUSTMENTS TO BASE FUNDING

THE ADJUSTMENTS TO BASE LEVEL FUNDING INCLUDE AN INCREASE OF $16.7 MILLION WHICH REFLECTS THE ANNUALIZATION OF ADDITIONAL RESOURCES RECEIVED PURSUANT TO THE COMPREHENSIVE CRIME CONTROL ACT OF 1989. INCREASES TOTALLING $121.1 MILLION TO COVER MANDATORY INCREASES IN EXPENSES SUCH AS RENT AND SALARY AND ADMINISTRATIVELY UNCONTROLLABLE OVERTIME ARE ALSO INCLUDED. THESE INCREASES ARE OFFSET IN PART BY DECREASES TO BASE LEVEL FUNDING TOTALLING $36.8 MILLION. THESE DECREASES INCLUDE A REDUCTION OF $15 MILLION ASSOCIATED WITH THE COST OF CONSTRUCTION OF POD B OF THE ENGINEERING RESEARCH FACILITY AT QUANTICO, VIRGINIA, AND $10 MILLION ASSOCIATED WITH THE COST OF RELOCATING THE WASHINGTON METROPOLITAN FIELD OFFICE. IN TOTAL THE CHANGES TO BASE LEVEL FUNDING AMOUNT TO A NET INCREASE OF $100,956,000. UNDER TODAY'S CIRCUMSTANCES, IT IS ESSENTIAL THAT THESE ADJUSTMENTS BE FULLY FUNDED IF THE FBI IS TO BE ABLE TO OPERATE EFFECTIVELY IN THE COMING YEAR.

ADMINISTRATIVELY UNCONTROLLABLE OVERTIME

IN PREPARING THE BUDGET FOR 1991 THE FBI FOUND ITSELF SOMEWHAT OVERTAKEN BY EVENTS RELATED TO THE PASSAGE AND ENACTMENT OF PUBLIC LAW 101-173, WHICH MODIFIED THE BASIS UPON WHICH THE RATE OF PAY FOR ADMINISTRATIVELY UNCONTROLLABLE OVERTIME IS CALCULATED. THE ENACTMENT OF THIS LAW WILL MAKE IT POSSIBLE TO PAY UP TO 25 PERCENT OF

Consulting and Related Services
(Dollars in thousands)

	1989 Actual	1990 Estimate	1991 Estimate
Consulting Services	$2,053	$3,989	$3,989

The services of consultants are obtained when either in-house staff does not possess the particular expertise or resources to conduct certain activities or when a service or project can be performed more economically by an outside contractor, academician, or professional. For example, to comply with Office of Management and Budget Circular A-76, the FBI has acquired contractor services to assist in conducting management productivity studies. Subject-area experts are used, as needed, in analyzing and examining items of evidence and conducting forensic research. Computer crime research is also conducted by consultants for the FBI. On-site physical examinations are conducted by contract physicians and the services of qualified psychiatrists are retained to support a psychological services program available to all FBI employees and their immediate families. These services function as a tool for carrying out responsibilities in the areas of hostage negotiation, crisis management, and counterterrorism. Additional areas that will require consulting services in 1990 and 1991 include: development of artificial intelligence expert systems to support counterterrorism investigations; automation of various activities in the Identification Division and certain systems maintenance activities for financial management and the Northeast Regional Computer Support Center (NERCSC) at Fort Monmouth, New Jersey; and microcomputer support for selected automation activities. Additionally, professional photographic consultants are needed to establish regional photograph processing centers for the FBI.

BASE PAY FOR ADMINISTRATIVELY UNCONTROLLABLE OVERTIME, THUS OVERCOMING THE PREVIOUS LIMIT OF 25 PERCENT OF BASE PAY OF A GS-10 ENTRY LEVEL AGENT. WHILE I BELIEVED STRONGLY IN THE NEED FOR THIS LEGISLATION, I WAS CONCERNED ABOUT THE IMPACT OF ITS PASSAGE, BECAUSE THE LAW CREATED AN UNFUNDED SALARY EXPENSE FOR FISCAL YEAR 1991.

IN SEEKING TO FIND A WAY TO ABSORB THE ADDITIONAL $42 MILLION IN SALARY EXPENSE ATTRIBUTABLE TO PUBLIC LAW 101-173, THE FBI ORIGINALLY PROPOSED TO REDUCE THE FUNDED AGENT COMPLEMENT. THE ONLY OPTIONS I THOUGHT WERE OPEN TO ME AT THAT TIME WERE TO REDUCE PERSONNEL OR TO REPROGRAM EQUIPMENT. BECAUSE OUR EQUIPMENT BUDGET HAS BEEN SO AFFECTED BY PAST ABSORPTIONS, I CONSIDERED A PERMANENT REDUCTION OF THIS MAGNITUDE TO BE UNACCEPTABLE.

OVER THE PAST SEVERAL YEARS ALL OF THE AGENCIES OF THE FEDERAL GOVERNMENT HAVE HAD TO ABSORB MANY INCREASES IN EXPENSES, WHILE THE DEMAND FOR SERVICES ALSO CONTINUED TO INCREASE. DURING THIS TIME THE FBI HAS SOUGHT TO MAINTAIN THE LEVEL OF INVESTIGATIVE OPERATIONS AND SUPPORT FUNCTIONS, AND IN ORDER TO DO THIS HAS HAD TO REDUCE EXPENDITURES FOR EQUIPMENT. THE FBI'S EXPENDITURES CAN ONLY BE MADE FOR PERSONNEL, IN THE FORM OF SALARIES AND BENEFITS, OR FOR EXPENSES, WHICH TAKE THE FORM OF SUPPLIES, EQUIPMENT AND VARIOUS OVERHEAD ITEMS. WE HAVE HISTORICALLY CHOSEN TO PRESERVE OUR PERSONNEL BASE AT THE EXPENSE OF EQUIPMENT. I HAVE BROUGHT WITH ME A

CHART WHICH DEPICTS SOME OF THE COST INCREASES FUNDED BY OFFSET AGAINST OUR EQUIPMENT BUDGET.

THE MATTER OF ABSORBING THE INCREASE IN COST OF ADMINISTRATIVELY UNCONTROLLABLE OVERTIME HAS NOW BEEN RECONSIDERED, IN COOPERATION WITH THE DEPARTMENT OF JUSTICE AND THE OFFICE OF MANAGEMENT AND BUDGET. THIS BUDGET PROPOSES A MEANS OF FUNDING THE INCREASED COST IN FISCAL YEAR 1991 WHICH REQUIRES MANAGEABLE PROGRAM DECREASES, ALONG WITH AN ADJUSTMENT TO THE LAPSE OF NEW POSITIONS. SINCE THE FBI IS NO LONGER FACED WITH A PERMANENT REPROGRAMMING TO FUND THE ADDITIONAL COST OF ADMINISTRATIVELY UNCONTROLLABLE OVERTIME, WE ARE ABLE TO ABSORB THESE COSTS FOR FISCAL YEAR 1991 WITHOUT REDUCING PERSONNEL.

ACCORDINGLY, THIS BUDGET REQUEST INCLUDES PROGRAM REDUCTIONS FOR REGIONAL CONFERENCES AND CONFIDENTIAL EXPENDITURES OF $1 MILLION EACH, AND BASE EQUIPMENT FOR $9.1 MILLION. IN ADDITION $1.6 MILLION ORIGINALLY IDENTIFIED FOR CAPITAL IMPROVEMENTS PROJECTS WILL BE APPLIED TO ADMINISTRATIVELY UNCONTROLLABLE OVERTIME. ANOTHER $26.7 MILLION OF THE COSTS ASSOCIATED WITH PUBLIC LAW 101-173 WILL BE ABSORBED BY DELAYING THE HIRING OF PERSONNEL FOR THE PRESIDENT'S 1991 INITIATIVES UNTIL THE LATTER PART OF THE YEAR. IN ADDITION, THE FBI IS SEEKING APPROVAL TO CONDUCT CERTAIN BACKGROUND INVESTIGATIONS FOR THE UNITED STATES ATTORNEYS ON A REIMBURSABLE BASIS, WHICH

WOULD ALLOW AN ADDITIONAL $2.6 MILLION TO BE APPLIED TO THE OVERTIME COST.

PROGRAM CHANGES

I WOULD LIKE TO TAKE THIS OPPORTUNITY TO EXPLAIN VERY BRIEFLY THE MOST SIGNIFICANT PROGRAMS OF THE FBI, TO REMIND YOU OF THEIR IMPORTANCE TO THE AMERICAN PEOPLE, AND TO ASK YOU TO SUPPORT FULLY THE REQUEST FOR RESOURCES CONTAINED IN THIS BUDGET.

DRUGS PROGRAM

UNDOUBTEDLY, THE FOREMOST LAW ENFORCEMENT ISSUE TODAY IS THE DRUG PROBLEM. DEALING WITH THIS COMPLEX PROBLEM WILL CONTINUE TO REQUIRE A COORDINATED EFFORT ON MANY FRONTS AND AT MANY LEVELS OF GOVERNMENT. ALTHOUGH THERE IS MUCH DEBATE AS TO PRECISELY HOW TO DEAL WITH THE PRODUCTION, TRANSPORTATION, SALE, AND CONSUMPTION OF ILLEGAL DRUGS, ONE THING IS CLEAR. THE SUPPLY SIDE OF THE DRUG PROBLEM MUST BE DEALT WITH IN A FIRM AND LASTING WAY. THIS MEANS ATTACKING THE SUPPLIERS, THE TRANSPORTERS, AND THE MERCHANTS. IT MEANS IDENTIFYING AND INVESTIGATING THE GROUPS AND ORGANIZATIONS WHICH TRAFFIC IN ILLEGAL DRUGS, BRINGING THEM TO JUSTICE AND SEIZING THE FRUITS AND INSTRUMENTALITIES OF THEIR CRIMES.

IN 1986, THE FBI, WITH THE CONCURRENCE OF THE ATTORNEY GENERAL, ADOPTED A WELL-DEFINED NATIONAL DRUG STRATEGY WHICH CONCENTRATES RESOURCES OF THE FBI ON THE ORGANIZATIONS AT THE HIGHEST LEVELS OF INTERNATIONAL AND

NATIONAL DRUG TRAFFICKING. SINCE 1983 THE FBI HAS SHIFTED RESOURCES IN SUCH A WAY AS TO ENABLE US TO CONDUCT VIGOROUS LONG-TERM INVESTIGATIONS, EXPAND THE DRUG INTELLIGENCE BASE, COORDINATE CONTINUOUSLY WITH THE DRUG ENFORCEMENT ADMINISTRATION, AND PROVIDE ASSISTANCE TO OTHER FEDERAL, STATE, AND LOCAL LAW ENFORCEMENT AGENCIES.

OUR IMPLEMENTATION OF THIS STRATEGY IS HAVING SIGNIFICANT RESULTS. CASES SUCH AS "POLAR CAP," IN WHICH OVER $50 MILLION WORTH OF ASSETS WERE SEIZED, "CAT-COM," WHICH RESULTED IN THE INDICTMENT OF 93 INDIVIDUALS AND DISMANTLEMENT OF SEVEN DRUG TRAFFICKING ORGANIZATIONS AND "WHITE MARE," WHICH RESULTED IN THE LARGEST DOMESTIC SEIZURE OF HEROIN EVER, 900 POUNDS, AND THE IDENTIFICATION AND INDICTMENT OF FIVE INTERNATIONAL HEROIN TRAFFICKING ORGANIZATIONS ARE PROOF THAT OUR STRATEGY WORKS.

IN FISCAL YEAR 1989, DRUG-RELATED INDICTMENTS AND INFORMATIONS WERE BROUGHT AGAINST 4,467 INDIVIDUALS, CONVICTIONS WERE OBTAINED AGAINST 2,853, AND OVER $125 MILLION IN ASSETS WERE SEIZED AND $45 MILLION WERE FORFEITED AS A RESULT OF FBI INVESTIGATIONS.

OUR MISSION IS CLEAR, OUR STRATEGY IS WORKING, AND WE ARE HAVING AN IMPACT. THE FBI INTENDS TO KEEP THE PRESSURE ON THE ENTERPRISES IN THIS VITAL PART OF THE WAR ON DRUGS. THEREFORE, THIS 1991 BUDGET REQUESTS AN INCREASE OF 333 POSITIONS, 119 WORKYEARS, AND $19.2 MILLION IN DIRECT FUNDING FOR THE DRUGS PROGRAM, ALONG

WITH A NET ADDITIONAL 224 REIMBURSABLE WORKYEARS FOR OUR PARTICIPATION IN THE ORGANIZED CRIME DRUG ENFORCEMENT PROGRAM.

WHITE-COLLAR CRIME PROGRAM

THE INVESTIGATION OF WHITE-COLLAR CRIME REMAINS ONE OF THE TOP NATIONAL PRIORITIES OF THE FBI. THE WHITE-COLLAR CRIME PROGRAM COVERS A BROAD RANGE OF ACTIVITIES WHICH ARE GENERALLY CLASSIFIED AS GOVERNMENT FRAUD, ENVIRONMENTAL CRIMES, PUBLIC CORRUPTION, AND FINANCIAL CRIMES. IT IS IMPOSSIBLE TO SAY WHICH OF THESE CATEGORIES OF CRIMES IS THE MOST IMPORTANT, SINCE EACH DEALS WITH ISSUES CRITICAL TO AMERICA'S CONTINUED CONFIDENCE IN THE INSTITUTIONS OF GOVERNMENT AND PRIVATE ENTERPRISE. THE SCOPE OF WHITE-COLLAR CRIME IS SUCH THAT IT IS IMPOSSIBLE FOR THE FBI TO INVESTIGATE ALL OF THE WHITE-COLLAR CRIME CASES THAT COME TO OUR ATTENTION. WE MUST, THEREFORE, CONSTANTLY ANALYZE TRENDS SO AS TO DIRECT OUR RESOURCES TO MAXIMUM ADVANTAGE.

CASES SUCH AS "HEDGE CLIPPER" AND "SOUR MASH," WHICH EXPOSED CORRUPT TRADING PRACTICES IN THE COMMODITIES TRADING INDUSTRY IN CHICAGO, AND "ILLWIND" WHICH FOCUSED ATTENTION ON DEFENSE PROCUREMENT FRAUD, STAND AS PROOF THAT THE FBI IS ON THE CUTTING EDGE OF LAW ENFORCEMENT IN THIS COUNTRY. IN FISCAL YEAR 1989 THE FBI INVESTIGATIONS WERE THE BASIS FOR OVER 4,500 CONVICTIONS AND PRETRIAL DIVERSIONS IN WHITE-COLLAR CRIME CASES. IN ADDITION, WHITE-COLLAR CRIME CASES RESULTED IN FINES, RECOVERIES, AND RESTITUTION TOTALLING $946 MILLION, ALONG WITH $24 MILLION IN FORFEITURES AND $328.4 MILLION IN SEIZURES.

HERE AGAIN, THE FBI'S STRATEGY IS WORKING AND WE ARE HAVING AN IMPACT. WE ARE CONTINUING INVESTIGATION OF SIGNIFICANT CASES IN EACH OF THE CATEGORIES OF WHITE-COLLAR CRIME AND ARE MOBILIZING RESOURCES TO VIGOROUSLY PURSUE FINANCIAL INSTITUTION FRAUDS. WE ARE REQUESTING AN INCREASE OF 440 POSITIONS, 11[illegible] WORKYEARS, AND FUNDING IN THE AMOUNT OF $12.4 MILLION FOR THE WHITE-COLLAR CRIME PROGRAM.

ORGANIZED CRIME PROGRAM

THE FBI'S ORGANIZED CRIME PROGRAM CONTINUES TO EVOLVE AS WE SEEK TO COUNTER THE CRIMINAL ACTIVITIES OF LA COSA NOSTRA AND OTHER ORGANIZED CRIMINAL GROUPS. THE FBI STRATEGY, KNOWN AS THE ENTERPRISE THEORY OF INVESTIGATION, COUPLED WITH PROSECUTIONS UNDER BOTH THE CIVIL AND CRIMINAL PROVISIONS OF THE RACKETEERING INFLUENCED AND CORRUPT ORGANIZATIONS STATUTE HAVE PROVEN TO BE EXTREMELY EFFECTIVE. THE ORGANIZED CRIME NATIONAL STRATEGY, WHICH WAS BASED ON CAREFUL ANALYSIS AND JUDICIOUS APPLICATION OF THE LAW, HAS ENABLED THE FBI TO HAVE A PROFOUND EFFECT UPON THESE CRIMINAL ORGANIZATIONS WHILE MINIMIZING THE RESOURCES REQUIRED TO DO SO.

IN FISCAL YEAR 1989, THE FBI'S ORGANIZED CRIME NATIONAL STRATEGY RESULTED IN THE INDICTMENT OR CONVICTION

OF 18 MEMBERS OF LA COSA NOSTRA HIERARCHY. ADDITIONALLY, 643 CONVICTIONS WERE OBTAINED AND 510 INDICTMENTS WERE FILED AGAINST MEMBERS AND ASSOCIATES OF LA COSA NOSTRA. IN ADDITION, 119 DEFENDANTS WERE CHARGED IN CIVIL COMPLAINTS FILED UNDER THE RICO STATUTE, AND 20 JUDGMENTS WERE OBTAINED AGAINST LA COSA NOSTRA MEMBERS, UNIONS AND OTHERS. ALSO, PROPERTY VALUED AT OVER $9 MILLION WAS SEIZED UTILIZING THE CIVIL PROVISIONS OF THE RICO STATUTE.

THESE INVESTIGATIONS AND CASES HAVE CAUSED SERIOUS DISRUPTION OF LA COSA NOSTRA ACTIVITIES IN PHILADELPHIA, BUFFALO, NEW YORK CITY, AND WEST VIRGINIA, AMONG OTHER PLACES. I FIRMLY BELIEVE THAT WE CAN HAVE THIS CONTINUING IMPACT BY AGGRESSIVE IMPLEMENTATION OF OUR NATIONAL STRATEGY.

WHILE WE CONTINUE TO APPLY RESOURCES TO THE INVESTIGATION OF CRIMINAL ENTERPRISES OF LA COSA NOSTRA, WE ARE TROUBLED BY THE DYNAMIC EMERGENCE OF ASIAN GROUPS ENGAGED IN ORGANIZED CRIMINAL ACTIVITY. TOWARD THIS END, WE ARE REQUESTING AN INCREASE OF 172 POSITIONS, 44 WORKYEARS, AND $4.1 MILLION FOR THE ORGANIZED CRIME PROGRAM IN ORDER TO RESPOND TO THE GROWING PROBLEM OF ASIAN ORGANIZED CRIME.

THE CRIME PROBLEMS FOR WHICH THE FBI IS RESPONSIBLE ARE MANY AND VARIED, BUT THEY SHARE CERTAIN CHARACTERISTICS. THEY ARE EACH, IN THEIR OWN RIGHT, COMPLEX AND SOPHISTICATED. THEY EACH REQUIRE COMPLEX AND

SOPHISTICATED INVESTIGATIVE TECHNIQUES, AND THIS TRANSLATES INTO A NEED FOR EXTENSIVE TECHNICAL SUPPORT. TO MEET THESE TECHNICAL REQUIREMENTS, THE FBI HAS DEVELOPED SEVERAL INITIATIVES WHICH ARE, AGAIN, BASED UPON CAREFUL ANALYSIS AND CONSERVATIVE ESTIMATE.

THE PROGRAM ENHANCEMENTS WE ARE REQUESTING INVOLVE RESOURCES NEEDED TO CONTINUE INITIATIVES WHICH THE CONGRESS HAS SUPPORTED IN THE PAST. OVER 87 PERCENT OF THE PROGRAM INCREASES REQUESTED IN THIS BUDGET ARE CONCENTRATED IN THE FBI'S PRIORITY INVESTIGATIVE PROGRAMS. THE REMAINDER OF THE INCREASES ARE SPREAD AMONG THE VARIOUS INITIATIVES WHICH DIRECTLY SUPPORT THOSE INVESTIGATIVE PROGRAMS. I CANNOT OVERSTATE THE IMPORTANCE OF MAINTAINING A BALANCE IN THE MIX BETWEEN PERSONNEL AND EQUIPMENT IN THE FBI. CRITICAL PROGRAMS INCLUDING THE AUTOMATED DATA PROCESSING AND TELECOMMUNICATIONS PROGRAM, THE TECHNICAL FIELD SUPPORT AND EQUIPMENT PROGRAM, THE RECORDS MANAGEMENT PROGRAM, AND THE FORENSIC SERVICES-FEDERAL PROGRAM ARE ESSENTIAL TO THE CONTINUED SUCCESS OF THE FBI. LET US NOT FORGET THAT, IN THE FINAL ANALYSIS, THE WORK OF THE FBI INVOLVES COLLECTION, ANALYSIS, AND PRESERVATION OF INFORMATION ABOUT, OR PHYSICAL EVIDENCE OF, VIOLATIONS OF LAW. IF WE ARE UNABLE TO GATHER AND PROCESS INFORMATION AND EVIDENCE, ALL THE PLANNING IN THE WORLD IS OF LITTLE USE.

IN THE AGGREGATE, THIS BUDGET INCLUDES PROGRAM INCREASES OF 1,285 POSITIONS, 357 DIRECT WORKYEARS, AND FUNDING IN THE AMOUNT OF $81.8 MILLION.

THESE ARE OFFSET, IN PART, BY PROGRAM DECREASES OF 740 POSITIONS, 740 WORKYEARS, AND FUNDING IN THE AMOUNT OF $41.9 MILLION. MOST OF THIS REDUCTION, 514 POSITIONS, 514 WORKYEARS, AND $27.3 MILLION, IS INCLUDED IN ORDER TO COMPLY WITH DEFICIT REDUCTION TARGETS ESTABLISHED BY THE ADMINISTRATION. AN ADDITIONAL REDUCTION OF 146 POSITIONS, 146 WORKYEARS, AND $869,000 REFLECTS ANTICIPATED SAVINGS TO BE DERIVED FROM THE IMPLEMENTATION OF THE OFFICE OF MANAGEMENT AND BUDGET'S CIRCULAR A-76. THE BALANCE OF THE PROGRAM DECREASES ARE INCLUDED TO ALLOW FOR FUNDING THE INCREASED COST OF ADMINISTRATIVELY UNCONTROLLABLE OVERTIME, AS I EXPLAINED EARLIER.

CONCLUSION

AT THE OUTSET OF MY REMARKS I TOUCHED BRIEFLY ON THE PRIORITY PROGRAMS OF THE FBI, AND I SPOKE ABOUT THE STRATEGIES DESIGNED TO MAXIMIZE THE IMPACT OF THE RESOURCES ALLOCATED TO EACH. I ALSO SPOKE ABOUT THE MANY BASE LEVEL AND PROGRAM CHANGES WHICH ARE INCLUDED IN THIS BUDGET.

IF THE FBI IS TO CONTINUE TO SERVE THE AMERICAN PEOPLE IN THE WAY THEY HAVE COME TO EXPECT, WE MUST BE ABLE TO ATTRACT AND RETAIN PEOPLE WHO MEET RIGOROUS STANDARDS AND WHO CAN STAND UP TO THE DEMANDS MADE OF

THEM. SUCH PEOPLE DESERVE TO BE COMPENSATED FAIRLY, AND THEY ALSO DESERVE THE TOOLS NECESSARY TO DO THE JOB.

THIS BUDGET REQUEST, IF FUNDED, WILL ENABLE THE FBI TO MEET OUR OBLIGATIONS IF WE ARE ABLE UTILIZE TO THE PLANS THAT WE HAVE SO CAREFULLY DEVISED. I'M CONFIDENT THAT WE CAN DO THIS BECAUSE THE MEN AND WOMEN WHO MAKE UP THE FBI HAVE A STRONG, CONTINUING COMMITMENT TO DUTY AND A PASSION FOR EXCELLENCE.

I PRESENT THIS BUDGET REQUEST TO YOU TODAY, CERTAIN IN THE KNOWLEDGE THAT OUR MISSION IS CLEAR, THAT OUR STRATEGIES WORK AND THAT THE FBI WILL CONTINUE TO SERVE PROUDLY AND WELL, AND I ASK FOR YOUR SUPPORT.

SEQUESTRATION AND ADMINISTRATIVELY UNCONTROLLABLE OVERTIME

Mr. SMITH. Well, now, Mr. Director, let me see if I can get these figures put together right here.

Mr. SESSIONS. All right, sir.

Mr. SMITH. You had a sequestration of about $21 million?

Mr. SESSIONS. That is correct.

Mr. SMITH. Then a law was passed—I won't say you passed it, but Congress passed a law for administratively uncontrollable overtime.

Mr. SESSIONS. That is correct.

Mr. SMITH. What was the cost of that?

Mr. SESSIONS. About $41.979 million. That is what it will be. It will actually come into effect on October 1, 1990. That is the requirement to pay it.

Mr. SMITH. Well, to take care of sequestration, you reduced certain things.

Mr. SESSIONS. That is correct.

Mr. SMITH. To some extent are you reducing the same things in order to try to offset administratively uncontrollable overtime?

Mr. SESSIONS. Some of the funding was taken from various sources. The main way we are dealing with it is by the $26.655 million that will be saved by the increased lapse rate.

In other words, the FBI will bring special agents on later in the year, rather than in a consistent pattern of hiring throughout the year. This will save approximately $26 million towards the increased cost of overtime.

BALANCE OF RESOURCES

Mr. SMITH. As far as personnel, you had an increase of 1,285, which I am sure you justified every one of those. You thing every of those is important.

Mr. SESSIONS. That is not a net, but that is correct.

Mr. SMITH. That is the increase, though. Then you had to offset that by reductions of 740?

Mr. SESSIONS. That is correct.

Mr. SMITH. So you end up with a little different mix—we say you have a little more that is under the title of drugs and a little more under one or two other titles and less under other titles.

Mr. SESSIONS. Organized crime, white-collar crime and drugs. Other than that, there is a little less, that is correct.

Mr. SMITH. Then you have less for other things?

Mr. SESSIONS. That is correct.

Mr. SMITH. On balance, will your organization, or will the FBI be as well balanced as it was before you made those shifts?

Mr. SESSIONS. Our reduction in the Organized Crime program in 1982 was the result Iowa the acquisition of Title 21 jurisdiction for drugs. So at that time, we reprogrammed into the drugs area almost half of those organized crime people.

You know that today the Organized Crime program and the Drugs program are separate. We also have the Organized Crime Drug Enforcement Task Force program.

The movement of resources is not unusual, but I think it is absolutely essential that we keep the balance. There are peaks that come up and hit us, like the savings and loan crisis.

You know that it is important for us to respond.

Mr. SMITH. Will you be as well balanced if this is the way it turns out, as you were before?

Your increase of 1,285 and decrease of 740 are in slightly different areas. Will you be as well balanced?

Mr. SESSIONS. We will not be as well balanced, but we will be able to respond to the needs placed. We will be able to have a relatively balanced program. You know, and I know, in the white-collar crime area, we can apply a great increase in resources to those difficult areas.

We could do the same in drugs, we could do the same practically in organized crime. But, it is a matter of trying to manage resources in a balanced way that will make strong programs. I think we have reflected this balance in our budget request.

Mr. SMITH. That is basically what bothers me somewhat. The Administration and the Congress are going to increase the efforts on drugs. Then at the same time we are reducing other things. That tells half the story.

You are increasing the drug effort, but can you take it away from the other things? That part of the story makes it look like your balance and proportions are being determined by what is politically popular to talk about—rather than whether or not you are going to be balanced.

DRUG STRATEGY

Mr. SESSIONS. There is another aspect of that. We found long before I was the Director that drugs were, in fact, involved in a great number of our investigative efforts.

When then Attorney General, William French Smith, gave us that jurisdiction in 1982, it was obvious that there were drugs involved in organized crime and in other areas of our investigations as well.

Essentially, we have maintained that balance there, but our National Drug Strategy is a very narrow and very well directed strategy aimed at the criminal organizations.

We are committed to use our National Strategy against major drug trafficking organizations, dealing in heroin and cocaine, with long-term investigations designed to actually break up the organizations and seize their assets and forfeit them.

We participate in the Organized Crime Drug Enforcement Task Force program which is essentially the same, it also targets the major drug organizations.

Mr. SMITH. You are the Federal Bureau of Investigation. This is something I think is commonly understood even by Members of Congress. You are not a law enforcement agency as much as you are an investigative agency. You have to investigate. The investigations are then used by law enforcement people. If the investigations aren't made, they don't know where to go to do their job.

Mr. SESSIONS. You are precisely right. The allocation of resources to those particular areas is a continuing and strong challenge.

STATUS OF WASHINGTON METROPOLITAN FIELD OFFICE MOVE

Mr. SMITH. One other way you propose to get some of the reductions necessary to offset some of these increased costs was by eliminating the $10 million previously appropriated for the Washington field office relocation.

Mr. SESSIONS. That is correct.

Mr. SMITH. What drives this decision? Are you not able to relocate, or are you just slowing it up?

Mr. SESSIONS. Mr. Chairman, the FBI, OMB, the Department of Justice, and GSA have struggled with that since 1982. There have been several times when locations have been found.

The last location was found in the spring before I became Director, in 1987. It was not an acceptable location from the point of view of the city government and the rejections made, we did not relocate there.

The difficulty of finding a place has been discouraging. I do not know what is going to happen from OMB's viewpoint, but they have removed funding from the move from our base. Therefore, it will not be in the base. We will have to find funding to be able to move it.

I think it is essential that it be done. We have not been able to get it done.

Mr. SMITH. You say there is objection—which city is objecting?

Mr. SESSIONS. The City of Washington, DC.

Mr. SMITH. They didn't want you to locate where you wanted to in the City of Washington?

Mr. SESSIONS. The last location was in Northwest Washington, near the Columbia Women's Hospital, and it was believed not to be an appropriate place and we have not pursued it.

Mr. SMITH. Have you pursued locations outside of the City of Washington?

Mr. SESSIONS. Not for moving the Washington-Metropolitan Field Office outside of the District of Columbia.

You may remember that in February of 1988, I consolidated the Alexandria, Virginia Field Office with the Washington Field Office. The Washington Metropolitan Field Office is what it is now.

We have not otherwise gone outside to find a location but we do have resident agencies outside.

Mr. SMITH. Is there still consideration of finding a location?

Mr. SESSIONS. Yes, it is absolutely essential to the FBI.

Mr. Smith. You don't think the money will be needed in the next fiscal year?

Mr. SESSIONS. It has been removed from the base. We are going to need the money some time, Mr. Chairman.

Mr. SMITH. Is there a possibility it will be needed in the next fiscal year.

Mr. SESSIONS. It is not probable. I think the chances are that OMB will actually continue to disallow our efforts to do that.

OFFICE OF MANAGEMENT AND BUDGET DENIALS FOR 1991

Mr. SMITH. What was your total request of OMB?

Mr. SESSIONS. It was a $1,972,375,000 and 24,529 positions.

Mr. SMITH. And what is represented by that difference in what was approved and what you requested—in terms of personnel effort?

Mr. SESSIONS. The request to Congress is $1,640,237,000 and 21,643 positions. This is a reduction of $257 million and 2,886 positions.

Mr. SMITH. What would those positions, had they been approved, been dedicated to?

Mr. SESSIONS. You want me to give them to you specifically, Mr. Chairman?

Mr. SMITH. Well, generally speaking. Then put in the record the details.

Mr. SESSIONS. I will provide those for the record as to precisely where these positions would have been. They are across a majority of all programs.

[The information follows:]

Resource Requests to the Office of Management and Budget and the Congress for 1991

The following information discusses the differences between the Federal Bureau of Investigation request to OMB and Congress.

For 1991, the final request to Congress for the **Federal Bureau of Investigation** (FBI) reflects a total reduction of 2,886 positions and $332,138,000 from the OMB request and includes a reduction of 856 positions (336 agents) and $173,875,000 to requested program enhancements.

The FBI's base level was reduced by $116,348,000 including the following: $15,000,000 for construction of the Engineering Research Facility (ERF) - Pod B; $10,000,000 for the relocation of the Washington Metropolitan Field Office; $14,160,000 for half of the 1991 pay raise; $20,941,000 for the 1990 sequester; 38 positions and $1,844,000 to meet the Administration's targeted budget deficit levels; and $321,000 in savings associated with the replacement of 23 agents in administrative positions at headquarters with non-agents. The FBI also did not receive funding for various mandatory increases, including GSA recurring services, building maintenance, and general pricing level adjustments.

Program Increases Denied: In order to fund a portion of the increased costs of AUO, all positions requested in 1991, except those for the Drugs program, are lapsed at 75 percent, rather than the typical 50 percent. New positions requested for the Drugs program are lapsed at 65 percent. OMB has agreed to provide full annualization of these positions in 1992. Due to the new lapse, personnel funding for program enhancements reflected in the request to Congress is less than that requested to OMB. This increased lapse rate is reflected in the program reductions identified below:

- Other Field Programs - Total increases of 244 positions (114 agents) and $32,890,000 were denied, including additional resources for the Bureau Applicant program and for establishing a legal attache in Madrid, Spain.

- Organized Crime program - Increases totaling 188 positions (89 agents) and $18,768,000 were denied, including the following: 100 positions to conduct additional Civil RICO investigations; 86 positions requested to support intensified efforts against Asian Organized Crime; $2,532,000 for confidential case expenditures; 2 positions to establish a legal attache in Bangkok, Thailand; $849,000 for aircraft operations; $696,000 for public source information subscription costs; and $1,600,000 to increase the number of offices supported by Special Operation Groups/Off-premise sites.

- Drugs program - Increases of $3,348,000 were denied. OMB supported the FBI's full request for this program. The difference between the FBI's request to OMB and the current request results from lapsing positions at 65 percent instead of 50 percent in order to absorb the increased costs of AUO.

- White-Collar Crime program - Increases denied total 165 positions (95 agents) and $20,536,000, including 102 positions for the investigation of environmental crimes, 55 positions for bankruptcy fraud, 8 accounting technician positions, and $214,000 for payments to cooperating witnesses.

- Training program - 2 positions and $3,916,000 were denied, including $1,307,000 to provide for 10mm pistol ammunition for increased firearms training and $450,000 for field firing-range construction.

- Forensic Services - Federal program - Enhancements of $4,507,000 were denied, in part, for the architectural design of a new FBI laboratory facility ($3,750,000) and to obtain explosives examination equipment ($254,000).

- Automated Data Processing and Telecommunications program - A total of 37 positions and $27,589,000 were denied. Requests not supported include: $14,000,000 for the procurement of intelligent workstations; $10,700,000 to replace headquarters equipment which has surpassed its life-cycle; and $1,600,000 for increased supply and maintenance requirements.

- Records Management program - Resources totaling 162 positions (38 agents) and $11,009,000 were denied, including the following: 30 document examiner positions for the Freedom of Information Privacy Act Section; 128 positions to conduct background investigations of contractors and 5-year reinvestigations of FBI employees with access to National Security Information; 4 document classification assistant positions; and $1,500,000 for optical disk storage hardware for automation.

- Technical Field Support and Equipment program - This program was denied 41 positions and $30,401,000. Included in this reduction were the following: $17,012,000 to construct ERF - Pod B; 32 field electronics technician positions; 9 support positions; and $11,208,000 for the replacement/expansion of the technical equipment inventory.

- Fingerprint Identification program - The FBI's request of $3,346,000 was denied. This funding was requested to purchase additional Automated Fingerprint readers and cameras for the Automated Identification System.

- Criminal Justice Data and statistical Services program Funding of $17,000,000 for the first-year costs of the National Crime Information Center 2000 project was cut.

- Executive Direction and Control program - All position increases were supported, but lapsing positions at 75 percent resulted in a reduction of $92,000.

- Administrative Services program - The request for 17 positions and $473,000 was denied. These resources were requested for contract, procurement, property management, and accounting areas to support increasing FBI field activities.

Program Decreases: In addition to the program enhancements denied, the FBI's 1991 budget includes decreases totaling 740 positions (including 252 agents) and $41,915,000. Program decreases are detailed below:

- Program decreases totaling 514 positions (including 227 agents) and $27,322,000 have been proposed in order to meet targeted budget deficit levels established by the Administration. These decreases are presented in the following table:

(Dollars in Thousands)

Program	Pos.	Amount
Other Field Programs	-235	-$12,528
Organized Crime	-47	-2,232
White-Collar Crime	-65	-3,255
Training	-11	-529
Forensic Services-Federal	-10	-489
ADP and Telecommunications	-26	-2,888
Records Management	-24	-796
Tech. Field Support and Equip.	-4	-1,295
General Law Enforcement Training	-8	-397
Forensic Services-Non-Federal	-4	-193
Fingerprint Identification	-43	-1,277
Criminal Justice Data and Statistics Services	-6	-195
Executive Direction and Control	-12	-575
Administrative Services	-19	-673
TOTAL	-514	-27,322

- A program decrease of 80 positions (including 25 agents) and $13,724,000 is also included to partially offset the $41,979,000 costs of increased AUO payments. This includes the following program reductions: travel ($1,000,000); confidential case funding in Other Field Programs ($1,000,000); conducting background investigations for the U.S. Attorneys as a reimbursable program as is the practice with other Federal agencies (80 positions (including 25 agents) and $2,655,000); and equipment funding ($9,069,000) including $1,064,000 for replacement vehicles,

$2,716,000 for ADP equipment, $3,630,000 for field investigative equipment, and $1,659,000 for field office furniture and related equipment. Reductions by program are as follows:

Program	(Dollars in Thousands) Pos.	Amount
Other Field Programs	-80	-$6,521
ADP and Telecommunications	...	-2,716
Tech. Field Support and Equip.	...	-4,487
TOTAL	-80	-13,724

- The final program reduction is a decrease of 146 positions and $869,000 for A-76 management and productivity initiatives. The decrease is reflected in the Records Management (73 positions and $438,000) and the Fingerprint Identification (73 positions and $431,000) programs.

NEW YORK COST-OF-LIVING ALLOWANCE

Mr. SMITH. What is the status of the New York pay experiment?

Mr. SESSIONS. The background, with which you are familiar, arose at the time I became Director in 1987, the FBI was having continual difficulty meeting special agent target staffing levels in the New York field office.

We found many agents required to move to the New York Metropolitan area resigning rather than going. We were also losing an inordinately high number of special agents who were aleady assigned there.

Additionally, in the support area we were not able to hire or retain an adequate number of employees. In the Intelligence Authorization Act of 1988, the New York Demonstration Project came into place. That amounted to an immediate payment of $20,000 to agents who were required to move into the New York Metropolitian Area.

Mr. SMITH. What has been the result other than every other city in the country wants the same thing?

Mr. SESSIONS. It is interesting. At the time that we actually did it, the cost-of-living in the New York Metropolitan area was 135 percent of the national average.

Boston and Newark, San Francisco, and Los Angeles were right behind New York at 125 percent. There were others, including Washington, which was down to the 115 percent level.

So, it was difficult for the rest. But, my view was that it was absolutely essential to stop what I called the flow of blood up in the New York Metropolitan area. That is precisely what has happened.

The figures are, I think, impressive in terms of the numbers of people who are now on-board covered by that project. As of October of last year, all of them were covered.

It has had a tremendous impact on stopping the number of resignations. Now we are actually able to hire. We were not able to do that before.

Mr. SMITH. We were told by the authorizing committee that they are going to work on a solution to this problem based essentially on the blue collar worker legislation that provides some adjustments under certain circumstances. Are you involved in that?

Mr. SESSIONS. Yes. I, along with the Attorney General, and Jack Lawn of the Drug Enforcement Adminstration sat on the National Advisory Commission on Law Enforcement.

That Commission will be coming forward with its proposed report which will have some 16 recommendations, all of which I think, are important to law enforcement and to the FBI specifically.

It also will make the recommendation that appropriate funding be given. Like the FBI, many of the agencies simply cannot absorb the costs associated with a cost-of-living allowance (COLA).

The AUO bill and the COLAS and those things which you have seen we have absorbed over the years. These cannot continue.

Mr. SMITH. When will that report be completed.

Mr. SESSIONS. It is my understanding that Chairman Bowsher will have it published later in the month, and it will be on the Hill.

I will be glad to give you a specific date, but that is my understanding.

Mr. SMITH. I see. Have you been working with the authorizing committees here on the Hill then or is this the report?

Mr. SESSIONS. I have not personally been working with the authorizing Committees on the Hill. It is, I think, important for you to know that my own perception is that it would be in the best interest of the FBI to be removed from Title V and from those pay and classification schedules, in order to address the unique and continuing problems we have around the country.

We have 56 field offices and 400 resident agencies. It is a problem to make those adjustments.

I believe that funding is imperative in connection with those pay raises. Mr. Chairman the horror stories, I am sure you have heard.

MANDATORY RETIREMENT FOR SPECIAL AGENTS

Mr. SMITH. A key issue in your having adequately trained personnel is the mandatory retirement at age 55. Is there any consideration to changing that?

Mr. SESSIONS. The Commission is advancing the recommendation that it be raised to 57, but without affecting the eligibility age of 50. My belief was that this would be extremely significant to the FBI.

There are many people, I am convinced, who because of the challenge that is available to them at that age bracket, at the peak of their careers, would prefer not to leave but find it a necessity to find some other place to go in order to support their families and have a continuing income.

Mr. SMITH. When did that 55 mandatory cap go into effect?

Mr. SESSIONS. I don't remember precisely, but it was about 10 years ago. January of 1978 is the word from the gallery.

Mr. SMITH. It really flies in the face of what has happened in this country. In 30 years time we have extended life in this country by 10 years.

Mr. SESSIONS. Yes.

Mr. SMITH. Everything is going the other direction.

Mr. SESSIONS. I am convinced that we in the FBI can gain a great deal from the age 57 cutoff. Also a procedure to extend the time that an agent can serve is needed. The current procedure is a cumbersome and awkward process which requires intervention from the Attorney General.

Mr. SMITH. How easy is it to extend for somebody wanting to go to work to age 60, for example?

Mr. SESSIONS. You can, on a 6-month basis, make a request to the Attorney General. I have asked him to give me the authority directly and to do it for a particular percentage of my people. This would allow me the luxury of being able to extend the mandatory retirement age for a percentage of my agents.

The retirement cutoff age of 57, if it is passed, will help a great deal.

Mr. SMITH. You can do that by regulation?

Mr. SESSIONS. It would take a change in law. I can do it by regulation if the Attorney General delegates the authority.

Mr. **Smith**. Do you expect his opinion on that soon?

Mr. **Sessions**. I have not asked him yet, but I shall.

Mr. **Smith**. Mr. Rogers?

FY 1991 REQUEST TO CONGRESS

Mr. **Rogers**. Let me congratulate you and all your associates for your continued good work in the FBI.

There has been a big drug seizure that you partially alluded to in your opening statement, not to mention the white collar crime successes and examples of your achievements over this past year.

We appreciate the good work.

Now, your budget request is one of the most confusing that I have seen. I am sure it is one of the most confusing you have seen, through no fault of yours. But, you are requesting a net increase of $141 million and 507 positions.

Mr. **Sessions**. That is correct.

Mr. **Rogers**. Of that $141 million increase, the way I read the figures, $101 million of that is just to keep up with last year?

Mr. **Sessions**. Correct. Those are the costs that take us from where we were after sequestration on our 1990 base which was $1,499,000,000 and $101,000,000 of that will bring us up to $1.64 billion .

The requested increase would take us up to $1.64 billion. You are absolutely correct.

Mr. **Rogers**. In toto, your net increase over last year's program is, what, $39 million?

Mr. **Sessions**. That is correct.

Mr. **Rogers**. How many positions does that translate to?

Mr. **Sessions**. It nets out to 545 positions of which 249 are special agent and 296 are support.

Mr. **Rogers**. That is new personnel, net new?

Mr. **Sessions**. That is correct.

Mr. **Rogers**. Now, to put your request to OMB in perspective to that number, what was your request in those terms, net increases?

Mr. **Sessions**. Our net increases have taken us to 24,529 positions, which is over our approximately 21,643 positions we are currently requesting.

It would be approximately 2,900 more.

Mr. **Rogers**. Net new?

Mr. **Sessions**. Net new.

Mr. **Brixey**. The request to OMB was 241 positions. You are contrasting basically 545 net. About a 1600 position difference.

Mr. **Rogers**. What was the dollar figure of your request, net new dollars, to OMB?

Mr. **Brixey**. $255 million.

Mr. **Rogers**. It is difficult to see through that because of the many puts and takes from your gross number—reductions to fund overtime pay, the A-76 reductions, the across-the-board program decreases, funding certain positions from reimbursements and the like.

It is fairly confusing to get to the bottom line. The bottom line bothers me some.

Can you do what you would like to do and we expect you to do with a reasonably small increase over last year's number?

Mr. SESSIONS. As I indicated to the Chairman, it is my belief that we can always use a great deal more people than we actually have. But as the Attorney General has noted and as we know, it is not possible to have all of the things done at one single time.

There are demands of the Department of Justice that must be met in the drug area and in the prisons area. These are consistent, continuing strong demands. I am satisfied that we will have, as I indicated, a balanced program.

We would like to have more. That is why we gave that figure of $1,972,375,000 to OMB, to tell them truthfully what we believe we need.

Mr. ROGERS. It is not much above a standstill budget, is it?

Mr. SESSIONS. It is a $39 million increase.

Mr. ROGERS. As a percentage of your total budget, that is a relatively small increase.

Mr. SESSIONS. About 2.5 percent.

A-76 REDUCTIONS

Mr. ROGERS. Let me ask you a couple of other things.

A-76 policy, and personnel levels. As it has in the last couple of years, OMB has required the FBI and other agencies, you have not been singled out, to cut certain amounts of positions and funds as a part of management savings.

Under their Circular A-76, agencies are required to perform studies on certain positions to determine whether functions can be performed by a private concern cheaper than by the government.

No one can argue with the philosophy behind that initiative.

How many positions are reduced in your budget due to A-76 management initiatives?

Mr. SESSIONS. In the 1991 budget, it is 146 positions. In 1990, it was 247.

In 1989, it was 393. Before that, 38.

It is a total of 824 positions through 1991.

Mr. ROGERS. Were those positions originally requested as part of your hiring plan and request to OMB?

Mr. SESSIONS. Yes.

Mr. ROGERS. How long does it normally take to do a study called for in the OMB A-76 Circular?

Mr. SESSIONS. We are in the process now of conducting six different studies. I have here somewhere the information on the specific ones, if you want that. Recent testimony before the Subcommittee on Human Resources revealed it is taking Federal agencies between 18 and 24 months to conduct an A-76 study.

The studies, I think, are indicative of our intention to try to comply with the spirit of A-76 and to make those changes where we can.

Mr. ROGERS. Well, is this a big burden? Doing the studies, is that a burdensome thing in time and manpower and expense?

Mr. SESSIONS. I looked at what it entails. It requires hiring a professional with six years of A-76 experience to manage the FBI's efforts.

There are six separate studies ongoing that involve nearly 800 employees. There are many functions that will go to competition with the private sector this fiscal year.

The six specific programs that we are looking at are: the facilities and grounds functions at the FBI Academy and FBI headquarters; the Quantico Library; the warehousing procedures; data center operations; and some aspects of fingerprint operations.

The problem has been the difference between OMB's and the FBI's perception of what we believe to be core governmental functions. It is the FBI's position that investigations and functions relating, to criminal investigations and counterintelligence functions are inherently governmental.

We are; therefore, extremely careful about going forward with privatization. We do have to find those areas and we presently have six ongoing studies.

Our ongoing efforts demonstrate that we are in compliance with Circular A-76.

Mr. ROGERS. You are having to make these cuts, you are having to cut positions before you could possibly complete the study?

Mr. SESSIONS. That is correct.

Mr. ROGERS. Studies that A-76 requires; right?

Mr. SESSIONS. That is correct.

Mr. ROGERS. You are getting cut before the fact? You are getting convicted before you are tried, aren't you?

Mr. SESSIONS. In defense of the requirement, we have known for some time about A-76. We have tried to comply with the spirit of this executive initiative.

We know that the FBI is mandated 2,008 workyears between the year 1987 and 1995. We have developed an inventory ourselves which includes 1,528 positions that we want to study. Those studies are ongoing.

We are trying as best we can to find those positions that can yield to the A-76 directive without impairing the privacy concerns and the operational concerns that we have in both foreign counterintelligence and criminal investigations.

Mr. ROGERS. Last year this subcommittee attempted to try to ease this problem.

We wrote into the report of the appropriations bill that we passed instructions dealing with the problem. Did that have any impact?

Mr. SESSIONS. We did not retain those positions, those 247 positions. Are those the ones you are referring to, Congressman?

Mr. ROGERS. The A-76.

Mr. SESSIONS. Yes, we did not retain them.

Mr. ROGERS. Our language had no effect?

Mr. SESSIONS. I don't know how to answer that. We did not retain the positions.

Mr. ROGERS. I will say it for you. It had no effect.

Mr. SESSIONS. Mr. Brixey may be able to clarify or provide an explanation.

Mr. BRIXEY. Congress restored the 393 in the previous year, the 247 last year. In our pass back from OMB, they said the cuts would have to stay. We lost 640 positions this year.

Mr. ROGERS. Due to?

Mr. **Brixey**. OMB Circular A-76.

Mr. **Rogers**. I think we made it about as explicit as we could last year. We put instructions in the bill report.

Of course, that is not binding, but it is sometimes very instructive to OMB and others. Maybe there is another way we can do it this year to try to help out. That is a big, big loss in your manpower.

Mr. **Sessions**. Yes, it is.

Mr. **Rogers**. I mean it is not chicken feed; is it?

Mr. **Sessions**. No, it is not.

USER FEES

Mr. **Rogers**. Beginning with the fiscal year 1990 bill, the FBI was given the authority to collect fees for processing fingerprint ID's and name checks——

Mr. **Sessions**. That is correct.

Mr. **Rogers** [continuing]. For non-law enforcement Federal and State agencies and for private businesses. Prior to that, you had been providing that service free, as I understand, as it had been for state and local law enforcement agencies?

Mr. **Sessions**. That is right, the service is free of charge for law enforcement units.

Mr. **Rogers**. Your fiscal year 1990 appropriations then was reduced by $30 million in anticipation that you would collect that much in fees?

Mr. **Sessions**. That is correct.

Mr. **Rogers**. And that you would be made whole again after $30 million was cut away. How has that worked out?

Mr. **Sessions**. Well, it hasn't worked out precisely as planned because it was November, 1989 before the law was signed. Apparently, there was an inability on the part of agencies who would be required to pay those user fees to actually have budgeted and prepared for it.

We have seen a substantial reduction of funds. We will not reach the $30 million.

Mr. Brixey tells me the loss of funds is approximately $7.5 million. It may be larger.

Are those correct figures, Mr. Brixey?

Mr. **Brixey**. Because we didn't get started until the first of January identifying who we would be charging, there was a lot of controversy over who was law enforcement and who was not. From an operating standpoint we built into our operating plan a reduction of $7.5 million, which is just 25 percent, and the three months that we lost.

We have been collecting statistics since the first of January. It appears that our receipts are only running about half of what they have been running in prior years. This was expected because the organizations didn't have money to pay for the service.

Besides the $7.5 million, it appears that we might be short at least another $3 to $5 million. We may have to absorb another shortfall which could be anywhere from $10 to $12 million out of that base cut.

Mr. ROGERS. Well, since we reduced your appropriations in fiscal year 1990, did that $30 million remain out of your funding base for 1991?

Mr. BRIXEY. Yes.

Mr. ROGERS. You stand to lose up to $20 million, give or take?

Mr. BRIXEY. Yes.

FINANCIAL INSTITUTION REFORM RECOVERY AND ENFORCEMENT ACT

Mr. ROGERS. One last area before I yield to my colleagues, under the major financial institution recovery legislation enacted last year, you were authorized an additional 236 agents in fiscal year 1990 for fraud investigation.

But without the supplemental, only 153 agents, as I understand it, will be hired, and at lower starting grades than is really desired. Now, the fiscal year 1991 request contains within that $12 million increase from white-collar crime about $5.6 million and 212 positions related to bank investigations and another 38 accounting positions.

How is that money being used?

Mr. SESSIONS. It would be used directly for the savings and loan and the financial fraud investigations. Of course, those people will be allocated and have been allocated in conjunction with the placement of the Assistant United States Attorneys in the various offices around the country to be sure that there is a coordinated capability between the investigative agency and the prosecutive agency.

Mr. ROGERS. My understanding is some of those new position hires are not at a grade and experience levels as high as perhaps you planned for?

Mr. SESSIONS. That is correct. We have tried to move to those areas where the need was greatest, where the experience level of agent would fill that need, but it is, as you know, not easy.

During the process of legislation being adopted to actually get that done, we were moving vigorously to address that need. Mr. Brixey may have other observations on the subject.

Mr. BRIXEY. To start with, the savings and loan bill was in two parts. It was initially a supplemental request that was approximately $23 million. It was to fund the initial hiring of people and transferring them to offices mostly in Arizona, Texas, New Mexico, and California. That supplemental was not passed.

There was an amendment for $25 million which was to fund the people on a full-year basis but this legislation assumed that the transfers had already taken place, that the initial cars and radios for them had been purchased the previous year. Since we didn't get the initial $23 million, we were not able to buy much of that initial equipment.

It only left enough money to bring people on board at a beginning level, which is a grade 10, although we normally fund them at a grade 13. That would allow us sufficient funds to promote them.

We only had enough money to pay for their initial salaries and not enough money to provide the equipment we normally would. Overall, we came out about $25 million short.

In the current year's budget, we do have 42 agent positions for bank fraud and embezzlement which will be specifically for the savings and loan initiative, and in total 249 agent positions which will be on the periphery. There is a substantial increase in the current year's budget.

It won't cover what we lost in the Savings and loan bill, but that is history.

Mr. Rogers. Well, then will that be a priority for increases?

Mr. Sessions. Yes, it is a top priority.

Mr. Rogers. I have other questions, but I will yield to my colleagues.

Mr. Smith. Mr. Alexander?

Mr. Alexander. Thank you, Mr. Chairman.

Mr. Director, good morning to both of you. Sorry I am a little bit late. I had another fish to fry.

I missed your presentation. I will read it while the other Members are asking questions.

FUNDING ABSORPTIONS

I am curious about the chart that you have presented which indicates the absorption that you had to experience. I am one that believes that we should not cut back our law enforcement in any way.

Having had some experience in both of those areas, I know it is very difficult to do your work when you are encountering cuts in your budgets.

The first thing that comes to my mind is the computer center and the electronic systems increases that you have planned for the headquarters which you demonstrated for us two years ago. Has that been affected in any way?

Mr. Sessions. The absorptions have come traditionally out of equipment.

Mr. Alexander. I see.

Mr. Sessions. Yes, it has been affected directly by those absorptions that were necessary. What I tried to do, Mr. Alexander, is to find a balance between personnel and equipment, believing that we could not continue to take the kind of hits that the $42 million on AUO required us to take. There just had to be some personnel reductions.

But, yes, we are negatively affected by that.

Mr. Brixey. Specifically, in our reprogramming last year we had absorptions which took almost $55 million in equipment to cover the operating, like the pay raises. There was a $17.3 million reduction in our ADP budget which affected our ability to acquire intelligent workstations and those programs you saw, demonstrated in our building.

Mr. Alexander. You plan to prolong the planning stage of the electronic divisions?

Mr. Brixey. Yes, sir.

Mr. Alexander. Perhaps you would like to talk to us after the meeting about that matter so I can look into it in more detail?

Mr. Sessions. We would be pleased to.

Mr. Alexander. And see if I can help you.

Mr. SESSIONS. Thank you.

Mr. ALEXANDER. Thank you, Mr. Chairman.

I might reserve my time for additional questions after the other Members.

FBI SUPPORT FOR STATE AND LOCAL LAW ENFORCEMENT

Mr. SMITH. Mr. Regula.

Mr. REGULA. Thank you, Mr. Chairman.

Director, I am glad to see you.

Mr. SESSIONS. Thank you, sir.

Mr. REGULA. I would be interested on what your ability to provide local assistance is under this budget. Local law enforcement depends often times on expert assistance from the FBI.

I know that that is a big item with them. Do you have adequate resources to respond to the local law enforcement departments?

Mr. SESSIONS. Some of the principal ways we respond are through our capability at the FBI Academy at Quantico, Virginia.

Over the years we have had to cut back the number of applications we accept for local law enforcement programs.

Mr. REGULA. Does that include your training program?

Mr. SESSIONS. That includes the training program for law enforcement officers from around the country. The principal program is called the National Academy. This program brings managers from all over the country, in fact, from around the world for training.

We cut that program before I became Director from 1,200 to 800. We are now back up to 1,000. We are having trouble being able to accommodate that number.

The other areas where the problem manifests itself are specifically areas of the Violent Crime Apprehension program, violent crime profiling, and other programs offered at the Academy where we are able to bring in those people to participate in those particular programs.

LABORATORY SUPPORT FOR STATE AND LOCAL ENFORCEMENT

The other area with which you are familiar and which became very dramatic was in connection with the District of Columbia drug problems. We were able to give our laboratory support not only in terms of Deoxyribonucleic Acid, (DNA) testing, but also in terms of the identification of weapons, which entails very intricate procedures that are used investigatively to provide support in forensic examinations.

It is, to me, extremely important that the local law enforcement agencies have access to those services.

For instance, DNA capability is extremely important to them, being able to identify with 100 percent certainty what violent criminal was involved in a rape or murder is extremely productive for law enforcement.

Another part of that is that you are able to exclude specific people through the DNA examination who otherwise might be the prime suspect. That is extremely important.

It goes hand-in-hand with the identification procedures and with the National Crime Information Center. (NCIC)

All of those are networks which are designed to provide support. Of course, as you probably know, the NCIC 2000 enhancement is not in this budget.

NCIC 2000

NCIC 2000 will once again give strong support to the National Crime Information Center which is utilized by 68,000 different subscribers around this country who gain information almost instantaneously. I know it wasn't in your question, but I will tell you when I became Director, the number of inquiries made of the National Crime Information Center on a daily basis ran close to 250,000.

Earlier this year I was told we had had over 1.31 million in transactions in one 24-hour period. The enhancement to the National Crime Information Center under the NCIC program is very important.

In the identification area we are now experiencing a four to six week turn-around time for the State and locals to identify those fingerprints.

You may know that we are moving to try to restore our capabilities to deal with the state of the automation in the fingerprint area.

We do not have the automated latent capability which I have discussed with this Committee before. We do not have it now, but we are making every effort to include the automated latent capability which would enable us to be on a par with the technical capabilities that exist in various States around this country.

To me, it is extremely important to regain this initiative and be able to supply identification services to all the law enforcement agencies in this country, not just in particular areas.

Mr. **Regula**. It would seem to me that your ability to enhance the capabilities of the local law enforcement would be a vital element in a totality of criminal prosecution and law enforcement?

Mr. **Sessions**. I think you are absolutely correct. I met with the International Association of Chiefs of Police, and the National Sheriffs Association. All of those groups have strong interest in the FBI providing these services in support of their needs.

Traditionally, the FBI has done this. Our ability to continue to do this has to be enhanced to meet these technological requirements.

THE IMPACT OF USER FEES

Mr. **Regula**. Should we consider expansion of the user fee potential of FBI so that, like in your training programs at Quantico, you can break even and, therefore, add people.

You could do it on a no-cost basis?

Mr. **Sessions**. That was one of the first questions I encountered when I became Director. That is, where would we be if we utilized user fees in connection with the services provided at the National Academy, Quantico, Virginia.

Without exception, whether I am talking with people within the FBI or on the outside, the concept of the user fee did not find acceptance principally because of the things that State and local enforcement agencies do.

For instance, we are constantly inquiring to gain information from State and local enforcement records. Are we going to have to then pay them a user fee to do that?

We are constantly beset with the need to further our cooperation with the local police departments without the interference of another artificial net.

I would say that the user fee, in connection with local enforcement at the National Academy, is not applicable.

Mr. REGULA. How about on some of the other elements of your assistance? I am just thinking that somehow we need to get the service done.

If that is the only way, maybe we ought to give you more authority.

Mr. SESSIONS. Well, for instance, in the fingerprint area, they supply and will continue to supply the information that is the basis of our assistance.

Are they going to charge us a fee for gaining that information? It is not easy to deal with the user fee issue.

Where are we actually providing something that is not being returned? When we give out information for which we are now charging user fees, those people are not giving us anything in return.

Mr. REGULA. Your difficulty is trying to categorize those things which appropriately should be subject to user fees?

Mr. SESSIONS. Yes, that is part of it.

PROSECUTION OF BANKING OFFICIALS

Mr. REGULA. Last question. Taxpayers realize that the savings and loan crisis is costing a lot of money.

The concern on the part of the public is that the people that caused this are not being adequately punished, for lack of a better term. What is your involvement?

Is it extensive in trying to prosecute those that are responsible for a criminal type of white collar crime that brought on this problem that the taxpayer is going to have to pay for?

Mr. SESSIONS. I think you are absolutely correct. It is logical that, in a problem as massive as the $150 billion plus savings and loan crisis, there has to be criminality involved. The response of the FBI is to enhance our capabilities and to enhance our projects in Texas and on the West Coast where the principal part of this crisis has occurred, and to do it with great energy.

The investigative pursuits in the last two years, I think, have been very good. There have been over 100 convictions in those cases alone. When you think about that kind of a conviction record for major institutional employees, I think it is significant.

Mr. ALEXANDER. Do you know whether or not any of those persons convicted in the thrift fraud cases went to jail?

Mr. SESSIONS. I don't have the information at hand, but I would be delighted to supply it for you.

Mr. ALEXANDER. I get that question all the time at home. The perception is they didn't.

Mr. SESSIONS. Well, I know, the last one was Mr. King. As I recall, he was given a sentence that did involve a significant amount of incarceration. That answer may be here and available in the room.

[The information follows:]

Prosecution of Banking Officials

The "Texcon" investigation was initiated by our Dallas Field Office in 1984 to address fraud surrounding the failure of the Empire Savings and Loan Association. This investigation involved the issuance of hundreds of multimillion dollar loans from thrift institutions for the purpose of land acquisition and condominium construction in the Dallas metropolitan area. To date, 102 subjects have been convicted and 100 have been sentenced. Of the subjects sentenced, 54 were incarcerated and 46 received probation. The average period of incarceration is 3.84 years and the average probationary period is 3.39 years. It should be noted that the extraordinarily long sentence of 35 years given to H. Wailen York, a major contractor and condominium developer, is included in the average period of incarceration. The seven principle subjects of this investigation are awaiting trial.

The "Texcon" investigation has resulted in court-ordered restitution in the amount of $12,167,000 and the court has levied fines in the amount of $576,000.

In his testimony, the Director addressed the sentencing of Patrick King. Mr. King is a subject in the "Thriftcon" investigation also underway in Dallas, Texas. The "Thriftcon' investigation involves 38 separate thrift institution failures where conspiratorial fraud by owners or officers had been alleged. "Thriftcon" is being handled by the Dallas Bank Fraud Task Force which includes investigators from the FBI, the Internal Revenue Service, and the Office of Thrift Supervision as well as attorneys from the U.S. Attorneys Office for the Northern District of Texas, and the Criminal Division's Fraud Section. Mr. King, who held positions of President and Chairman of the Board of Vernon Savings and Loan Association, was convicted by a jury in September 1989. Mr. King was subsequently sentenced to five years incarceration, followed by five years of probation. Mr. King was further ordered to pay restitution of $65,771.

To date, 62 individuals have been formally charged in the "Thriftcon" investigation and 47 have been convicted. Of the 47 subjects convicted, 40 have been sentenced. Of the 40 sentenced, 31 received a sentence of incarceration and 9 received probation. The average period of incarceration in "Thriftcon" is 4.16 years and the average probationary period is 3.5 years.

The "Thriftcon" investigation has resulted in court ordered restitution in the amount of $10,151,705 and the court has levied fines totalling $563,850.

Mr. Sessions. Mr. Baker, do you have that information?

Mr. Baker. No.

Mr. Sessions. I will provide it for you. The Department of Justice would have that information as well.

Mr. Regula. Thank you, Mr. Chairman.

FBI EFFORTS IN TOXIC WASTE AREA

Mr. Smith. Mr. Dwyer.

Mr. Dwyer. Thank you, Mr. Chairman.

In your description of the white-collar crime, you mentioned your responsibility in the area of illegal disposal of toxic waste.

What are you devoting to this particular activity?

Mr. Sessions. I cannot tell you specifically, except to say that I do recall that there are over 400 cases that we have worked collectively with other agencies. We do not have the direct statutory authority but have a Memorandum of Understanding where we conduct those investigations.

I believe there are some 400 cases that we have worked on since we acquired these Memorandas of Understanding back six or seven years ago.

We have a great interest in it, and I would like to give you the specific figures for the record.

Mr. Dwyer. I would like to see that.

[The information follows:]

FBI EFFORTS IN TOXIC WASTE INVESTIGATIONS

The environmental crimes caseload increased 229 percent from 185 cases handled in 1985 to 608 cases in 1989. Informations/indicments and convictions achieved as a result of FBI investigations have experienced similar increases. In 1985, one information/indictment and two convictions were recorded; whereas, in 1989, 50 informations/indictments and 35 convictions were recorded.

The following chart displays the number of Agent workyears utilized for environmental crimes:

	Agent workyears	Percent of change
Fiscal year:		
1990 [1]	51.1	53
1989	33.4	26
1988	26.5	36
1987	19.5	38
1986	14.1	72
1985	8.2	

[1] 1990 figures are based on information through 1/13/90.

Environmental crimes are becoming a major issue and the Attorney General is placing more emphasis on investigations in this area.

FBI IMPACT ON THE WAR ON DRUGS

Mr. **Dwyer**. You mentioned that on your drug strategy. You are having an impact.

Mr. **Sessions**. I think so.

Mr. **Dwyer**. How do you measure the impact?

In other words, how do we arrive at that conclusion that we are having an impact?

Mr. **Sessions**. The way I look at it.

Mr. **Dwyer**. I know there are no signs available.

Mr. **Sessions**. There are great signs available, Mr. Congressman. My belief is the understanding of the responsibility the FBI has in the national drug war. We have a segment of the line for which we are responsible. Our division in that sense is charged with that.

The National Drug Strategy is really very simple. It is to attack major drug organizations that deal in heroin and cocaine. That involves identifying them.

We have now some 450 drug cases that we have identified.

Of those, there are approximately 35 to 40 percent that we are presently investigating. By dealing with that the idea is to destroy the organization itself.

In my testimony, you saw the reference to "CAT-COM," and the reference to "White Mare." There are dozens of other investigations where major organizations were, in fact, destroyed.

To me, that is carrying out our part of the National Drug Strategy in a very vigorous and effective way.

Playing on that, I would like if I might, to simply supply you with that information for the record. It is a significant contribution to the national drug strategy and the National Drug War.

Mr. **Dwyer**. That will be fine.

I would like to have you supply it for the record.

[The information follows:]

FBI IMPACT ON THE "WAR ON DRUGS"

The FBI's National Drug Strategy (NDS) approach of targeting trafficking organizations is unique in the Federal drug law enforcement community. We have used our ever-increasing intelligence bases to identify more than 50 major Colombian, Mexican, Asian and Italian drug trafficking organizations operating in the United States. Our primary intelligence-gathering methodology, referred to as Racketeering Enterprise Investigations, has been wholly adopted in format and substance by the CIA as a guide in seizing drug-related intelligence from abroad. To manage drug intelligence, the FBI has developed the most modern computerized technology that is in the process of being implemented as our new Drug Information System (DIS). The Office of National Drug Control Policy, recognizing the value of this state-of-the-art technology, indicated in the January 1990 National Drug Control Strategy, that DIS serve as a primary support for the proposed National Drug Intelligence Center. These sophisticated innovations are absolutely essential in carrying the war to the drug trafficking organizations.

Since the FBI institued its NDS in 1986, Bureau investigations have resulted in nearly 11,000 felony convictions and approximately 1,600 indictments are pending prosecution. In 1989 alone, we seized for eventual forfeiture $125.5 million and we project significant yearly increases in seizures. Most significantly, since the NDS began, we have dismantled over 150 major internationally-rooted drug trafficking organizations operating in the U.S., an accomplishment whose value exceeds the traditional measures of counting individual indictments and convictions.

Our three-year investigations called "Cashweb/Expressway" led to conviction of 98 persons, the seizure of over 24,000 pounds of cocaine and marijuana and currency amounting to $14.7 million. This case dismantled three major South American money laundering operations and a similar number of trafficking organizations they served. "Cat-Com" employed communication tracking devices, combined with a lengthy undercover operations and six months of electronics surveillance coverage, to result in the penetration and destruction of major Colombian drug importation networks. In this case, 92 persons were indicted and $5 million in assets and cash were seized. "Forceout," a Mexican drug trafficking case instituted in one of our Northwestern field divisions, led to the arrest of 21 major drug traffickers and the seizure so far of nearly $2 million in cash and assets. Agents in our "White Mare" investigation seized 820 pounds of Southeast Asian heroin in New York, the largest heroin seizure in U.S. history. The 17-month investigation, involving 23 electronic surveillances, led to that seizure and the arrest of 44 conspirators who comprised six drug groups both here and abroad. Approximately $4.5 million in cash was taken in the process.

DRUG SEIZURES

Mr. DWYER. Have these efforts resulted in less drugs being available in the marketplace?

Mr. SESSIONS. I would have to say no. When we seized 820 pounds in New York followed by some 80 pounds in connection with "White Mare," it is my understanding there was no perceptible influence on the availability of the heroin, nor the price of heroin charged.

Mr. DWYER. Basically, while we have an impact, when we break up those operations, we don't have an effect on the amount of supply?

Mr. SESSIONS. I think we do have an effect in the long term. In connection with "White Mare," there were five Asian groups. There were five of them and they were dismantled. There are going to be other groups that replace them.

Obviously, it is a very active business. I believe our responsibility of attacking those organizations makes a significantly strong contribution.

Mr. DWYER. I think you exercised your responsibility in a vigorous manner. I wonder what the ultimate impact is in the marketplace.

From what I read in the paper, there is no decrease in availability of narcotics.

Mr. SESSIONS. I remember a seven-day period back last spring when 20 metric tons of cocaine were seized in Los Angeles followed by nine metric tons seized in South Texas, and five metric tons being seized over in Louisiana. Those were Drug Enforcement Administration and local cases.

No one was able, and Mr. Lawn will be testifying about it later, to identify that this had an impact on either market price or availability. There are great quantities of drugs here, no question about it.

AVAILABILITY OF CRYSTAL METHAMPHETAMINE (ICE)

Mr. DWYER. How about the drugs that are not imported? I think last year you talked about "ice," or the year before your predecessor mentioned the word ice, which apparently is a drug that can be manufactured in someone's garage.

Mr. SESSIONS. It is a crystal methamphetamine.

Mr. DWYER. Is that on the increase?

Mr. SESSIONS. Yes. Mr. Lawn can tell you specifically what it is.

It is my understanding that in both Korea and Hawaii, the movement of ice into the system is significant. I do not know the nature of that quantity.

Our responsibility is to deal with the heroin and the cocaine, and in some exceptional cases, mass amounts of marijuana.

INFLUENCE OF ASIAN GANGS ON DRUG TRAFFICKING

Mr. DWYER. You mentioned the Asiatic gangs.

Mr. SESSIONS. Yes.

Mr. DWYER. Is there criminal intent limited to the Asiatic community or has it gone outside the bounds of the Asiatic community?

Mr. SESSIONS. I can't define that for you. I will attempt to do that.

It seems to me what happened in "White Mare" and in New York was that the effective destruction of La Cosa Nostra enabled the Asian gangs to move in. That is my understanding.

I think probably it is not limited to Asian usage. It is filling that void in the market left by the destruction of the La Cosa Nostra.

Just like the crack-cocaine market, they will muscle in wherever they can and cover whatever part of it they can.

[The information follows:]

THE INFLUENCE OF ASIAN GANGS ON DRUG TRAFFICKING

In December 1987, the Organized Crime Section of the FBI, completed a survey on Asian Organized Crime (AOC) in the United States which revealed that the overwhelming majority of AOC was confined within Asian communities.

Research recently undertaken to update that survey, although not yet completed, indicates that the threat posed to the United States by AOC groups and enterprises is no longer localized. Asian criminal activity is no longer confined to pockets in the Pacific territories, and along the West Coast. AOC is all-pervasive; its influence spans international borders.

It is important to note that AOC comprises many organized criminal ethnic groups, including Chinese, Japanese, Korean, Vietnamese and other Asian gangs, each evolving at their own pace (depending upon a myriad of cultural and demographic variables. However, one statement that can be made with utter certitude is that like the La Cosa Nostra (LCN) in its embryonic stage, virtually all AOC groups initially prey upon their own ethnic communities where they are linguistically and culturally comfortable. Some, like the Korean and Vietnamese criminal gangs, continue to be primarily parasitic within their cloistered communities. Others like the Japanese Boryokudan and Chinese Triads are involved in money laundering and its antecedent, drug trafficking and, coupled with the accelerated societies from which they were spawned, have been catapulted beyond the boundaries of their ethnic communities onto the international scene. As such, the nature of these criminal enterprises requires the acquisition of facilities (public corruption) and the disposition of ill-gotten gains (money laundering).

To facilitate these matters, AOC groups are interacting not only with each other but with Columbian drug cartels and the LCN.

The LCN has, for half a century, woven itself into the fabric of society. Association with the LCN will only serve to accelerate the assimilation of AOC groups into the existing criminal infrastructure of the U.S.

The scope of AOC is virtually limitless without the immediate and sustained efforts of the law enforcement community. For this reason, the FBI has designated the LCN as the primary target in the Organized Crime National Strategy (OCNS), and has determined AOC groups to be a priority sub-program within the OCNS.

Additionally, available immigration statistics reveal that between 1970 and 1988 Asian immigrants to the United States were two and one half times that of all immigrants from European and African countries combined for the same time span. This influx logically includes AOC members and expands the U.S. market of potential victims by AOC groups.

FELON IDENTIFICATION SYSTEM

Mr. DWYER. There has been a lot of discussion on the cuts and the impact on this budget. Back in 1988, the Congress enacted the McCollum amendment which provided for a system of felon identification, using a telephone check at the point of the sale. What is the status of that?

Mr. SESSIONS. The utilization of identification capabilities is being coordinated with the Department of Justice to be sure that we are able to meet their needs. I don't remember the specific figures.

If you can give them to me, Jay, I will discuss them. But the ability to be able to have an on-line identification capability that is secure is the principal problem.

Where you have multiple access not through Governmental agencies but through other entities, which would be places where guns are sold, it is a problem. But, we are continuing in our effort with the Department of Justice to quantify that and to be able to react to it.

Part of that is, of course, premised upon our ability to access our records in an automated fashion, to be able to respond promptly to the request for identification from the seller of the weapon.

Mr. DWYER. When would you anticipate we might have some system in place?

Mr. SESSIONS. I simply can't give that to you, but I will respond to you for the record.

[The information follows:]

Felon Identification System

Section 6213 of the Anti-Drug Abuse Act of 1988 mandated that the Attorney General report to Congress by November 18, 1989, on a system for immediate and accurate identification of felons who attempt to purchase firearms. By letter to Congress, dated November 20, 1989, the Attorney General proposed implementation of Option A2 of a study which provides for the use of a touch-tone telephone by licensed firearms dealers to contact a criminal justice agency for access to criminal records information currently on file with the States or Federal Government.

In order to make such a system feasible, the Attorney General directed the FBI to: 1) establish a complete and automated data base of felons who are prohibited from purchasing firearms; 2) develop, in conjunction with the Bureau of Justice Statistics (BJS), voluntary reporting standards for State and local law enforcement; 3) enhance its criminal history records system in order to merge the computerized index for an additional 8.8 million manual records into the FBI's Automated Identification System; and 4) continue to monitor impressive advances being made in biometric identification technology.

Establishment of a data base of felons who are prohibited from purchasing firearms is interpreted by the FBI's Identification Division (ID) as segregation of the records of "disqualified felons" from others maintained in the criminal file. This could be accomplished by establishing a separate data base for use by firearms dealers, or by identifying the disqualified felons in the established data base by placing a felony conviction flag in the automated name index. Although either alternative would have the same results, the placing of felony conviction flags appears to be more efficient and less costly.

The task of accurately identifying convicted felons is extremely difficult. There is no known method for programmatically identifying the disqualified felons in the FBI's existing data base. Therefore, a coordinated effort is being undertaken by the FBI in conjunction with State representatives as to how to identify convicted felons. Specific methodology and details of achieving this objective still have to be worked out with the States and other affected parties.

In order for criminal history records to be complete, they must contain up-to-date arrest and disposition information. As of March 15, 1990, the ID had a fingerprint card backlog of approximately 600,000. Daily receipts of fingerprint cards have been averaging more than 32,000 per day, which has resulted in a growth of the backlog by about 2,000 per day. Current monthly receipts of arrest dispositions are averaging about 165,000 or about 8,000 per day. In addition, as of March 15, 1990, there were almost 2 million dispositions backlogged. Under the best of conditions, it would take the ID almost two years to eliminate this backlog.

Beginning in December 1989, representatives of BJS and the FBI ID have been meeting to develop plans for drafting voluntary reporting standards. The National Crime Information Center (NCIC) Advisory Policy Board (APB) was also apprised of this mandate. In February 1990, representatives of the FBI ID and BJS met with the Identification Services Subcommittee (ISS) of the NCIC APB to informally discuss this mandate regarding voluntary reporting standards. The ISS is an integral part of these discussions since the Director of the FBI, in June 1989, requested the NCIC APB to also serve in an advisory capacity for the FBI ID. Thereafter, the NCIC APB created the ISS to focus on issues related to the ID. During the February meeting, the ISS identified topics that it believed the FBI and BJS should consider for inclusion in the draft voluntary reporting standards.

The first draft of the voluntary reporting standards developed by representatives of the FBI ID and BJS has been completed. This draft is currently being reviewed internally. As a part of the internal review process, copies were made available through the ISS to the four APB Regional Working Groups (RWG) for informal comment. In addition, some SEARCH Group, Inc. members are being given an opportunity to provide comments.

The FBI asked the RWGs to provide their comments no later than one week after the conclusion of their Spring meetings. Based upon their meeting schedule, comments are expected no later than April 18, 1990, and the SEARCH Group, Inc. comments by April 6, 1990. As soon as these comments are received, the draft will be finalized and forwarded to the Department of Justice for any necessary review and approval prior to making the draft available for public comment.

Technically, making the FBI ID's 8.8 million manual records available for on-line name checks may not impose a computer processing problem. However, the anticipated volume of subsequent requests for manual records following the return of positive responses from the automated name index check, would exceed the ID's current ability to respond. However, to fully automate the 8.8 million criminal history records would be an enormous task. Therefore, the ID has prepared a statement of work requesting a feasibility study of the various options.

Many of the options detailed in the Task Force report require the collection of biometric data in the form of fingerprints at some stage in the approval process. The technologies associated with fingerprints are advancing at a very rapid pace. The FBI is following the recent developments in telecommunications, image processing, and mass storage technology that now make it reasonable to consider the development of systems to electronically capture and transmit information currently contained on fingerprint cards. The "live-scan" fingerprint capture technology is evolving rapidly, and the major Automated Fingerprint Identification System vendors are in the process of incorporating direct impact from live-scan readers into their systems.

The FBI is not only monitoring these advances, but working towards developing a system which will accept fingerprint identification data directly from users in electronics form. The FBI is also monitoring other biometric technologies, such as retinal scans and DNA which could be introduced into a felon identification system.

If legislation is enacted mandating Option A2 as recommended by the Attorney General, there will have to be further definition of the intended methodology before the development of a system which includes direct access of FBI/ID records utilizing telephonic touch-tone dial-up access. Operational security, and cost issues must be addressed by the FBI and at the State level, and systems planning must be done with the NCIC APB and the APB's Subcommittee for ID Services. Operational procedures and requirements will have to be worked out with the States, be mutually understood and agreed upon prior to implementation of Option A2.

FBI FIREARMS

Mr. Dwyer. One last question.

I read in the paper that the Bureau of Alcohol, Tobacco and Firearms is having difficulty with assault weapons out in the street. What is the FBI experience in that area?

Mr. Sessions. It is not unlike the experience of other law enforcement agencies where we are confronted with superior fire power and superior weapons capability in the streets.

You may recall that in 1986, the FBI had a tragic circumstance down in Miami, Florida, where two of our agents were actually killed and five of them were badly wounded. In that exchange, the investigation and the autopsies proved that the fatal wounds on the attackers were inflicted before the fatal wounds were inflicted on our own agents. So, fire power is extremely important.

I think you may know that I have moved directly to acquire for the FBI the 10 millimeter which will deliver in the pistol more rounds of ammunition with greater impact and higher accuracy.

In another respect I believe that it is a responsibility of the Congress to be able to respond to the need as they perceive it.

I have not entered the discussions concerning the fire arms area, except for my noting that we do suffer like law enforcement agencies suffer.

Mr. Dwyer. Probably in some type of arms race? They get better weapons, we have to get better weapons, and you go on like that.

Mr. Sessions. The FBI believes in applying a deadly force in those circumstances where it is necessary. We lost an agent six weeks ago serving a routine search warrant. We went out there fully prepared with special team weapons and tactics capability. In the back room as the agent came out of the door, he was immediately killed and two other agents were wounded in that fracas. It is always a danger.

It is a terrible, terrible circumstance. We need to be well armed and capable of meeting what they have by way of firepower.

ASSET FORFEITURE AND SEIZURE

Mr. Smith. Mr. Kolbe?

Mr. Kolbe. Thank you, Mr. Chairman.

My questions are fairly quick and simple.

In looking at your estimate, you refer on page 7 to your seizure levels. You talk about $45 million.

Mr. Sessions. That is in white collar crime.

Mr. Kolbe. Is that white collar crime or is that the drug?

Mr. Sessions. Drug, that is drug.

Mr. Kolbe. I have a question about that figure.

When we think of the $100 billion plus drug business that is going on in this country, and that is generally what it has been estimated, $45 million is obviously not even a drop in the bucket, it is a drop in the ocean.

I am not saying this in a critical sense, but I guess in just a sense of frustration. I take that figure and divide it by the number of convictions that you refer to in the same paragraph.

It works out to $16,000, roughly less than $16,000 per conviction. Considering you concentrate on the big fish, are we really doing as much as we ought to be doing in this area?

Mr. **Sessions**. My belief is, and I have observed this over the years, that it is important where you can to have a statute that will allow seizures, and to be able to conduct not only the seizures, but the forfeitures. Forfeitures are the important part of that.

The $45 million is the forfeiture figure. Last year we seized about $145 or $150 million. In fact, that is in excess of what our budget was last year in that area.

It may be a drop, but it is comparable to the amount of money that we are actually spending on the program itself. But the forfeitures, that is the $45 million, is about a third to a fourth of the actual budget.

Mr. **Kolbe**. Maybe I am misunderstanding semantics. You seized a certain amount of assets. After there is a conviction there is a forfeiture. The $45 million is what you retain?

Mr. **Sessions**. That is what goes in the general fund.

Mr. **Kolbe**. That is what the Government retains?

Mr. **Sessions**. That is correct.

You may seize $100 million worth, but have to return $75 million worth.

Mr. **Kolbe**. I understand that.

Are we doing enough?

If $45 million is all we are really ending up with against 2,853 convictions, are we getting at all the assets that these people, those 2,853 convictions represent?

Mr. **Sessions**. Assets are difficult to trace when they are physical assets. You have to be able to prove the association with the criminal conduct.

Once that is done, you will be able to seize and forfeit as well. I remember DEA last year, and Mr. Lawn will be before you tomorrow, was able to seize in excess of its actual budget over $65 or $70 million last year.

It may be in excess of that, but I recall that figure. The point is the forfeitures are what count.

You have to be able to not only make the drug investigation, but to make the investigation concerning the property itself that can be identified as flowing from that.

Did you have some comment, Jay?

Mr. **Brixey**. I think your point is well taken. I would like to give some figures to indicate at least we are trying to get better.

In 1988, we seized about $110 million and forfeited $47 million. Last year we seized $470 million and forfeited about $74 million in total.

We are putting asset forfeiture teams in our field offices. We are hiring contract people to help us process them quickly. There is a lot of effort in the FBI to improve our performance in this area.

Mr. **Kolbe**. Now I really am confused. The Director's statement says in 1989, $125 million in assets were seized and $45 million were forfeited. You just said $400 million.

Mr. **Brixey**. You are talking one program.

Mr. **Kolbe**. What is the $400 million?

Mr. **Brixey**. Total FBI.

Mr. **Kolbe**. All programs?

Mr. **Brixey**. Yes.

ASSETS SEIZURES FROM DRUG TRAFFICKING

Mr. **Kolbe**. Now I am getting even more interested in this. You are telling me that the drug program is less than one third of what we are seizing?

Mr. **Sessions**. That is probably correct.

Mr. **Kolbe**. Where in the world is the rest of it?

Mr. **Sessions**. In the White-Collar Crime program, both the forfeitures and the fines and the restitutions are, as I indicated in my statement, almost seven to one over our budget.

Mr. **Kolbe**. I'm just astonished that those areas represent twice as much, almost three times as much as what we are getting in the area of drugs, which is where I would think the big money would be.

Mr. **Sessions**. I don't have a programmatic breakdown. I will be happy to give it to you.

[The information follows:]

FISCAL YEAR 1989

	Forfeitures	Seizures
Drugs	$45,197,921	$125,453,787
White-collar crime	24,382,375	328,445,202
Organized crime	1,794,633	9,303,828
General property crime	371,926	732,833
Fugitives	360,946	785,095
Personal crime	142,832	431,902
General government crime	3,565	66,111
Miscellaneous	1,242,999	4,145,533
Total	73,497,197	469,364,291

Mr. **Smith**. Would the gentleman yield?

Mr. **Kolbe**. Yes.

Mr. **Smith**. I think maybe you might want to recognize that a forfeiture does not occur in the particular year it is seized.

Mr. **Kolbe**. I understand that.

Mr. **Smith**. Those figures are a little bit misleading when you use one year for the number of dollars forfeited and the number of dollars seized.

Mr. **Kolbe**. The Chairman's point is well taken. I recognize that. All I have are the figures in front of me. I recognize the convictions last year can't necessarily be tied directly to the forfeitures because of the time lag that is involved there.

Just as the general rule, comparison is what I was trying to get at.

Mr. **Sessions**. You may have discussed that with the Attorney General and know the Department of Justice has pursued with great vigor the enhancement of their forfeiture capability to be able to process judicial and non-judicial forfeitures. They are pursuing that very diligently.

COMPARISON ON FBI AND DEA FORFEITURES

Mr. Kolbe. I guess I am still wondering if DEA has results, I think you said $500 million in forfeitures?

Mr. Sessions. $557 million in seizures last year.

Mr. Kolbe. Your total was $400 million overall?

Mr. Sessions. Yes, and about $145 million was related to drugs.

Mr. Kolbe. Okay. Let me take the drug part of it because DEA is virtually all in drugs.

Why the difference there? I realize the DEA is focused entirely on drugs.

You have many other responsibilities, but you all are very much a front line in the drug war.

Mr. Sessions. I would think that the answer has to fall in the nature of the mission that is involved.

We are identifying the major drug trafficking organizations. That is all we do essentially beyond the coordination with DEA, the keeping of figures, the looking at trends and the supplying of intelligence.

We are investigating those major drug traffic organizations and, incidentally, may get seizures of drugs or seizures of assets during the course of these investigations.

I mentioned "White Mare." There were 820 pounds of heroin seized in the first seizure and 80 pounds seized thereafter.

We didn't expect to get any more than maybe 30 kilos, and there it was. This indicates the size and capability of the organization. The principal focus for us is to identify the organization and the assets as well. It takes a great deal of time and effort to identify and target assets and then be able to actually get them.

Mr. Kolbe. If I understand then, you are saying that it is the nature of the kind of cases that you go after?

You may not land the cases that have the most assets to be seized.

Mr. Sessions. It is seldom that we seize cash. It happens every once in a while. But DEA seizes a great deal of cash.

Mr. Kolbe. That is the nature of the kind of case—

Mr. Sessions. I think so. I think it is tied to the differences in the type of operations they sustain.

Mr. Kolbe. Perhaps for the record you might elaborate on that, perhaps give some of the programmatic breakdown?

Mr. Sessions. I will be glad to tell you specifically and factually what we have.

[The information follows:]

Asset Forfeiture and Seizure

The FBI's National Drug Strategy (NDS) was designed to focus our drug resources on those multinational Colombian, Mexican, Italian and Asian cocaine and heroin trafficking organizations that control a predominant share of the illegal United States drug market. Our investigative approach in drug investigations is based on our proven success in traditional organized crime investigations in which the organization is addressed as a single entity. The FBI's investigative approach permits penetration of the trafficking organization at its highest echelon, using undercover operations, electronic surveillance, extended physical surveillances, and many other sophisticated investigative techniques. Our NDS investigations are directed toward dismantling trafficking organizations, arresting and prosecuting their leaders, and seizing and forfeiting their ill-gotten assets. Because our approach addresses the totality of illegal enterprises, we also seek to seize evidence against supporting mechanisms of drug organizations, notably those operations engaging in the money laundering and against corrupt public officials who facilitate drug conspiracies.

The Drug Enforcement Administration's (DEA) mission, in contrast, channels that agency's resources to address multiple objectives. DEA supports foreign source country as well as domestic investigations. DEA supports a marijuana eradication program. They also investigate clandestine labs producing dangerous drugs. They conduct interdiction-related investigations of smugglers and importers and they participate in State and local task forces targeting street-level and local drug enforcement problems. DEA also has responsibility for licensing and regulatory functions in connection with licit drug production.

There are several reasons why DEA seizes more drug assets than the FBI. For one, the DEA has three times more drug agents than does the FBI. DEA's support complement far exceeds that of the FBI to help maximize seizures during the course of investigations. The FBI's 3,200 investigations are long-term and labor-intensive in nature, requiring sufficient time to support prosecution of top echelon conspirators. DEA, on the other hand, investigates on average about 28,000 cases against individual drug traffickers from whom drug-related assets can readily be seized.

In addition, pursuant to its interdiction mandate, DEA participates with other interdiction agencies in making drug smuggler arrests and seizing drugs along U.S. borders. Instrumentalities of drug crimes and drug-derived assets of drug smugglers are thereafter processed for eventual forfeiture. Although the FBI does not have an interdiction mandate, the Bureau routinely furnishes intelligence information to DEA, the U.S. Customs Service and the Coast Guard, primarily through the

El Paso Intelligence Center, that leads to major drug interdictions masked as "cold hits." Those drugs, arrests, and resultant assets seized (airplanes, ships, cars, trucks, motor homes and other conveyances) are claimed as statistical accomplishments by those agencies. In 1987 and 1988 alone, for example, the FBI furnished intelligence that led to seizures of nearly 318,000 kilograms of cocaine, heroin, marijuana and hashish. We have no information concerning associated arrests and asset seizures. None of those accomplishments is formally attributed to or claimed by the FBI. Nevertheless, in 1988 and 1989, the dollar values of FBI seizures exceeded our drug budget in those years.

FBI SALARIES

Mr. **Kolbe**. At the close of your statement you refer to the need for keeping salaries competitive so that we are able to attract the best people and give them tools necessary to do the job.

I well remember when I was in the state legislature that we used to complain we couldn't keep local law enforcement or state law enforcement people because the FBI and other federal law enforcement agencies paid so much better.

What is your view of where your agency stacks up with other law enforcement in terms of the salaries we are able to pay at the entry level today?

Mr. **Sessions**. Federal law enforcement generally and the FBI specifically have suffered a complete reversal. It is my understanding that when you look at comparable salaries for local law enforcement, that you need to find a city with a population about 10,000 before you actually find an entry level salary lower than what Federal law enforcement is paying.

The FBI, specifically, for example, in California, is 81 out of 86 in terms of its starting salary for its special agents. That means that 80 local law enforcement agencies pay better starting slaries than the FBI does.

This is not typical. The problem is exacerbated in California, but it is extremely difficult.

You take the major metropolitan areas, and there are 12 or 13 of them that we deal with in the FBI. It is with the rare exception when the starting salary is lower for a police officer with a high school education compared with the starting salary for an FBI Special Agent who has a college degree and three years of experience, or short fall is dramatic. It means that people have to want to come to the FBI.

My own personal experience is that every time I meet with a new class privately, I ask them, "Just give me an indication about how many of you took a salary cut to come to the FBI." About 75 to 80 percent of their hands are raised.

Mr. **Kolbe**. Why do they do it?

Mr. **Sessions**. Well, they want to be FBI Special Agents. They believe in the agency and they believe what it stands for, and they are extremely patriotic people.

They are driven by what they believe the image of the FBI is and what they want to do with their lives. That is quality living. I agree with it, but it is tough.

Mr. **Kolbe**. I do, too.

I appreciate that. Obviously, that doesn't put food on the table for them.

But you really believe that is the primary reason that is bringing them to the agency, not some other benefits that you might not be putting your finger on?

I just don't know. I am just asking.

Mr. **Sessions**. I have never sat down with them and told, had them tell me that there are other benefits. I know that generally speaking, in comparison to local law enforcement employment, their insurance benefits are better, their age of retirement benefits are generally better. Their side packages are much better. Their overtime, of course, is stunningly better in almost every circumstance.

Mr. KOLBE. I don't want to overburden your staff——

Mr. SESSIONS. You are not overburdening me. I am interested.

Mr. KOLBE [continuing]. With requests for work. If you could perhaps give me or give the Committee just a little data by taking a few random samples, just a handful of State and local agencies starting salary levels against yours, I would like to make comparisons.

[The information follows:]

Comparison of FBI Agent Salaries to those of State and Local Government Employees and Private Agency Employees

According to some reports, there is about a 25 percent disparity between the pay of Federal employees and those workers performing the same or similar functions in State and local governments or private industry. The FBI is responsible for investigating over 250 violations of law and finds the cases on which we work to be extremely complex, often requiring years of effort. We, therefore, seek to employ as agents individuals who, at the minimum, have a college degree and work experience; however, we also need specialists like attorneys, accountants, and linguists. Our requirements are high. Currently, new agents earn $27,206 in base salary ($34,008 when the $6,802 that agents can earn if administratively uncontrollable overtime is included). Set forth below is a list of various police departments (PDs) around the country, the salary of new police officers and detectives (excluding overtime) for 1989, and the educational requirements for the job:

State	Agency/Position	Starting Salary	Education Requirements
Alabama	Hoover PD/Officer	$23,095	High School Diploma
	Hoover PD/Detective	$25,463	High School Diploma
Arizona	Chandler PD/Officer	$25,540	High School Diploma
	Chandler PD/Detective	$32,000	High School Diploma
California	Los Angeles PD/ Officer	$32,050 $37,709	High School Diploma (higher salary with college)
	Los Angeles PD/ Detective	$39,818 $46,833	High School Diploma (higher salary with college)
	Oakland PD/Officer	$31,586	High School Diploma
	Oakland PD/Detective	$45,036	High School Diploma
Colorado	Denver PD/Officer	$23,368	High School Diploma
	Denver PD/Detective	$37,248	High School Diploma
Connecticut	Samford PD/Officer	$30,200	High School Diploma
	Samford PD/Detective	$38,166	High School Diploma
Illinois	Chicago PD/Officer	$26,469	High School Diploma
	Chicago PD/Detective	$30,882	High School Diploma
Minnesota	St. Paul PD/Officer	$28,193	2-year degree from institution offering professional police officers program

State	Agency/Position	Starting Salary	Education Requirements
	St. Paul PD/ Detective	$37,188	2-year degree from institution offering professional police officers program (and 4 years as an officer)
New Jersey	Fort Lee PD/Officer	$30,376	High School Diploma
	Fort Lee PD/Detective	$43,380	High School Diploma
Ohio	Mentor PD/Officer	$25,488	High School Diploma
	Mentor PD/Detective	$32,119	High School Diploma
Oregon	Portland PD/Officer	$25,077	2-years of college
	Portland PD/Detective	$36,415	2-years of college
Pennsylvania	Philadelphia PD/ Deputy/Officer	$26,939	High School Diploma
	Philadelphia PD/ Deputy/Detective	$30,273	High School Diploma
Virginia	Arlington County PD/Officer	$27,040	2-years of college
	Arlington County PD/Detective	$31,283	2-years of college
Washington	Takoma PD/Officer	$30,527	High School Diploma
	Takoma PD/Detective	$36,122	High School Diploma

AGENT TURF WARS IN DRUG ENGORCEMENT

Mr. KOLBE. My final area of question has to do with a continuing problem. I don't know that we are ever going to resolve it.

That is the coordination in the drug war. There was an interesting article several months ago in our major newspaper in Arizona about yet another turf fight between, in this case, Customs and the DEA.

I realize this is not you, not the FBI. But again, perhaps going back to my days as Chairman of the Judiciary Committee in my state legislature, I have a perception this is an ongoing problem.

I don't know the role of Mr. Bennett as mediator or arbitrator. As I see it, he is primarily a policy person. Are we going to resolve these turf problems?

I think it plagues our whole effort in drug enforcement.

Mr. SESSIONS. I have two observations about that. First of all, about how those confrontations evolve and how they take place.

Every agency, if it is energetic and is pursuing its jurisdiction the way it should is going to run up against undercover people, and against other operations of other agencies. It happens routinely.

What has to happen in order to avoid that is a continuing, strong determination to coordinate fully and completely with the other agencies in areas of operation.

It is my belief that this absolutely must take place, and we pursue that diligently. We pursue it on a continuing basis with DEA. We continually pursue it out of field offices where we work to be sure there is coordination.

I think you are right. I think the law enforcement agencies have a responsibility to demand that and to do it.

It must happen at the top and it must happen again at every other level. But it is a very vigorous area of investigation with a lot of agencies involved and it is difficult to do.

But I agree with you, it must not be ignored and it must continually be attacked. I think it will always continue because it is natural where agencies are pursuing vigorously their own jurisdiction to come into conflict with another agency's jurisdiction.

It happens between the FBI and other agencies, and we, immediately, at the top and everywhere down the line try to attack that particular circumstance, and correct it to be sure it doesn't happen again.

Mr. KOLBE. I am not so worried about the fact that agencies come in contact with each other in the pursuit of their responsibilities or run up against each other, as you put it. I am concerned about the agency that worries that if someone else is going to grab a little bit of the credit, that agency may get bit more resources. That is what I see would happen too often.

I know you share this concern, between the FBI and DEA at least you have one boss at the top.

You get over to Customs, then you are within interdepartmental feuds. You get to talking about the FBI or DEA and the state police or local police, then you are have multiple coordination problems. That is where I see this problem continuing on and on.

Mr. SESSIONS. Every time I go out, no matter what group I am talking with, whether it is the International Chiefs of Police, or the

National Executive Institute one primary conversation always surfaces. That is exactly the thrust of what you are talking about, the necessity from the top, that they work toward cooperation and recognize the fact that cooperation is beneficial to our efforts.

In about 85 percent of our cases, there are other local agencies or other Federal agencies involved. If we do not have that cooperation, and if we do not insist on cooperation on a constant and continuing basis, our efforts deteriorate.

Mr. **Kolbe**. To summarize your view then a solution lies in leadership at the top. You don't see a legislative approach to this thing to assure coordination and cooperation?

Mr. **Sessions**. Of course, there may be benefit derived from Congressional guidance in that regard. Basically, I think it comes from leadership.

Mr. **Kolbe**. Thank you.

Mr. **Smith**. Thank you for your testimony, Mr. Sessions. We will have now a short closed session.

[The following questions were submitted to be answered for the record.]

QUESTIONS SUBMITTED BY CONGRESSMAN SMITH

Federal Bureau of Investigation
Impact of 1990 Funding Reductions

QUESTION: In 1990 the FBI was forced to absorb both the cost of the 1990 pay raise and a sequestration of approximately $21 million. What impact did these reductions have on your programs?

ANSWER: The cost of absorbing the 1990 pay raise was $30.311 million. This was accomplished by reducing equipment- funding. Overall, the FBI identified $60.918 million in absorptions for 1990. These included $50.566 million for the following permanent requirements: 1990 pay raise ($30,311,000); Deoxyribonucleic Acid (DNA) database system ($450,000); Engineering Research Facility Pod B construction ($15,000,000) and operations and maintenance ($661,000); rental of space ($789,600); travel, training and supplies ($483,250); salary increases for upgraded positions ($1,230,804); vehicle maintenance ($1,200,000); and other miscellaneous items ($440,000). Also included is $10.352 million for one-year only operational requirements, such as the acquisition of 10-mm weapons and ammunition ($8,127,000), power substation ($960,000) and replacement PCP transformers ($600,000) for the FBI Academy, Special Weapons and Tactics (SWAT) team equipment ($270,000), and other miscellaneous items ($395,000).

The entire $60.918 million was taken from equipment funding, primarily from automobiles, automated data processing equipment, laboratory and technical equipment, and field office furniture and office equipment. All of the 1990 program increases allowed for equipment were eliminated.

The sequestration of funding in compliance with the Balanced Budget and Emergency Deficit Control Act of 1985 (as amended), required the application of across the board reductions to all programs amounting to 1.37 percent. As a result, the FBI lost a total of 177 agent and 232 support permanent positions, at a cost of $17.546 million. Another $3.395 million in reductions associated with sequestration were taken from equipment funding. The following table details the sequestration of funding by budget decision unit:

1990 Sequestration

	Positions		Budget Authority ($000)	
Decision Unit	Agent	Support	Personnel	Nonpers
Other Field Programs	-91	-73	-$7,508	-$1,140

Engineering Research Facility

QUESTION: $15 million was provided in 1990 for constuction of Pod B of the FBI's new Engineering Research Facility (ERF). What is the status of this project?

ANSWER: The FBI has allocated $15 million for construction of Pod B; however, no funding was provided in the 1990 appropriation. Negotiations with the general contractor to return to the facility site are underway. If these negotiations are successful, we anticipate a resumption of construction in June 1990, with a completion date of October, 1991. With the $15 million allocated, the FBI anticipates being able to fund construction of Pod B (research and development, computer-aided engineering, and radio communications) and Pod D (antenna test facility).

QUESTION: Are you prepared to go forward with the final phase of this project (Pod C), and if so, why have you not requested any funds for this purpose in 1991.

ANSWER: Funding totaling $17,012,000 was requested in the 1991 budget (to be recurred in 1992) but was disallowed by the Office of Management and Budget (OMB). There is no flexibility within the FBI's appropriation to absorb the cost of Pod C.

QUESTION: Will dragging out the construction of this facility run up the overall cost?

ANSWER: Yes. Delays in the construction of the ERF have caused an escalation of costs since the initial cost estimate, and these costs continue to rise. Initial cost projections for completion of the facility (i.e., Pods B, C, and D) in 1986, assuming completion in 1989, were $26,000,000; however, due to insufficient funding, the anticipated total costs for these pods, assuming funding is provided in 1991, have escalated to $34,000,000. A failure to provide funding in 1991 for completion of the project will result in cost increases of five to eight percent per year until funding is obligated.

1991 Increases

QUESTION: Considering that the Department has requested an additional $35 million and 274 positions under OCDE for FBI organized crime drug programs, why do you request an additional increase of $4 million and 172 positions for organized crime programs?

ANSWER: The FBI's involvement in Organized Crime Drug Enforcement (OCDE) is totally drug related, and as such, is coordinated through the FBI's Drug Program, which has investigative responsibility for all drug investigations for the FBI. None of these resources being requested for OCDE drug investigations are related to, or in support of, the investigative activities of the FBI's Organized Crime Program.

The FBI is requesting $35 million and 274 positions for OCDE investigations in furtherance of the National Drug Strategy, i.e., the identification and investigation of major drug trafficking organizations. With these resources, the FBI would be able to continue implementing the objectives of National Drug Strategy in conducting effective, coordinated, and sustained investigations against major drug trafficking organizations that are national in scope, with the goal of neutralizing the drug trafficking network through criminal prosecution and the seizure and forfeiture of the proceeds and assets of the organization. These resources would be dedicated to the High Density Drug Trafficking Areas pursuant to the Administration's recently released National Drug Strategy. These areas are the same as the FBI's level I cities outlined in the National Drug Strategy.

The request for $4 million and 172 positions for the Organized Crime Program is to allow the FBI to begin directing an appropriate level of investigative resources to address the illegal activities of Asian organized criminal groups, which include murder, extortion, gambling, loansharking, money laundering, prostitution, smuggling, corruption, and sweatshop labor.

Asian gangs, once considered to be merely street gangs composed of young members who restrict their activities to a limited geographical area, now appear to have become an interstate menace with factions throughout the United States that are either headed, or controlled, by older members of the faction. Many FBI offices have identified major Asian organized criminal activity, however, due to the extent of their involvement in addressing the activities of the La Cosa Nostra (LCN), have not been able to conduct Asian organized crime investigations. Recent investigations that have been initiated, have identified active criminal associations between the LCN and the Chinese and Japanese organized crime groups.

The size of these Asian organized crime groups, plus the development of their association with the LCN, makes it imperative that the FBI no longer delay initiating investigations into the groups' illegal activities. The resources requested for the Organized Crime Program would allow the FBI to use both the Enterprise Theory of Investigation and Civil Racketeer Influenced and Corrupt Organizations (RICO) statutes wherever appropriate to eliminate the Asian organized crime threat to American society.

QUESTION: What is driving the increased requirement for White-Collar Crime resources?

ANSWER: The White-Collar Crime Program is requesting 249 Agent, 161 general support, and 30 special support positions for 1991. They will be used in the following areas:

Governmental Fraud - An increase of 120 Agent and 78 general support positions is needed to address Department of Defense (DOD) Procurement Fraud in 1991, in order for the FBI to expand on and maintain investigative inroads currently being made in the "ILLWIND" DOD procurement fraud investigation. "ILLWIND," with 200 subjects, is focused upon bribery and fraud within Navy procurement. Requested resources would focus upon similar bribery and fraudulent activity in all of the U.S. Armed Services.

Financial Crimes - An increase of 42 Agent and 26 general support positions are necessary for Bank Fraud and Embezzlement (BF&E) investigations to accommodate the recent and projected growth cited in the FBI's BF&E caseload. In addition, the unaddressed workload and the time-consuming and personnel intensive nature of BF&E investigations necessitate further resource allocation to this investigative area. This enhancement is requested to augment current investigative efforts for 1991.

The FBI is requesting an increase of 70 Agent and 46 general support positions to address the overwhelming number of unaddressed fraud by wire schemes, specifically related to boiler room operations and securities.

An increase of 17 Agent and 11 general support positions is requested for bankruptcy fraud matters. These resources are requested to address a predicted increase in bankruptcy referrals, due to the passage of the Bankruptcy Judges, U.S. Trustees, and Family Farmer Bankruptcy Act of 1986, which greatly expanded the U.S. Trustee Program. The sizable increase resulted in an increase in the number of bankruptcy fraud referrals. The additional Agents will also address individual-type fraud cases which are currently investigated too infrequently.

In addition to the Agent and support positions requested, the FBI needs an additional 30 Accounting Technicians to provide quantitative support to investigations.

QUESTION: Please describe the backlog in translations driving the request for $1,100,00 for contract linguists.

ANSWER: A backlog in translations is not a factor in the 1991 increases for the Contract Linguist budget because most of the translation work has to be done immediately and due to the Statute of Limitations cannot be backlogged. Rather, without the contract linguists, the cases cannot be opened. Contract linguists are hired to address translation needs in languages for which the FBI has no capability. The budget increase is requested because of the growing number of these languages which require emergency work for a short term need. In addition, contract linguists provide additional translation services in languages in which the FBI has some capability, but not enough to meet the demands of the cases. The increase is also needed to meet the rising costs of these linguists. The FBI currently pays between $13 and $18 per hour, which is below the going rates of $35 to $50 per hour.

Automation

QUESTION: The FBI's initial purchase of Burroughs Standard Terminals in 1983 provided minimal capabilities for workprocessing and queries of data bases. The second terminal procurement began in 1987 for intelligent workstations (IWS). I understand that you have purchased 5,423 IWSs, but only two-thirds of these are in the field, and field offices are now pleading for more and for associated supporting services. Are funds requested in 1991 to purchase sufficient IWSs to outfit all field offices?

ANSWER: The FBI requested funds in 1991 to purchase sufficient IWSs to outfit all field offices. A $30 million enhancement was requested for 1991 to purchase IWSs and related peripherals for the field. OMB subsequently denied all increases in funding for the acquisition of IWSs for the field.

QUESTION: Does the Bureau plan to strengthen the technological capability for Special Agents in the field with professional staffs for training, assistance and maintenance, and support personnel to load the systems with data and operate them?

ANSWER: Yes. The FBI plans to strengthen the technological capability for agents in the field by upgrading the professional staffs. The FBI's Long-Range Automation Strategy calls for a fully integrated, distributed data architecture in a completely automated environment. Case support will be provided through the utilization of automated systems, particularly the Field Office Information Management System (FOIMS). Professional technical support is required in order to allow investigators to gain the full benefits of this support. To determine the proportion of special support personnel needed to support adequately the investigative agents in the field in this completely automated environment, a comprehensive analysis, including a field survey, is being conducted.

QUESTION: Why didn't the FBI replace the 2,677 older Burroughs instead of entering into a maintenance contract that could add $4,733 to the investment in each of them?

ANSWER: The FBI lacked sufficient funding to replace the 2,677 Burroughs. Funding for IWSs in 1989, 1990, and 1991 was $9,876,000, $1,710,198 and $5,700,000, respectively. Approximately $27 million is required to replace 2,677 Burroughs with IWSs. The yearly maintenance investment for the Burroughs equipment is $3.2 million. The initial allocation of the IWSs was based on providing automation support to users with no automation equipment rather than replacing existing Burroughs terminals. The first-year allocations of the IWSs were primarily used to complete the baseline implementation of FOIMS, as mandated by FBI Director, in twenty-seven offices which were not automated at that time. The next allocation of IWSs were used to replace antiquated wordprocessing equipment, such as Mag Card machines and typewriters in the field offices. This provided all offices with at least a minimum level of microcomputer support to improve wordprocessing capabilities. IWSs were then allocated to the field agents at a ratio of one IWS per every ten Agents to provide critical investigative case support. The requirement is one workstation for every two personnel. Along with the replacement of the antiquated wordprocessing equipment, the FBI initiated the swap of outdated "dumb terminals" in the field with the IWSs.

In 1990, the FBI plans to begin the replacement of 571 Burroughs terminals which are used primarily for wordprocessing functions in the field, such as those for squad secretaries and typists in the wordprocessing pools. This will allow the FBI to generate electronic documents on the same architecture.

QUESTION: By now, all major elements of the FBI are directly engaged in developing and using computer-based systems. Why doesn't the FBI, in keeping with the Paperwork Reduction Act, have an organizational mechanism and procedures for involving the FBI's divisions and major districts in the formulation of annual plans and priorities for development and acquisition of Automated Data Processing and Telecommunications?

ANSWER: The FBI has many organizational mechanisms and procedures in place to aid in the formulation of annual plans and to set priorities for Automated Data Processing and Telecommunications (ADPT) program acquisitions. Foremost, in 1978, the FBI established the Technical Services Division (TSD) as a centralized management entity to solve the most important problems facing the FBI through the development and application of automation and engineering technologies.

Intrinsic to the division are many of the controls dictated by the Paperwork Reduction Act. Specifically, the TSD is organized into five major entities with varying responsibilities, two of which are responsible for the engineering and National Crime Information Center programs. The other three sections are charged with the operation, development, and support of the FBI's automation initiatives. The first of these entities is the Systems Development Section (SDS) whose mission is to design, develop, implement, maintain, and enhance the FBI's various automated information management systems. SDS also provides technology and methodology support for all programs/projects. The Operations Management Section provides large-scale computer operations, communications (voice and data), and related support for other TSD and FBI entities and criminal justice system users. The Planning and Analysis Section provides administrative and analytical support to TSD management at all levels. Staff responsibilities include ADPT equipment acquisition, information systems security and audit, long-range planning as well as other functions.

Further, in keeping with sound management practices, the TSD has instituted several internal reviewing bodies which include the audit and security staffs, a Systems Review Board, the Data Base Design Review Board, and the planning function.

The Paperwork Reduction Act requires that each agency/department be responsible for management of its information resources. The current organizational structure of the FBI allows it to comply with the Act. Accountability and responsibility for the various requirements controls are fixed and centralized at the divisional level with the TSD having the responsibility specifically for the efficient and economical management of the FBI's ADPT program.

QUESTION: It appears that the Automated Data Processing and Telecommunications (ADPT) budget in the FBI bears a disproportionately higher share of Gramm-Rudman cuts and also is a recurring source for reprogrammings. After the Committee has appropriated money for automation, why has the FBI reduced those budgets by $113 million in the six-year period of 1985 to 1990?

ANSWER: Sequestration of funding in 1990 was allocated across all programs at the rate of 1.37 percent; thus, the ADPT program bore the same proportionate reduction as all other programs. In 1986, the FBI requested and received Congressional exemption to the sequestration requirement of a flat percentage reduction across all programs. In that year, the FBI reduced the Automated Data Processing and Telecommunications (ADPT) program $21.9 million, or 42 percent of the total amount sequestered. In electing that particular course of action,' FBI management realized that all of the appropriated equipment funding for the ADPT program could not be obligated in 1986 due to a lawsuit voiding the standard terminal contract awarded in 1985.

Three other factors have contributed to recent situations where the FBI has found itself reallocating funding from the ADPT and other programs. One factor is the continuing required absorption of various costs such as pay increases. A second factor is increasing operational costs related to travel in support of investigations, GSA rent, transfers of personnel to field offices, supplies, and related items. A final factor is the expansion of the FBI's mission and services without commensurate increases in funding. Historically, when confronted with absorptions, FBI managers have chosen to retain personnel at the expense of its equipment base. However, in light of the substantial absorptions confronting the Bureau, FBI executives have realized that the effects of the reductions to technical equipment funding have reached a point where the FBI would not be able to effectively equip its workforce and provide technical support to investigative activities if absorptions were not also shared on the personnel side. Balancing the FBI's needs for personnel and the equipment to support them is of the utmost importance.

QUESTION: The FBI has always prided itself on being the best law enforcement agency in the country because of its technological edge. Why then do you sacrifice that edge by cutting back on technological advances in order to maintain employment levels?

ANSWER: In order to fund major required absorptions, the FBI has had to reduce its equipment base and remain below its authorized personnel ceiling levels. It is important for the FBI to balance its need for personnel and the equipment to support them. The FBI would no longer be able to effectively equip its workforce if the absorptions were not translated to personnel reductions at some point. For this reason, the FBI plans to fund the majority of the increased administratively uncontrollable overtime expenses by bringing on personnel later in the year.

For 1991, the FBI, and other components of the Department of Justice, must absorb the cost to implement Public Law 101-173 by taking a reduction of $9 million in equipment. The remaining $33 million cost of P.L. 101-173 will be borne through hiring personnel later in the year and other non-equipment related proposals.

QUESTION: Artificial Intelligence techniques are being developed for use by the FBI. A techniques, where demonstrated, are impressive and appear to be especially helpful to new Special Agents, but concerns have been raised about the cost of these initiatives. Has the FBI subjected the program and its major "competitors" for funding to an independent evaluation to strengthen the basis for future budgetary plans in this area?

ANSWER: Yes. The FBI's artificial intelligence program has been scrutinized internally by the Inspection Division and externally by the Senate and House Appropriations Committees/Subcommittees, the Department of Justice, and the Defense Advanced Research Projects Agency and Institute for Defense Analyses.

1991 BUDGET REQUEST

Mr. EARLY. The subcommittee will come to order.

I apologize for being late. We had a picture taking session in the chamber and that is the reason why I am late. With the membership we have to take 11 pictures, to have a chance of getting one good picture. [Laughter.]

Mr. ROGERS. When you look at the Committee, you can see why it takes such a long time. [Laughter.]

Mr. EARLY. We will now hear testimony from the United States Marshals Service, concerning their Salaries and Expenses account, the Assets Forfeiture Fund and the Support of U.S. Prisoners account.

The Marshals Service requests appropriations of $288,529,000 in fiscal year 1991 for Salaries and Expenses, $100,000,000 for the Asset Forfeiture Fund, and $193,034,000 for Support of U.S. Prisoners.

We will insert in the record at this point the fiscal year 1991 budget justification for these requests.

[The justifications follow:]

United States Marshals Service

Salaries and expenses

Summary Statement

Fiscal Year 1991

The United States Marshals Service is requesting, for 1991, a total of $288,529,000, 3,503 permanent positions, and 3,436 workyears. This request represents a net increase of 253 positions, 263 workyears and $50,668,000 over the 1990 appropriation enacted.

The Marshals Service seeks resources for those key responsibilities it performs on behalf of the entire judicial system. Whether safeguarding all judicial participants, detaining and transporting prisoners, capturing those trying to escape justice, or managing drug dealers' ill-gotten assets, the Service provides core services necessary for a uniform system of justice.

Others, particularly at the front-end of the system (investigative agencies and prosecutors), have received sizeable resource increases to wage the War on Drugs. The recent, substantial increases for the U.S. Attorneys, for example, will result in additional prosecutions which will seriously tax the Marshal Service's capacity.

Right now, investigative and prosecutorial efforts result in the consistent growth in everything from prisoner population to time devoted to criminal proceedings. When combined with accelerated drug activity, it presents us with a workload we cannot face, especially in view of our existing infrastructure. The Marshals Service is burdened with an aging inventory in virtually every area. Vehicles well beyond their useful life transport prisoners increasingly longer distances each day. Detention facilities in buildings a half-century old were never designed for today's heightened security requirements. Our Digital Voice Privacy (DVP) radio system remains incomplete but is essential to ensure safety during upcoming proceedings. Our information systems are fragmented and lack the level of automation needed to manage the wide range of responsibilities facing the Marshals Service.

The most serious problem, however, affects our most valuable resource: our workforce. Over the next few years, it will undergo a major transition as mandatory retirements reach three times the normal level. The skilled veterans who now guard the courtrooms, transport prisoners and secure the judicial process must be replaced with a large influx of well-trained, highly-motivated recruits if we are to meet the unprecedented demands for improved security.

The magnitude of the detention problem also cannot be denied. We barely find adequate bed space for the prisoners now in our custody--at great expense in time, distance and effort. What will happen when that population exceeds 16,000, stay in jail months at a time, and need to be produced for dozens of court proceedings? Likewise, how will we safeguard multiple-defendant drug trials when most Federal court facilities fail to meet basic security standards? In the past we assigned more and more Deputies to high-risk proceedings just to ensure minimum safety, but always at a cost to something else: asset management, fugitive investigations or another priority.

As yesterday's prisoners are replaced with today's we find these new defendants to be more dangerous and violence-prone than ever before. Moreover, the international scope of these efforts adds a new dimension to security requirements. Recently drug leaders Carlos Lehder-Rivas and Juan Matta Ballesteros were safely tried and sentenced. Now, Manuel Antonio Noriega is in our custody. And in the past few months, we have brought more than a dozen Medillein "extraditables" to the United States to face judicial proceedings.

Meanwhile, other long-term problems persist. The recent bombings in the Eleventh Circuit underscore the need for security for all types of judicial endeavors.

While of primary importance, judicial protection and prisoner custody are but two of our major priorities. To fully succeed, we must address every facet of our responsibilities adequately. Failure to do so simply shifts problems elsewhere in the judicial system. Other areas requiring major emphasis include fugitive apprehension, seized asset management and support services.

The potential of the seized asset program must be realized. Substantial resources are needed to keep pace with the responsibilities of managing a $1 billion inventory, generated by the aggressive efforts of the U.S. Attorneys. Improvements in support services must be addressed too. Chronic understaffing in such areas as financial management, procurement, personnel, and training must be corrected if we are to provide effective, efficient service. In fact, the Department's 1989 audit of the Marshals Service lists many of these matters as serious concerns, substantiating our claim that additional resources are needed in areas which support the Service's operational mission.

In summary, this budget carefully balances fiscal concerns and program realities. Absent adequate support, we have no chance of achieving our mission objectives. A brief summarization of the Marshals Service 1990 program requirements follows.

Protection of the Judicial Process

The Protection of the Judicial Process Program includes all the efforts required to coordinate the safe conduct of judicial proceedings and maintain a secure, open court environment for all participants . In 1991, 99 positions, 51 workyears and $15,820,000 are requested for the activities in this program.

The ultimate disposition of drug and other crime offenders must be through the workings of the criminal justice system. It is the Marshals Service's singular responsibility to ensure the safe conduct of judicial proceedings. Several factors, not the least of which is the nature of the offense, determine the level of security that the Service provides at criminal court proceedings.

In recent years, it has become apparent that Federal drug offenses require higher levels of security than all other categories of criminal offense. A random sampling of approximately 10,000 criminal offenses revealed that, compared to all other Federal criminal cases, drug prosecutions involved 21 percent more proceedings, lasted 35 percent longer, and involved 63 percent more defendants. Not surprisingly, by 1991 time devoted to criminal proceedings will increase approximately 20 percent above the 1989 level, and over 60 percent of all criminal proceedings will be drug-related.

As the Drug War advances to the courtroom, resulting in a workload that is 70 percent drug-related, protected witnesses will make over 4,900 court appearances in 1991, up 56 percent from 1988. Security needed to ensure successful testimony will increase proportionally. Further, post-testimony requirements--particularly employment assistance (projected to increase 145 percent from 1988 to 1991) and completion of new personal history documents (up 51 percent in the same period)--reflect the increasing difficulty of placing greater numbers of foreign-born witnesses in a totally new environment and maintaining security of long-term protectees. Yet, in cases where such witnesses testify, nine-out-of-ten result in convictions.

Unprecedented growth in such indicators as criminal proceedings (up 20 percent over 1989's record level) and prisoner productions (will exceed 600,000 in 1991, up 62 percent since 1988), demonstrates that added resources for prisoner security are urgently needed in 1991. This foreshadows greater in-court security needs, particularly given the poor physical/structural security found in most Federal courthouses nationwide.

Prisoner Transportation and Detention

To provide for the growing needs of the Prisoner Transportation and Detention Program for 1991, a net increase of 49 positions, 24 workyears and $13,264,000 is requested. These resources will be used to provide improvements in prisoner production and the expansion of the National Prisoner Transportation System (NPTS) activities.

Today, over 12,000 prisoners are in Marshals Service custody. By 1991 that figure will exceed 16,000, with no end in sight. Each year Deputies travel farther than before taking prisoners to and from court and available jails. Increasing reliance must be placed on the NPTS as the "in-district" transportation assumes Regional proportions. Further efforts are being made to explore all available detention space (public and private) to deal with this crisis. And, renovations are needed in Marshals Service cellblocks and detention cells--80 percent of which are below Federal standards--to realize their short-term detention capacity.

Fugitive Apprehension

The Marshals Service promotes a comprehensive approach to fugitive apprehension and places special emphasis on major organized crime and drug fugitives. Last year the Marshals Service arrested over 14,000 felons. In 1990, we expect to arrest close to 17,000 as a result of the Attorney General's determination that the Marshals Service assumes responsibility for most DEA fugitive cases and the additional fugitive efforts funded under the President's 1990 initiative.

The challenge, however, remains formidable. Over sixty-five percent of the fugitives are wanted in drug-related cases. Drug fugitives have more resources than before, making them among the most creative and dangerous to apprehend. As a result of the increase for fugitive apprehensions granted in the President's 1990 Violent Crime Initiative, no program increases are requested for 1991. In addition, this submission reflects a program reduction of 87 positions, 92 workyears and $5,400,000, which, in terms of workyears, results in a reduction of only 17 workyears from the 1990 enacted level for this program. This reduction is based on an anticipated decline in the backlog of fugitive felony warrants.

Seized Asset Management

In order to handle unprecedented increases in workload in the Seized Asset Management Program, we request an increase of 134 positions, 67 workyears and $6,239,000 for 1991. These resources will be used to establish an additional 44 seized asset management units, expanding this service to the 56 highest-volume districts. Because of the increased volume of workload generated by the additional U.S. Attorneys and the attendant rise in equitable sharing, management services, and timely disposition of assets the Marshals Service must receive a proportional increase in resources for both operational and administrative functions.

D.C. Superior Court

The Marshals Service requests in increase of 35 positions, 17 workyears and $1,540,000 for the District of Columbia Superior Court. The additional resources are urgently needed to address every aspect of this district's responsibilities. Current staffing shortages necessitate the dangerous practice of one Deputy escorting ten prisoners through the Courthouse when moving them from the cellblocks to the courtroom. The shortage of Deputies endangers the judiciary, the general public, the prisoners, and Marshals Service personnel.

Service of Process

Every year the Marshals Service executes hundreds of thousands of summonses, writs, mandates, and other process for the Federal Courts, United States Attorneys, private litigants, Federal agencies, foreign governments, and others. This program is also responsible for providing law enforcement assistance in nuclear weapons movement through reimbursable agreements with the Joint Cruise Missile Project Office of the Department of Defense and the U.S. Air Force, and providing specific assistance to State and local law enforcement agencies. No increased resources are requested for 1991.

Field Support and Training

The Marshals Service has assembled the most comprehensive and sophisticated training program to develop the best operational deputies possible. Specialized classes in officer survival and protective services help prepare the workforce for the complex and dangerous Marshals Service missions. No increased resources are requested for 1991.

ADP and Telecommunications

Unfortunately, the quality of our technology does not match the caliber of our employees. In fact, it no longer satisfies basic requirements. Our DVP radio system, initiated in 1980, stands 85 percent complete, with much of the initial equipment ready for replacement. Our various ADP and management information systems are fragmented and rely on computer equipment of a previous generation.

The Marshals Service requests an increase of $5,112,000 for improvements in the ADP and Telecommunications Program for 1991. The requested increases will enable the Service to upgrade ADP hardware and software, enhance the District Accounting System (DAS) and the Prisoner Population Management System (PPMS) software, install networks in the largest districts and complete the fixed radio portion of the Marshals Service radio plan.

Management and Administration

For 1991, the Marshals Service requests another 23 positions, 13 workyears and $1,055,000 for improvements in the Management and Administration Program. This includes resources to address the marked increase in contract litigation and review by the Office of Legal Counsel; remedy the accounting weaknesses in handling our financial management responsibilities cited in the recent Audit Report; improve positions in personnel management to comply with OMB-established standards; and advance the management information and support activities in the Service to keep pace with operational demands.

United States Marshals Service

Salaries and expenses

Justification of Proposed Changes in Appropriation Language

The 1991 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses, United States Marshals Service

For necessary expenses of the United States Marshals Service; including acquisition, lease, maintenance, and operation of vehicles and aircraft; [$217,027,000 as authorized in Public Law 100-690 (102 Stat. 4513)] ^ Provided, That notwithstanding the provisions of title 31 U.S.C. 3302, [for fiscal year 1990 and hereafter] the Director of the United States Marshals Service may collect fees and expenses for the services authorized by 28 U.S.C. 1921 as amended by Public Law 100-690, and credit ^ fees to this appropriation to be used for salaries and other expenses incurred in providing these services [: Provided further, That not to exceed $6,000 shall be available for official reception and representation expenses].

including purchase of passenger motor vehicles for police-type use without regard to the general purchase price limitation for the current fiscal year; $288,529,000; of which not to exceed $12,653,000 for the renovation and construction of Marshals Service prisoner holding facilities shall be available until expended;

not to exceed $1,000,000 of such

(18 U.S.C. 1963, 3053, 3059, 3192, 4008, 3521-3528, 19 U.S.C. 1613; 21 U.S.C. 881; 28 U.S.C. 510; 524, 561-562, 565, 567, 569-572, 1921; 48 U.S.C. 1424(b), 1614(c), 1694(b)(3); Department of Justice Appropriations Act, 1990, additional authorizing legislation to be proposed.)

[For carrying out efforts at National Drug Control and the President's initiative to combat violent crime, $23,819,000 to improve the ability of the United States Marshals Service to pursue and apprehend alleged major drug and organized crime figures, and to improve the security required for anti-drug and organized crime judicial proceedings.]

(Department of Transportation and Related Agencies Appropriations Act, 1990)

Explanation of changes

1. The first change will permit direct purchase of vehicles instead of continuing the lease-purchase arrangement under which vehicles have previously been acquired. Language is also added which would permit up to $12,653,000 of the 1991 appropriation to be available until expended for the renovation and construction of holding facilities. The funds would permit renovation of 115 courtroom holding cells, prisoner detention areas, and courtroom elevators. Marshals Service appropriations have previously been available for these purposes but an expanded program requires more than one year to fully implement a number of the proposed projects.

2. The second change strikes the hereafter clause and restores the previous dollar limitation on the collection of fees and expenses for the service of civil process. Beginning in 1987 the Director of the Marshals Service was permitted to collect fees and pay expenses for the service of civil process and credit not to exceed $1,000,000 to the appropriation to cover expenses incurred. The 1990 Act inserted a hereafter clause, which would have made it unnecessary to restate this authority on an annual basis, but it also removed the $1,000,000 limitation.

3. The third change proposes deletion of the separate limitation for reception and representation expenses in favor of a Department limitation of $95,000 which would be available for allocation among the Department's various components.

4. The fourth change deletes language which is included in the Department of Transportation and Related Agencies Appropritions Act, 1990.

This budget activity provides vital support to the Federal Government's administration of the justice system in the areas of operational support and protection of the federal judiciary, including court security; execution of fugitive investigations and court orders; seizure, management and disposal of assets subject to judicial forfeiture; protection of key government witnesses; custody and transportation of unsentenced federal prisoners; and contracting with local detention facilities for the housing of unsentenced federal prisoners.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Protection of the Judicial Process...	1,112	1,089	$82,000	1,112	1,143	$86,495	1,211	1,194	$102,315	99	51	$15,820

Long-Range Goals: To protect those witnesses, potential witnesses, and their dependents whose lives are in jeopardy as a result of actual or potential testimony against criminal organizations, drug traffickers, terrorists and other Federal criminals.

To ensure the integrity of the Federal judicial system by providing security at all places in which Federal judicial business is conducted, and to eliminate fear of intimidation, retribution, or physical harm on behalf of all judicial participants.

To ensure prisoner and courtroom security at judicial proceedings.

Major Objectives:

To maintain security at over 500 judicial facilities across the nation by: evaluating new and changing requirements; providing technical assistance to U.S. Marshals and the Federal judiciary on security procedures; and, using the latest state-of-the-art security equipment.

To provide personnel and security systems to protect all high-threat trials, other criminal proceedings, and certain civil proceedings, where warranted.

To augment courtroom security with specially trained Special Operations Group (SOG) Deputy U.S. Marshals for high-risk/threat court security needs.

To provide 24-hour-a-day security services to establish and maintain a threat assessment and risk management methodology service for members of the Federal judiciary (including employees and families) threatened as a result of performing their duties. Security is also provided to sequestered juries, grand juries, and judicial conferences.

To provide contract security officers and security equipment to secure all judicial facilities.

To protect those endangered witnesses and their families who have been approved for protective services by the Department of Justice, Criminal Division, Office of Enforcement Operations.

To ensure that endangered witnesses can testify without fear of retribution.

To assist witnesses and families in becoming self-sustaining through relocation under new identities.

To ensure that prisoner holding areas in Federal courthouses meet minimum National standards for safety, health and security.

Base Program Description: The Judicial Security program maintains the integrity of the judicial process by ensuring that each Federal judicial facility is secure and that all Federal judges, magistrates, prosecutors and participants can conduct judicial proceedings in an open and safe environment.

The Technical Assistance element provides highly trained judicial security specialists to assist U.S. Marshals, judges, and other members of the judicial family in evaluating security risks and planning and implementing responses.

The Court Security element uses personnel and proven systems and procedures to ensure the integrity of the judicial process. Appropriate security measures include screening courtroom participants, packages, and spectators with x-ray equipment and metal detectors outside Federal courtrooms; isolating the criminal defendants from the public; and ensuring that an appropriate number of Deputy U.S. Marshals are assigned to the courtroom to preclude or minimize any disruption that could reasonably be anticipated.

The Threat Analysis Division provides information concerning threats to judicial family members, Marshals Service personnel, and to those who are under the protection of the Marshals Service. This includes a centralized Threat Analysis Group that supports operations involving judicial security, high-threat trials, witness security, and enforcement operations (especially the execution of warrants involving violence-pron groups), by preventing acts of violence and intimidation, and providing intelligence information for those members of the judicial family under threat.

The Judicial Facility Security element utilizes authority delegated by the General Services Administration to contract with the private sector for highly qualified contract guards, called Court Security Officers (CSOs), and for the installation and maintenance of physical security equipment. All direct costs for this program element are funded by the judiciary through a Memorandum of Understanding with the Administrative Office of the United States Courts (AOUSC).

The Witness Security program is the Government's most effective way to obtain testimony against accused drug dealers, major organized crime members, and terrorists. It encourages potential witnesses to testify by providing the secure environment and support services necessary to eliminate fear that such testimony would jeopardize the safety of the witnesses and their families.

This program supports the Federal judicial system through the timely receipt, administrative processing, and production for judicial proceedings of all prisoners in Marshals Service custody (the transportation and movement of federal prisoners within district and via the NPTS); and the supervision of unsentenced prisoners.

Individuals arrested or detained for violation of Federal statutes are remanded to the custody of the Marshals Service. Federal prisoners are transported and moved within and between districts for observation, and service of sentence. Short-distance prisoner moves are completed by district personnel using government vehicles.

Accomplishments and Workload: Accomplishments of the Protection of the Judicial Process program are presented in the following table.

			Estimates	
Item	1988	1989	1990	1991
JUDICIAL SECURITY				
Criminal trial bench hours..................	106,466	116,188	127,800	140,000
Civil trial bench hours.....................	172,170	164,431	178,100	181,350
Other proceedings bench hours...............	156,148	146,487	160,000	168,400
Magistrate proceedings......................	502,987	450,586	510,000	553,600
Threats received............................	213	331	425	500
Protective services details.................	69	93	140	167
Judicial conferences........................	36	49	75	100
Background investigations (including limited background investigations)..........	500	500	1,000	1,042
Security up-dates...........................	...	...	600	1,800
WITNESS SECURITY				
New principal witnesses.....................	208	185*	200*	240*
Cumulative witness workload.................	5,253	5,438*	5,638*	5,878*
Cumulative program participants (includes witnesses & family members)......	11,755	11,511*	11,886	12,301
Witnesses funded/maintained/active..........	783	878	973	1,068
Average months witnesses are funded.........	16	17	17	17
Reactivated witnesses	109	115	120	125
Production days (Court appearances)..........	3,132	3,743	4,300	4,900
Child visitations...........................	96	193	216	240
New personal history documents..............	1,921	2,298	2,600	2,900
Household relocations.......................	317	474	450	470

			Estimates	
WITNESS SECURITY (continued)	1988	1989	1990	1991
Preliminary interviews	252	307	350	400
Employment assistance	652	1,544	1,600	1,600
FOIA, Congressional requests	418	450	484	520
Financial Services (voucher transactions)	21,972	28,802	33,600	35,440
Field reports (witness contacts)	29,784	34,696	40,500	45,900
PRISONER SECURITY				
Average daily prisoner population	8,857	11,740	13,916	16,279
Average number workhours per daily prisoner population	193	201	219	239
Prisoners produced for trials	136,476	181,105	213,110	251,469
All other prisoner productions	242,624	260,614	306,671	361,872
Total prisoner productions accomplished	379,100	441,719	519,781	613,341
Construction/renovation of USMS Courtroom holding cells and prisoner elevators	2	3	3	104

* Figure changed because final numbers were not available at the time of the 1991 Galleys were prepared.

Judicial Security

Several factors, not the least of which is the nature of the offense, determine the level of security that the Marshals Service provides at criminal court proceedings. In recent years, it has become more apparent that Federal drug offenses require a higher level of security than all other categories of criminal offenses. The Service has long maintained that drug cases are lengthier, more complex, and require higher levels of security.

The Comprehensive Crime Control Act of 1984, Organized Crime Drug Enforcement Task Forces, the Sentencing Reform Act, Anti-Drug Abuse Act of 1988, and similar initiatives continue to cause the marked growth in the Marshals Service's judicial security workload. More complex security problems result as the War on Drugs presents more alleged international terrorists, major drug traffickers, and others for proceedings in the Federal courts. Prior to the passage of the 1988 Anti-Drug Abuse Act, the Administrative Office of the United States Courts reported a 16 percent increase in cases involving all drug-related offenses. A review of recent criminal trials demonstrates the security problems associated with such proceedings, particularly multiple defendant trials in remote venues.

USA v Jerry Allen LeQuire, et al., a recently completed trial in Alabama, involved 25 defendants, 17 in custody and eight fugitives. The defendants were convicted of continuing criminal enterprise, RICO, narcotics trafficking, and obstruction of justice (murder). Jerry LeQuire is a leader of a drug organization which relies on violence, including murder, to sustain its position as a leading drug-distribution network. DEA intelligence indicated that LeQuire ordered and financed the murder of the mother of a key witness the day before the trial began in Montgomery, Alabama, and that three Latin males using automatic weapons carried out the execution.

In the District of Columbia, the USA v. Edmonds, et al. trial started September 11, 1989. The 11 defendants were charged with continuing criminal enterprise, conspiracy to violate narcotics laws and other drug-related violations. Edmonds' drug empire was accused of smuggling nearly a ton of Colombian cocaine each month for two years and of murdering nearly 30 people. To guard against possible retribution, jurors remained anonymous and were sequestered throughout the trial. The District requested special support from the Court Security Division after the home of a government witness was fire bombed and threats were made against jury members. This necessitated extraordinary security measures including a bullet-proof shielded courtroom, and television surveillance. On December 6, 1989, the jury found all but one of the defendants guilty on all counts. The security for this trial cost the Service nearly $250,000. three

The recent arrest of Manuel Antonio Noriega, who is facing indictment from two Federal Courts, has already, and will continue to represent a price tag for security which will undoubtedly exceed that expended on the likes of convicted drug trafficker Carlos Lehder-Rivas and convicted terrorist Fawaz Younis.

The fact that Noriega is the deposed leader of Panama, the nature of the charges he is facing, his alleged involvement in CIA activity, and the fact that he has drawn worldwide attention, will necessitate unprecedented security measures involving equipment, weapons, and manpower. While in the custody of the U.S. Marshals our extraordinary security requirements are in effect not only during his high-threat court appearances but also 24-hours per day, seven days per week.

The trial of USA v. Ted O'Neill began October 1989 and involves 181 indicted defendants, 41 of whom are currently in custody. These defendants, charged with narcotics violations, are believed to have ties to Panama's former General Noriega, the Irish Republican Army (IRA), organized crime and motorcycle gangs. Due to the numerous defendants in this case, the trial judge is forced to sever the case into trials of 25 defendants at a time. Therefore, numerous Deputies are on Special Assignment in order to augment the three who staff the sub-office where the court is located. These cases are estimated to last as long as two years in total.

Eduardo Martinez-Romero was arrested in Colombia as a result of a nationwide drug crackdown by the Government of Colombia. Martinez was alleged to be associated with the violent Medellin Drug Cartel. He was extradited to the United States on September 7, 1989, and is under indictment in the Northern District of Georgia. He faces charges of money laundering of illicit drug profits. Martinez was first drug suspect to be extradited under the reinstated Colombian-U.S. extradition treaty.

Since the extradition of Martinez, ten other Columbian drug fugitives have been taken into custody and turned over to the United States. They are associated with the Colombian Medellin Drug Cartel, believed responsible for the killing of approximately 80 Columbian judges, including several who ruled against the Cartel. Other judges are in hiding or have left Columbia. Those extradited face trial on drug trafficking charges in various locations throughout the United States. Because of the acts of violence by the Medellin Drug Cartel, these U.S. trials will require intense security.

The primary responsibility of the Threat Analysis Division (TAD) is to support other Marshals Service divisions and field operations in assessing the danger that criminal elements pose to Marshals Service personnel and its protectees. The workload trend seen in this area reflects increases caused by cases involving drugs. For example: in 1987, TAD completed 37 Intelligence Briefs for Marshals Service Offices and other law enforcement agencies, in 1988; 65 Briefs, in 1989, 810 Briefs; and in the first quarter of 1990, 167 Briefs. The Service projects that anticipated workload in this area will continue to increase during 1991.

In 1988, some 213 serious threats were lodged against members of the judicial community, requiring the establishment of 69 protective service details. In 1989, 331 threats were reported, an increase of 55 percent. The Service must take all threats seriously, although some may prove to be unfounded. Even bogus threats represent a significant workload requirement, because judicial officers are given protection when there is any danger that the threat is valid.

A sample of the serious nature of some threats proves that they are made and violence occurs not only before and during trials, but after proceedings have concluded. In 1989 there were 93 protective details, a 35 percent increase above the 1988 level. The length and cost of these protective details continues to rise. A protective detail in Puerto Rico which began in 1984 for Chief U.S. District Judge Perez-Giminez continues today. United States Attorney, Danny Lopez-Romo, of Puerto Rico was provided protection from 1985 to September 1989.

Most details relate to criminal prosecutions, but a trend toward threats appearing in civil cases. In 1988, U.S. District Judge Richard Daronco, Southern District of New York, was murdered as a result of a civil case ruling.

Unfortunately, not only do these trends continue, they escalate. As recently as December 16, 1989, a package bomb was delivered in the mail at the residence of U.S. Court of Appeals Judge Robert S. Vance near Birmingham, Alabama. The package contained a pipe bomb which exploded and killed the judge and seriously injured his wife. Immediately, all U.S. Marshals were notified and directed to warn all Federal judges of the incident. In addition, the U.S. Marshals Service implemented procedures to screen all judges' mail at approximately 500 Federal court facilities, nationwide. After the bombing at Judge Vance's residence, 17 threatening letters were mailed to the other judges in the Eleventh Circuit addressed to "The Late Judge ...".

On December 18, 1989, U.S. Marshals Service personnel detected another package pipe bomb addressed to the Clerk's Office, during the course of screening mail at the Eleventh Circuit Court of Appeals facility in Atlanta, Georgia. The FBI in Atlanta advised that there were similarities between this packaged device and the bomb that killed Judge Vance. Both were pipe bombs containing nails and tacks, and were packaged similarly in shoebox size cartons.

That same day, a bomb exploded and killed private attorney Robert Robinson in his Savannah, Georgia, office. On December 19, a suspicious package was discovered at the National Association for the Advancement of Colored People Headquarters in Jacksonville, Florida. The package contained a bomb similar to the ones in Atlanta and Savannah, Georgia, and Birmingham, Alabama. As a result of these events, the U.S. Marshals Service is currently providing 24-hour personal security to 29 Federal judges in the 11th Circuit. The Service estimates these security details will cost approximately $200,000 per week.

Judicial Conferences also involve Marshals Service protective details, and in 1989, there were 49 Judicial Conferences, a 36 percent increase over 1988. For example, in 1988 the Ninth Circuit held their conference at Coeur D'Alene, Idaho, the site of four bombings in 1988 and near Hayden Lake, Idaho, the headquarters of the Aryan Nations Compound. Over 25 Service personnel were assigned to this protective detail.

As danger in and out of the courtroom escalates, the Service places increasing reliance on its Special Operations Group (SOG). The mission of SOG is to provide operational support and expertise to the Marshals Service. This involves high-risk/threat situations related to court security, fugitive operations, personal protection, prisoner transportation, seizures, witness security or any other law enforcement functions assigned to the Service. This mission is in addition to SOG's traditional responsibility of responding to situations of national significance at the request of the Director or Attorney General, such as Wounded Knee or the prison riot at the United States Penitentiary in Atlanta.

In 1989, SOG was called upon to respond to high-threat trials, seizures and arrests involving narco-terrorists, White supremacy groups and violent, professional criminals. This frequently required one or more six-man teams to respond quickly to a particular situation in a city or region. Current SOG members are located throughout the United States. With the heavy workload in individual districts, it is difficult to mobilize enough SOG members without adversely affecting district operations. Frequently, SOG teams are formed without having worked as a unit previously.

Examples of high-risk/threat missions accomplished by SOG are the following:

1) Domestic Terrorism - Security for Levasseur trial in Springfield, Massachusetts
2) Domestic Terrorism - Security for White Supremacist trial in Fort Smith, Arkansas
3) Narcotic - Security for Gutierrez trial in Los Angeles, California, (DEA Agent Camarena-Salazar murder trial)
4) Narco-Terrorism - Completion of Carlos Lehder drug trial in Jacksonville, Florida
5) International Terrorism - Security on Fawaz Younis, alleged Lebanese hijacker in Washington, D.C.

6) Domestic/International Terrorism - Security and prisoner transportation involving Los Macheteros between Connecticut and Puerto Rico
7) Narcotics - Asset seizure in North Carolina, code named "Operation River Rat"
8) Domestic Terrorism - Arrest of 15 Most Wanted fugitive Ken Martinson (Posse Comitatus) in Las Vegas, Nevada.
9) Narco-Terrorism - Security for the Jerry LeQuire trial, Montgomery, Alabama, (leader of an international narcotics organization charged with murder of a government witness and RICO violations).
10) Narco/International Terrorism - Seven separate extraditions from Bogota, Colombia, involving ten extraditions to the United States.

Recent passage of the Inspector General Act resulted in the April 1989 transfer of all Marshals Service resources committed to Internal Investigations/Inspections to the Office of the Inspector General at the Department of Justice. The Service retained responsibility for conducting background investigations on potential and current Marshals Service employees. To meet our obligation in this area, this program will absorb the personnel security function on an "as available" basis along with the backlog of requests for security updates and investigations which must be addressed. A recent Departmental audit of the personnel security program confirmed the need for additional resources to assure that all Marshals Service employees and contractors have the appropriate level of background investigation conducted. It is essential that these initial investigations and updates be completed to enable full and unimpeded access by our personnel to the sensitive and classified information required to meet the agency's mission.

Early in 1988, the Court Security Division began providing for the physical security of headquarters by contracting for guard hire and training the special security officers who staff the building. Because of the "state-of-the-art" closed circuit television alarm system and computer key card entry system, the security force and alarm systems are now managed by one person in the Court Security Division as a collateral duty.

Witness Security

The nature of criminal cases pending in the judicial system underscores the importance of the witness security program. A number of major drug dealers and organized crime members are currently on or awaiting trial. A few examples demonstrate the important role protected witnesses play in the judicial process, and the security measures required.

On December 26, 1989, Lieutenant Colonel Luis del Sid, Panamanian Defense Force commander, was arraigned in Federal Court in Miami. Del Sid is the purported "number two" man to Manuel Noriega, and the indictment charges cocaine smuggling in the U.S. while del Sid was a commander in the PDF. To date, no protected witnesses are involved, but this Division, as in other extremely high-threat situations, is providing security for court productions.

Two arraignments were held during May 1989 in Los Angeles, for two separate indictments against multi-billionaire Juan Matta-Ballesteros, one of the world's most notorious cocaine traffickers, who is charged with both conspiracy to import and distribute narcotics, and importation and distribution of narcotics. Matta-Ballesteros is the purported successor to Aillica-Falcone, who allegedly runs the largest drug operation in Mexico. Matta-Ballesteros, wanted for questioning in the 1985 murder of DEA Agent Enrique Camerena Salazar, is suspected of involvement in the corruption of Mexican federal police, whom he allegedly has used as "hit men," and for the murder of witnesses in both the United States and Mexico. He is a top-ranking official, possibly the head, of the Communist Party of Honduras. The facilities of the Witness Protection Program will house and produce Matta-Ballesteros for court appearances, although he is not a witness. Trial proceedings for one case began in July, and Ballesteros was convicted on seven counts and sentenced to life without parole. Two protected witnesses provided testimony at the trial. The second trial has been postponed until April 1990.

Twenty-eight defendants were charged in the Southern District of New York with thirty-five counts of narcotics and conspiracy to commit murder. Several defendants arrested in the United States were fugitives from Italy, and two are presently in custody in Italy. These defendants are associates of the Badalmenti/Torretta crime family in Sicily and the Gambino, Colombo, and Luchese families of New York. Three protected witnesses provided testimony at this trial, which received the full range of media coverage, including attention from the international press. Seven defendants are still fugitives, and seven remain to be sentenced. The remaining 14 defendants received sentences totaling 106 years. These convictions should severely damage the narcotics trade between Italy and the United States, known as the "Pizza Connection II."

Since 1970, over 5,800 principal witnesses and over 7,000 family members have entered the Witness Security Program on the recommendations of U.S. Attorneys and/or the approval of the Criminal Division, Department of Justice. In 1989, 1,854 principal witnesses and their families received active protection and funding. The Marshals Service provides these witnesses with around-the-clock protection while they are in threat environments and during their return to danger areas for pre-trial conferences, trials, or other court appearances. In 1989 there were 3,743 production days, an increase of 20 percent over 1988. The Service projects an increase to nearly 4,900 production days in 1991, reflecting the trend of multiple witnesses testifying at trials of long duration. During all of these production days, no witness following the guidelines of the Program has been injured or killed.

In 1989, 185 new witnesses with their family members entered the Program. By 1991 there will be 240 new principal witnesses, a 20 percent increase over the 1990 level. All new entrants require a variety of services, including initial evaluation to determine suitability for the Program, psychological counseling and training in preparation for the changes that must be made, physical and dental examinations, orientation briefings about relocation areas, employment assistance, and personal history documentation to provide witnesses and their families with new identities in safe locations.

There were over 11,000 Program participants (including witnesses and family members) in 1989. By 1991, the Service projects that the cumulative program participation will be at least 12,000 members. When considered alone, the number of new entrants each year does not appear to be a significant workload factor. However, these entrants add to the cumulative total of all participants who have entered the Program since 1970. During the last quarter of 1989, 8,674 services were provided to 908 witnesses. Non-prisoner witnesses and appropriate dependents are moved to other areas under new identities and are provided employment assistance and necessary services to aid them in establishing new lives in their new communities as quickly as possible. Many of these services are not simply single occurrences, but could take many months to complete. For example, job placement services average 17 months.

While a tremendous amount of work occurs during the pre-enrollment and enrollment phases of the program and during actual court proceedings, the bulk of the workload faced by the Witness Security Division and supporting district personnel involves the life-long commitment to all who fulfill their obligations to the Program: providing protection whenever a witness is required to enter a danger area; reactivating witnesses; relocating witnesses whenever a security breach has occurred which could jeopardize the witnesses and their families; providing child visitations; and, offering additional program services that are available to all witnesses and their families. Some of these services are: psychological counseling, vocational guidance and drug rehabilitation assistance, preparation of resumes, letters to potential employment contacts, letters of appreciation, and obtaining, scheduling and preparing for employment interviews.

A new problem for the Witness Security Division is that of "second generation witnesses." Because of the lifetime commitment, program services are now provided to the grown children of those first program participants. The Marshals Service must now obtain additional program services, e.g., documentation for military and college records, for these "second generation witnesses".

In the area of documentation, the Division provides new identities substantiated by authentic documentation. This may include: court-ordered name changes; social security cards; FBI documentation; birth certificates; U.S. passports; immigration papers; school records; medical records; military records; civil and religious certificates; professional licenses; and social security benefits. During 1989 there were 2,298 new personal history documents in addition to numerous documents in various stages of completion. By 1991, the Division expects to complete 2,900 documents, a 26 percent increase over 1989 workload. The completion of personal history documentation to create new identities requires a variety of steps (which can span several years) from the initiation of each document to its completion. Each document is unique as it complies with differing State requirements, restrictions and limitations of other Federal agencies, military policies and procedures, the complexity of the background to be created, and the urgency which may be dictated by security requirements.

In 1989, the Program honored 193 court-ordered requests for child visitations. For 1991, the projection of 240 visits, or an increase of 24 percent from 1989 is realistic. Such visits require difficult coordination, bringing together various family members who are living in different States. Obviously, these visits, involving multiple protectees, require around-the-clock security details and expend a substantial amount of personnel and resources.

In 1989, there were 474 household relocations -- or an average of more than one move for every day of the year. A typical move of household goods involves the production of the witness and/or spouse back to the danger area for several days. Staffing requirements vary as security concerns dictate. In an effort to reduce this danger to the witness and to Marshals Service personnel, the Marshals Service recently has adopted new guidelines providing for the monetary replacement of household goods in lieu of subjecting move participants to threats during the packing, pickup, and shipment of their goods. The Service projects that by 1991 one half of all new principal witnesses will take advantage of this service; and, therefore, no significant workload increase is anticipated in this area.

An additional workload requirement is providing employment assistance to witnesses and their families. The Marshals Service currently funds witnesses for an average of 17 months, and during 1989, expended approximately $9.6 million on subsistence, housing and medical expenses for witnesses (a 28 percent increase over 1988 expenses). In 1989, 878 principal witnesses were funded/maintained, for an average of nearly $11,000 per witness. Obviously, having witnesses become self-sustaining is cost-effective and helps the witness and family to better and more quickly adjust to their new lives in their new communities. Nearly 95 percent of the protected witnesses have criminal backgrounds. Therefore, it is difficult to find employment for them, since their resumes are extremely limited in terms of legitimate prior employment. And, witnesses often require repeated employment assistance. If a witness must be moved because of a breach of security, the employment process begins again. From 1987 to 1989, the number of principal reactivated witnesses increased from 97 to 115, or by 19 percent. By 1991 the Service anticipates reactivating 125 witnesses, or more than ten per month. A reactivated witness is one who has been relocated because of threats or security breaches, or for medical reasons.

As a result of national efforts to combat narcotics activities, 80 percent of the Witness Security workload is drug related, and many of the witnesses are foreign nationals. These people are in the country legally, but have no permanent-resident status for employment purposes. It is increasingly difficult to help them and/or their families find employment. The Service has requested legislative efforts to sponsor a law allowing the Attorney General to grant permanent-resident status to participants in the Witness Security Program. Also, the language barrier is a very real problem. Many witnesses sponsored by the DEA, OCDETF and FBI (which, combined, account for 82.2 percent of total agency sponsorship) are Spanish-speaking foreign nationals, who speak no English. There are fewer than a dozen Witness Security Inspectors located across the country who are fluent in a foreign language. Currently there are 100 active principal witnesses who do not speak any English. Often, the Program must first educate these witnesses before finding employment for them and nearly 150 family members.

The Witness Security Division faces greater challenges as criminal elements, some with their country's treasury at their disposal, become more sophisticated with their boldness, advanced weaponry, and violence. Where once witnesses were protected from loansharks and bookmakers, they are now protected against international terrorists and drug cartels. The degree of threat and violence has escalated. Significant trials are typically characterized by high degrees of threat, media attention, multiple protected witnesses, and extended duration.

For witnesses to remain alive and provide testimony to the Government and the Courts about traditional organized crime, terrorism, narco-terrorism, and other criminal enterprises, and for them to survive the rigors of protected life, they must be prepared. The Witness Security Program provides those services necessary to ensure their continued protection and to translate their testimony into criminal convictions. According to the "Director's Report: A Review of the United States Marshals Service in FY 1988," during 1988 in cases where protected witnesses testified, over 86 percent of the defendants were convicted. Of the 3,891 defendants thus convicted, 3,167 (81 percent) were incarcerated with 89 receiving sentences of either life imprisonment or death. Additionally, 845 forfeitures from these defendants resulted in $34 million in fines to the Government. This Program continues critical support for the successful prosecution of serious criminal cases.

Prisoner Security

In 1989, the Marshals Service received 82,238 individuals charged with violating Federal law, with over 70,000 committed to contract jails. The remainder were housed in Federal institutions. On the average, each prisoner received is produced five times for appearances at detention hearings, trials, other court proceedings, medical care, or transfers between detention facilities. By 1991 the average number of times a prisoner must be produced will increase to seven.

In 1991, the Service will continue to be faced with unprecedented prisoner handling and security requirements generated by Federal emphasis on drug prosecutions as well as the Comprehensive Crime Control (CCCA) and the Sentencing Reform (SRA) Acts. A December 1988 report from the Administrative Office of the U.S. Courts indicates that even one year after the implementation of SRA, only 25 percent of those sentenced were covered by SRA. Therefore, the full impact of SRA (such as increased productions, longer average stay, etc.) may not be realized until 1990-1991.

The 1989 Detention Survey just completed by the Service shows the average daily prisoner load will reach approximately 16,300 in 1991. By 1995, the prisoner population level is expected to reach almost 29,600 with a bedspace shortfall of 20,400 beds. At that rate, the Service's prisoner population level will have grown 714 percent from 1979-1995.

The number of Federal court cities in emergency detention status will increase 137 percent (from 49 in 1989 to 116 in 1995). From 1987-88 the agency expended 18 percent more operational workyears for prisoner productions, and overtime workyears doubled in just a two year period (from 86-88). Based upon an analysis of operational workhours per prisoners in custody, the Service will require an average of 239 workhours per daily prisoner population to support the 16,279 in custody. This would represent a required increase of 20 operational workyears for 1991.

With the rampant increase in drug related arrests, the Federal prisoner's propensity for extreme violence has necessitated unique security steps be taken to ensure safety in the courtroom as well as during transport to and from court. The profound effect this type of criminal has on the detention, production and transportation requirements of the Service is devastating. Deputies are required for special assignment from districts already feeling the crunch of a detention space shortage to support these high risk trials, thereby leaving their own district short-handed. High risk trials held in remote areas of the country which have smaller district staff and jail space resources create additional security problems since most local jails are not equipped to handle the multiple defendants involved with this type of trial nor are the facilities equipped to provide adequate security. The case of the USA v. Jerry Allen Lequire, et al, a recent trial in the Middle District of Alabama, involved 25 defendants who were convicted of narcotics trafficking, murder, etc. The day before the trial, the mother of a key witness was murdered in execution style with automatic weapons. The trial of USA v. Scutari, et al, required some 50 Deputies brought in during proceedings to ensure security for 14 defendants charged with sedition and considered extremely dangerous.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Protection of the Judicial Process............................	1,112	1,143	$86,495	1,211	1,194	$102,315	99	51	$15,820

The Marshals Service requests an increase of **99 positions, 51 workyears and $15,820,000** for the 1991 Protection of the Judicial Process decision unit. This increase will: provide additional support for the field offices and personnel to assure and make available a steady supply of employment opportunities for witnesses; help meet the growth in Judicial Security workload generated by the Administration's efforts to combat drug and terrorist activity; and provide for a comprehensive package to address known requirements for secure prisoner production and improve security systems.

Judicial Security

For 1991 the Marshals Service requests **61 additional positions, 31 workyears, and $3,659,000** to meet a growth in Judicial Security workload generated by the Administration's determined efforts to combat drug and terrorist activity.

This is uncontrollable workload as it is generated, for the most part, by other law enforcement agencies, especially the DEA, FBI, and Customs Service. As these agencies increase their efforts to apprehend and prosecute drug traffickers, the Service must handle an increasing number of lengthy and costly multi-defendant trials. Processing high-threat criminals through the courts takes additional staffing dedicated specifically to these cases. Without additional resources, the Marshals Service will be unable to provide an adequate level of security for these trials.

By the close of 1990, the War on Drugs, the Comprehensive Crime Control Act, the 1988 Anti-Drug Abuse Act, and other initiatives will result in the prosecution of scores of the most dangerous organized crime and drug figures. The severity of this situation cannot be overstated. In 1991, time devoted to criminal proceedings will be about 20 percent above the 1989 level.

In 1989, 331 threats were received, a 55 percent increase above 1988. Likewise, protective details also increased 35 percent above the 1988 level. Due to the recent bombs and threatening letters found in the 11th Judicial Circuit, and the increase in drug proceedings it is expected that threats and protective details will increase significantly in 1990.

Eclipsing the growing number of bench hours is the increase in the number of "high risk" proceedings conducted by the courts. These proceedings require additional personnel in order to provide adequate security for the judiciary, prosecutors, witnesses and defendants.

Personnel resources provided to the 95 U.S. Marshals districts for court security are based on "normal" workload projections for criminal, civil, and magistrate proceedings. It is impossible to predict where the "high risk" trials are going to take place. The Marshals Service addresses the location problem through our Special Assignment System, to provide "out-of-district" personnel on a temporary basis. This system has worked well in the past, but the extraordinary increases in "high risk" proceedings have exhausted staff which could be safely diverted from other districts. For example, the average weekly out-of-district staffing for 1987 was 52; in 1988 the figures doubled to 104. By September 1, 1989, the average had reached 127 and will reach 145 in 1991. Without relief from this problem, the Service faces the possibility of having to prioritize the protection it provides to the judicial process.

Historically, "high risk" proceedings could be handled by augmenting a district's resources with a handful of Deputies for a period of two to three weeks. This is no longer true. Defendants such as Los Macheteros, the United Freedom Front, White supremacist organizations and drug lords have organizations with national and international ties. They present security risks never experienced before, and the complexity of their cases creates trials which last as long as 12 months. In fact, two security details involving individuals from international organizations have consumed 50 personnel per detail at different times during this past year. To address the increased need to "Special Assign" deputies to high-threat situations, **12 positions, 6 workyears and $766,000** are requested.

These groups present such a critical risk that the Service has deployed the Special Operations Group (SOG) to assist with certain proceedings. SOG has traditionally activated its highly-trained, rapid-response Teams only in instances of national significance. In today's violence-filled environment, however, their expertise is often needed to guarantee adequate security at judicial proceedings.

An additional **38 Deputy U.S. Marshals, 19 workyears and $2,425,000** are needed to address the increase of drug-related cases, especially those resulting from the passage of the 1988 Anti-Drug Abuse Act. The Administrative Office of the United States Courts reported in 1988 that, "...cases involving all drug-related offenses rose by 16 percent..." They noted this increase prior to the passage of the 1988 Anti-Drug Abuse Act. Today, about 60 percent of all criminal proceedings stem from drug related charges.

In guaranteeing the security and integrity of the judicial system the Marshals Service must assure that our own employees meet appropriate standards since they have access to virtually every phase of the judicial process including the judiciary, juries, witnesses and evidence. Therefore, steps must be taken to assure that all those placed in such positions are worthy of trust.

In April 1989, all resources of the Office of Internal Security (OIS) were transferred to the newly created Office of Inspector General in implementation of the Inspector General Act. Responsibility for the personnel security program of the Marshals Service remained with OIS, without the resources required to initiate and adjudicate background investigations for all Marshals Service employees and certain contractors. A Departmental audit in February 1989 cited the need to address a backlog of employees in sensitive positions with no background investigations. In addition, approximately 600 employees holding security clearances for access to classified national security information have not had their required update investigation within the last five years, and approximately 1,200 other employees who occupy sensitive positions and routinely access extremely sensitive law enforcement information have not had an update investigation during the last five years. All of the above investigations are required by statute, executive order, and OPM and DOJ regulations.

Ten positions, five workyears and $423,000 for seven security specialist and three administrative support positions, to begin to conduct 1,042 background investigations on new employees and employees who have never had an investigation, and 1,800 update investigations on employees whose investigations are over five years old are requested. These resources will accomplish approximately 11.7 percent of the required initial and update investigations, and initial investigations on 52.6 percent of the 253 new positions requested in the 1991 budget.

In light of the fact that the Threat Analysis Division is already facing a backlog in connection with threats involving drug cases and is projecting a 500 percent increase in workload in this area by 1991, an increase of **one position, one workyear and $45,000** for one Intelligence Research Specialist is requested. These resources will be used to improve provision of current, accurate, complete and timely information to Marshals Service field offices regarding on-going or anticipated threat situations. The additional staff is needed to receive, analyze, promptly assess and disseminate information without which Marshals Service personnel face further risk while dealing with dangerous individuals.

Witness Security

For 1991, the Marshals Service requests an increase of **eight positions, five workyears and $268,000** for the Witness Security program.

To be successful in the War on Drugs, the government must sustain the Witness Security Program and encourage additional witnesses to testify against alleged drug traffickers and other criminal leaders by fulfilling its commitment to provide security and a safe transition to life under new identities. Given the fact that in 1989 protected witnesses made over 3,700 court appearances during the prosecution of the likes of Matta-Ballesteros, the Medellin cartel and similar narco/terrorist groups, the need for this Program is clearly apparent.

This request includes **one position, one workyear and $45,000** for an employment specialist to assist in what continues to be one of the program's greatest problems -- the employment of witnesses. Currently, the Program averages 17 months of funding per witness. The sooner witnesses become self-sustaining, the greater the savings to the Program. Therefore, as a cost-effective measure the Service plans to establish an employment support unit at the Safesite and Orientation Center. This unit will act in concert with the East Coast Employment Specialist and Regional Supervisors to assure and make available a steady supply of employment opportunities for program participants. And, an increase of **one position, one workyear and $45,000** is requested for one Resource Analyst for the staff of the Witness Security Division to support the case manager positions in the orderly construction of new identities for witnesses and family members.

Nearly 95 percent of the protected witnesses have criminal backgrounds, making employment opportunities extremely unlikely; and the language barrier is an additional problem. Some witnesses require employment assistance many times;

there were 97 reactivated principal witnesses in 1987, 109 in 1988, and 115 in 1989. All of these factors have built a workload which requires additional resources.

The Witness Security Division requests an additional **six positions, three workyears and $178,000** which will be dedicated to field support. **Two** WITSEC Assistants and $72,000 will be used at the Safesite and Orientation Center to assist the increased number of Inspectors working there and to perform the heavy volume of administrative work generated. Currently, there are 28 operational positions, but only one administrative position at that location. The site is open 24-hours per day, seven days per week, and operates with four overlapping operational shifts. The additional presence of administrative support is required not only to help with the backlog of work, but to be available for regularly scheduled evening and weekend duty. **Four** additional Witsec Assistants will be placed throughout the Division to provide administrative support to regions experiencing heavy workload caused by an increase in relocated witnesses.

Prisoner Security

To meet anticipated 1991 needs, the Marshals Service requests **30 positions, 15 workyears and $11,893,000** for a comprehensive package to address known requirements for prisoner court-room security and improve security systems.

In 1991, the Marshals Service will continue to be faced with providing increased security for prisoners' trials in the courtroom. Arrests made in support of anti-drug and organized crime initiatives, and the implementation of the Immigration Control and Reform Act give the Marshals Service custody of the most dangerous types of offender. The scope of involvement, the resources at the criminals' disposal, and their proven willingness to do whatever is necessary to disrupt proceedings underscore the need for greatly improved physical and building security, as well as prompt and secure prisoner transportation. As the full impact of SRA is felt, prisoners will be more prone to violence and will require more secure escort as the potential for plea bargaining is eliminated and mandatory sentencing is applied.

Not only is there a critical need for adequate holding facilities, prisoner production and transportation requirements also present new demands for added safety. In 1991, prisoner productions will rise to 600,000, double the 1987 level. Many organized crime and drug cartel figures must be produced dozens of times for bond hearings, pre-trial motions, and actual trial proceedings. The impact of the Sentencing Reform Act is already generating significant workload increase in this vital judicial support function, and based on AOUSC data, has had an impact on only 25 percent of the prisoners sentenced as of February, 1989. Addressing security requirements of such multiple productions requires **30 positions, 15 workyears and $1,914,000 in 1991**.

Given the multiple-defendant drug and terrorist trials and the prisoners' known capacity for violence, simple ratios of one Deputy per prisoner no longer apply. Only visible courtroom security will ensure tranquility of the court.

Marshals Service personnel are responsible for responding to duress alarms activated by court personnel as well as the overall security of the courthouse and prisoner areas. Alarms and Closed Circuit Television (CCTV) monitors are consolidated in a central location monitored by Service personnel or contract guards. The Court Security Division contracts, on a nationwide basis, for security systems installation and maintenance for Court Security related systems. The Marshals Service Facilities Branch has contracted with GSA and various security vendors for systems installation and maintenance. However, methods of procuring and maintenance are different for similar pieces of equipment housed in the same security console, and there have been difficulties in coordinating systems maintenance and component replacement. In order to correct this problem and provide compatible equipment and maintenance services to field offices, the Facilities Branch is negotiating with the current vendor on Court Security's nationwide contract to procure and maintain security equipment. These prices have been negotiated with Mosler, the current vendor, and they have agreed to continue the same price structure for both Court Security and Prisoner handling related security equipment. This will result in an estimated increase of $1,007,000 for systems maintenance and for systems procurement and installation.

Given the demonstrated inadequacy of physical/structural security found in most courthouses as well as the increasing numbers and types of dangerous trials, the Marshals Service needs $8,972,000 to repair and construct courtroom holding cells, construct secure passageways to transport prisoners within courthouses and construct a prisoner elevator in Foley Square, New York. Currently, in many areas prisoners must be moved through corridors and on elevators used by court personnel and the general public. Given the type of prisoner coming into our custody and the increased threats against judicial officers, these security problems must be addressed. The Service currently has 57 courtroom holding cells in need of major repair, and 232 new courtroom holding cells to be constructed. Of the requested funding, $3,972,000 would remain in the base allowing the Service to complete all these projects over a three year period.

The $5,000,000 requested to fund the construction of a prisoner elevator in Foley Square, New York is a one-time expense and would correct a situation in which dangerous prisoners are transported on public elevators with judges and the general public. Although new construction, such as courtroom holding cells, prisoner elevators, prisoner stairwells, and secure corridors should be the responsibility of the General Services Administration, in this instance, as in many others, GSA is unable to construct these facilities without reimbursement from client agencies, citing lack of funding.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Prisoner Transportation and Detention.....	560	552	$39,520	560	606	$41,686	609	630	$54,950	49	24	$13,264

Long-Range Goal: To ensure expeditious and secure custody and transportation of Federal Prisoners and to acquire sufficient and acceptable detention space for Federal prisoners in non-Federal facilities.

Major Objectives:

To expand the National Prisoner Transportation System (NPTS) capabilities to further reduce costs and increase services to other Federal agencies on a reimbursable basis.

To reduce staff time, travel costs and jail expenses associated with the transportation of prisoners by improving scheduling and processing techniques and maximizing the use of mass transportation systems.

To maintain an automated prisoner management information system monitoring Federal prisoner populations and reducing transportation expenses.

To develop and implement the Prisoner Automated Scheduling System (PASS) for moving Federal prisoners.

To ensure that prisoner detention cells in U.S. Marshals Service district offices meet minimum national standards for safety, health and security.

To inspect jails for compliance with Federal, State and local detention standards and to assist in designing and implementing improvements to conditions of confinement, thus reducing adverse court orders and inmate litigation.

To administer the Intergovernmental Service Agreement, the Cooperative Agreement, and the Federal Excess Property Programs to obtain adequate detention space in Federal Court cities.

To receive and produce all prisoners in accordance with court calendars.

Base Program Description: This program supports the Federal judicial system through the timely receipt, administrative processing, and production for judicial proceedings of all prisoners in Marshals Service custody; the transportation and movement of Federal prisoners within district and via the NPTS; and the supervision of unsentenced prisoners. Individuals arrested or detained for violation of Federal statutes are remanded to the custody of the Marshals Service. Federal prisoners are transported and moved within and between districts for observation, and service of sentence. Short-distance prisoner moves are completed by district personnel using government vehicles. Long-distance prisoner moves are done via the NPTS, which includes aircraft, as well as supporting bus, van and small plane feeder systems.

The Marshals Service also has the responsibility for acquiring detention space for unsentenced Federal prisoners and administering the Cooperative Agreement and Federal Excess Property programs. These programs were specifically designed to improve the level of inmate services, halt the loss of jail space, and obtain guaranteed space for prisoners in Federal court cities.

Accomplishments and Workload: Accomplishments of the Prisoner Transportation and Detention program are presented in the following table.

			Estimates	
Item	1988	1989	1990	1991
Total Number of Prisoners Moved...............	113,015*	129,576	142,266	159,497
